UNITED STATES
SECURITIES AND EXCHANGE COMMISSION
Washington, D.C. 20549

# FORM 10-K

(Mark One)

☒ **ANNUAL REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**
**For the Fiscal Year Ended December 31, 2012**
**Or**
☐ **TRANSITION REPORT PURSUANT TO SECTION 13 OR 15(d) OF THE SECURITIES EXCHANGE ACT OF 1934**
**For the transition period from _________ to ___________**

| Commission File Number | Exact Name of Registrant as specified in its charter | State or Other Jurisdiction of Incorporation or Organization | IRS Employer Identification Number |
|---|---|---|---|
| 1-12609 | PG&E CORPORATION | California | 94-3234914 |
| 1-2348 | PACIFIC GAS AND ELECTRIC COMPANY | California | 94-0742640 |

77 Beale Street, P.O. Box 770000
San Francisco, California 94177
(Address of principal executive offices) (Zip Code)
(415) 267-7000
(Registrant's telephone number, including area code)

77 Beale Street, P.O. Box 770000
San Francisco, California 94177
(Address of principal executive offices) (Zip Code)
(415) 973-7000
(Registrant's telephone number, including area code)

**Securities registered pursuant to Section 12(b) of the Act:**

| Title of Each Class | Name of Each Exchange on Which Registered |
|---|---|
| **PG&E Corporation** : Common Stock, no par value | New York Stock Exchange |
| **Pacific Gas and Electric Company** : First Preferred Stock, cumulative, par value $25 per share: Redeemable: 5% Series A, 5%, 4.80%, 4.50%, 4.36% Nonredeemable: 6%, 5.50%, 5% | NYSE Amex Equities |

**Securities registered pursuant to Section 12(g) of the Act: None**

Indicate by check mark if the registrant is a well-known seasoned issuer, as defined in Rule 405 of the Securities Act:

| | |
|---|---|
| PG&E Corporation | Yes ☑ No ☐ |
| Pacific Gas and Electric Company | Yes ☑ No ☐ |

Indicate by check mark if the registrant is not required to file reports pursuant to Section 13 or Section 15(d) of the Act:

| | |
|---|---|
| PG&E Corporation | Yes ☐ No ☑ |
| Pacific Gas and Electric Company | Yes ☐ No ☑ |

Indicate by check mark whether the registrant (1) has filed all reports required to be filed by Section 13 or 15(d) of the Securities Exchange Act of 1934 during the preceding 12 months (or for such shorter period that the registrant was required to file such reports), and (2) has been subject to such filing requirements for the past 90 days.

| | |
|---|---|
| PG&E Corporation | Yes ☑ No ☐ |
| Pacific Gas and Electric Company | Yes ☑ No ☐ |

Indicate by check mark whether the registrant has submitted electronically and posted on its corporate Web site, if any, every Interactive Data File required to be submitted and posted pursuant to Rule 405 of Regulation S-T during the preceding 12 months (or for such shorter period that the registrant was required to submit and post such files).

| | | |
|---|---|---|
| PG&E Corporation | Yes ☑ | No ☐ |
| Pacific Gas and Electric Company | Yes ☑ | No ☐ |

Indicate by check mark if disclosure of delinquent filers pursuant to Item 405 of Regulation S-K is not contained herein, and will not be contained, to the best of registrant's knowledge, in definitive proxy or information statements incorporated by reference in Part III of this Form 10-K or any amendment to this Form 10-K:

| | |
|---|---|
| PG&E Corporation | ☑ |
| Pacific Gas and Electric Company | ☑ |

Indicate by check mark whether the registrant is a large accelerated filer, an accelerated filer, a non-accelerated filer, or a smaller reporting company (as defined in Rule 12b-2 of the Exchange Act). (Check one):

| **PG&E Corporation** | **Pacific Gas and Electric Company** |
|---|---|
| Large accelerated filer ☑ | Large accelerated filer ☐ |
| Accelerated filer ☐ | Accelerated filer ☐ |
| Non-accelerated filer ☐ | Non-accelerated filer ☑ |
| Smaller reporting company ☐ | Smaller reporting company ☐ |

Indicate by check mark whether the registrant is a shell company (as defined in Rule 12b-2 of the Exchange Act).

| | |
|---|---|
| PG&E Corporation | Yes ☐ No ☑ |
| Pacific Gas and Electric Company | Yes ☐ No ☑ |

**Aggregate market value of voting and non-voting common equity held by non-affiliates of the registrants as of June 30, 2012, the last business day of the most recently completed second fiscal quarter:**

| | |
|---|---|
| PG&E Corporation common stock | $19,276 million |
| Pacific Gas and Electric Company common stock | Wholly owned by PG&E Corporation |

**Common Stock outstanding as of February 11, 2013:**

| | |
|---|---|
| PG&E Corporation: | 431,436,673 |
| Pacific Gas and Electric Company: | 264,374,809 shares (wholly owned by PG&E Corporation) |

**DOCUMENTS INCORPORATED BY REFERENCE**

Portions of the documents listed below have been incorporated by reference into the indicated parts of this report, as specified in the responses to the item numbers involved:

| | |
|---|---|
| Designated portions of the combined 2012 Annual Report to Shareholders | Part I (Items 1, 1A and 3), Part II (Items 5, 6, 7, 7A, 8 and 9A) |
| Designated portions of the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders | Part III (Items 10, 11, 12, 13 and 14) |

## UNITS OF MEASUREMENT

| | | |
|---|---|---|
| 1 Kilowatt (kW) | = | One thousand watts |
| 1 Kilowatt-Hour (kWh) | = | One kilowatt continuously for one hour |
| 1 Megawatt (MW) | = | One thousand kilowatts |
| 1 Megawatt-Hour (MWh) | = | One megawatt continuously for one hour |
| 1 Gigawatt (GW) | = | One million kilowatts |
| 1 Gigawatt-Hour (GWh) | = | One gigawatt continuously for one hour |
| 1 Kilovolt (kV) | = | One thousand volts |
| 1 MVA | = | One megavolt ampere |
| 1 Mcf | = | One thousand cubic feet |
| 1 MMcf | = | One million cubic feet |
| 1 Bcf | = | One billion cubic feet |
| 1 MDth | = | One thousand decatherms |

**Item 1.** ***Business***

**General**

***Corporate Structure and Business***

PG&E Corporation, incorporated in California in 1995, is a holding company that conducts its business through Pacific Gas and Electric Company ("Utility"), a public utility operating in northern and central California. The Utility was incorporated in California in 1905. PG&E Corporation became the holding company of the Utility and its subsidiaries on January 1, 1997.

The Utility's revenues are generated mainly through the sale and delivery of electricity and natural gas to customers. The Utility served approximately 5.2 million electricity distribution customers and approximately 4.4 million natural gas distribution customers at December 31, 2012. The Utility had approximately $52 billion in assets at December 31, 2012 and generated revenues of approximately $15 billion in 2012. The Utility is regulated primarily by the California Public Utilities Commission ("CPUC") and the Federal Energy Regulatory Commission ("FERC"). In addition, the Nuclear Regulatory Commission ("NRC") oversees the licensing, construction, operation, and decommissioning of the Utility's nuclear generation facilities.

***Corporate and Other Information***

The principal executive offices of PG&E Corporation and the Utility are located at 77 Beale Street, P.O. Box 770000, San Francisco, California 94177. PG&E Corporation's telephone number is (415) 267-7000 and the Utility's telephone number is (415) 973-7000. PG&E Corporation and the Utility file or furnish various reports with the Securities and Exchange Commission ("SEC"). These reports, including Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and any amendments to those reports filed or furnished pursuant to Sections 13(a) or 15(d) of the Securities Exchange Act of 1934, as amended ("1934 Act"), are available free of charge on both PG&E Corporation's website, *www.pgecorp.com* , and the Utility's website, *www.pge.com* , as promptly as practicable after they are filed with, or furnished to, the SEC. The information contained on these websites is not incorporated by reference into this Annual Report on Form 10-K and should not be considered part of this report.

This is a combined Annual Report on Form 10-K of PG&E Corporation and the Utility and includes information incorporated by reference from the joint Annual Report to Shareholders for the year ended December 31, 2012, which is attached to this report as Exhibit 13 ("2012 Annual Report") and the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders. The 2012 Annual Report contains forward-looking statements that are necessarily subject to various risks and uncertainties. For a discussion of the significant risks that could affect the outcome of these forward-looking statements and PG&E Corporation's and the Utility's future financial condition and results of operations, see the information in the 2012 Annual Report under the headings "Cautionary Language Regarding Forward-Looking Statements" and "Risk Factors" which appear under the heading "Management's Discussion and Analysis of Financial Condition and Results of Operations" ("MD&A").

***Operational Improvements***

The Utility's electricity and natural gas businesses are each led by a senior executive who reports to the President of the Utility. During 2012, the Utility continued to build these organizations by adding new leaders with extensive industry expertise and expanding the Utility's work force where needed to implement the Utility's enhanced focus on safety and operational excellence. Significant improvements were made to the Utility's natural gas operations during 2012 to enhance safety, test and replace pipelines, modernize and upgrade the system, and search and validate records. Much of this work was carried out under the Utility's pipeline safety enhancement plan that was approved by the CPUC in late December 2012. The Utility also continued work to implement the safety recommendations made by the National Transportation Safety Board ("NTSB") in its 2011 investigative report on the rupture of one of the Utility's natural gas transmission pipelines in San Bruno, California on September 9, 2010 (the "San Bruno accident"). (For more information, see "Natural Gas Utility Operations" below.) The Utility also undertook significant projects in 2012 to improve and modernize its electricity operations by repairing, replacing or upgrading equipment to improve reliability and safety. In addition, the Utility continued the installation of advanced electric and gas meters throughout its service territory and took other steps to lay the foundation for the development of a "smart grid" to enable customers to have better control over their energy usage and costs, to integrate new

sources of energy (such as distributed generation and storage, rooftop solar and other intermittent energy sources), and to enable the continued safe and reliable operation of the grid. (For more information, see “Electric Utility Operations” below.)

***Employees***

At December 31, 2012, PG&E Corporation and its subsidiaries had 20,593 regular employees, including 20,583 regular employees of the Utility. Of the Utility’s regular employees, 12,492 are covered by collective bargaining agreements with three labor unions: the International Brotherhood of Electrical Workers, Local 1245, AFL-CIO (“IBEW”); the Engineers and Scientists of California, IFPTE Local 20, AFL-CIO and CLC (“ESC”); and the Service Employees International Union, Local 24/7 (“SEIU”). There are two collective bargaining agreements with IBEW. One IBEW collective bargaining agreement expires on December 31, 2014 and the other IBEW collective bargaining agreement expires on December 31, 2015. The ESC collective bargaining agreement expires on December 31, 2014. The SEIU collective bargaining agreement expires on July 31, 2013.

## Regulatory Environment

Various aspects of the Utility's business are subject to a complex set of energy, environmental and other laws, regulations, and regulatory proceedings at the federal, state, and local levels. This section and the “Ratemaking Mechanisms” section below summarize some of the more significant laws, regulations, and regulatory proceedings affecting the Utility. These summaries are not an exhaustive description of all the laws, regulations, and regulatory proceedings that affect the Utility. The energy laws, regulations, and regulatory proceedings may change or be implemented or applied in a way that PG&E Corporation and the Utility do not currently anticipate.

PG&E Corporation is a public utility holding company that is subject to the requirements of the Public Utility Holding Company Act of 2005 (“PUHCA”). Under the PUHCA, public utility holding companies fall principally under the regulatory oversight of the FERC. PG&E Corporation and its subsidiaries are exempt from all requirements of the PUHCA other than the obligation to provide access to their books and records to the FERC and the CPUC for ratemaking purposes. These books and records provisions are largely duplicative of other provisions under the Federal Power Act of 1935 and state law.

For discussion of specific pending regulatory proceedings and investigations that are expected to affect the Utility, see the information under the headings within MD&A entitled “Regulatory Matters” and “Natural Gas Matters” in the 2012 Annual Report, which information is incorporated herein by reference.

***Federal Regulation***

*The Federal Energy Regulatory Commission*

The FERC regulates the transmission of electricity and wholesale sales of electricity in interstate commerce and the transmission and sale of natural gas for resale in interstate commerce. The FERC also regulates interconnections of transmission systems with other electric systems and generation facilities, tariffs and conditions of service of regional transmission organizations, including the California Independent System Operator Corporation (“CAISO”), and the terms and rates of wholesale electricity sales. The FERC has authority to impose penalties of up to $1 million per day for violation of certain federal statutes, including the Federal Power Act of 1935 and the Natural Gas Act of 1938, and for violations of FERC-approved regulations. The FERC has jurisdiction over the Utility's electricity transmission annual amount of revenue (“revenue requirements”) and rates, the licensing of substantially all of the Utility's hydroelectric generation facilities, and the interstate sale and transportation of natural gas.

The FERC has the responsibility to approve and enforce mandatory standards governing the reliability of the nation’s electricity transmission grid, including standards to protect the nation’s bulk power system against potential disruptions from cyber and physical security breaches, to prevent market manipulation, and to supplement state transmission siting efforts in certain electric transmission corridors that are determined to be of national interest. The FERC certified the North American Electric Reliability Corporation (“NERC”) as the nation’s Electric Reliability Organization. The NERC is responsible for developing and enforcing electric reliability standards, subject to FERC approval. The FERC also has approved a delegation agreement under which the NERC has delegated enforcement authority for the geographic area known as the Western Interconnection to the Western Electricity Coordinating Council (“WECC”). The Utility must self-certify compliance to the WECC on an annual basis and the compliance program encourages self-reporting of violations. WECC staff, with participation by the NERC and the FERC, also performs a compliance audit of the Utility every three years. In addition, the WECC and the NERC may perform

spot checks or other interim audits, reports, or investigations. The FERC also has authorized the WECC and the NERC to impose penalties up to $1 million per day, per violation.

The FERC also has adopted policies and rules to promote investment in energy infrastructure and lower costs for consumers through incentive ratemaking for transmission projects. In addition, the FERC's Order No. 1000 establishes electric transmission planning and cost allocation requirements for public utility transmission providers. Order No. 1000 requires public utility transmission providers to improve transmission planning processes and allocate costs for new transmission facilities to the beneficiaries of those facilities.

The CAISO is responsible for providing open access electricity transmission service on a non-discriminatory basis, planning transmission system additions, and ensuring the maintenance of adequate reserves of generation capacity.

*The Nuclear Regulatory Commission*

The NRC oversees the licensing, construction, operation and decommissioning of nuclear facilities, including the Utility's two nuclear generating units at Diablo Canyon and the Utility's retired nuclear generating unit at Humboldt Bay ("Humboldt Bay Unit 3"). NRC regulations require extensive monitoring and review of the safety, radiological, seismic, environmental, and security aspects of these facilities. In the event of non-compliance, the NRC has the authority to impose fines or to force a shutdown of a nuclear plant, or both. NRC safety and security requirements have, in the past, necessitated substantial capital expenditures at Diablo Canyon, and additional significant capital expenditures could be required in the future. For information about NRC matters affecting Diablo Canyon, including the status of the Utility's relicensing application see the information under the heading within MD&A entitled "Regulatory Matters−Diablo Canyon Nuclear Power Plant" in the 2012 Annual Report, which information is incorporated herein by reference.

*The Pipeline and Hazardous Materials Safety Administration*

The Utility also is subject to regulations adopted by the federal Pipeline and Hazardous Materials Safety Administration ("PHMSA") that is within the United States Department of Transportation. The PHMSA develops and enforces regulations for the safe, reliable, and environmentally sound operation of the nation's pipeline transportation system and the shipment of hazardous materials. Through a certification with PHMSA, the CPUC is authorized to enforce the federal pipeline safety standards over intrastate natural gas pipelines, as well as any state pipeline safety requirements that do not conflict with the federal requirements, through penalties and/or injunctive relief.

*The National Transportation Safety Board*

The NTSB is an independent federal agency that is authorized to investigate pipeline accidents and certain transportation accidents that involve fatalities, substantial property damage, or significant environmental damage. The NTSB investigated the San Bruno accident and in August 2011 announced that it had determined the probable cause of the San Bruno accident placing the blame primarily on the Utility. The NTSB report recommended that the Utility take certain actions to improve the safety of its gas transmission system. The status of the Utility's implementation of the NTSB's recommendations is discussed under "Natural Gas Utility Operations" below.

***State Regulation***

*The California Public Utilities Commission*

The CPUC consists of five members appointed by the Governor of California and confirmed by the California State Senate for staggered six-year terms. The CPUC has jurisdiction over the rates and terms and conditions of service for the Utility's electricity and natural gas distribution operations, electricity generation, and natural gas transportation and storage services. The CPUC also has jurisdiction over the Utility's issuances of securities, dispositions of utility assets and facilities, energy purchases on behalf of the Utility's electricity and natural gas retail customers, rates of return, rates of depreciation, oversight of nuclear decommissioning, and aspects of the siting of facilities used in providing electric and natural gas utility service.

The CPUC also enforces state laws that set forth safety requirements pertaining to the design, construction, testing, operation, and maintenance of utility gas gathering, transmission, and distribution pipeline systems, and for the safe operation of such pipelines and equipment. The CPUC has adopted many rules and regulations to

implement state laws and policies, such as the laws relating to the development of renewable energy resources, demand response and public purpose programs, and the reduction of greenhouse gas ("GHG") emissions. The CPUC also has been delegated authority to enforce compliance with certain federal regulations related to the safety of natural gas facilities. The CPUC has authority to impose penalties for violating these state and federal laws, orders, or regulations of up to $50,000 per violation, per day. (See the discussion under the heading within MD&A entitled "Natural Gas Matters" in the 2012 Annual Report for information about the CPUC's pending enforcement proceedings against the Utility relating to the Utility's safety recordkeeping for its natural gas transmission system; the Utility's operation of its natural gas transmission pipeline system in or near locations of higher population density; and the Utility's pipeline installation, integrity management, recordkeeping and other operational practices, and other events or courses of conduct that could have led to or contributed to the San Bruno accident, which discussion is incorporated herein by reference.)

Ratemaking for retail sales from the Utility's generation facilities is under the jurisdiction of the CPUC. To the extent that this electricity is sold for resale into wholesale markets, however, it is under the ratemaking jurisdiction of the FERC. In addition, the CPUC has general jurisdiction over most of the Utility's operations, and regularly reviews the Utility's performance, using measures such as the frequency and duration of outages. The CPUC also conducts investigations into various matters, such as deregulation, competition, and the environment, in order to determine its future policies. The CPUC has imposed conditions that govern the relationship between the Utility and PG&E Corporation and other affiliates. These conditions relate to finance, human resources, records and bookkeeping, and the transfer of customer information. Among other conditions, the financial conditions provide that the capital requirements of the Utility, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner, must be given first priority by PG&E Corporation's Board of Directors (known as the "first priority" condition). In addition, the Utility must maintain on average its CPUC-authorized utility capital structure, although it can request a waiver of this condition if an adverse financial event reduces the Utility's common equity component by 1% or more.

The CPUC also has adopted complex and detailed rules governing transactions between California's electricity and gas utilities and certain of their affiliates. The rules address the use of the utilities' names and logos by their affiliates, the separation of utilities and their affiliates, provision of utility information to affiliates, and energy procurement-related transactions between the utilities and their affiliates. The CPUC has established specific penalties and enforcement procedures for affiliate rules violations. Utilities are required to self-report affiliate rules violations.

*The California Energy Resources Conservation and Development Commission*

The California Energy Resources Conservation and Development Commission, commonly called the California Energy Commission ("CEC"), is the state's primary energy policy and planning agency. The CEC is responsible for licensing all thermal power plants over 50 MW, overseeing funding programs that support public interest energy research, advancing energy science and technology through research, development and demonstration, and providing market support to existing, new, and emerging renewable technologies. In addition, the CEC is responsible for forecasts of future energy needs used by the CPUC in determining the adequacy of the utilities' electricity procurement plans.

*The California Air Resources Board*

The California Air Resources Board ("CARB") is the state agency charged with setting and monitoring GHG and other emission limits. The CARB also is responsible for adopting and enforcing regulations to meet the California Global Warming Solutions Act of 2006 ("AB 32"), which requires the gradual reduction of GHG emissions in California to 1990 levels by 2020 on a schedule beginning in 2013. In October 2011, the CARB adopted its final "cap-and-trade" regulations to help gradually reduce GHG emissions. In November 2012, the CARB held the first auction of GHG emission allowances under this "cap-and-trade" program. (For more information, see "Environmental Matters — Air Quality and Climate Change" below.)

***Other Regulation***

The Utility obtains permits, authorizations, and licenses in connection with the construction and operation of the Utility's generation facilities, electricity transmission lines, natural gas transportation pipelines, and gas compressor station facilities. These permits include discharge permits, various Air Pollution Control District permits, U.S. Department of Agriculture-Forest Service permits, FERC hydroelectric generation facility and transmission line licenses, and NRC licenses. Some licenses and permits may be revoked or modified by the agency

that granted them if facts develop or events occur that differ significantly from the facts and projections assumed when they were granted. In addition, discharge permits and other approvals and licenses often have a term that is less than the expected life of the associated facility. Licenses and permits may require periodic renewal, which may result in additional requirements being imposed by the granting agency. (For more information, see "Environmental Matters — Water Quality" below.)

The Utility has franchise agreements with 292 cities and counties that permit the Utility to install, operate, and maintain the Utility's electric and natural gas facilities in the public streets and roads. In exchange for the right to use public streets and roads, the Utility pays annual fees to the cities and counties. In most cases, the Utility's franchise agreements are for an indeterminate term, with no expiration date. The Utility has several franchise agreements that have a specified term of years, including an agreement with a large charter city.

The Utility also periodically obtains permits, authorizations, and licenses in connection with distribution of electricity and natural gas. Under these permits, authorizations, and licenses, the Utility has rights to occupy and/or use public property for the operation of the Utility's business and to conduct certain related operations.

***Competition in the Electricity Industry***

At the federal level, the FERC is charged with developing rules to encourage fair and efficient competitive wholesale electric markets by employing best practices in market rules and reducing barriers to trade between markets and among regions. (See "Regulatory Environment−Federal Regulation" above for a description of some of these rules.) The FERC also has authority to prevent accumulation and exercise of market power by assuring that proposed mergers and acquisitions of public utility companies and their holding companies are in the public interest and by addressing market power in jurisdictional wholesale markets through its new powers to establish and enforce rules prohibiting market manipulation. The FERC also has issued rules on the interconnection of generators to require regulated transmission providers, such as the Utility or the CAISO, to use standard interconnection procedures and a standard agreement for generator interconnections. These rules are intended to limit opportunities for electric transmission providers to favor their own generation, facilitate market entry for generation competitors by streamlining and standardizing interconnection procedures, and encourage investment in generation and transmission.

At the state level, the California Legislature mandated the restructuring of the California electricity industry beginning in 1998 to allow customers of the California investor-owned electric utilities to purchase electricity from a service provider other than the regulated utilities (the ability to choose an energy provider is referred to as "direct access"). A market framework was established for electricity generation in which generators and other electricity providers were permitted to charge market-based prices for wholesale electricity through transactions conducted through the California Power Exchange ("PX"). As the 2000-2001 California energy crisis unfolded, direct access was suspended. The PX filed a petition for bankruptcy protection and now operates solely to reconcile remaining refund amounts owed and to make compliance filings as required by the FERC in the California refund proceeding, which is still pending at the FERC. (For information about the status of the California refund proceeding and the remaining disputed claims made by power suppliers in the Utility's bankruptcy proceeding that was precipitated by the energy crisis, see Note 13: Resolution of Remaining Chapter 11 Disputed Claims, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.)

Current California law provides only limited opportunities for customers who receive "bundled" electricity service (i.e., electricity, transmission and distribution services) to choose to purchase electricity directly from an energy service provider other than the three California investor-owned electric utilities. As authorized by California law enacted in October 2009, the CPUC has adopted a plan to reopen direct access on a limited and gradual basis to allow eligible customers of the three California investor-owned electric utilities to purchase electricity from independent electric service providers rather than from a utility. Effective April 2010, all qualifying non-residential customers became eligible to take direct access service subject to annual and absolute caps. It is estimated that the total amount of direct access that will be allowed in the Utility's service territory by the end of the four-year phase-in period will be equal to approximately 11% of the Utility's total annual retail sales at the end of the period, roughly the highest level that was reached before the CPUC suspended direct access. Further legislative action is required to exceed these limits.

In addition, the Utility's customers may, under certain circumstances, obtain power from a community choice aggregator ("CCA") instead of from the Utility. California law permits cities and counties and certain other public agencies to purchase and sell electricity for their local residents and businesses after they have registered as

CCAs. Under these arrangements, the Utility continues to provide distribution, metering, and billing services to the customers of the CCAs and remains the electricity provider of last resort for those customers. The law provides that a CCA can procure electricity for all of its residents who do not affirmatively elect to continue to receive electricity from the Utility. Under the CPUC's rules, a surcharge is imposed on retail end-users of the CCA to prevent a shifting of costs to customers who continue to receive electricity from a utility. The law also authorizes the Utility to recover from each CCA any costs of implementing the program that are reasonably attributable to the CCA, and to recover from all customers any costs of implementing the program not reasonably attributable to a CCA. Over 90,000 customers in Marin County are now receiving commodity service from the Marin Energy Authority, a CCA.

In some circumstances, governmental entities such as cities and irrigation districts, which have authority under the state constitution or state statute to provide retail electric service, seek to acquire the Utility's distribution facilities. For example South San Joaquin Irrigation District ("SSJID") has applied to San Joaquin County Local Agency Formation Commission for the authority to provide electric distribution service in and around the cities of Manteca, Ripon and Escalon. SSJID has indicated that, if it receives the requested authority, it will seek to acquire the Utility's distribution facilities, either under a consensual transaction, or via eminent domain.

It is also possible that technological developments could pose challenges for traditional utilities. In particular, technology-related cost declines and sustained federal or state subsidies could make the combination of "distributed generation" and storage a viable, cost-effective alternative to the Utility's bundled electric service. In addition, the levels of self-generation of electricity by customers (primarily solar installations) and the use of customer net energy metering, which allows self-generating customers to receive bill credits at the full retail rate, are increasing.

Although the CPUC has established ratemaking mechanisms that allow the Utility to collect some non-bypassable or fixed charges from those who procure electricity from alternate sources, rates for the Utility's remaining customers could increase as alternative energy providers (CCAs or local government agencies) and alternative energy sources (self-generation and storage, distributed generation, electric vehicles) become more prevalent. Increasing rate pressure on remaining customers could, in turn, cause more customers to seek alternative energy providers or sources, further exacerbating the Utility's rate challenges.

***Competition in the Natural Gas Industry***

Under the FERC's rules, interstate natural gas pipeline companies are required to divide their services into separate gas commodity sales, transportation, and storage services and must provide transportation service whether or not the customer (often a local gas distribution company) buys the natural gas from these companies. The Utility's natural gas pipelines are located within the State of California and are exempt from most of the FERC's rules and regulations applicable to interstate pipelines; the Utility's pipeline operations are instead subject to the jurisdiction of the CPUC.

The CPUC divides the Utility's natural gas customers into two categories: "core" customers, who are primarily small commercial and residential customers, and "non-core" customers, who are primarily industrial, large commercial, and electric generation customers. Non-core customers have access to capacity rights for firm service on the Utility's natural gas pipeline, as well as interruptible (or "as-available") services. All services are offered on a nondiscriminatory basis to any creditworthy customer. This market structure has resulted in a robust wholesale gas commodity market at the Utility's "Citygate," which refers to the non-physical interconnection between the big "backbone" gas transmission system and the smaller downstream local transmission systems. The Utility's gas transmission and storage system has operated under the CPUC-approved "Gas Accord" market structure since 1998 which largely mimics the regulatory framework required by the FERC for interstate gas pipelines. (See "Ratemaking Mechanisms" below.)

The Utility competes with other natural gas pipeline companies for customers transporting natural gas into the southern California market on the basis of transportation rates, access to competitively priced supplies of natural gas, and the quality and reliability of transportation services. The most important competitive factor affecting the Utility's market share for transportation of natural gas to the southern California market is the total delivered cost of western Canadian and U.S. Rocky Mountains natural gas delivered to northern California, relative to the total delivered cost of natural gas from the southwestern United States. In general, when the total cost of western Canadian and U.S. Rocky Mountains natural gas delivered to northern California increases relative to other competing natural gas sources, the Utility's market share of transportation services into southern California decreases. The Utility also competes for storage services with other third-party storage providers, primarily in northern California.

## Ratemaking Mechanisms

### *Overview*

The Utility’s rates for electricity and natural gas utility services are based on its costs of providing service (“cost-of-service ratemaking”). Before setting rates, the CPUC and the FERC conduct proceedings to determine the revenue requirements that the Utility is authorized to collect from its customers. The CPUC determines the Utility’s revenue requirements associated with electricity and natural gas distribution operations, electricity generation, and natural gas transportation and storage. The FERC determines the Utility’s revenue requirements associated with its electricity transmission operations.

Revenue requirements are designed to allow a utility an opportunity to recover its reasonable operating and capital costs of providing utility services as well as a return of, and a fair rate of return on its investment in utility facilities (“rate base”). Revenue requirements are primarily determined based on the Utility’s forecast of future costs. These costs include the Utility’s costs of electricity and natural gas purchased for its customers, operating expenses, administrative and general expenses, depreciation, taxes, and public purpose programs.

To develop retail rates, the revenue requirements are allocated among customer classes which are mainly residential, commercial, industrial, and agricultural. Specific rate components are designed to produce the required revenue. Rate changes become effective prospectively on or after the date of CPUC or FERC decisions. Most rate changes approved by the CPUC throughout the year are consolidated to take effect on the first day of the following year.

The Utility uses balancing accounts to keep track of its authorized revenue requirements, actual customer billings collected through rates, and actual costs incurred to provide electricity and natural gas services. Balances in all CPUC-authorized accounts are subject to review, verification audit, and adjustment, if necessary, by the CPUC. For more information regarding the Utility’s balancing accounts, see Note 3: Regulatory Assets, Liabilities and Balancing Accounts, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.

While the CPUC generally uses cost-of-service ratemaking to develop revenue requirements and rates, it selectively uses incentive ratemaking, which bases rates on the extent to which the utilities meet objective or fixed standards or goals, such as energy efficiency goals, instead of on the cost of providing service.

### *Electricity and Natural Gas Distribution and Electricity Generation Operations*

#### *General Rate Cases*

The General Rate Case (“GRC”) is the primary proceeding in which the CPUC determines the amount of revenue requirements that the Utility is authorized to collect from customers to recover the Utility’s anticipated business and operational costs related to its electricity and natural gas distribution and electricity generation operations and to provide the Utility an opportunity to earn its authorized rate of return. The CPUC generally conducts a GRC every three years. Typical interveners in the Utility's GRC include the CPUC’s Division of Ratepayer Advocates and The Utility Reform Network. In November 2012, the Utility filed its 2014 GRC application with the CPUC for rates effective from 2014 through 2016. For more information see the heading within MD&A entitled “2014 General Rate Case” in the 2012 Annual Report, which information is incorporated herein by reference.

#### *Attrition Rate Adjustments*

The CPUC may authorize the Utility to receive annual increases for the years between GRCs in the base revenues authorized for the test year of a GRC in order to avoid a reduction in earnings in those years due to, among other things, inflation and increases in invested capital. These adjustments are known as attrition rate adjustments. Attrition rate adjustments provide increases in the revenue requirements that the Utility is authorized to collect in rates for electricity and natural gas distribution and electricity generation operations.

*Cost of Capital Proceedings*

The CPUC authorizes the Utility's capital structure (i.e., the relative weightings of common equity, preferred equity, and debt) and the authorized rates of return on each component that the Utility may earn on its electricity and natural gas distribution, natural gas transmission, and electricity generation assets. The authorized capital structure that was in effect through 2012 consisted of 52% equity, 46% long-term debt, and 2% preferred stock. Since 2008, the Utility's authorized cost of capital has been subject to an adjustment mechanism that is triggered in a particular year if the 12-month October-through-September average of the applicable Moody's Investors Service utility bond index increases or decreases by more than 100 basis points from the benchmark. If the adjustment mechanism is triggered, the Utility's authorized ROE beginning on the next January 1 st would be adjusted by one-half of the increase or decrease. This mechanism did not trigger a change in the Utility's authorized rates of return for 2012.

In December 2012, the CPUC issued a decision in the cost of capital proceeding that authorizes the Utility to maintain a capital structure consisting of 52% equity, 47% long-term debt, and 1% preferred stock beginning on January 1, 2013. (For more information see the section of MD&A entitled "2013 Cost of Capital Proceeding" in the 2012 Annual Report, which information is incorporated herein by reference.)

***Rate Recovery of Costs of Electricity Generation Resources***

*Overview*

California investor-owned electric utilities are required to use the principles of "least-cost dispatch" in managing electric generation resources to meet customer demand for electricity. The utilities are also responsible for procuring electricity required to meet customer demand, plus applicable reserve margins, that are not satisfied from their own generation facilities and existing electricity contracts. To accomplish this, each utility must submit a ten-year procurement plan to the CPUC for approval. Each procurement plan must be designed to reduce GHG emissions and use the State of California's preferred loading order to meet the forecasted demand (i.e., increases in future demand will be offset through energy efficiency programs, demand response programs, renewable generation resources, distributed generation resources, and new conventional generation). The CPUC approved the Utility's electricity procurement plan in January 2012 covering 2011 through 2020 and approved the Utility's GHG compliance instrument procurement plan in April 2012.

California law allows electric utilities to recover the costs incurred in compliance with their CPUC-approved electricity procurement plans without further after-the-fact reasonableness review. To the extent the Utility's electricity purchases are not in compliance with the CPUC-approved plan, costs associated with those purchases may be disallowed. The Utility recovers its electricity procurement costs through the Energy Resource Recovery Account ("ERRA"), a balancing account authorized by the CPUC. The ERRA tracks the difference between (1) billed and unbilled ERRA revenues and (2) electric procurement costs incurred under the Utility's authorized procurement plans. To determine the rates used to collect ERRA revenues, each year, the CPUC reviews the Utility's forecasted procurement costs related to power purchase agreements, hedging, and generation fuel expense and approves a forecasted revenue requirement. On December 20, 2012, the CPUC approved the Utility's forecast of 2013 procurement costs and associated revenue requirement. Changes in rates to reflect the approved revenue requirement became effective on January 1, 2013. (The CPUC may adjust a utility's retail electricity rates at any time when the forecasted aggregate over-collections or under-collections in the ERRA exceed five percent of its prior year electricity procurement revenues.) The CPUC also performs an annual compliance review to ensure that (1) the Utility prudently administered the contracts that were entered into in accordance with its CPUC-approved procurement plans, (2) utilized the principles of least-cost dispatch in managing its electric generation resources, and (3) prudently operated its own generation facilities.

*Costs Incurred Under New Power Purchase Agreements*

The CPUC has approved various power purchase agreements that the Utility has entered into with third parties in accordance with the Utility's CPUC-approved procurement plan, the renewable energy mandate, and resource adequacy requirements. The CPUC also authorized the Utility to recover fixed and variable costs associated with these contracts through the ERRA.

For new non-renewable generation purchased from third parties under power purchase agreements, the Utility may also recover any above-market costs through either (1) a non-bypassable customer charge or (2) the allocation of the "net capacity costs" (i.e., contract price less energy revenues) to all "benefiting customers" in the Utility's service territory, including direct access customers and CCA customers under certain circumstances. The non-bypassable charge can be imposed from the date of signing a power purchase agreement and can last for ten

years from the date the new generation unit comes on line or for the term of the contract, whichever is less. Utilities are allowed to justify a cost recovery period longer than ten years on a case-by-case basis. If a utility uses the net capacity cost allocation method, the net capacity costs are allocated for the term of the contract. To use the net capacity allocation method, the CPUC must determine that a resource was needed to meet system or local area reliability needs for the benefit of all distribution customers. The CPUC can decide whether to require an energy auction for resources subject to the net capacity cost allocation.

For renewable generation purchased from third parties under power purchase agreements, the Utility may also recover any above-market costs through the imposition of a non-bypassable charge on customers.

*Costs of Utility-Owned Generation Resource Projects*

The CPUC-authorized revenue requirements to recover the initial capital costs for utility-owned generation projects are recovered through the Utility Generation Balancing Account ("UGBA"), which tracks the difference between the CPUC-approved forecast of initial capital costs, adjusted from time to time as permitted by the CPUC, and actual costs. The initial revenue requirement for Utility-owned projects generally would begin to accrue in the UGBA as of the new facility's commercial operation date or the date a completed facility is transferred to the Utility, and would be included in rates on January 1 of the following year. The CPUC-authorized revenue requirements for capital costs and non-fuel operating and maintenance costs for operating Utility-owned generation facilities are addressed in the Utility's GRC.

The Utility may recover any above-market costs associated with new utility-owned generation resources in a manner similar to the recovery of above-market costs for non-renewable generation purchases described above. The recovery of above-market costs is typically addressed in the CPUC order approving a specific utility-owned generation project.

***Electricity Transmission***

The Utility's electricity transmission revenue requirements and its wholesale and retail transmission rates are subject to authorization by the FERC. The Utility has two main sources of transmission revenues: (1) charges under the Utility's transmission owner tariff and (2) charges under specific contracts with wholesale transmission customers that the Utility entered into before the CAISO began its operations in 1998. These wholesale customers are referred to as existing transmission contract customers and are charged individualized rates based on the terms of their contracts. Other customers pay transmission rates that are established by the FERC in the Utility's transmission owner tariff rate cases. These FERC-approved rates are included by the CPUC in the Utility's retail electric rates and are collected from retail electric customers receiving bundled service.

*Transmission Owner Rate Cases*

The primary FERC ratemaking proceeding to determine the amount of revenue requirements that the Utility is authorized to recover for its electric transmission costs and to earn its return on equity is the transmission owner rate case ("TO rate case"). The Utility generally files a TO rate case every year. The Utility is typically able to charge new rates, subject to refund, before the outcome of the FERC ratemaking review process. See the information within MD&A entitled "FERC Transmission Owner Rate Case" in the 2012 Annual Report, which information is incorporated herein by reference.

The Utility's transmission owner tariff includes several rate components. The primary component consists of base transmission rates intended to recover the Utility's operating and maintenance expenses, depreciation and amortization expenses, interest expense, tax expense, and return on equity. The Utility derives the majority of the Utility's transmission revenue from base transmission rates. Another component consists of rates that reflect credits and charges from the CAISO for transmission revenues received by the CAISO for providing wholesale wheeling service (i.e., the transfer of electricity that is being sold in the wholesale market) to third parties using the Utility's transmission facilities and charges related to the cost of providing service to existing transmission contract customers under specific contracts. The CAISO also imposes a transmission access charge on the Utility for use of the CAISO-controlled electric transmission grid in serving its customers, which are recovered from the Utility's retail customers as part of transmission rates.

***Natural Gas***

*Gas Safety Rulemaking Proceeding*

The CPUC is conducting a rulemaking proceeding to adopt new safety and reliability regulations for natural gas transmission and distribution pipelines in California and the related ratemaking mechanisms. As directed by the CPUC, in August 2011, the Utility filed its proposed pipeline safety enhancement plan to replace certain natural gas pipeline segments, install automatic or remote shut-off valves, and take other actions to modernize and upgrade its natural gas transmission system. On December 20, 2012, the CPUC approved the Utility's proposed plan but disallowed the Utility's request for rate recovery of a significant portion of plan-related costs that the Utility forecasted it would incur over the first phase of the plan (2011 through 2014). See the information under the heading within MD&A entitled "Natural Gas Matters−CPUC Gas Safety Rulemaking Proceeding" in the 2012 Annual Report, which information is incorporated herein by reference.

*Natural Gas Transmission and Storage Rate Cases*

The CPUC determines the Utility's authorized revenue requirements and rates for its natural gas transmission and storage services in a separate rate case called the gas transmission and storage ("GT&S") rate case. The CPUC's decision in the most recent GT&S rate case approved a settlement agreement, known as the Gas Accord V, which set the Utility's rates and associated revenue requirements for natural gas transmission and storage services from January 1, 2011 through December 31, 2014. (The Utility expects to file an application to begin the next GT&S rate case in September 2013.) A substantial portion of the authorized revenue requirements, primarily those costs allocated to core customers, continue to be assured of recovery through balancing account mechanisms and/or fixed reservation charges. The Utility's ability to recover the remaining revenue requirements continues to depend on throughput volumes, gas prices, and the extent to which non-core customers and other shippers contract for firm transmission services. This volumetric cost recovery risk associated with each function (backbone transmission, local transmission, and storage) is summarized below.

*Backbone Transmission.* The backbone transmission revenue requirement is recovered through a combination of firm two-part rates (consisting of fixed monthly reservation charges and volumetric usage charges) and as-available one-part rates (consisting only of volumetric usage charges). The mix of firm and as-available backbone services provided by the Utility continually changes. As a result, the Utility's recovery of its backbone transmission costs is subject to volumetric and price risk to the extent that backbone capacity is sold on an as-available basis. Core procurement entities (including core customers served by the Utility) are the primary long-term subscribers to backbone capacity. Core customers are allocated approximately 38% of the total backbone capacity on the Utility's system. Core customers pay approximately 69% of the costs of the backbone capacity that is allocated to them through fixed reservation charges.

*Local Transmission.* The local transmission revenue requirement is allocated approximately 66% to core customers and 34% to non-core customers. The Utility recovers the portion allocated to core customers through a balancing account, but the Utility's recovery of the portion allocated to non-core customers is subject to volumetric and price risk.

*Storage.* The storage revenue requirement is allocated approximately 51% to core customers, 37% to non-core storage service, and 12% to pipeline load balancing service. The Utility recovers the portion allocated to core customers through a balancing account, but the Utility's recovery of the portion allocated to non-core customers is subject to volumetric and price risk. The revenue requirement for pipeline load balancing service is recovered in backbone transmission rates and is subject to the same cost recovery risks described above for backbone transmission.

*Biennial Cost Allocation Proceeding*

Certain of the Utility's natural gas distribution costs and balancing account balances are allocated to customers in the CPUC's Biennial Cost Allocation Proceeding. This proceeding normally occurs every two years and is updated in the interim year for purposes of adjusting natural gas rates to recover from customers any under-collection, or refund to customers any over-collection, in the balancing accounts. Balancing accounts for gas distribution and other authorized expenses accumulate differences between authorized amounts and actual revenues.

*Natural Gas Procurement*

The Utility sets the natural gas procurement rate for core customers monthly, based on the forecasted costs of natural gas, core pipeline capacity and storage costs. The Utility reflects the difference between actual natural gas purchase costs and forecasted natural gas purchase costs in several natural gas balancing accounts, with under-collections and over-collections taken into account in subsequent monthly rates.

The Utility recovers the cost of gas (subject to the ratemaking mechanism discussed below), acquired on behalf of core customers, through its retail gas rates. (The Utility recovers the cost of gas used in generation facilities as a cost of electricity that is recovered through electricity balancing accounts.)

The Utility is protected against after-the-fact reasonableness reviews of these gas procurement costs under the Core Procurement Incentive Mechanism ("CPIM"). Under the CPIM, the Utility's natural gas purchase costs for a fixed 12-month period are compared to an aggregate market-based benchmark based on a weighted average of published monthly and daily natural gas price indices at the points where the Utility typically purchases natural gas. Costs that fall within a tolerance band, which is 99% to 102% of the commodity benchmark, are considered reasonable and are fully recovered in customers' rates. One-half of the costs above 102% of the benchmark are recoverable in customers' rates, and the Utility's customers receive in their rates 80% of any savings resulting from the Utility's cost of natural gas that is less than 99% of the benchmark. The Utility retains the remaining amount of savings as incentive revenues, subject to a cap equal to 1.5% of total natural gas commodity costs. While this incentive mechanism remains in place, changes in the price of natural gas, consistent with the market-based benchmark, are not expected to materially impact net income.

In January 2010, the CPUC approved a joint settlement agreement among the Utility, the CPUC's Division of Ratepayer Advocates, and The Utility Reform Network to incorporate a portion of hedging costs for core customers into the Utility's CPIM beginning November 1, 2010. The settlement agreement has an initial term of seven years, through October 2017, which can be extended by agreement of the parties. As a result, the settlement agreement permits the Utility to develop and implement a sustained core hedging program. (For more information, see Note 10: Derivatives, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference).

*Interstate and Canadian Natural Gas Transportation*

The Utility has a number of agreements with interstate and Canadian third-party transportation service providers to transport natural gas from the points at which the Utility takes delivery of natural gas (typically in Canada, the U.S. Rocky Mountains, and the southwestern United States) to the points at which the Utility's natural gas transportation system begins. These are governed by tariffs that detail rates, rules, and terms of service for the provision of natural gas transportation services to the Utility on interstate and Canadian pipelines. United States tariffs are approved for each pipeline for service to all of its shippers, including the Utility, by the FERC in a FERC ratemaking review process, and the applicable Canadian tariffs are approved by the Alberta Utilities Commission and the National Energy Board. The transportation costs the Utility incurs under these agreements are recovered through CPUC-approved rates as core natural gas procurement costs or as electricity procurement costs. For more information, see the discussion below under "Natural Gas Utility Operations — Interstate and Canadian Natural Gas Transportation Services Agreements" below.

**Electric Utility Operations**

During 2012, the Utility made significant capital investments in its electric transmission and distribution infrastructure to extend the life of or replace existing infrastructure; to maintain and improve system reliability, safety, and customer service; to integrate more renewable energy resources; to increase capacity; and add new infrastructure to meet customer demand growth. The Utility improved the reliability of its system by adding emergency capacity at substations, increasing distribution system automation, upgrading poor performing circuits, performing targeted asset replacement, and improving service restoration processes. The Utility also has been working to accelerate pole replacement and maintenance of its overhead and underground electric facilities and to increase the use of wireless devices that allow the Utility to monitor the performance of the electric system and respond more quickly to power disruptions.

The Utility also substantially completed the installation of an advanced metering infrastructure throughout its service territory in 2012. As of December 31, 2012, the Utility has installed approximately 8.9 million advanced electric and gas meters. As permitted by CPUC rules, customers may choose not to have an advanced meter

installed. The new infrastructure uses SmartMeter ™ technology that can measure energy use in hourly or quarter-hourly increments, allow customers to track energy usage throughout the billing month and thus enable greater customer control over electricity costs. Usage data is collected through a wireless communications network and transmitted to the Utility's information system where the data is stored and used for billing and other Utility business purposes.

The Utility's advanced metering infrastructure supports the development of a "smart grid" in California, part of a nationwide effort to improve and modernize the nation's electric system by combining advanced communications and controls to create a responsive and resilient energy delivery network. In March 2012, the Utility began incorporating the latest "smart grid" technology in parts of its service territory by installing automated switches that reduce outage duration and the number of customers affected by outages. When an electrical outage occurs, these switches detect a short circuit, block power flow to the affected area, communicate with a central computer, and then quickly reroute power around the problem to keep as many customers powered as possible. Over the next several years, the Utility plans to undertake various "smart grid" projects and invest in "smart grid" technologies.

*Electricity Resources*

The Utility is required to maintain physical generating capacity adequate to meet its customers' load, including peak demand and planning and operating reserves, deliverable to the locations and at times as may be necessary to provide reliable electric service. The Utility is required to dispatch, or schedule, all of the electricity resources within its portfolio in the most cost-effective way. The following table shows the percentage of the Utility's total actual deliveries of electricity to customers in 2012 represented by each major electricity resource.

Total 2012 Actual Electricity Delivered – 76,205 GWh:

| | **Percent of Bundled Retail Sales** | |
|---|---|---|
| Owned Generation Facilities | | |
| Nuclear | 23.3% | |
| Small Hydroelectric | 1.2% | |
| Large Hydroelectric | 9.7% | |
| Fossil fuel-fired | 8.3% | |
| Solar | 0.2% | |
| Total | | 42.7% |
| Qualifying Facilities [(1)] | | |
| Renewable | 4.4% | |
| Non-Renewable | 9.8% | |
| Total | | 14.2% |
| Irrigation Districts and Water Agencies | | |
| Small Hydroelectric | 0.3% | |
| Large Hydroelectric | 3.5% | |
| Total | | 3.8% |
| Other Third-Party Purchase Agreements | | |
| Renewable | 12.9% | |
| Large Hydroelectric | 0.4% | |
| Non-Renewable | 11.5% | |
| Total | | 24.8% |
| Others, Net [(2)] | | 14.5% |
| Total | | 100% |

(1) Electric utilities are required under federal law to purchase energy and capacity from independent power producers with generation facilities (20 MW or less) that meet the definition of a qualifying facility ("QF") under the Public Utility Regulatory Policies Act of 1978. QFs primarily include co-generation facilities that produce combined heat and power and renewable generation facilities. For more information about the power purchase agreements that the Utility has entered into with QFs, see "QF Power Purchase Agreements," below.

(2) This amount is mainly comprised of net CAISO open market purchases, offset by transmission and distribution related system losses.

*Owned Generation Facilities*

At December 31, 2012, the Utility owned the following generation facilities, all located in California, listed by energy source and further described below:

| Generation Type | County Location | Number of Units | Net Operating Capacity (MW) |
|---|---|---|---|
| Nuclear: | | | |
| Diablo Canyon | San Luis Obispo | 2 | 2,240 |
| Hydroelectric: | | | |
| Conventional | 16 counties in northern and central California | 106 | 2,683 |
| Helms pumped storage | Fresno | 3 | 1,212 |
| Hydroelectric subtotal: | | 109 | 3,895 |
| Fossil fuel-fired: | | | |
| Colusa Generating Station | Colusa | 1 | 657 |
| Gateway Generating Station | Contra Costa | 1 | 580 |
| Humboldt Bay Generating Station | Humboldt | 10 | 163 |
| CSU East Bay Fuel Cell | Alameda | 1 | 1.4 |
| SF State Fuel Cell | San Francisco | 2 | 1.6 |
| Fossil fuel-fired subtotal: | | 15 | 1,403 |
| Photovoltaic: | | 10 | 102 |
| Total | | 136 | 7,640 |

*Diablo Canyon Power Plant.* The Utility's Diablo Canyon power plant consists of two nuclear power reactor units, Units 1 and 2. For the twelve months period ended December 31, 2012, the Utility's Diablo Canyon power plant achieved an average overall capacity factor of approximately 90%. The NRC operating license for Unit 1 expires in November 2024, and the NRC operating license for Unit 2 expires in August 2025. For more information on matters affecting Diablo Canyon, see the section of MD&A entitled "Regulatory Matters−Diablo Canyon Nuclear Power Plant" in the 2012 Annual Report, which information is incorporated herein by reference. The ability of the Utility to produce nuclear generation depends on the availability of nuclear fuel. The Utility has entered into various purchase agreements for nuclear fuel that are intended to ensure long-term fuel supply. For more information about these agreements, see Note 15: Commitments and Contingencies — Nuclear Fuel Agreements, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.

The following table outlines the Diablo Canyon power plant's refueling schedule for the next five years. The Diablo Canyon power plant refueling outages are typically scheduled every 20 months. The average length of a refueling outage over the last five years has been approximately 43.6 days. The actual refueling schedule and outage duration will depend on the scope of the work required for a particular outage and other factors.

| | 2013 | 2014 | 2015 | 2016 | 2017 |
|---|---|---|---|---|---|
| Unit 1 | | | | | |
| Refueling | - | February | September | - | April |
| Duration (days) | - | 40 | 40 | - | 30 |
| Startup | - | March | November | - | May |
| Unit 2 | | | | | |
| Refueling | February | September | - | May | - |
| Duration (days) | 52 | 40 | - | 35 | - |
| Startup | March | November | - | June | - |

*Hydroelectric Generation Facilities.* The Utility's hydroelectric system consists of 109 generating units at 68 powerhouses, including the Helms pumped storage facility. Most of the Utility's hydroelectric generation units are classified as "large" hydro facilities, as their unit capacity exceeds 30 MW. The Helms pumped storage facility consists of three motor/generator units. During 2011, the Utility began inspections of all three units following reports of a significant failure of a similarly designed pumped storage generation unit in Austria that was apparently caused by cracks in the generator rotor poles due to metal fatigue. The Utility completed inspections and repairs on each of the three units and returned them to service in 2012.

All of the Utility's powerhouses are licensed by the FERC (except for three small powerhouses not subject to FERC licensing requirements), with license terms between 30 and 50 years. The Utility is in the process of renewing hydroelectric licenses associated with capacity of approximately 1,137 MW and surrendering the hydroelectric license associated with the Kilarc-Cow Creek Project which has a capacity of 5 MW. Although the original licenses associated with 880 MW of the 1,137 MW have expired, the licenses are automatically renewed each year until completion of the relicensing process. Licenses associated with approximately 3,002 MW of hydroelectric power will expire between 2013 and 2047.

*Fossil Fuel-fired Generation Facilities.* The Utility's natural gas-fired generation facilities include the Colusa Generating Station, the Gateway Generating Station, and the Humboldt Bay generating station. In addition, the Utility owns and operates three fuel cell sites in the Bay Area. On December 20, 2012, the CPUC approved an amended purchase and sale agreement between the Utility and a third-party developer that provides for the construction of a 586-megawatt natural gas-fired facility in Oakley, California that would be acquired by the Utility no sooner than January 1, 2016.

*Photovoltaic Facilities.* In April 2010, the CPUC approved the Utility's five-year program for the development of up to 250 MW of solar photovoltaic ("PV") facilities to be owned and operated by the Utility, along with entering into power purchase agreements for an additional 250 MW of PV facilities to be developed by third parties. Under the PV program, Utility-owned PV facilities with an aggregate of 100 MW are operational, and an additional 50 MW are under construction and expected to become operational in 2013. The operational PV facilities include, the Five Points solar station (15 MW), the Westside solar station (15 MW), the Stroud solar station (20 MW), the Huron solar station (20 MW), the Cantua solar station (20 MW), and the Giffen solar station (10 MW). All of these facilities are located in Fresno County. The PV facilities under construction are the Gates solar station (20 MW), the West Gates solar station (10 MW) and the Guernsey solar station (20 MW). The Gates and West Gates solar stations are located in Fresno County; the Guernsey solar station is located in Kings County.

In December 2012, the Utility sought CPUC approval to terminate the PV program early. If approved, the Utility will not pursue the development of the remaining 100 MW of Utility-owned PV facilities over the remaining two years of the program, but instead will procure this capacity through the CPUC's Renewable Auction Mechanism ("RAM") process. Additionally, the Utility proposed to solicit the remaining 152 MW of capacity to be provided under power purchase agreements through the RAM process rather than through the PV program.

*Generation Resources from Third Parties*

*QF Power Purchase Agreements.* Under the Public Utility Regulatory Policies Act ("PURPA") of 1978 electric utilities are required to purchase energy and capacity from independent power producers with generation facilities that meet the statutory definition of a qualifying facility ("QF"). In June 2011, the FERC approved the California investor-owned utilities' joint application to terminate their obligation under PURPA to purchase QF energy and capacity from facilities exceeding 20 MW. QFs primarily include co-generation facilities that produce combined heat and power and renewable generation facilities. As of December 31, 2012, the Utility had power purchase agreements with 180 operating QFs for approximately 3,000 MW of capacity. The majority of this capacity is from cogeneration facilities and the remainder is from renewable generation facilities. Agreements for approximately 2,700 MW expire at various dates between 2013 and 2028. QF power purchase agreements for approximately 300 MW have no specific expiration dates and will terminate only when the owner of the QF exercises its termination option. No single QF accounted for more than 5% of the Utility's 2012 electricity deliveries.

*Irrigation Districts and Water Agencies.* The Utility also has entered into agreements with various irrigation districts and water agencies to purchase hydroelectric power. These agreements require the Utility to make semi-annual fixed minimum payments as well as variable payments based on the operating and maintenance costs incurred by the irrigation districts and water agencies. These contracts will expire on various dates between 2013 and 2030.

*Other Third-Party Power Purchase Agreements* . The Utility has entered into several power purchase agreements for renewable and conventional generation resources, including tolling agreements and resource adequacy agreements.

For more information regarding the Utility's power purchase agreements, see Note 15: Commitments and Contingencies — Third-Party Power Purchase Agreements, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.

*Renewable Generation Resources*

Renewable generation resources include bioenergy such as biogas and biomass, small hydroelectric, wind, solar, and geothermal energy. California's Renewables Portfolio Standard ("RPS") program gradually increases the amount of renewable energy that load-serving entities, such as the Utility, must deliver to their customers from an average of at least 20% of their total retail sales in the years 2011-2013 to 33% of their total retail sales in 2021 and thereafter. For more information regarding the new RPS program, see the section of MD&A entitled "Environmental Matters – Renewable Energy Resources" in the 2012 Annual Report, which information is incorporated herein by reference.

During 2012, most renewable energy deliveries resulted from third party power purchase agreements and QF agreements. Additional renewable resources included the Utility's small hydroelectric and solar facilities and certain irrigation district contracts (small hydroelectric facilities). (Under California law only small hydroelectric generation resources (30 MW or less) can qualify as a renewable resource for purposes of meeting the RPS mandate. Most of the Utility's hydroelectric generating units have a capacity in excess of the 30-MW threshold and do not qualify as RPS-eligible resources.)

Total 2012 renewable deliveries are stated in the table below.

| Type | GWh | % of Bundled Load |
|---|---|---|
| Biopower | 3,373 | 4.4% |
| Geothermal | 3,803 | 5.0% |
| Wind | 4,338 | 5.7% |
| Small Hydroelectric | 1,812 | 2.4% |
| Solar | 1,171 | 1.5% |
| Total | 14,497 | 19.0% |

For more information regarding the Utility's renewable energy contracts, see Note 15: Commitments and Contingencies — Third-Party Power Purchase Agreements, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.

***Electricity Transmission***

At December 31, 2012, the Utility owned approximately 18,100 circuit miles of interconnected transmission lines operated at voltages of 500 kV to 60 kV. The Utility also operated 91 electric transmission substations with a capacity of approximately 60,800 MVA. The Utility's electric transmission system is interconnected with electric power systems in the WECC, which includes many western states, Alberta and British Columbia, Canada, and parts of Mexico.

The CAISO, which is regulated by the FERC, controls the operation of the transmission system and provides open access transmission service on a nondiscriminatory basis. The CAISO also is responsible for ensuring that the reliability of the transmission system is maintained. The Utility acts as its own scheduling coordinator to schedule electricity deliveries to the transmission grid. The Utility also acts as a scheduling coordinator to deliver electricity produced by several governmental entities to the transmission grid under contracts

the Utility entered into with these entities before the CAISO commenced operation in 1998. In addition, under the mandatory reliability standards implemented by the FERC, all users, owners, and operators of the transmission system, including the Utility, are also responsible for maintaining reliability through compliance with the reliability standards. See the discussion of reliability standards under "The Utility's Regulatory Environment — Federal Regulation" above.

During 2012, the Utility upgraded several critical substations and re-conductored some transmission lines to improve maintenance and operating flexibility, reliability and safety, including the installation or replacement of 9 transmission substation banks. The Utility expects to undertake various additional transmission projects over the next few years to upgrade and expand the Utility's transmission system and increase capacity in order to accommodate system load growth, to secure access to renewable generation resources, to replace aging or obsolete equipment, and to improve system reliability.

***Electricity Distribution***

The Utility's electricity distribution network consists of approximately 141,000 circuit miles of distribution lines (of which approximately 20% are underground and approximately 80% are overhead), 58 transmission-switching substations, and 601 distribution substations. The Utility's distribution network interconnects with the Utility's transmission system primarily at transmission switching substations and distribution substations where transformers and switching equipment reduce the high-voltage transmission levels at which the electricity transmission system transmits electricity, ranging from 500 kV to 60 kV, to lower voltages, ranging from 44 kV to 2.4 kV, suitable for distribution to the Utility's customers. The distribution substations serve as the central hubs of the Utility's electricity distribution network and consist of transformers, voltage regulation equipment, protective devices, and structural equipment. Emanating from each substation are primary and secondary distribution lines connected to local transformers and switching equipment that link distribution lines and provide delivery to end-users. In some cases, the Utility sells electricity from its distribution lines or other facilities to entities, such as municipal and other utilities, that then resell the electricity.

In 2012, the Utility replaced more than 130,000 feet of underground cable, primarily in San Francisco and Oakland, replaced 98,000 feet of overhead wire, and installed or replaced 39 distribution substation transformer banks to improve reliability and provide capacity to accommodate growing demand. The Utility plans to continue performing work to improve the reliability and safety of its electricity distribution operations in 2013.

***Electricity Operating Statistics***

The following table shows certain of the Utility's operating statistics from 2008 to 2012 for electricity sold or delivered, including the classification of revenues by type of service.

| | 2012 | 2011 | 2010 | 2009 | 2008 |
|---|---|---|---|---|---|
| Customers (average for the year) | 5,214,170 | 5,188,638 | 5,155,724 | 5,137,240 | 5,129,427 |
| Deliveries (in GWh) [1] | 86,113 | 81,255 | 79,634 | 72,385 | 74,783 |
| Revenues (in millions): | | | | | |
| Residential | $ 4,953 | $ 4,778 | $ 4,795 | $ 4,759 | $ 4,656 |
| Commercial | 4,735 | 4,732 | 4,823 | 4,538 | 4,413 |
| Industrial | 1,408 | 1,379 | 1,424 | 1,392 | 1,400 |
| Agricultural | 901 | 692 | 736 | 770 | 727 |
| Public street and highway lighting | 79 | 77 | 79 | 74 | 75 |
| Other | (11) | 94 | (1,178) | (1,700) | (863) |
| Subtotal | 12,065 | 11,752 | 10,679 | 9,833 | 10,408 |
| Regulatory balancing accounts | (51) | (151) | (35) | 424 | 330 |
| **Total electricity operating revenues** | $12,014 | $11,601 | $ 10,644 | $ 10,257 | $ 10,738 |
| Other Data: | | | | | |
| Average annual residential usage (kWh) | 5,961 | 6,799 | 6,843 | 6,953 | 7,007 |
| Average billed revenues (per kWh): | | | | | |
| Residential | $ 0.1594 | $ 0.1548 | $ 0.1560 | $ 0.1524 | $ 0.1480 |
| Commercial | 0.1449 | 0.1441 | 0.1468 | 0.1377 | 0.1296 |
| Industrial | 0.917 | 0.951 | 0.988 | 0.940 | 0.867 |
| Agricultural | 0.1458 | 0.1475 | 0.1451 | 0.1327 | 0.1300 |
| Net plant investment per customer | $ 4,919 | $ 5,045 | $ 4,728 | $ 4,336 | $ 3,994 |

(1) These amounts include electricity provided to direct access customers who procure their own supplies of electricity.

## Natural Gas Utility Operations

During 2012, the Utility has taken many immediate and longer-term steps to improve the safety and reliability of its natural gas transmission system, including performing extensive pipeline testing and monitoring, and replacing and upgrading equipment. Much of this work is part of the Utility's pipeline safety enhancement plan ("PSEP"), approved by the CPUC in December 2012, to meet the new, industry-wide safety standards for gas transmission systems. (See the information within MD&A under the heading "Natural Gas Matters" in the 2012 Annual Report, which information is incorporated herein by reference.)

In 2012, as part of the PSEP pipeline modernization program, the Utility confirmed the strength of 202 miles of transmission pipeline through hydrostatic pressure tests or records verification, installed 46 automated or remote-controlled valves, replaced 40 miles of transmission pipeline, and retrofitted 78 miles of transmission pipeline to accommodate in-line inspection tools. Since work on the program began in 2011, the Utility has also collected and digitized more than 3.5 million pipeline records, which includes validating the Maximum Allowable Operating Pressure ("MAOP") for more than 89 percent of its gas transmission system (and 100 percent of the 2,088 miles of the Utility's transmission pipelines in populated areas).

The Utility is also improving operations by utilizing modern tools and technologies. In 2012, the Utility began demonstrating a new car-mounted natural gas leak detection device, which is much more sensitive than traditional instruments. The Utility also began using an advanced hand-held leak-detection instrument that uses infrared technology to pinpoint methane gas without false alarms from other gases. This technology can detect and grade leaks at the same time. In addition, the Utility improved its supervisory controls and data acquisition system ("SCADA") to better detect pipeline leaks and breaks and improved its integrity management program, including incorporating new analysis tools to identify and assess risks to pipeline integrity.

For the distribution system, the Utility has implemented a new distribution integrity management program designed to enhance operations and improve the overall safety of the gas distribution system. In 2012, the Utility replaced 23 miles of Aldyl-A plastic pipeline and identified another 150 miles to be replaced over the next two years. It also updated the geographic information system with information on more than 5,500 miles of Aldyl-A pipeline, including additional pipeline and service attribute information. The Utility also completed additional distribution leak surveys in 2012, in addition to complying with regular distribution leak survey requirements.

Many of these improvement efforts satisfy recommendations made to the Utility by the NTSB and the CPUC in 2010 and 2011. In the first half of 2012, the Utility was able to officially close out four of the twelve NTSB recommendations. In January 2013, the Utility requested closure on three more recommendations. The Utility continues to make significant progress on the remaining longer-term recommendations, and the NTSB stated in September 2012 that the Utility's progress was acceptable.

In December 2012, the CPUC accepted the gas safety plans submitted by each gas corporation in California, including the Utility, to describe each gas corporation's programs, plans, and initiatives, to increase the safety and reliability of their natural gas operations. The plans were submitted in compliance with California Senate Bill 705, enacted in October 2011, which requires each gas corporation subject to CPUC jurisdiction to develop and implement a plan for the safe and reliable operation of its gas pipeline system. The new law required the CPUC to review the plans and accept, modify, or reject each plan by December 31, 2012. The CPUC has ordered the Utility, as well as the other gas corporations, to submit modifications to their plans by June 2013 and to continually review, revise and update their plans as required by emerging issues, industry practices, and state and federal regulators.

### *Natural Gas System Assets*

The Utility owns and operates an integrated natural gas transportation, storage, and distribution system that includes most of northern and central California. At December 31, 2012, the Utility's natural gas system consisted of approximately 42,400 miles of distribution pipelines, approximately 6,400 miles of backbone and local transmission pipelines, and various storage facilities. The Utility owns and operates eight natural gas compressor stations which receive, store and move natural gas through the Utility's pipelines. (The Utility has incurred significant environmental liabilities related to some of its compressor stations. See "Environmental Matters" below.) The Utility's backbone transmission system, composed primarily of Lines 300, 400, and 401, is used to transport gas from the Utility's interconnection with interstate pipelines, other local distribution companies, and California gas

fields to the Utility's local transmission and distribution systems. The Utility's Line 300 interconnects with pipeline systems located in the U.S. Southwest and the Rocky Mountains that are owned by third parties (Transwestern Pipeline Company, El Paso Natural Gas Company, Questar Southern Trails Pipeline Company, and Kern River Pipeline Company). Line 300 has a receipt capacity of approximately 1.1 Bcf per day. The Utility's Line 400/401 interconnects at the California-Oregon border with the pipeline systems owned by Gas Transmission Northwest Corporation ("GTN") and Ruby Pipeline, LLC. This line has a receipt capacity at the border of approximately 2.2 Bcf per day. Through interconnections with other interstate pipelines, the Utility can receive natural gas from all the major natural gas basins in western North America, including basins in western Canada, the Rocky Mountains, and the southwestern United States. The Utility also is supplied by natural gas fields in California.

The Utility owns and operates three underground natural gas storage fields connected to the Utility's transmission and storage system and has a 25% interest in the new Gill Ranch Storage Field. These storage fields and the Utility's Gill Ranch share have a combined firm capacity of approximately 48.7 Bcf. In addition, three independent storage operators are interconnected to the Utility's northern California transportation system.

***Natural Gas Services***

The CPUC divides the Utility's on-system natural gas customers into two categories for the purpose of determining service reliability: core and non-core customers. This classification is based largely on a customer's annual natural gas usage. The core customer class is comprised mainly of residential and small commercial natural gas customers. The non-core customer class is comprised of industrial, large commercial, and electric generation natural gas customers. In 2012, core customers represented more than 99% of the Utility's total natural gas customers and 36% of its total natural gas deliveries, while non-core customers comprised less than 1% of the Utility's total natural gas customers and 64% of its total natural gas deliveries. In addition to deliveries discussed above, the Utility delivers gas to off-system customers ( *i.e* ., outside of the Utility's service territory) and to third-party natural gas storage customers.

The Utility provides natural gas transportation services to all core and non-core customers connected to the Utility's system in its service territory. Core customers can purchase natural gas procurement service (i.e. , natural gas supply) from either the Utility or alternate energy service providers. When the Utility provides both transportation and procurement services, the Utility refers to the combined service as "bundled" natural gas service. Currently, over 96% of core customers, representing over 83% of the annual core market demand, receive bundled natural gas service from the Utility.

The Utility does not provide procurement service to large non-core customers such as electricity generators, QF co-generators, enhanced oil recovery customers, refiners, and other large non-core customers. However, some smaller non-core customers are permitted to elect to receive core service, including procurement service, from the Utility if they agree to receive such service for a minimum of five years. Core service to non-core customers is subject to these restrictions to protect core procurement customers from price increases that could otherwise result if the Utility incurred costs to reinforce its pipeline system and take other measures to provide core service reliability on a short-term basis to serve new load from non-core customers.

The Utility offers backbone gas transmission, gas delivery (local transmission and distribution), and gas storage services as separate and distinct services to its non-core customers. Access to the Utility's backbone gas transmission system is available for all natural gas marketers and shippers, as well as non-core customers.

The Utility has regulatory balancing accounts for core customers designed to ensure that the Utility's results of operations over the long term are not affected by weather variations, conservation, energy efficiency measures, or changes in their consumption levels. The Utility's results of operations can be affected, however, by non-core consumption levels because there are fewer regulatory balancing accounts related to non-core customers. Approximately 97% of the Utility's natural gas distribution base revenues are recovered from core customers and the remainder from non-core customers.

*Natural Gas Supplies*

The Utility purchases natural gas to serve its core customers directly from producers and marketers in both Canada and the United States. The contract lengths and natural gas sources of the Utility's portfolio of natural gas purchase contracts have fluctuated generally based on market conditions. During 2012, the Utility purchased approximately 247,792 MMcf of natural gas (net of the sale of excess supply of gas). Substantially all this natural gas was purchased under contracts with a term of one year or less. The Utility's largest individual supplier

represented approximately 10% of the total natural gas volume the Utility purchased during 2012.

*Interstate and Canadian Natural Gas Transportation Services Agreements*

The Utility has a number of arrangements with interstate and Canadian third-party transportation service providers to serve core customers' service demands. The Utility has firm transportation agreements for delivery of natural gas from western Canada to the United States-Canada border with TransCanada NOVA Gas Transmission, Ltd. and TransCanada Foothills Pipe Lines Ltd., B.C. System. These companies' pipeline systems connect at the border to the pipeline system owned by GTN, which provides natural gas transportation services to a point of interconnection with the Utility's natural gas transportation system on the Oregon-California border near Malin, Oregon. The Utility, the largest firm shipper on GTN's pipeline, has two firm transportation agreements with GTN for these services. In addition, the Utility has firm transportation agreements with Ruby Pipeline, LLC to transport this gas from the U.S Rocky Mountains to the interconnection point with the Utility's natural gas transportation system in the area of Malin, Oregon, at the California border, and firm transportation agreements with Transwestern Pipeline Company, LLC and El Paso Natural Gas Company to transport this natural gas from supply points in this region to interconnection points with the Utility's natural gas transportation system in the area of California near Topock, Arizona.

*Natural Gas Deliveries*

The total volume of natural gas delivered to on-system customers during 2012 was approximately 945 MMDth. The following table shows the percentage of the Utility's total 2012 natural gas deliveries represented by each of the Utility's major customer classes.

| | |
|---|---|
| Residential Customers | 20% |
| Transport-only Customers (non-core) | 75% |
| Commercial Customers | 5% |

The California Gas Report is prepared by the California electric and natural gas utilities to present an outlook for natural gas requirements and supplies for California over a long-term planning horizon. It is prepared in even-numbered years followed by a supplemental report in odd-numbered years. The 2012 California Gas Report forecasts average annual growth in the Utility's natural gas deliveries (for core customers and non-core transportation) of approximately 0.3% for the years 2010 through 2030. The natural gas requirements forecast is subject to many uncertainties, and there are many factors that can influence the demand for natural gas, including weather conditions, level of economic activity, conservation, price, and the number and location of electricity generation facilities.

*Natural Gas Operating Statistics*

The following table shows the Utility's operating statistics from 2008 through 2012 (excluding subsidiaries) for natural gas, including the classification of revenues by type of service.

| | 2012 | 2011 | 2010 | 2009 | 2008 |
|---|---|---|---|---|---|
| Customers (average for the year) | 4,353,278 | 4,327,407 | 4,295,741 | 4,271,007 | 4,269,165 |
| Gas purchased (MMcf) | 247,792 | 279,157 | 270,228 | 264,314 | 260,315 |
| Average price of natural gas purchased | $ 2.45 | $ 3.69 | $ 4.07 | $ 3.57 | $ 7.51 |
| Bundled gas sales (MMcf): | | | | | |
| Residential | 185,376 | 201,109 | 195,195 | 195,217 | 198,699 |
| Commercial | 47,341 | 52,230 | 53,921 | 57,550 | 63,934 |
| Total | 232,717 | 253,339 | 249,116 | 252,767 | 262,633 |
| Revenues (in millions): | | | | | |
| Bundled gas sales: | | | | | |
| Residential | $ 1,852 | $ 2,089 | $ 1,991 | $ 1,953 | $ 2,574 |
| Commercial | 383 | 464 | 474 | 496 | 792 |
| Regulatory balancing accounts | 221 | 295 | 305 | 289 | 221 |
| Other | 66 | 102 | 49 | 55 | (30) |
| Bundled gas revenues | 2,522 | 2,950 | 2,819 | 2,793 | 3,557 |
| Transportation service only revenue | 499 | 400 | 377 | 349 | 333 |
| Operating revenues | $ 3,021 | $ 3,350 | $ 3,196 | $ 3,142 | $ 3,890 |
| Selected Statistics: | | | | | |
| Average annual residential usage (Mcf) | 45 | 49 | 48 | 48 | 49 |
| Average billed bundled gas sales revenues per Mcf: | | | | | |
| Residential | $ 9.99 | $ 10.39 | $ 10.20 | $ 10.00 | $ 12.95 |
| Commercial | 8.09 | 8.89 | 8.79 | 8.62 | 12.38 |
| Net plant investment per customer | $ 1,696 | $ 1,721 | $ 1,637 | $ 1,557 | $ 1,344 |

**Public Purpose and Customer Programs**

California law has historically required the CPUC to authorize certain levels of funding for programs related to energy efficiency, research and development, and renewable energy resources through the collection of an electric public goods charge. The legislation authorizing the public goods charge expired on January 1, 2012. The CPUC has ordered the Utility to continue to collect in electric rates the amounts that were previously funded through the public goods charge for energy efficiency and established an energy program investment charge to support ongoing energy efficiency and research and development. Gas public interest research continues to be funded through the gas public purpose program surcharge. California law requires the CPUC to authorize funding for the California Solar Initiative and other self-generation programs, as discussed under “Self-Generation Incentive Program and California Solar Initiative,” below. Additionally, the CPUC has authorized funding for energy savings assistance and demand response programs. For 2012, the Utility collected authorized revenue requirements of $688 million from electric customers and $169 million from gas customers to fund public purpose and other programs.

*Energy Efficiency Programs*

The Utility's energy efficiency programs are designed to encourage the manufacture, design, distribution, and customer use of energy efficient appliances, other energy-using equipment and energy management products to meet energy savings goals in California. The CPUC has authorized a total of $823 million to fund the Utility's 2013 and 2014 energy efficiency programs, including programs administered by the Marin Energy Authority, a CCA, and a regional network of San Francisco Bay area cities and counties.

On December 20, 2012, the CPUC approved a new energy efficiency incentive mechanism to reward the Utility and other California energy utilities for the successful implementation of their 2010-2012 energy efficiency programs. The mechanism provides each utility with an earnings rate composed of a 5% management fee based on qualified program expenditures and an additional performance bonus of up to 1%. The Utility's earnings rate for the 2010-2012 energy efficiency program cycle is 5.68%. The CPUC awarded the Utility $21 million for the successful implementation of the Utility's 2010 energy efficiency programs. The CPUC decision also established the process that is expected to apply to incentive claims for program years 2011 and 2012. After the CPUC completes its audit of the utilities' 2011 program expenditures, the utilities must file their incentive claims in the third quarter of 2013 for approval by the CPUC in the fourth quarter of 2013. Similarly, the utilities will file their incentive claims based on the CPUC-audited 2012 program expenditures in the third quarter of 2014 for approval by the CPUC in the fourth quarter of 2014.

It is uncertain what form of incentive ratemaking the CPUC will establish and what amount, if any, the Utility will be authorized to earn for future energy efficiency programs.

*Demand Response Programs*

Demand response programs provide financial incentives and other benefits to participating customers to curtail on-peak energy use. In April 2012, the CPUC authorized the Utility to collect $192 million to fund its 2012-2014 demand response programs. Due to the timing of the decision, the CPUC authorized the Utility to recover both 2012 and 2013 program costs through customer rates collected in 2013.

*Self-Generation Incentive Program and California Solar Initiative*

The Utility administers the self-generation incentive program authorized by the CPUC to provide incentives to electricity and gas customers who install certain types of clean or renewable distributed generation and energy storage resources that meet all or a portion of their onsite energy usage. In December 2011, the CPUC approved continuing annual funding for the self-generation incentive program of $36 million through 2014, with any carryover funds to be administered through 2015. The Utility also administers the California Solar Initiative in its service territory. The CPUC has authorized the Utility to collect approximately $1.1 billion from 2007 through 2016 to fund customer incentives for the installation of retail solar energy projects to serve onsite load, as well as to fund research, development, and demonstration activities, and administration expenses. The current overall objective of this initiative is to install 3,000 MW (through both California investor-owned electric utilities and municipal electric utilities) through 2016.

*Low-Income Energy Efficiency Programs and California Alternate Rates for Energy*

The CPUC has authorized the Utility to collect approximately $469 million to support the Utility's energy efficiency programs for low-income and fixed-income customers over 2012 through 2014. The Utility also provides a discount rate called the California Alternate Rates for Energy ("CARE") for low-income customers. This rate subsidy is paid for by the Utility's other customers. During any given year, the extent of the subsidy for customers collectively depends upon the number of customers participating in the program and their actual energy usage. In 2012, the amount of this subsidy was approximately $851 million. The CPUC also authorized the Utility to recover approximately $45 million in administrative costs relating to the CARE subsidy through 2014.

**Environmental Matters**

The Utility is subject to a number of federal, state and local laws and requirements relating to the protection of the environment and the safety and health of the Utility's personnel and the public.  These laws and requirements relate to a broad range of activities, including the following:

- the discharge of pollutants into the air, water, and soil;
- the transportation, handling, storage and disposal of spent nuclear fuel;
- the identification, generation, storage, handling, transportation, treatment, disposal, record keeping, labeling, reporting, remediation and emergency response in connection with hazardous and radioactive substances;
- the reporting and reduction of carbon dioxide ("CO2") and other GHG emissions; and
- the environmental impacts of land use, including endangered species and habitat protection.

The penalties for violation of these laws and requirements can be severe and may include significant fines, damages, and criminal or civil sanctions.  These laws and requirements also may require the Utility, under certain circumstances, to interrupt or curtail operations.  To comply with these laws and requirements, the Utility may need to spend substantial amounts from time to time to construct, acquire, modify, or replace equipment, acquire permits and/or emission allowances or other emission credits for facility operations and clean-up, or decommission waste disposal areas at the Utility's current or former facilities and at third-party sites where the Utility's wastes may have been disposed.

The Utility's estimated costs to comply with environmental laws and regulations are based on current estimates and assumptions that are subject to change.  In addition, the Utility is likely to incur costs as it develops
and implements strategies to mitigate the impact of its operations on the environment, including climate change and its foreseeable impact on the Utility's future operations.  The actual amount of costs that the Utility will incur is subject to many factors, including changing laws and regulations, the ultimate outcome of complex factual investigations, evolving technologies, selection of compliance alternatives, the nature and extent of required remediation, the extent of the facility owner's responsibility, the availability of recoveries or contributions from third parties, and the development of market-based strategies to address climate change.  Generally, the Utility has recovered the costs of complying with environmental laws and regulations in the Utility's rates, subject to reasonableness review.  Environmental costs associated with the clean-up of most sites that contain hazardous substances are subject to a special ratemaking mechanism described under "Recovery of Environmental Remediation Costs" below.

***Air Quality and Climate Change***

The Utility's electricity generation plants, natural gas pipeline operations, fleet, and fuel storage tanks are subject to numerous air pollution control laws, including the federal Clean Air Act, as well as state and local statutes.  These laws and regulations cover, among other pollutants, those contributing to the formation of ground-level ozone, carbon monoxide, sulfur dioxide ("SO2"), nitrogen oxide ("NOx") and particulate matter.

*Federal Regulation* .  At the federal level, the U.S. Environmental Protection Agency ("EPA") is charged with implementation and enforcement of the Clean Air Act.  Although there have been several legislative attempts to address climate change through imposition of nationwide regulatory limits on GHG emissions, comprehensive federal legislation has not yet been enacted..  In the absence of federal legislative action, the EPA has used its existing authority under the Clean Air Act to address GHG emissions, including establishing an annual GHG reporting requirement.

*State Regulation.*   AB 32 requires the gradual reduction of state-wide GHG emissions to the 1990 level by 2020. The CARB is the state agency charged with monitoring GHG levels and adopting regulations to implement and enforce AB 32.  The CARB established a state-wide GHG 1990 emissions baseline of 427 million metric tons of CO2 (or its equivalent) to serve as the 2020 emissions limit for the state of California.  The CARB has approved various regulations to implement AB 32, including a state-wide, comprehensive "cap and trade" program that sets gradually declining limits (or "caps") on the amount of GHGs that may be emitted by the major sources of GHG emissions.

The cap and trade program's first two-year compliance period, which began January 1, 2013, applies to the electricity generation and large industrial sectors.  The next two-year compliance period, from January 1, 2015 through December 31, 2017, will expand to include the natural gas supply and transportation sectors, effectively

covering all the capped sectors until 2020. Each year the CARB will issue emission allowances (i.e., the rights to emit GHGs) equal to the amount of GHGs emissions allowed for that year. Emitters can obtain allowances from the CARB at quarterly auctions held by the CARB or from third parties on the secondary market for trading GHG allowances. The CARB's first quarterly auction was held on November 14, 2012. Emitters (also known as covered entities) are required to obtain and surrender allowances equal to the amount of their GHGs emissions within a particular compliance period. Emitters may also meet up to 8% of their compliance obligation through the purchase of "offset credits" which represent GHG emissions abatement achieved in sectors that are not subject to the cap. For more information about the cap-and trade program, see the section of MD&A entitled "Environmental Matters" in the 2012 Annual Report, which information is incorporated herein by reference.

Increasing use of renewable energy supplies also is expected to help reduce GHG emissions in California. In April 2011, the California Governor signed legislation that requires load-serving entities, such as the Utility, to gradually increase the amount of renewable energy delivered to their customers to at least 33% of the total amount of electricity retail sales by 2020. (See "Electricity Resources" above.) In December 2011, the CPUC approved various regulations to implement the new law, including the establishment of renewable energy targets for each compliance period. (For more information, see "Renewable Generation Resources" above.)

*Climate Change Mitigation and Adaptation Strategies.* During 2012, the Utility continued its programs to develop strategies to mitigate the impact of the Utility's operations (including customer energy usage) on the environment and to develop its strategy to plan for the actions that it will need to take to adapt to the likely impacts that climate change will have on the Utility's future operations. With respect to electric operations, climate scientists project that, sometime in the next several decades, climate change will lead to increased electricity demand due to more extreme and frequent hot weather events. Climate scientists also predict that climate change will result in significant reductions in snowpack in parts of the Sierra Nevada Mountains. This impact could, in turn, affect the Utility's hydroelectric generation. At this time, the Utility does not anticipate that reductions in Sierra Nevada snowpack will have a significant impact on its hydroelectric generation, due in large part to its adaptation strategies. For example, one adaptation strategy the Utility is developing is a combination of operating changes that may include, but are not limited to, higher winter carryover reservoir storage levels, reduced conveyance flows in canals and flumes in response to an increased portion of precipitation falling as rain rather than snow, and reduced discretionary reservoir water releases during the late spring and summer. If the Utility is not successful in fully adapting to projected reductions in snowpack over the coming decades, it may become necessary to replace some of its hydroelectric generation with electricity from other sources, including GHG-emitting natural gas-fired power plants.

With respect to natural gas operations, safety-related pipeline hydrotesting, as well as normal pipeline maintenance, releases the GHG methane to the atmosphere. The Utility has taken steps to reduce the release of methane by implementing techniques including drafting and cross-compression. In addition, the Utility continues to replace a substantial portion of its older cast iron and steel gas mains with new pipe, which reduces leakage.

The Utility believes its strategies to reduce GHG emissions—such as energy efficiency and demand response programs, infrastructure improvements, and the support of renewable energy development—are also effective strategies for adapting to the expected increased demand for electricity in extreme hot weather events likely to result from climate change. PG&E Corporation and the Utility are also assessing the benefits and challenges associated with various climate change policies and identifying how a comprehensive program can be structured to mitigate overall costs to customers and the economy as a whole while ensuring that the environmental objectives of the program are met.

***Emissions Data***

PG&E Corporation and the Utility track and report their annual environmental performance results across a broad spectrum of areas. As a result of the time necessary for a thorough, third-party verification of the Utility's GHG emissions, emissions data for 2011 are the most recent data available. Since 2009, the Utility has complied with AB 32's annual GHG emissions reporting requirements, reporting combustion emissions from its electric generation facilities and natural gas compressor stations to the CARB. (For information about the sources of electric generation that the Utility delivered to customers in 2012, see "Electric Utility Operations− Electricity Resources" above.) Consistent with Utility practice since 2002, the Utility also voluntarily reported its 2011 GHG emissions to The Climate Registry ("TCR"), a non-profit organization that has a reporting and measurement standard applicable to most industry sectors across North America. Reporting to TCR enables the Utility to publicly report GHG emissions not covered by mandatory reporting requirements. The Utility's third-party verified voluntary GHG

inventory for 2011 totaled more than 50 million metric tonnes of CO2-equivalent (“CO2-e”), which includes approximately 33 million metric tonnes CO2-e from customer natural gas use.

Beginning with its 2010 emissions, the Utility also reported the GHG emissions from its facilities and operations to the EPA under its mandatory reporting requirements. PG&E Corporation and the Utility also publish third-party-verified GHG emissions data in their annual Corporate Responsibility and Sustainability Report.

***2011 Emissions Reported to the California Air Resources Board***

For its 2011 emissions, the Utility began reporting the GHG emissions from natural gas supplied to customers and the fugitive emissions from its natural gas distribution system and compressor stations. The following table shows the GHG emissions data the Utility reported to the CARB under AB 32.

| **Source** | **Amount (metric tonnes CO2 – equivalent)** |
|---|---|
| Fossil Fuel-Fired Plants (1) | 2,025,543 |
| Natural Gas Compressor Stations (2) | 258,446 |
| Distribution Fugitive Natural Gas Emissions | 224,298 |
| Customer Natural Gas Use (3) | 39,049,732 |
| Total | 41,558,019 |

(1) Includes nitrous oxide (“N2O”) and methane (“CH4”) emissions from the Utility’s generating stations; does not include de minimis emissions.
(2) Includes compressor stations emitting more than 25,000 metric tonnes of CO2-e annually; does not include de minimis emissions.
(3) Includes emissions from the combustion of natural gas delivered to all entities on the Utility’s distribution system, with the exception of gas delivered to other natural gas local distribution companies. This figure does not represent the Utility’s compliance obligation under AB 32, which will be equivalent to the above reported value less the fuel that is delivered to covered entities as calculated by the CARB.

***Benchmarking GHG Emissions for Delivered Electricity***

The Utility’s third-party-verified CO2 emissions rate associated with the electricity delivered to customers in 2011 was 393 pounds of CO2 per MWh. The Utility’s 2011 emissions rate as compared to the national and California averages for electric utilities is shown in the following table:

| | **Amount (Pounds of CO2 per MWh)** |
|---|---|
| U.S. Average (1) | 1,216 |
| California’s Average (1) | 659 |
| Pacific Gas and Electric Company (2) | 393 |

(1) Source: Environmental Protection Agency eGRID 2012 Version 1.0, which contains year 2009 information configured to reflect the electric power industry's current structure as of May 10, 2012. This is the most up-to-date information available from EPA.

(2) Since the Utility purchases a portion of its electricity from the wholesale market, the Utility is not able to track some of its delivered electricity back to a specific generator. Therefore, there is some unavoidable uncertainty in the Utility’s total emissions and the Utility’s emission rate for delivered electricity.

***Emissions Data for Utility-Owned Generation***

In addition to GHG emissions data provided above, the table below sets forth information about the GHG and other emissions from the Utility’s owned generation facilities. The Utility’s owned generation (primarily nuclear and hydroelectric facilities) comprised more than 40% of the Utility’s delivered electricity in 2011. The Utility’s fossil fuel-fired generation comprised approximately 6% of the Utility’s delivered electricity in 2011.

| | 2011 | 2010 |
|---|---|---|
| Total NOx Emissions (tons) | 144 | 904 |
| NOx Emissions Rates (pounds/MWh) | | |
| Fossil Fuel-Fired Plants | 0.06 | 0.49 |
| All Plants | 0.008 | 0.06 |
| Total SO2 Emissions (tons) | 12 | 42 |
| SO2 Emissions Rates (pounds/MWh) | | |
| Fossil Fuel-Fired Plants | 0.005 | 0.023 |
| All Plants | 0.0007 | 0.003 |
| Total CO2 Emissions (metric tons) | 2,024,206 | 1,545,892 |
| CO2 Emissions Rates (pounds/MWh) | | |
| Fossil Fuel-Fired Plants | 875 | 943 |

| | | |
|---|---|---|
| All Plants | 126 | 106 |
| Other Emissions Statistics | | |
| Sulfur Hexafluoride (“SF6”) Emissions | | |
| Total SF6 Emissions (metric tons CO2-equivalent) | 70,052 | 69,066 |
| SF6 Emissions Leak Rate | 1.7% | 1.8% |

***Water Quality***

Section 316(b) of the federal Clean Water Act requires that cooling water intake structures at electric power plants, such as the nuclear generation facilities at Diablo Canyon, reflect the best technology available to minimize adverse environmental impacts. On April 20, 2011, the EPA published draft regulations that propose specific reductions for impingement (which occurs when larger organisms are caught on water filter screens) and provide a case-by-case site specific assessment to establish compliance requirements for entrainment (which occurs when organisms are drawn through the cooling water system). The proposed site specific assessment allows for the consideration of a variety of factors including social costs and benefits, energy reliability, land availability, and non-water quality adverse impacts. The draft regulations were subject to public comment. In June 2012, the EPA issued a Notice of Data Availability proposing changes to the draft regulations which, if adopted, would provide more flexibility in complying with some of the requirements. The EPA is required to issue final regulations by July 2013.

On May 4, 2010, the California Water Resources Control Board ("California Water Board") adopted a policy on once-through cooling. The policy, effective October 1, 2010, generally requires the installation of cooling towers or other significant measures to reduce the impact on marine life from existing power generation facilities by at least 85%. However, with respect to the state's nuclear power generation facilities, the policy allows other compliance measures to be taken if the costs to install cooling towers are "wholly out of proportion" to the costs considered by the California Water Board in developing its policy. The policy also allows other compliance measures to be taken if the installation of cooling towers would be "wholly unreasonable" after considering non-cost factors such as engineering and permitting constraints and adverse environmental impacts. The Utility believes that the costs to install cooling towers at Diablo Canyon, which could be as much as $4.5 billion, will meet the "wholly out of proportion" test. The Utility also believes that the installation of cooling towers at Diablo Canyon would be "wholly unreasonable." The policy also established a nuclear review committee to evaluate the feasibility and cost of alternative technologies for nuclear plants. The committee's consultant, Bechtel, must complete an assessment for the California Water Board's review by October 2013. Upon review of the feasibility assessment, if the California Water Board does not require the installation of cooling towers at Diablo Canyon, the Utility could incur significant costs to comply with alternative compliance measures or to make payments to support various environmental mitigation projects. If the California Water Board requires the installation of cooling towers that the Utility believes are not technically or economically feasible, the Utility may be forced to cease operations at Diablo Canyon, may need to procure substitute power, and may incur a material charge. The Utility would seek to recover such costs in rates. The Utility's Diablo Canyon operations must be in compliance with the California Water Board's policy by December 31, 2024.

***Hazardous Waste Compliance and Remediation***

The Utility's facilities are subject to the requirements issued by the EPA under the federal Resource Conservation and Recovery Act ("RCRA") and the Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended ("CERCLA"), as well as other state hazardous waste laws and other environmental requirements. CERCLA and similar state laws impose liability, without regard to fault or the legality of the original conduct, on certain classes of persons that contributed to the release of a hazardous substance into the

environment. These persons include the owner or operator of the site where the release occurred and companies that disposed or arranged for the disposal of the hazardous substances found at the site, and in some cases corporate successors to the operators or arrangers. Under CERCLA, these persons may be subject to joint and several liability for the costs of cleaning up the hazardous substances that have been released into the environment, damages to natural resources, and the costs of required health studies. In the ordinary course of the Utility's operations, the Utility generates waste that falls within CERCLA's definition of hazardous substances and, as a result, has been and may be jointly and severally liable under CERCLA for all or part of the costs required to clean up sites at which these hazardous substances have been released into the environment.

The Utility has a comprehensive program in place to comply with federal, state, and local laws and regulations related to hazardous materials and hazardous waste compliance, remediation activities, and other environmental requirements. The Utility assesses and monitors, on an ongoing basis, measures that may be necessary to comply with these laws and regulations and implements changes to its program as deemed appropriate. The Utility's remediation activities are overseen by the California Department of Toxic Substances Control ("DTSC"), several California regional water quality control boards, and various other federal, state, and local agencies.

The Utility has been, and may be, required to pay for environmental remediation at sites where the Utility has been, or may be, a potentially responsible party under CERCLA and similar state environmental laws. These sites include former manufactured gas plant ("MGP") sites; current and former power plant sites; former gas gathering and gas storage sites; sites where natural gas compressor stations are located; current and former substations, service centers, and general construction yard sites; and sites currently and formerly used by the Utility for the storage, recycling, or disposal of hazardous substances. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site.

Although the Utility has provided for known environmental obligations that are probable and reasonably estimable, estimated costs may vary significantly from actual costs, and the amount of additional future costs may be material to results of operations in the period in which they are recognized. For more information about environmental remediation liabilities, see the sections within MD&A entitled "Environmental Matters," "Critical Accounting Polices," and Note 15: Commitments and Contingencies−Environmental Remediation Contingencies, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.

*Generation Facilities*

Operations at the Utility's current and former generation facilities may have resulted in contaminated soil or groundwater. Although the Utility sold most of its geothermal and fossil fuel-fired plants, in many cases the Utility retained pre-closing environmental liability under various environmental laws. The Utility currently is investigating or remediating several such sites with the oversight of various governmental agencies. Fossil fuel-fired Units 1 and 2 of the Utility's Humboldt Bay power plant shut down in September 2010, and are now in the decommissioning process along with the nuclear Unit 3, which was shut down in 1976. The Utility has entered into a voluntary cleanup agreement with the DTSC and is currently completing a soil and groundwater investigation to determine what soil and groundwater remediation may be necessary.

*Former Manufactured Gas Plant Sites*

The Utility is assessing whether and to what extent remedial action may be necessary to mitigate potential hazards posed by certain retired MGP sites. During their operation, from the mid-1800s through the early 1900s, MGPs produced lampblack and coal tar residues. The residues from these operations, which may remain at some sites, contain chemical compounds that now are classified as hazardous. The Utility has been coordinating with environmental agencies and third-party owners to evaluate and take appropriate action to mitigate any potential environmental concerns at 41 MGP sites that the Utility owned or operated in the past. Of these sites owned or operated by the Utility, 40 sites have been or are in the process of being investigated and/or remediated, and the Utility is developing a strategy to investigate and remediate the last site. The Utility spent approximately $51 million in 2012 on these sites.

*Third-Party Owned Disposal Sites*

Under environmental laws, such as CERCLA, the Utility has been or may be required to take remedial action at third-party sites used for the disposal of waste from the Utility's facilities, or to pay for associated clean-up

costs or natural resource damages.  The Utility is currently aware of two such sites where investigation or clean-up activities are currently underway.  At the Geothermal Incorporated site in Lake County, California, the Utility substantially completed closure of the disposal facility, which was abandoned by its operator.  The Utility was the major responsible party and led the remediation effort on behalf of the responsible parties.  For the Casmalia disposal facility near Santa Maria, California, the Utility and several parties that sent waste to the site have entered into a court-approved agreement with the EPA that requires the Utility and the other parties to perform certain site investigation and remediation measures.

*Natural Gas Compressor Stations*

Groundwater at the Utility’s Hinkley and Topock natural gas compressor stations contains hexavalent chromium as a result of the Utility’s past operating practices.  The Utility is responsible for remediating this groundwater contamination and for abating the effects of the contamination on the environment.  The Utility has incurred significant environmental liabilities associated with these sites.  For more information about the Utility’s remediation and abatement efforts and related liabilities, see Note 15: Commitments and Contingencies−Environmental Remediation Contingencies of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.

*Recovery of Environmental Remediation Costs*

The CPUC has authorized the Utility to recover most of its environmental remediation costs through various ratemaking mechanisms, subject to exclusions for certain sites, such as the Hinkley natural gas compressor site, and subject to limitations for certain liabilities such as amounts associated with fossil fuel-fired generation facilities formerly owned by the Utility.  For more information, see Note 15: Commitments and Contingencies−Environmental Remediation Contingencies of the Notes to the Consolidated Financial Statements in the 2012 Annual Report which information is incorporated herein by reference.

***Nuclear Fuel Disposal***

Under the Nuclear Waste Policy Act of 1982, the DOE and electric utilities with commercial nuclear power plants were authorized to enter into contracts under which the DOE would be required to dispose of the utilities’ spent nuclear fuel and high-level radioactive waste by January 1998, in exchange for fees paid by the utilities.  The DOE has been unable to meet its contractual obligation with the Utility to dispose of nuclear waste from the Utility’s two nuclear generating units at Diablo Canyon and the retired nuclear facility at Humboldt Bay Unit 3.  As a result, the Utility constructed an interim dry cask storage facility to store spent fuel at Diablo Canyon through at least 2024, and a separate facility at Humboldt Bay.  The Utility and other nuclear power plant owners sued the DOE to recover the costs that they incurred to construct interim storage facilities for spent nuclear fuel.

On September 5, 2012, the U.S. Department of Justice and the Utility executed a settlement agreement that awarded the Utility $266 million for spent fuel storage costs incurred through December 31, 2010.  For more information, see Note 15: Commitments and Contingencies−Environmental Remediation Contingencies of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.  Considerable uncertainty continues to exist regarding when and whether the DOE will meet its contractual obligation to the Utility and other nuclear power plant owners to dispose of spent fuel.

***Nuclear Decommissioning***

The Utility's nuclear power facilities consist of two units at Diablo Canyon and the retired facility at Humboldt Bay Unit 3.  Nuclear decommissioning requires the safe removal of nuclear facilities from service and the reduction of residual radioactivity to a level that permits termination of the NRC license and release of the property for unrestricted use. The Utility files an application with the CPUC every three years requesting approval of the Utility’s estimated decommissioning costs and authorization to recover the estimated costs through rates.  Nuclear decommissioning charges collected through rates are held in nuclear decommissioning trusts to be used for the eventual decommissioning of each nuclear unit.   (See the discussion of the 2012 Nuclear Decommissioning Cost Triennal Proceeding in Note 2: Summary of Significant Accounting Policies of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.)

***Endangered Species***

Many of the Utility's facilities and operations are located in, or pass through, areas that are designated as critical habitats for federal, or state-listed endangered, threatened, or sensitive species. The Utility may be required to incur additional costs or be subjected to additional restrictions on operations if additional threatened or endangered species are listed or additional critical habitats are designated at or near the Utility's facilities or operations. The Utility is seeking to secure "habitat conservation plans" to ensure long-term compliance with state and federal endangered species acts. The Utility expects that it will be able to recover costs of complying with state and federal endangered species acts through rates.

**Item 1A.** ***Risk Factors***

A discussion of the significant risks associated with investments in the securities of PG&E Corporation and the Utility appears within MD&A under the heading "Risk Factors" in the 2012 Annual Report, which information is incorporated herein by reference.

**Item 1B.** ***Unresolved Staff Comments***

None.

**Item 2.** ***Properties***

The Utility owns or has obtained the right to occupy and/or use real property comprising the Utility's electricity and natural gas distribution facilities, natural gas gathering facilities and generation facilities, and natural gas and electricity transmission facilities, which are described above under "Electric Utility Operations" and "Natural Gas Utility Operations" which information is incorporated herein by reference. The Utility occupies or uses real property that it does not own primarily through various leases, easements, rights-of-way, permits, or licenses from private landowners or governmental authorities. In March and September 2012, the Utility entered into 10-year facility lease agreements for 250,000 and 145,000 square feet of office space, respectively, in San Ramon, California. The Utility also recently entered into a lease agreement for a new 12,000 square foot data center located near Sacramento, California. In total, the Utility occupies 10.8 million square feet of real property, including 8.6 million square feet that the Utility owns. Of the 10.8 million square feet of occupied real property, approximately 1.7 million square feet represent the Utility's corporate headquarters located in several Utility-owned buildings in San Francisco, California.

The Utility currently owns approximately 167,000 acres of land, including approximately 140,000 acres of watershed lands. As part of the settlement agreement entered into by PG&E Corporation and the Utility to resolve the Utility's proceeding under Chapter 11 of the U.S. Bankruptcy Code, the Utility agreed to protect its watershed lands with conservation easements or equivalent protections, and/or donate up to approximately 75,000 acres of its watershed lands to public entities or qualified non-profit conservation organizations. (The Utility will not donate watershed lands that contain the Utility's or a joint licensee's hydroelectric generation facilities or is otherwise used for utility operations, but this land may be encumbered with conservation easements.) The Utility formed a non-profit organization, the Pacific Forest Watershed Lands Stewardship Council ("Council") to oversee the development and implementation of a Land Conservation Plan ("LCP") that will articulate the long-term management objectives for the watershed lands. The Council is governed by an 18-member board of directors, one of whom was appointed by the Utility. The other members represent a range of diverse interests, including the CPUC, California environmental agencies, organizations representing underserved and minority constituencies, agricultural and business interests, and public officials. The Council's goal is to implement the transactions contemplated in the LCP over the next few years, subject to obtaining any required permits and approvals from the FERC, the CPUC, and other governmental agencies.

PG&E Corporation also leases approximately 82,000 square feet of office space from a third party in San Francisco, California, of which 40,000 square feet will expire in 2014 and the remaining in 2022.

**Item 3.** ***Legal Proceedings***

In addition to the following legal proceedings, PG&E Corporation and the Utility are involved in various legal proceedings in the ordinary course of their business. For more information regarding PG&E Corporation's and the Utility's liability for legal matters, see Note 15: Commitments and Contingencies−Legal and Regulatory Contingencies, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.

***Diablo Canyon Power Plant***

The Utility's Diablo Canyon power plant employs a "once-through" cooling water system that is regulated under a Clean Water Act permit issued by the Central Coast Regional Water Quality Control Board ("Central Coast Board"). This permit allows the Diablo Canyon power plant to discharge the cooling water at a temperature no more than 22 degrees above the temperature of the ambient receiving water, and requires that the beneficial uses of the water be protected. The beneficial uses of water in this region include industrial water supply, marine and wildlife habitat, shellfish harvesting, and preservation of rare and endangered species. In January 2000, the Central Coast Board issued a proposed draft cease and desist order alleging that, although the temperature limit has never been exceeded, the Utility's Diablo Canyon power plant's discharge was not protective of beneficial uses.

In October 2000, the Utility and the Central Coast Board reached a tentative settlement under which the Central Coast Board agreed to find that the Utility's discharge of cooling water from the Diablo Canyon power plant protects beneficial uses and that the intake technology reflects the best technology available, as defined in the federal Clean Water Act. As part of the tentative settlement, the Utility agreed to take measures to preserve certain acreage north of the plant and to fund approximately $6 million in environmental projects and future environmental monitoring related to coastal resources. On March 21, 2003, the Central Coast Board voted to accept the settlement agreement. On June 17, 2003, the settlement agreement was executed by the Utility, the Central Coast Board and the California Attorney General's Office. A condition to the effectiveness of the settlement agreement is that the Central Coast Board renew Diablo Canyon's permit.

At its July 10, 2003 meeting, the Central Coast Board did not renew the permit and continued the permit renewal hearing indefinitely. Several Central Coast Board members indicated that they no longer supported the settlement agreement, and the Central Coast Board requested a team of independent scientists, as part of a technical working group, to develop additional information on possible mitigation measures for Central Coast Board staff. In January 2005, the Central Coast Board published the scientists' draft report recommending several such mitigation measures. If the Central Coast Board adopts the scientists' recommendations, and if the Utility ultimately is required to implement the projects proposed in the draft report, it could incur costs of up to approximately $30 million. The Utility would seek to recover these costs through rates charged to customers.

In addition, the California Water Board's policy on once-through cooling and regulations that are expected to be issued by the EPA in July 2013 could affect future negotiations between the Central Coast Board and the Utility regarding the status of the 2003 settlement agreement. (See "Item 1. Business−Environmental Matters−Water Quality" above.)

PG&E Corporation and the Utility believe that the ultimate outcome of this matter will not have a material impact on their Utility's financial condition or results of operations.

***Litigation Related to the San Bruno Accident and Natural Gas Spending***

At December 31, 2012, approximately 140 lawsuits involving third-party claims for personal injury and property damage, including two class action lawsuits, had been filed against PG&E Corporation and the Utility in connection with the San Bruno accident on behalf of approximately 450 plaintiffs. The lawsuits seek compensation for personal injury and property damage, and other relief, including punitive damages. These cases have been coordinated and assigned to one judge in the San Mateo County Superior Court. The trial of the first group of remaining cases began on January 2, 2013 with pretrial motions and hearings. On January 14, 2013, the court vacated the trial and all pending hearings due to the significant number of cases that have been settled outside of court. The court has urged the parties to settle the remaining cases. As of February 8, 2013, the Utility has entered into settlement agreements to resolve the claims of approximately 140 plaintiffs. It is uncertain whether or when the Utility will be able to resolve the remaining claims through settlement.

Additionally, in October 2010, a purported shareholder derivative lawsuit was filed following the San Bruno accident to seek recovery on behalf of PG&E Corporation and the Utility for alleged breaches of fiduciary duty by officers and directors, among other claims, relating to the Utility's natural gas business. The case has been coordinated with the other cases in the San Mateo County Superior Court. The judge has ordered that proceedings in the derivative lawsuit be delayed until further order of the court. On February 7, 2013, another purported shareholder derivative lawsuit was filed in U.S. District Court for the Northern District of California to seek recovery on behalf of PG&E Corporation for alleged breaches of fiduciary duty by officers and directors, among other claims.

In addition, on August 23, 2012, a complaint was filed in the San Francisco Superior Court against PG&E Corporation and the Utility (and other unnamed defendants) by individuals who seek certification of a class consisting of all California residents who were customers of the Utility between 1997 and 2010, with certain exceptions. The plaintiffs allege that the Utility collected more than $100 million in customer rates from 1997 through 2010 for the purpose of various safety measures and operations projects but instead used the funds for general corporate purposes such as executive compensation and bonuses. To state their claims, the plaintiffs cited the January 2012 investigative report from the CPUC's Safety and Enforcement Division ("SED") that alleged, from 1996 to 2010, the Utility spent less on capital expenditures and operations and maintenance expense for its natural gas transmission operations than it recovered in rates, by $95 million and $39 million, respectively. The SED recommended that the Utility should use such amounts to fund future gas transmission expenditures and operations. Plaintiffs allege that PG&E Corporation and the Utility engaged in unfair business practices in violation of Section 17200 of the California Business and Professions Code ("Section 17200") and claim that this violation also constitutes a violation of California Public Utilities Code Section 2106 ("Section 2106"), which provides a private right of action for violations of the California constitution or state laws by public utilities. Plaintiffs seek restitution and disgorgement under Section 17200 and compensatory and punitive damages under Section 2106. PG&E Corporation and the Utility contest the allegations. In January 2013, PG&E Corporation and the Utility requested that the court dismiss the complaint on the grounds that the CPUC has exclusive jurisdiction to adjudicate the issues raised by the plaintiffs' allegations. In the alternative, PG&E Corporation and the Utility requested that the court stay the proceeding until the CPUC investigations described above are concluded. The court has set a hearing on the motion for April 26, 2013.

For additional information, see the discussion within MD&A under the heading, "Natural Gas Matters" and in Note 15: Commitments and Contingencies of the Notes to the Consolidated Financial Statements contained in the 2012 Annual Report, which discussions are incorporated herein by reference.

***Pending CPUC Investigations and Potential Enforcement Matters***

The CPUC is conducting three investigations pertaining to the Utility's natural gas operations that relate to (1) the Utility's safety recordkeeping for its natural gas transmission system, (2) the Utility's operation of its natural gas transmission pipeline system in or near locations of higher population density, and (3) the Utility's pipeline installation, integrity management, recordkeeping and other operational practices, and other events or courses of conduct, that could have led to or contributed to the San Bruno accident. In 2012, the SED issued investigative reports in each of these investigations alleging that the Utility committed numerous violations of applicable laws and regulations and recommending the CPUC impose penalties on the Utility. Evidentiary hearings were held in each of these investigations. The CPUC administrative law judges ("ALJs") who oversee the investigations have adopted a revised procedural schedule, including the dates by which the parties' briefs must be submitted. The ALJs have also permitted the other parties (the City of San Bruno, The Utility Reform Network, and the City and County of San Francisco) to separately address in their opening briefs their allegations against the Utility, if any, in addition to the allegations made by the SED.

The ALJs have ordered the SED and other parties to file single coordinated briefs to address potential monetary penalties and remedies (which could include remedial operational or policy measures) for all three investigations by April 26, 2013. After briefing has been completed, the ALJs will issue one or more presiding officer's decisions listing the violations determined to have been committed, the amount of penalties, and any required remedial actions. Based on the revised procedural schedule, one or more presiding officer's decisions will be issued by July 23, 2013. The decisions would become the final decisions of the CPUC thirty days after issuance unless the Utility or another party filed an appeal, or a CPUC commissioner requested review of the decision, within such time.

California gas corporations are required to provide notice to the CPUC of any self-identified or self-corrected violations of certain state and federal regulations related to the safety of natural gas facilities and utilities' natural gas operating practices. The CPUC has authorized the SED to issue citations and impose penalties based on self-reported violations. In April 2012, the CPUC affirmed a $17 million penalty that had been imposed by the SED based on the Utility's self-report that it failed to conduct periodic leak surveys because it had not included 16 gas distribution maps in its leak survey schedule. (The Utility has paid the penalty and completed all of the missed leak surveys.) As of December 31, 2012, the Utility has submitted 34 self-reports with the CPUC, plus additional follow-up reports. The SED has not yet taken formal action with respect to the Utility's other self-reports. The SED may issue additional citations and impose penalties on the Utility associated with these or future reports that the Utility may file.

In addition, in July 2012, the Utility reported to the CPUC that it had discovered that its access to some pipelines has been limited by vegetation overgrowth or building structures that encroach upon some of the Utility's gas transmission pipeline rights-of-way. The Utility is undertaking a system-wide effort to identify and remove encroachments from its pipeline rights-of-way over a multi-year period. PG&E Corporation and the Utility are uncertain how this matter will affect the investigative proceedings related to natural gas operations, or whether additional proceedings or investigations will be commenced by the CPUC that could result in regulatory orders or the imposition of penalties on the Utility.

The CPUC can impose significant penalties for violations of applicable laws, rules, and orders. The CPUC has wide discretion to determine the amount of penalties based on the totality of the circumstances, including such factors as the gravity of the violations; the type of harm caused by the violations and the number of persons affected; and the good faith of the entity charged in attempting to achieve compliance, after notification of a violation. The CPUC is also required to consider the appropriateness of the amount of the penalty to the size of the entity charged. The CPUC has historically exercised this discretion in determining penalties. The CPUC's delegation of enforcement authority to the SED allows the SED to use these factors in exercising discretion to determine the number of violations, but the SED is required to impose the maximum statutory penalty for each separate violation that the SED finds.

For more information, see discussions within MD&A under the heading, "Natural Gas Matters," and Note 15: Commitments and Contingencies−Legal and Regulatory Contingencies, of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which discussions are incorporated herein by reference

***Criminal Investigation***

On June 9, 2011, the Utility was notified that representatives from the U.S. Department of Justice, the California Attorney General's Office, and the San Mateo County District Attorney's Office are conducting an investigation of the San Bruno accident. These representatives have indicated that the Utility is a target of the investigation. The Utility is cooperating with the investigation. PG&E Corporation and the Utility are uncertain whether any criminal charges will be brought against either company or any of their current or former employees. PG&E Corporation and the Utility are unable to estimate the amount (or range of amounts) of reasonably possible losses associated with any civil or criminal penalties that could be imposed on the Utility. See the discussions within MD&A under the heading "Natural Gas Matters – Criminal Investigation," and in Note 15: Commitments and Contingencies of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which discussions are incorporated herein by reference.

**Item 4. *Mine Safety Disclosures***

Not applicable.

## EXECUTIVE OFFICERS OF THE REGISTRANTS

The names, ages and positions of PG&E Corporation "executive officers," as defined by Rule 3b-7 of the General Rules and Regulations under the Securities and Exchange Act of 1934 ("Exchange Act") at February 1, 2013 were as follows.

| Name | Age | Position |
|---|---|---|
| Anthony F. Earley, Jr. | 63 | Chairman of the Board, Chief Executive Officer, and President |
| Kent M. Harvey | 54 | Senior Vice President and Chief Financial Officer |
| Christopher P. Johns | 52 | President, Pacific Gas and Electric Company |
| Hyun Park | 51 | Senior Vice President and General Counsel |
| Greg S. Pruett | 55 | Senior Vice President, Corporate Affairs |
| John R. Simon | 48 | Senior Vice President, Human Resources |

All officers of PG&E Corporation serve at the pleasure of the Board of Directors of PG&E Corporation. During at least the past five years through February 1, 2013, the executive officers of PG&E Corporation had the following business experience. Except as otherwise noted, all positions have been held at PG&E Corporation.

| Name | Position | Period Held Office |
|---|---|---|
| Anthony F. Earley, Jr. | Chairman of the Board, Chief Executive Officer, and President | September 13, 2011 to present |
| | Executive Chairman of the Board, DTE Energy Company | October 1, 2010 to September 12, 2011 |
| | Chairman of the Board and Chief Executive Officer, DTE Energy Company | August 1998 to September 30, 2010 |
| Kent M. Harvey | Senior Vice President and Chief Financial Officer | August 1, 2009 to present |
| | Senior Vice President, Financial Services, Pacific Gas and Electric Company | August 1, 2009 to present |
| | Senior Vice President and Chief Risk and Audit Officer | October 1, 2005 to July 31, 2009 |
| Christopher P. Johns | President, Pacific Gas and Electric Company | August 1, 2009 to present |
| | Senior Vice President and Chief Financial Officer | May 1, 2009 to July 31, 2009 |
| | Senior Vice President, Financial Services, Pacific Gas and Electric Company | May 1, 2009 to July 31, 2009 |
| | Senior Vice President, Chief Financial Officer, and Treasurer | October 4, 2005 to April 30, 2009 |
| | Senior Vice President and Treasurer, Pacific Gas and Electric Company | June 1, 2007 to April 30, 2009 |
| Hyun Park | Senior Vice President and General Counsel | November 13, 2006 to present |
| Greg S. Pruett | Senior Vice President, Corporate Affairs | November 1, 2009 to present |
| | Senior Vice President, Corporate Affairs, Pacific Gas and Electric Company | November 1, 2009 to present |
| | Senior Vice President, Corporate Relations | November 1, 2007 to October 31, 2009 |
| | Senior Vice President, Corporate Relations, Pacific Gas and Electric Company | March 1, 2009 to October 31, 2009 |
| John R. Simon | Senior Vice President, Human Resources | April 16, 2007 to present |
| | Senior Vice President, Human Resources, Pacific Gas and Electric Company | April 16, 2007 to present |

The names, ages and positions of the Utility's "executive officers," as defined by Rule 3b-7 of the General Rules and Regulations under the Exchange Act at February 1, 2013 were as follows:

| Name | Age | Position |
|---|---|---|
| Anthony F. Earley, Jr. | 63 | Chairman of the Board, Chief Executive Officer, and President, PG&E Corporation |
| Christopher P. Johns | 52 | President |
| Nickolas Stavropoulos | 54 | Executive Vice President, Gas Operations |
| Geisha J. Williams | 51 | Executive Vice President, Electric Operations |
| Karen A. Austin | 51 | Senior Vice President and Chief Information Officer |
| Desmond A. Bell | 50 | Senior Vice President, Safety and Shared Services |
| Thomas E. Bottorff | 59 | Senior Vice President, Regulatory Affairs |
| Helen A. Burt | 56 | Senior Vice President and Chief Customer Officer |
| John T. Conway | 55 | Senior Vice President, Energy Supply |
| Edward D. Halpin | 51 | Senior Vice President and Chief Nuclear Officer |
| Kent M. Harvey | 54 | Senior Vice President, Financial Services |
| Gregory K. Kiraly | 48 | Senior Vice President, Electric Distribution Operations |
| Hyun Park | 51 | Senior Vice President and General Counsel, PG&E Corporation |
| Greg S. Pruett | 55 | Senior Vice President, Corporate Affairs |
| John R. Simon | 48 | Senior Vice President, Human Resources |
| Jesus Soto, Jr. | 45 | Senior Vice President, Gas Transmission Operations |
| Fong Wan | 51 | Senior Vice President, Energy Procurement |
| Dinyar B. Mistry | 50 | Vice President, Chief Financial Officer, and Controller |

All officers of the Utility serve at the pleasure of the Board of Directors of the Utility. During at least the past five years through February 1, 2013, the executive officers of the Utility had the following business experience. Except as otherwise noted, all positions have been held at Pacific Gas and Electric Company.

| Name | Position | Period Held Office |
|---|---|---|
| Anthony F. Earley, Jr. | Chairman of the Board, Chief Executive Officer, and President, PG&E Corporation | September 13, 2011 to present |
| | Executive Chairman of the Board, DTE Energy Company | October 1, 2010 to September 12, 2011 |
| | Chairman of the Board and Chief Executive Officer, DTE Energy Company | August 1998 to September 30, 2010 |
| Christopher P. Johns | President | August 1, 2009 to present |

| Jesus Soto, Jr. | Senior Vice President, Gas Transmission Operations | May 29, 2012 to present |
| | Vice President, Operations Services, El Paso Pipeline Group | May 2007 to May 2012 |
| Fong Wan | Senior Vice President, Energy Procurement | October 1, 2008 to present |
| | Vice President, Energy Procurement | January 9, 2006 to September 30, 2008 |
| Dinyar B. Mistry | Vice President, Chief Financial Officer, and Controller | October 1, 2011 to present |
| | Vice President and Controller, PG&E Corporation | March 8, 2010 to present |
| | Vice President and Controller | March 8, 2010 to September 30, 2011 |
| | Vice President and Chief Risk and Audit Officer | September 16, 2009 to March 7, 2010 |
| | Vice President and Chief Risk and Audit Officer, PG&E Corporation | August 1, 2009 to March 7, 2010 |
| | Vice President, Internal Auditing/Compliance and Ethics, PG&E Corporation | January 1, 2009 to July 31, 2009 |
| | Vice President, Regulation and Rates | September 20, 2007 to December 31, 2008 |

## PART II

**Item 5.** ***Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities***

As of February 11, 2013, there were 67,982 holders of record of PG&E Corporation common stock. PG&E Corporation common stock is listed on the New York Stock Exchange and the Swiss stock exchange. The high and low sales prices of PG&E Corporation common stock for each quarter of the two most recent fiscal years are set forth under the heading "Quarterly Consolidated Financial Data (Unaudited)" in the 2012 Annual Report, which information is incorporated herein by reference. Shares of common stock of the Utility are solely owned by PG&E Corporation. Information about the frequency, amount, and restrictions upon the payment of, dividends on common stock declared by PG&E Corporation and the Utility is set forth in PG&E Corporation's Consolidated Statements of Equity, the Utility's Consolidated Statements of Shareholders' Equity, Note 6: Common Stock and Share-Based Compensation−Dividends of the Notes to the Consolidated Financial Statements, and within MD&A under the heading "Liquidity and Financial Resources—Dividends," in the 2012 Annual Report, which information is incorporated herein by reference.

***Sales of Unregistered Equity Securities***

During the quarter ended December 31, 2012, PG&E Corporation made equity contributions totaling $170 million to the Utility in order to maintain the Utility's 52% common equity target authorized by the CPUC and to ensure that the Utility has adequate capital to fund its capital expenditures. PG&E Corporation did not make any sales of unregistered equity securities during 2012.

***Issuer Purchases of Equity Securities***

PG&E Corporation common stock:

| Period | Total Number of Shares Purchased | Average Price Per Share | Total Number of Shares Purchased as Part of Publicly Announced Plans or Programs | Approximate Dollar Value of Shares that May Yet be Purchased Under the Plans or Programs |
|---|---|---|---|---|
| October 1 through October 31, 2012 | - | - | - | $ - |
| November 1 through November 30, 2012 | - | - | - | - |
| December 1 through December 31, 2012 | 406 [1] | $39.71 | - | - |
| **Total** | 406 | $39.71 | - | $ - |

[1] Shares of PG&E Corporation common stock tendered to pay stock option exercise price.

During the quarter ended December 31, 2012, the Utility did not redeem or repurchase any shares of its various series of preferred stock outstanding.

**Item 6.** ***Selected Financial Data***

Selected financial information, for each of PG&E Corporation and the Utility for each of the last five fiscal years, is set forth under the heading "Selected Financial Data" in the 2012 Annual Report, which information is incorporated herein by reference.

**Item 7.** ***Management's Discussion and Analysis of Financial Condition and Results of Operations***

A discussion of PG&E Corporation's and the Utility's consolidated financial condition and results of operations is set forth under the heading "Management's Discussion and Analysis of Financial Condition and Results of Operations" in the 2012 Annual Report, which discussion is incorporated herein by reference.

**Item 7A.** ***Quantitative and Qualitative Disclosures About Market Risk***

Information responding to Item 7A is set forth within MD&A under the heading "Risk Management Activities," and in Note 10: Derivatives and Note 11: Fair Value Measurements of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which information is incorporated herein by reference.

**Item 8.** ***Financial Statements and Supplementary Data***

Information responding to Item 8 is set forth under the following headings for PG&E Corporation: "Consolidated Statements of Income," "Consolidated Statements of Comprehensive Income," "Consolidated Balance Sheets," "Consolidated Statements of Cash Flows," and "Consolidated Statements of Equity;" under the following headings for Pacific Gas and Electric Company: "Consolidated Statements of Income," "Consolidated Statements of Comprehensive Income," "Consolidated Balance Sheets," "Consolidated Statements of Cash Flows," and "Consolidated Statements of Shareholders' Equity" in the 2012 Annual Report and under the following headings for PG&E Corporation and Pacific Gas and Electric Company jointly: "Notes to the Consolidated Financial Statements," "Quarterly Consolidated Financial Data (Unaudited)," and "Reports of Independent Registered Public Accounting Firm" in the 2012 Annual Report, which information is incorporated herein by reference.

**Item 9.** ***Changes in and Disagreements With Accountants on Accounting and Financial Disclosure***

Not applicable.

**Item 9A.** ***Controls and Procedures***

Based on an evaluation of PG&E Corporation's and the Utility's disclosure controls and procedures as of December 31, 2012, PG&E Corporation's and the Utility's respective principal executive officers and principal financial officers have concluded that such controls and procedures are effective to ensure that information required to be disclosed by PG&E Corporation and the Utility in reports that the companies file or submit under the 1934 Act is recorded, processed, summarized, and reported within the time periods specified in the SEC rules and forms. In addition, PG&E Corporation's and the Utility's respective principal executive officers and principal financial officers have concluded that such controls and procedures were effective in ensuring that information required to be disclosed by PG&E Corporation and the Utility in the reports that PG&E Corporation and the Utility file or submit under the 1934 Act is accumulated and communicated to PG&E Corporation's and the Utility's management, including PG&E Corporation's and the Utility's respective principal executive officers and principal financial officers, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure.

There were no changes in internal control over financial reporting that occurred during the quarter ended December 31, 2012 that have materially affected, or are reasonably likely to materially affect, PG&E Corporation's or the Utility's internal control over financial reporting.

Management of PG&E Corporation and the Utility have prepared an annual report on internal control over financial reporting. Management's report, together with the report of the independent registered public accounting firm, appears in the 2012 Annual Report under the heading "Management's Report on Internal Control Over Financial Reporting" and "Report of Independent Registered Public Accounting Firm," which information is incorporated by reference and included in Exhibit 13 to this report.

**Item 9B.** ***Other Information***

***2013 PG&E Corporation Short-Term Incentive Plan***

On February 20, 2013, the Compensation Committee of the PG&E Corporation Board of Directors ("Committee") approved the PG&E Corporation 2013 Short-Term Incentive Plan ("STIP") under which officers and employees of PG&E Corporation and the Utility may receive cash awards based on the extent to which specified performance targets are met in each of three areas: safety (both public and employee), customer (which includes operational reliability and the efficient completion of pipeline safety work), and corporate financial performance. The resulting STIP scores for each of these measures will have the following weightings: safety (40%), customer (35%), and corporate financial performance (25%). The Committee also approved the specific performance targets for each of these STIP components.

## PART III

**Item 10.** ***Directors, Executive Officers and Corporate Governance***

Information regarding executive officers of PG&E Corporation and the Utility is set forth under "Executive Officers of the Registrants" at the end of Part I of this report. Other information regarding directors is set forth under the heading "Nominees for Directors of PG&E Corporation and Pacific Gas and Electric Company" in the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders, which information is incorporated herein by reference. Information regarding compliance with Section 16 of the Exchange Act is included under the heading "Section 16(a) Beneficial Ownership Reporting Compliance" in the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders, which information is incorporated herein by reference.

***Website Availability of Code of Ethics, Corporate Governance and Other Documents***

The following documents are available both on PG&E Corporation's website *www.pgecorp.com* , and the Utility's website, *www.pge.com* : (1) the codes of conduct and ethics adopted by PG&E Corporation and the Utility applicable to their respective directors and employees, including their respective Chief Executive Officers, Chief Financial Officers, Controllers and other executive officers, (2) PG&E Corporation's and the Utility's corporate governance guidelines, and (3) key Board Committee charters, including charters for the companies' Audit Committees and the PG&E Corporation Nominating and Governance Committee and Compensation Committee.

If any amendments are made to, or any waivers are granted with respect to, provisions of the codes of conduct and ethics adopted by PG&E Corporation and the Utility that apply to their respective Chief Executive Officers, Chief Financial Officers, or Controllers, the company whose code is so affected will disclose the nature of such amendment or waiver on its respective website and any waivers to the code will be disclosed in a Current Report on Form 8-K filed within four business days of the waiver.

***Procedures for Shareholder Recommendations of Nominees to the Boards of Directors***

During 2012 there were no material changes to the procedures described in PG&E Corporation's and the Utility's Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders by which security holders may recommend nominees to PG&E Corporation's or Pacific Gas and Electric Company's Boards of Directors.

***Audit Committees and Audit Committee Financial Expert***

Information regarding the Audit Committees of PG&E Corporation and the Utility and the "audit committee financial expert" as defined by the SEC is set forth under the headings "Corporate Governance — Board Committee Duties and Composition — Audit Committees" and "Corporate Governance — Board and Director Independence — Committee Membership Requirements" and "Corporate Governance – Committee Membership" in the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders, which information is incorporated herein by reference.

**Item 11.** ***Executive Compensation***

Information responding to Item 11, for each of PG&E Corporation and the Utility, is set forth under the headings "Compensation Discussion and Analysis," "Compensation Committee Report," "Summary Compensation Table - 2012," "Grants of Plan-Based Awards in 2012," "Outstanding Equity Awards at Fiscal Year End - 2012," "Option Exercises and Stock Vested During 2012," "Pension Benefits – 2012," "Non-Qualified Deferred Compensation – 2012," "Potential Payments Upon Resignation, Retirement, Termination, Change in Control, Death, or Disability" and "Compensation of Non-Employee Directors – 2012 Director Compensation" in the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders, which information is hereby incorporated herein by reference.

**Item 12.** ***Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters***

Information regarding the beneficial ownership of securities for each of PG&E Corporation and the Utility, is set forth under the headings "Security Ownership of Management" and "Share Ownership Information - Principal Shareholders" in the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders, which information is incorporated herein by reference.

*Equity Compensation Plan Information*

The following table provides information as of December 31, 2012 concerning shares of PG&E Corporation common stock authorized for issuance under PG&E Corporation's existing equity compensation plans.

| Plan Category | (a) Number of Securities to be Issued Upon Exercise of Outstanding Options, Warrants and Rights | (b) Weighted Average Exercise Price of Outstanding Options, Warrants and Rights | (c) Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (Excluding Securities Reflected in Column(a) ) |
|---|---|---|---|
| Equity compensation plans approved by shareholders | 5,758,820[(1)] | $ 30.05 | 4,548,119[(2)] |
| Equity compensation plans not approved by shareholders | - | - | - |
| Total equity compensation plans | 5,758,820[(1)] | $ 30.05 | 4,548,119[(2)] |

(1) Includes 45,597 phantom stock units, 2,101,484 restricted stock units and 3,088,896 performance shares. The weighted average exercise price reported in column (b) does not take these awards into account. For a description of these performance shares, see Note 6: Common Stock and Share-Based Compensation of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which description is incorporated herein by reference. For performance shares, amounts reflected in this table assume payout in shares at 200% of target. The actual number of shares issued can range from 0% to 200% of target depending on achievement of total shareholder return objectives. Also, restricted stock units and performance shares are generally settled in net shares. Upon vesting, shares with a value equal to required tax withholding will be withheld and, in lieu of issuing the shares, taxes will be paid on behalf of employees. Shares not issued due to share withholding or performance achievement below maximum will be available again for issuance.

(2) Represents the total number of shares available for issuance under the PG&E Corporation Long-Term Incentive Program (“LTIP”) and the PG&E Corporation 2006 Long-Term Incentive Plan (“2006 LTIP”) as of December 31, 2012. Outstanding stock-based awards granted under the LTIP include stock options, restricted stock, and phantom stock. The LTIP expired on December 31, 2005. The 2006 LTIP, which became effective on January 1, 2006, authorizes up to 12 million shares to be issued pursuant to awards granted under the 2006 LTIP. Outstanding stock-based awards granted under the 2006 LTIP include stock options, restricted stock, restricted stock units, phantom stock and performance shares. For a description of the 2006 LTIP, see Note 6: Common Stock and Share-Based Compensation of the Notes to the Consolidated Financial Statements in the 2012 Annual Report, which description is incorporated herein by reference.

**Item 13.** ***Certain Relationships and Related Transactions, and Director Independence***

Information responding to Item 13, for each of PG&E Corporation and the Utility, is included under the headings Related Party Transactions and “Information Regarding the Boards of Directors of PG&E Corporation and Pacific Gas and Electric Company –Board and Director Independence” in the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders, which information is incorporated herein by reference.

**Item 14.** ***Principal Accountant Fees and Services***

Information responding to Item 14, for each of PG&E Corporation and the Utility, is set forth under the heading “Information Regarding the Independent Registered Public Accounting Firm for PG&E Corporation and Pacific Gas and Electric Company” in the Joint Proxy Statement relating to the 2013 Annual Meetings of Shareholders, which information is incorporated herein by reference.

**PART IV**

**Item 15.** ***Exhibits and Financial Statement Schedules***

**(a) The following documents are filed as a part of this report:**

1. The following consolidated financial statements, supplemental information and report of independent registered public accounting firm are contained in the 2012 Annual Report and are incorporated by reference in this report:

Consolidated Statements of Income for the Years Ended December 31, 2012, 2011, and 2010 for each of PG&E Corporation and Pacific Gas and Electric Company.

Consolidated Statements of Comprehensive Income for the Years Ended December 31, 2012, 2011, and 2010 for each of PG&E Corporation and Pacific Gas and Electric Company.

Consolidated Balance Sheets at December 31, 2012 and 2011 for each of PG&E Corporation and Pacific Gas and Electric Company.

Consolidated Statements of Cash Flows for the Years Ended December 31, 2012, 2011, and 2010 for each of PG&E Corporation and Pacific Gas and Electric Company.

Consolidated Statements of Equity for the Years Ended December 31, 2012, 2011, and 2010 for PG&E Corporation.

Consolidated Statements of Shareholders' Equity for the Years Ended December 31, 2012, 2011, and 2010 for Pacific Gas and Electric Company.

Notes to the Consolidated Financial Statements.

Quarterly Consolidated Financial Data (Unaudited).

Reports of Independent Registered Public Accounting Firm (Deloitte & Touche LLP).

2. The following financial statement schedules and report of independent registered public accounting firm are filed as part of this report:

Reports of Independent Registered Public Accounting Firm (Deloitte & Touche LLP).

I—Condensed Financial Information of Parent as of December 31, 2012 and 2011 and for the Years Ended December 31, 2012, 2011, and 2010.

II—Consolidated Valuation and Qualifying Accounts for each of PG&E Corporation and Pacific Gas and Electric Company for the Years Ended December 31, 2012, 2011, and 2010.

Schedules not included are omitted because of the absence of conditions under which they are required or because the required information is provided in the consolidated financial statements, including the notes thereto.

3. Exhibits required by Item 601 of Regulation S-K

| **Exhibit Number** | **Exhibit Description** |
|---|---|

**REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Shareholders of
PG&E Corporation and Pacific Gas and Electric Company
San Francisco, California

We have audited the consolidated financial statements of PG&E Corporation and subsidiaries (the "Company") and Pacific Gas and Electric Company and subsidiaries (the "Utility") as of December 31, 2012 and 2011, and for each of the three years in the period ended December 31, 2012, and the Company's and the Utility's internal control over financial reporting as of December 31, 2012, and have issued our reports thereon dated February 21, 2013 (which report on the consolidated financial statements expresses an unqualified opinion and includes an explanatory paragraph relating to several investigations and enforcement matters pending with the California Public Utilities Commission that may result in material amounts of penalties); such consolidated financial statements and reports are included in your 2012 Annual Report to Shareholders of the Company and the Utility and are incorporated herein by reference. Our audits also included the consolidated financial statement schedules of the Company and Utility listed in Item 15. These consolidated financial statement schedules are the responsibility of the Company's and the Utility's management. Our responsibility is to express an opinion based on our audits. In our opinion, such consolidated financial statement schedules, when considered in relation to the basic consolidated financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

| Net income | $ 816 | $ 844 | $ 1,099 |
| Other Comprehensive Income | | | |
| Pension and other postretirement benefit plans (net of income tax of $72, $9, $25 in 2012, 2011, and 2010, respectively) | 108 | (11) | (42) |
| Other (net of income tax of $3 in 2012) | 4 | - | - |
| Total other comprehensive income (loss) | 112 | (11) | (42) |
| Comprehensive Income | $ 928 | $ 833 | $ 1,057 |
| Weighted average common shares outstanding, basic | 424 | 401 | 382 |
| Weighted average common shares outstanding, diluted | 425 | 402 | 392 |
| Net earnings per common share, basic | $ 1.92 | $ 2.10 | $ 2.86 |
| Net earnings per common share, diluted | $ 1.92 | $ 2.10 | $ 2.82 |

PG&E Corporation applies the treasury stock method of reflecting the dilutive effect of outstanding stock-based compensation in the calculation of diluted EPS. In addition, during 2010, PG&E Corporation applied the “if-converted” method to reflect the impact of the Convertible Subordinated Notes to the extent it was dilutive when compared to basic EPS.

**AMENDMENT NO. 1 TO CREDIT AGREEMENT**

This AMENDMENT NO. 1 TO CREDIT AGREEMENT (this " Amendment "), dated as of December 24, 2012, is entered into by and among (1) PG&E CORPORATION, a California corporation (the " Borrower "); (2) the Required Lenders (as defined in the Credit Agreement referred to below); and (3) BANK OF AMERICA, N.A., as Administrative Agent, with respect to the following:

A. The Borrower, the Administrative Agent and the Lenders have previously entered into that certain Credit Agreement dated as of May 31, 2011 (the " Existing Credit Agreement " and as the same may be further amended, restated, supplemented or otherwise modified and in effect from time to time, including, but not limited to, by this Amendment, the " Credit Agreement "). Capitalized terms are used in this Amendment as defined in the Credit Agreement, unless otherwise defined herein.

B. The Borrower, the Administrative Agent and the Required Lenders desire to make certain amendments to the Existing Credit Agreement as set forth below on the terms and subject to the conditions set forth in this Amendment.

NOW, THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto hereby agree as follows:

1. **Effectiveness** . The effectiveness of the provisions of Section 2 of this Amendment is subject to the satisfaction of the conditions further described in Section 3 of this Amendment.

2. **Amendment to Section 8** . On the terms and subject to the conditions of this Amendment, Section 8 of the Existing Credit Agreement is hereby amended by deleting clause (h) in its entirety and replacing it with the following:

"(h) one or more judgments or decrees shall be entered against the Borrower or any of its Significant Subsidiaries by a court of competent jurisdiction involving in the aggregate a liability (not paid or, subject to customary deductibles, fully covered by insurance as to which the relevant insurance company has not denied coverage) of $100,000,000 or more, and all such judgments or decrees shall not have been vacated, discharged, stayed or bonded pending appeal within 30 days from the entry thereof unless, in the case of a discharge, such judgment or decree is due at a later date in one or more payments and the Borrower or such Subsidiary satisfies the obligation to make such payment or payments on or prior to the date such payment or payments become due in accordance with such judgment or decree; or."

3. **Conditions Precedent to the Effectiveness of this Amendment** . The effectiveness of the provisions of Section 2 of this Amendment is conditioned upon, and such provisions shall not be effective until, satisfaction of the following conditions (the first date on which all of the following conditions have been satisfied being referred to herein as the " Amendment Effective Date "):

(a) The Administrative Agent shall have received, on behalf of the Lenders, this Amendment, duly executed and delivered by the Borrower, the Administrative Agent and the Required Lenders.

(b) The representations and warranties set forth in Section 4 of this Amendment shall be true and correct as of the Amendment Effective Date.

(c) No Default or Event of Default shall have occurred and be continuing on the date of the Amendment Effective Date or after giving effect to this Amendment.

4. **Representations and Warranties**. In order to induce the Administrative Agent and the Lenders to enter into this Amendment and to amend the Existing Credit Agreement in the manner provided in this Amendment, the Borrower represents and warrants to the Administrative Agent and each Lender that (a) each of the representations and warranties made by the Borrower in the Credit Agreement (i) that does not contain a materiality qualification (other than the representations and warranties set forth in Section 4.2, 4.6(b) and 4.13) shall be true and correct in all material respects on and as of the date of the Amendment Effective Date as if made on and as of such date, and (ii) that contains a materiality qualification (other than the representations and warranties set forth in Sections 4.2, 4.6(b) and 4.13) shall be true and correct on and as of the Amendment Effective Date (or, to the extent such representations and warranties specifically relate to an earlier date, that such representations and warranties were true and correct in all material respects, or true and correct, as the case may be, as of such earlier date); (b) the Borrower has the corporate power and corporate authority to make and deliver this Amendment and to perform the Existing Credit Agreement as amended by this Amendment; (c) the Borrower has taken all necessary corporate action to authorize the execution and delivery of this Amendment and the performance of the Existing Credit Agreement as amended by this Amendment; (d) this Amendment has been duly executed and delivered by the Borrower and constitutes a legal, valid and binding obligation of the Borrower, enforceable against the Borrower in accordance with its terms, except as enforceability may be limited by (x) applicable bankruptcy, insolvency, reorganization, moratorium or similar laws affecting the enforcement of creditors' rights generally, laws of general application related to the enforceability of securities secured by real estate and by general equitable principles (whether enforcement is sought by proceedings in equity or at law) and (y) applicable regulatory requirements (including the approval of the CPUC) prior to foreclosure under the Indenture; and (e) t he execution and delivery by the Borrower of this Amendment and the performance by the Borrower of this Amendment do not (x) violate in any material respect any Requirement of Law or any Contractual Obligation of the Borrower or any of its Significant Subsidiaries; or (y) result in, or require, the creation or imposition of any Lien on any of their respective properties or revenues pursuant to any Requirement of Law or any such Contractual Obligation (other than the Liens created by the Indenture).

5. **Miscellaneous**.

(a) Reference to and Effect on the Existing Credit Agreement and the other Loan Documents.

(i) Except as specifically amended by this Amendment, the Existing Credit Agreement and the other Loan Documents shall remain in full force and effect and are hereby ratified and confirmed by the Borrower in all respects.

(ii) The execution and delivery of this Amendment and performance of the Credit Agreement shall not, except as expressly provided herein, constitute a waiver of any provision of, or operate as a waiver of any right, power or remedy of the Administrative Agent or the Lenders under, the Existing Credit Agreement or any of the other Loan Documents.

(iii) Upon the conditions precedent set forth herein being satisfied, this Amendment shall be construed as one with the Existing Credit Agreement, and the Existing Credit Agreement shall, where the context requires, be read and construed throughout so as to incorporate this Amendment.

(iv) If there is any conflict between the terms and provisions of this Amendment and the terms and provisions of the Credit Agreement or any other Loan Document, the terms and provisions of this Amendment shall govern.

(b) Counterparts. This Amendment may be executed by one or more of the parties to this Amendment on any number of separate counterparts, and all of said counterparts taken together shall be deemed to constitute one and the same instrument. Delivery of an executed signature page of this Amendment by facsimile transmission (or by email of a PDF or similar electronic image file) shall be effective as delivery of a manually executed counterpart hereof. A set of the copies of this Amendment signed by all of the parties shall be lodged with the Borrower and the Administrative Agent.

(c) Governing Law. This Amendment and the rights and obligations of the parties under this Amendment shall be governed by, and construed and interpreted in accordance with, the law of the State of New York.

6. **Loan Documents**. This Amendment is a Loan Document as defined in the Credit Agreement, and the provisions of the Credit Agreement generally applicable to Loan Documents are applicable hereto and incorporated herein by this reference.

[This Space Intentionally Left Blank]

IN WITNESS WHEREOF, the parties hereto have caused this Amendment to be duly executed as of the date first above written.

**AMENDMENT NO. 1 TO CREDIT AGREEMENT**

This AMENDMENT NO. 1 TO CREDIT AGREEMENT (this " Amendment "), dated as of December 24, 2012, is entered into by and among (1) PACIFIC GAS AND ELECTRIC COMPANY, a California corporation (the " Borrower "); (2) the Required Lenders (as defined in the Credit Agreement referred to below); and (3) CITIBANK, N.A., as Administrative Agent, with respect to the following:

A. The Borrower, the Administrative Agent and the Lenders have previously entered into that certain Credit Agreement dated as of May 31, 2011 (the " Existing Credit Agreement " and as the same may be further amended, restated, supplemented or otherwise modified and in effect from time to time, including, but not limited to, by this Amendment, the " Credit Agreement "). Capitalized terms are used in this Amendment as defined in the Credit Agreement, unless otherwise defined herein.

B. The Borrower, the Administrative Agent and the Required Lenders desire to make certain amendments to the Existing Credit Agreement as set forth below on the terms and subject to the conditions set forth in this Amendment.

NOW, THEREFORE, for good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the parties hereto hereby agree as follows:

1. **Effectiveness** . The effectiveness of the provisions of Section 2 of this Amendment is subject to the satisfaction of the conditions further described in Section 3 of this Amendment.

2. **Amendment to Section 8** . On the terms and subject to the conditions of this Amendment, Section 8 of the Existing Credit Agreement is hereby amended by deleting clause (h) in its entirety and replacing it with the following:

"(h) one or more judgments or decrees shall be entered against the Borrower or any of its Significant Subsidiaries by a court of competent jurisdiction involving in the aggregate a liability (not paid or, subject to customary deductibles, fully covered by insurance as to which the relevant insurance company has not denied coverage) of $100,000,000 or more, and all such judgments or decrees shall not have been vacated, discharged, stayed or bonded pending appeal within 30 days from the entry thereof unless, in the case of a discharge, such judgment or decree is due at a later date in one or more payments and the Borrower or such Subsidiary satisfies the obligation to make such payment or payments on or prior to the date such payment or payments become due in accordance with such judgment or decree; or."

3. **Conditions Precedent to the Effectiveness of this Amendment** . The effectiveness of the provisions of Section 2 of this Amendment is conditioned upon, and such provisions shall not be effective until, satisfaction of the following conditions (the first date on which all of the following conditions have been satisfied being referred to herein as the " Amendment Effective Date "):

(a) The Administrative Agent shall have received, on behalf of the Lenders, this Amendment, duly executed and delivered by the Borrower, the Administrative Agent and the Required Lenders.

(b) The representations and warranties set forth in Section 4 of this Amendment shall be true and correct as of the Amendment Effective Date.

(c) No Default or Event of Default shall have occurred and be continuing on the date of the Amendment Effective Date or after giving effect to this Amendment.

4. **Representations and Warranties** . In order to induce the Administrative Agent and the Lenders to enter into this Amendment and to amend the Existing Credit Agreement in the manner provided in this Amendment, the Borrower represents and warrants to the Administrative Agent and each Lender that (a) each of the representations and warranties made by the Borrower in the Credit Agreement (i) that does not contain a materiality qualification (other than the representations and warranties set forth in Section 4.2, 4.6(b) and 4.13) shall be true and correct in all material respects on and as of the date of the Amendment Effective Date as if made on and as of such date, and (ii) that contains a materiality qualification (other than the representations and warranties set forth in Sections 4.2, 4.6(b) and 4.13) shall be true and correct on and as of the Amendment Effective Date (or, to the extent such representations and warranties specifically relate to an earlier date, that such representations and warranties were true and correct in all material respects, or true and correct, as the case may be, as of such earlier date); (b) the Borrower has the corporate power and corporate authority to make and deliver this Amendment and to perform the Existing Credit Agreement as amended by this Amendment; (c) the Borrower has taken all necessary corporate action to authorize the execution and delivery of this Amendment and the performance of the Existing Credit Agreement as amended by this Amendment; (d) this Amendment has been duly executed and delivered by the Borrower and constitutes a legal, valid and binding obligation of the Borrower, enforceable against the Borrower in accordance with its terms, except as enforceability may be limited by (x) applicable bankruptcy, insolvency, reorganization, moratorium or similar laws affecting the enforcement of creditors' rights generally, laws of general application related to the enforceability of securities secured by real estate and by general equitable principles (whether enforcement is sought by proceedings in equity or at law) and (y) applicable regulatory requirements (including the approval of the CPUC) prior to foreclosure under the Indenture; and (e) t he execution and delivery by the Borrower of this Amendment and the performance by the Borrower of this Amendment do not (x) violate in any material respect any Requirement of Law or any Contractual Obligation of the Borrower or any of its Significant Subsidiaries; or (y) result in, or require, the creation or imposition of any Lien on any of their respective properties or revenues pursuant to any Requirement of Law or any such Contractual Obligation (other than the Liens created by the Indenture).

5. **Miscellaneous**.

(a) Reference to and Effect on the Existing Credit Agreement and the other Loan Documents.

(i) Except as specifically amended by this Amendment, the Existing Credit Agreement and the other Loan Documents shall remain in full force and effect and are hereby ratified and confirmed by the Borrower in all respects.

(ii) The execution and delivery of this Amendment and performance of the Credit Agreement shall not, except as expressly provided herein, constitute a waiver of any provision of, or operate as a waiver of any right, power or remedy of the Administrative Agent or the Lenders under, the Existing Credit Agreement or any of the other Loan Documents.

(iii) Upon the conditions precedent set forth herein being satisfied, this Amendment shall be construed as one with the Existing Credit Agreement, and the Existing Credit Agreement shall, where the context requires, be read and construed throughout so as to incorporate this Amendment.

(iv) If there is any conflict between the terms and provisions of this Amendment and the terms and provisions of the Credit Agreement or any other Loan Document, the terms and provisions of this Amendment shall govern.

Exhibit 10.18

PG&E Corporation.

**Peter A. Darbee**
Chairman of the Board
Chief Executive Officer and President

1 Market, Spear Tower
Suite 2400
San Francisco CA 94105

415.267.7118
Fax: 415.267.7252

March 9, 2007

Mr. John Simon
5403 South Chester Court
Greenwood Village, CO 80111

Dear Hyun:

On behalf of PG&E Corporation, I am pleased to extend an invitation to you to join our organization as Senior Vice President, Human Resources, reporting to me.

Your initial total compensation package will consist of the following:

1. An annual base salary of $325,000 ($27,083.33/month) subject to possible increases through our annual salary review plan.

2. A one-time bonus of $100,000 payable within 60 days of your date of hire, subject to normal tax withholdings. Should you leave the company or should your employment be terminated for cause within two years of your date of hire, a prorated amount of this bonus must be refunded to the company.

3. A target incentive of $162,500 (50% of your base salary) in an annual short-term incentive plan under which your actual incentive dollars may range from zero to $325,000 based on performance relative to established goals. This incentive will be prorated for the number of months worked from your date of hire and will be payable in 2008.

4. Participation in the PG&E Corporation Long-Term Incentive Plan (LTIP) as a band 3 officer. Grants under the LTIP are currently split equally between restricted stock and performance shares, and are generally made annually on the first business day of the year. Your initial LTIP grant will be made on your date of hire, and will have an estimated value of $300,000. This estimated value is used only for the purpose of determining the number of shares for your grant, which will be based on the closing price of PG&E Corporation common stock (PCG) on your date of hire. The ultimate value that you realize from these grants will depend upon your employment status and the performance of PG&E Corporation common stock.

5. A one-time supplement LTIP grant with an estimated current value of $200,000. This grant will be apportioned and made in the same manner as the grant described in item 5.

6. Participation in the PG&E Corporation Supplemental Executive Retirement Plan (SERP). The basic benefit payable from the SERP at retirement is a monthly annuity equal to the product of 1.7% x [average of the three highest years' combination of salary and annual incentive for the last ten years of service] x years of credited service x 1/12 less any amounts paid or payable from the Pacific Gas and Electric Company Retirement Plan (RP).

7. Conditioned upon meeting plan requirements, you will also be eligible for post-retirement life insurance and post-retirement medical benefits upon retirement under the RP.

8. Participation in the PG&E Corporation Retirement Savings Plan (RSP), a 401(k) defined contribution plan. You will be eligible to contribute as much as 20% of your salary on either a pre-tax or after-tax basis, subject to legal limits. After your first year of service, we will match contributions you make, up to 3% of your salary, at 75 cents on each dollar contributed for the second and third years of your employment. Thereafter, we will match contributions up to 6% of your salary at 75 cents on each dollar contributed.

9. Participation in the PG&E Corporation Supplemental Retirement Savings Plan (SRSP), a non-qualified deferred compensation plan. You may elect to defer payment of some of your compensation on a pre-tax basis. We will provide you with the full matching contributions that cannot be provided through the RSP due to legal limitations imposed on highly compensated employees.

10. As a result of your officer level (officer band 3), you will become an eligible participant under Executive Stock Ownership Program effective January 1, 2008. As an ancillary benefit to that program, you will also be eligible to receive financial counseling from The AYCO Company at a subsidized rate to assist you in your understanding of our compensation and benefits programs and how those programs can help you to achieve financial security.

11. Participation in a cafeteria-style benefits program that permits you to select coverage tailored to your personal needs and circumstances. The benefits you elect will be effective the first of the month following the date of your hire.

12. PG&E Corporation also offers a paid-time off (PTO) program. You will be eligible for 200 (25 days) per year. You will accrue PTO at rate of approximately 17 hours per month, provided that you work full-time for the month. In addition, PG&E Corporation recognizes ten paid company holidays annually and provides three floating holidays immediately upon hire and at the beginning of each year.

13. An annual perquisite allowance of $20,000 to be used in lieu of individual authorizations for cars and memberships in clubs and civic organizations.

14. A comprehensive executive relocation assistance package, including: (1) the reimbursement of closing costs on the sale of your current residence, contingent upon using a PG&E-designated relocation company and purchasing a new residence, (2) the move of your household goods, including 60 days of storage and the movement of the goods out of storage, and (3) a lump sum payment of $10,000 payable within 60 days of your date of employment. In addition, the package will include financial assistance in the form of a monthly mortgage subsidy of $3,000 (applicable to interest only) for a period of 36 months. This subsidy is contingent upon the following: (1) your purchase of a principal residence (within 50 miles of your work location) within one year of your date of hire, (2) your satisfying typical mortgage qualification criteria, and (3) use of a company-designated lender. Should you have any questions regarding the relocation package, please contact Denise Nicco, Director of Relocation at (415) 973-3814.

PG&E Corporation.

Mr. Simon
March 9, 2007
Page 3

This offer is contingent upon your passing a comprehensive background verification including a credit check and security clearance assessment, and a standard drug analysis test. We will also need to verify your eligibility to work in the United States based on applicable immigration laws. In addition, your election as an officer of PG&E Corporation is subject to approval by the Board of Directors of PG&E Corporation, and elements of your compensation are subject to approval by the Nominating, Compensation, and Governance Committee of the Board of Directors of PG&E Corporation.

I look forward to your joining our team and believe you will make a strong contribution to the achievement of our being the leading utility in the United States. I would appreciate receiving your written acceptance of this offer as soon as possible. Please call me at any time if you have questions.

Sincerely,

/s/ PETER A. DARBEE

PETER A. DARBEE

Attachment

This is to confirm my acceptance of PG&E Corporation's offer as Senior Vice President, Human Resources as outlined above.

JOHN R. SIMON

(Signature and Date)

# 2013 OFFICER SHORT-TERM INCENTIVE PLAN

On February 20, 2013, the Compensation Committee of the PG&E Corporation Board of Directors ("Committee") approved the structure of the 2013 Short-Term Incentive Plan ("STIP"), as well as the weighting and the specific performance targets for each component of the 2013 STIP. Officers of PG&E Corporation and Pacific Gas and Electric Company ("Utility") (together, the "Companies") are eligible to receive cash incentives under the STIP based on the extent to which the adopted 2013 performance targets are met. Target cash awards under the STIP may range from 40 percent to 100 percent of base salary depending on officer level. STIP company performance may range from a score of 0 to 2.0. The Committee may apply an individual performance modifier from 0 percent to 150 percent to individual officer awards. The Committee will retain complete discretion to determine and pay all STIP awards to officers and non-officer employees. This includes discretion to reduce the final score on any and all measures downward to zero.

The Committee approved the 2013 performance targets for each of the three categories set forth in the table below.

The corporate financial performance target, with a weighting of 25%, is based on PG&E Corporation's budgeted earnings from operations that were previously approved by the Board of Directors, consistent with the basis for reporting and guidance to the financial community. As with previous earnings performance scales, unbudgeted items impacting comparability such as changes in accounting methods, workforce restructuring, and one-time occurrences will be excluded.

**2013 STIP Performance Targets**

| Category | Relative Weight | 2013 Target |
|---|---|---|
| Safety (includes both Public and Employee metrics) (1) | 40.0% | 1.000 |
| Customer (includes customer satisfaction and reliability) (2) | 35.0% | 1.000 |
| Financial (includes Earnings from Operations) | 25.0% | 1.000 |

1. Safety includes four subcomponents: (1) Nuclear Operations Safety, (2) Electric Operations Safety, (3) Gas Operations Safety, and (4) Employee Safety, all of which measure the Utility's safety performance with respect to each of those areas. The Committee will retain complete discretion to reduce the final Safety rating downward to zero based on the Companies' overall safety performance for 2013. The Companies' overall safety performance will be measured both by the quantitative measures described above and by qualitative performance. With respect to qualitative performance, the Committee will consider the collective impact that the Companies' business operations have had on public and employee safety.

2. Customer includes five subcomponents: (1) the overall satisfaction of customers, as measured through a quarterly survey, (2) the number of third party "dig-ins" (i.e., damage resulting in repair or replacement of underground facility) to the Utility's gas and electric assets, (3) the average duration of electricity outages experienced by all customers served, as measured by the System Average Interruption Duration Index , (4) how quickly gas asset information is entered into the Utility's gas mapping system after a gas project is completed, and (5) the Utility's ability to complete certain committed work for gas operations-related programs efficiently.

.

.Exhibit 10.31

SUPPLEMENTAL EXECUTIVE RETIREMENT PLAN
OF
PG&E CORPORATION
(As Amended Effective as of January 1, 2013)

This is the controlling and definitive statement of the Supplemental Executive Retirement Plan (" PLAN ") [1] for ELIGIBLE EMPLOYEES of PG&E Corporation (" CORPORATION "), Pacific Gas and Electric Company (" COMPANY ") and such other companies, affiliates, subsidiaries, or associations as the BOARD OF DIRECTORS may designate from time to time. The PLAN is the successor plan to the Supplemental Executive Retirement Plan of the COMPANY. The PLAN as contained herein was first adopted effective January 1, 2005.

No new participants can become eligible to accrue benefits under the PLAN on or after January 1, 2013, and existing participants in the PLAN as of January 1, 2013 shall cease to accrue further benefits under the Plan as of the date they become participants in Part III of the RETIREMENT PLAN.

ARTICLE 1

DEFINITIONS

1.01 Basic SERP Benefit shall mean the benefit described in Section 2.01.

1.02 Board or Board of Directors shall mean the BOARD OF DIRECTORS of the CORPORATION or, when appropriate, any committee of the BOARD which has been delegated the authority to take action with respect to the PLAN.

1.03 Company shall mean the Pacific Gas and Electric Company, a California corporation.

1.04 Corporation shall mean PG&E Corporation, a California corporation.

1.05 Eligible Employee shall mean individuals who are, prior to January 1, 2013 (1) (a) employees of the COMPANY or, with respect to PG&E Corporation, PG&E Corporation Support Services, Inc., and PG&E Corporation Support Services II, Inc. only, (i) prior to April 1, 2007, were employees who transferred to PG&E Corporation, PG&E Corporation Support Services, Inc., or PG&E Corporation Support Services II, Inc. from Pacific Gas and Electric Company; or (ii) after March 31, 2007, all employees, and (b) officers in Officer Bands I-V, or (2) such other employees of the COMPANY, the CORPORATION, PG&E Corporation Support Services, Inc., PG&E Corporation Support Services II, Inc., or such other companies, affiliates, subsidiaries, or associations, as may be designated by the Chief Executive Officer of the CORPORATION. ELIGIBLE EMPLOYEES shall not include employees who retired prior to January 1, 2005, or whose employment relationship with any of the PARTICIPATING EMPLOYERS was otherwise terminated prior to January 1, 2005.

1.06 STIP Payment shall mean amounts received by an ELIGIBLE EMPLOYEE under the Short-Term Incentive Plan maintained by the CORPORATION prior to the date the ELIGIBLE EMPLOYEE becomes a participant in Part III of the RETIREMENT PLAN.

1.07 PART III of the RETIREMENT PLAN shall mean the cash balance benefit available under the RETIREMENT PLAN.

1.08 Participating Employer shall mean the COMPANY, the CORPORATION, PG&E Corporation Support Services, Inc., PG&E Corporation Support Services II, Inc., and any other companies, affiliates, subsidiaries or associations designated by the Chief Executive Officer of the CORPORATION.

1.09 Plan shall mean the Supplemental Executive Retirement Plan ( " SERP " ) as set forth herein and as may be amended from time to time.

1.010 Plan Administrator shall mean the Employee Benefit Committee or such individual or individuals as that Committee may appoint to handle the day-to-day affairs of the PLAN.

1.10 Retirement Plan shall mean the Pacific Gas and Electric Company Retirement Plan.

1.11 Salary shall mean the base salary received by an ELIGIBLE EMPLOYEE prior to the date the ELIGIBLE EMPLOYEE becomes a participant in Part III of the RETIREMENT PLAN. SALARY shall not include amounts received by an employee after such employee ceases to be an ELIGIBLE EMPLOYEE. For purposes of calculating benefits under the PLAN, SALARY shall not be reduced to reflect amounts that have been deferred under the PG&E Corporation Supplemental Retirement Savings Plan.

1.12 Service shall mean " credited service " as that term is defined in the RETIREMENT PLAN or, if the Nominating and Compensation Committee of the BOARD OF DIRECTORS has granted an adjusted service date for an ELIGIBLE EMPLOYEE, " credited service " as calculated from such adjusted service date. In no event, however, shall SERVICE include periods of time after which an officer has ceased to be an ELIGIBLE EMPLOYEE or after the date the ELIGIBLE EMPLOYEE becomes a participant in Part III of the RETIREMENT

PLAN.

ARTICLE 2

SERP BENEFITS

2.01 The BASIC SERP BENEFIT payable from the PLAN shall be a monthly annuity with an annuity start date of the later of (a) the first of the month following the month in which the ELIGIBLE EMPLOYEE has a separation from service (as provided under Code Section 409A and related guidance), or (b) the first of the month following the ELIGIBLE EMPLOYEE's 55th birthday; provided, however, that no payments under the PLAN shall be made until the seventh month following the annuity start date. The first payment shall consist of the monthly annuity payment for the seventh month, plus the first six monthly annuity payments, including interest calculated at a rate to reflect the CORPORATION's marginal cost of funds. The monthly amount of the BASIC SERP BENEFIT shall be equal to the product of:

1.7% x the average of three highest calendar years' combination of SALARY and STIP PAYMENT for the last ten years of SERVICE x SERVICE x 1/12.

In computing a year's combination of SALARY and STIP PAYMENT, the year's amount shall be the sum of the SALARY and STIP PAYMENT, if any, paid or payable in the same calendar year. If an ELIGIBLE EMPLOYEE has fewer than three years' SALARY, the average shall be the combination of SALARY and STIP PAYMENT for such shorter time, divided by the number of years and partial years during which such employee was an ELIGIBLE EMPLOYEE.

The BASIC SERP BENEFIT is further reduced by any amounts paid or payable from the RETIREMENT PLAN (other than amounts paid or payable under Part III of the RETIREMENT PLAN), calculated before adjustments for marital or joint pension option elections.

The BASIC SERP BENEFIT is a benefit commencing at age 65. The amount of the benefit payable shall be reduced by the appropriate age and service factors contained in the RETIREMENT PLAN applicable to such employee. For such calculations, the service factor shall be SERVICE as defined in the PLAN.

In computing amounts payable from the RETIREMENT PLAN as an offset to the benefit payable from this PLAN, the RETIREMENT PLAN benefit shall be calculated as though the ELIGIBLE EMPLOYEE elected to receive a pension from the RETIREMENT PLAN commencing on the same date as benefits from this PLAN.

2.02 For ELIGIBLE EMPLOYEES of the PARTICIPATING EMPLOYERS, who transfer from any of said companies to another subsidiary or affiliate, the principles of Section 10 of the RETIREMENT PLAN shall govern the calculation of benefits under this PLAN.

2.03 An ELIGIBLE EMPLOYEE may elect to have his BASIC SERP BENEFIT paid in any one of the following forms that are actuarially equivalent within the meaning of Treasury Regulations Section 1.409A-2(b)(ii), with the first annuity payment commencing at the time set forth in Section 2.01:

(a) BASIC SERP BENEFIT, or a reduced BASIC SERP BENEFIT as calculated under Section 2.02, paid as a monthly annuity for the life of the ELIGIBLE EMPLOYEE with no survivor's benefit.

(b) A monthly annuity payable for the life of the ELIGIBLE EMPLOYEE with a survivor's option payable to the ELIGIBLE EMPLOYEE's joint annuitant beginning on the first of the month following the ELIGIBLE EMPLOYEE's death. Subject to the requirements of Treasury Regulations Section 1.409A-2(b)(ii), the factors to be applied to reduce the BASIC SERP BENEFIT to provide for a survivor's benefit shall be the factors which are contained in the RETIREMENT PLAN and which are appropriate given the type of joint pension elected and the ages and marital status of the joint annuitants.

An ELIGIBLE EMPLOYEE may make this election by the latest date permitted by the PLAN ADMINISTRATOR and in compliance with the rules of Treasury Regulations Section 1.409A-2(b)(2)(ii).

2.04 Annuities payable to an ELIGIBLE EMPLOYEE who is receiving a (i) BASIC SERP BENEFIT, (ii) a BASIC SERP BENEFIT reduced to provide a survivor's benefit to a joint annuitant, or (iii) a joint annuitant who is receiving a survivor's benefit shall be decreased by any additional amounts which can be paid from the RETIREMENT PLAN where such additional amounts are due to increases in the limits placed on benefits payable from qualified pension plans under Section 4l5 of the Internal Revenue Code. The amount of any such decrease shall be adjusted to reflect the type of pension elected by an ELIGIBLE EMPLOYEE under the RETIREMENT PLAN and this PLAN.

ARTICLE 3

SURVIVOR BENEFITS

3.01 In the event that an ELIGIBLE EMPLOYEE who has accrued a benefit under this PLAN dies prior to the date that a BASIC SERP BENEFIT would otherwise commence, the PLAN ADMINISTRATOR shall pay a survivor's benefit ("SURVIVOR'S BENEFIT") to the ELIGIBLE EMPLOYEE's surviving spouse or BENEFICIARY ("Beneficiary" shall have the same meaning as provided under the

RETIREMENT PLAN):

(a) If the sum of the age and SERVICE of the ELIGIBLE EMPLOYEE at the time of death equaled 70 (69.5 or more is rounded to 70) or if the ELIGIBLE EMPLOYEE was age 55 or older at the time of death, the surviving spouse's or BENEFICIARY's benefit shall be a monthly annuity commencing at the time set forth in Section 2.01 and shall be payable for the life of the surviving spouse or BENEFICIARY. The amount of the monthly benefit shall be a monthly benefit that is actuarially equivalent to one-half of the monthly BASIC SERP BENEFIT that would have been paid to the ELIGIBLE EMPLOYEE calculated:

(i) as if he had elected to receive a BASIC SERP BENEFIT, without survivor's option; and

(ii) the monthly annuity starting date was the first of the month following the month in which the ELIGIBLE EMPLOYEE died; and

(iii) without the application of early retirement reduction factors. However, if the surviving spouse or BENEFICIARY is more than 10 years younger than the ELIGIBLE EMPLOYEE, the amount of the surviving spouse's or BENEFICIARY's benefit shall be reduced one-twentieth of 1 percent for each full month in excess of 120 months' difference in their ages, except that such reduction shall not result in a SURVIVOR'S BENEFIT lower than would have been payable if the ELIGIBLE EMPLOYEE had retired as of the date of death and elected a 50 percent joint pension with a spouse of the same gender and age as the surviving spouse or BENEFICIARY.

(b) If the ELIGIBLE EMPLOYEE is less than 55 years of age or had fewer than 70 points (as calculated under Section 3.01 (a)) at the time of death, the surviving spouse or BENEFICIARY will be entitled to receive a monthly annuity commencing at the time set forth in Section 2.01. The amount of the monthly annuity payable to the surviving spouse or BENEFICIARY shall be equal to the BASIC SERP BENEFIT converted to a marital joint annuity providing for a 50 percent survivor's benefit, calculated as if: 1) the ELIGIBLE EMPLOYEE had terminated employment at the date of death, 2) had lived until age 55, 3) had begun to receive PENSION payments at age 55, and 4) had subsequently died.

(c) If a former ELIGIBLE EMPLOYEE was age 55 or older at the time of his death and not yet receiving a SERP BENEFIT under the PLAN, the surviving spouse or BENEFICIARY will be entitled to receive a monthly annuity at the time set forth in Section 2.01 in an amount equal to the BASIC SERP BENEFIT converted to a marital joint annuity providing for a 50 percent survivor's benefit, calculated as if the former ELIGIBLE EMPLOYEE had begun receiving the converted SERP BENEFIT immediately prior to his death.

(d) If a former ELIGIBLE EMPLOYEE was younger than age 55 and had fewer than 70 points (as calculated under Section 3.01(a)) at the time of his death, the surviving spouse or BENEFICIARY will be entitled to receive a monthly annuity at the time set forth in Section 2.01 in an amount equal to the BASIC SERP BENEFIT converted to a marital joint annuity providing for a 50 percent survivor's benefit, calculated as if: 1) the former ELIGIBLE EMPLOYEE had survived until age 55, 2) had begun receiving the converted SERP BENEFIT at age 55, and 3) had subsequently died.

3.02 A surviving spouse or BENEFICIARY who is entitled to receive a SURVIVOR'S BENEFIT under Section 3.01 shall not be entitled to receive any other benefit under the PLAN.

## ARTICLE 4

## ADMINISTRATIVE PROVISIONS

4.01 Administration. The PLAN shall be administered by the Senior Human Resources Officer of the CORPORATION ("PLAN ADMINISTRATOR"), who shall have the authority to interpret the PLAN and make and revise such rules as he or she deems appropriate. The PLAN ADMINISTRATOR shall have the duty and responsibility of maintaining records, making the requisite calculations, and disbursing payments hereunder. The PLAN ADMINISTRATOR's interpretations, determinations, rules, and calculations shall be final and binding on all persons and parties concerned.

4.02 Amendment and Termination. The CORPORATION may amend or terminate the PLAN at any time, provided, however, that no such amendment or termination shall adversely affect an accrued benefit which an ELIGIBLE EMPLOYEE has earned prior to the date of such amendment or termination, nor shall any amendment or termination adversely affect a benefit which is being provided to an ELIGIBLE EMPLOYEE, surviving spouse, joint annuitant, or beneficiary under Article II or Article III on the date of such amendment or termination. Anything in this Section 4.02 to the contrary notwithstanding, the CORPORATION may (but is not obligated to) reduce or terminate any benefit to which an ELIGIBLE EMPLOYEE, surviving spouse or joint annuitant, is or may become entitled provided that such ELIGIBLE EMPLOYEE, surviving spouse or joint annuitant is or becomes entitled to an amount equal to such benefit under another plan, practice, or arrangement of the CORPORATION that preserves the time and form of payment rules under the PLAN and otherwise in a manner that complies with Code Section 409A, to the extent required to not violate Code Section 409A.

4.03 Nonassignability of Benefits. Except to the extent otherwise directed by a domestic relations order that the Plan Administrator determines is a Qualified Domestic Relations Order under Section 401(a)(12) of the Internal Revenue Code, the benefits payable under this PLAN or the right to receive future benefits under this PLAN may not be anticipated, alienated, pledged, encumbered, or subject to any charge or legal process, and if any attempt is made to do so, or a person eligible for any benefits becomes bankrupt, the interest under the PLAN of the person affected may be terminated by the PLAN ADMINISTRATOR which, in its sole discretion, may cause the same to be held if applied for the benefit of one or more of the dependents of such person or make any other disposition of such benefits that it deems appropriate.

4.04 Nonguarantee of Employment . Nothing contained in this PLAN shall be construed as a contract of employment between a PARTICPATING EMPLOYER and the ELIGIBLE EMPLOYEE, or as a right of the ELIGIBLE EMPLOYEE to be continued in the employ of a PARTICIPATING EMPLOYER, to remain as an officer of a PARTICIPATING EMPLOYER, or as a limitation on the right of a PARTICIPATING EMPLOYER to discharge any of its employees, with or without cause.

4.05 Apportionment of Costs . The costs of the PLAN may be equitably apportioned by the PLAN ADMINISTRATOR among the PARTICIPATING EMPLOYERS. Each PARTICIPATING EMPLOYER shall be responsible for making benefit payments pursuant to the PLAN on behalf of its ELIGIBLE EMPLOYEES or for reimbursing the CORPORATION for the cost of such payments, as determined by the CORPORATION in its sole discretion. In the event the respective PARTICIPATING EMPLOYER fails to make such payment or reimbursement, and the CORPORATION does not exercise its discretion to make the contribution on such PARTICIPATING EMPLOYER's behalf, future benefit accruals of the ELIGIBLE EMPLOYEES of that PARTICIPATING EMPLOYER shall be suspended. If at some future date, the PARTICIPATING EMPLOYER makes all past-due contributions, plus interest at a rate determined by the PLAN ADMINISTRATOR in his or her sole discretion, the benefit accrual of its ELIGIBLE EMPLOYEES will be recognized for the period of the suspension.

4.06 Benefits Unfunded and Unsecured . The benefits under this PLAN are unfunded, and the interest under this PLAN of any ELIGIBLE EMPLOYEE and such ELIGIBLE EMPLOYEE's right to receive a distribution of benefits under this PLAN shall be an unsecured claim against the general assets of the CORPORATION.

4.07 Applicable Law . All questions pertaining to the construction, validity, and effect of the PLAN shall be determined in accordance with the laws of the United States, and to the extent not preempted by such laws, by the laws of the State of California. The PLAN is intended to comply with the provisions of Code Section 409A. However, the CORPORATION makes no representation that the benefits provided under this PLAN will comply with Code Section 409A and makes no undertaking to prevent Code Section 409A from applying to the benefits provided under this PLAN or to mitigate its effects on any deferrals or payments made under this PLAN.

4.08 Satisfaction of Claims . Notwithstanding Section 4.05 or any other provision of the PLAN, the CORPORATION may at any time satisfy its obligations (either on a before-tax or after-tax basis) for any benefits accrued under the PLAN by the purchase from an insurance company of an annuity contract on behalf of an ELIGIBLE EMPLOYEE. Such purchase shall be in the sole discretion of the CORPORATION and shall be subject to the ELIGIBLE EMPLOYEE' s acknowledgement that the CORPORATION's obligations to provide benefits hereunder have been discharged, without regard to the payments ultimately made under the contract. In the event of a purchase pursuant to this Section 4.07, the CORPORATION may in its sole discretion make payments to or on behalf of an ELIGIBLE EMPLOYEE to defray the cost to such ELIGIBLE EMPLOYEE of any personal income tax in connection with the purchase.

---

[1] Words in all capitals are defined in Article I.

.

.Exhibit 10.32

**PG&E CORPORATION**
**DEFINED CONTRIBUTION EXECUTIVE SUPPLEMENTAL RETIREMENT PLAN**

Effective as of January 1, 2013 (the "Effective Date"), PG&E Corporation adopts this Plan for the benefit of a select group of management or highly compensated employees of PG&E Corporation and its Participating Subsidiaries. The Plan is an unfunded arrangement and is intended to be exempt from the participation, vesting, funding and fiduciary requirements set forth in Title I of ERISA.

**Article 1 – Definitions**

When used in this Plan, the following words, terms and phrases have the meanings given to them in this Article unless another meaning is expressly provided elsewhere in this document. When applying these definitions and any other word, term or phrase used in this Plan, the form of any word, term or phrase will include any and all of its other forms.

1.01 " **Accoun t** " means the bookkeeping account established for each Eligible Employee as provided in Section 5.01 hereof.

1.02 " **Aggregated Plan"** means any arrangement that, along with this Plan, would be treated as a single nonqualified deferred compensation plan under Treasury Regulation Section 1.409A-
1(c)(2).

1.03 " **Board** " means the Board of Directors of Company.

1.04 " **Code** " means the Internal Revenue Code of 1986, as amended. Reference to a specific section of the Code shall include such section, any valid regulation promulgated thereunder, and any comparable provision of any future legislation amending, supplementing, or superseding such section.

1.05 " **Committee** " means the Compensation Committee of the Board, as it may be constituted from time to time.

1.06 " **Company** " means PG&E Corporation, a California corporation.

1.07 " **Company Contribution** " means a deemed contribution that is credited to an Eligible Employee's Account in accordance with the terms of Article 2 hereof.

1.08 " **Eligible Employee** " means any individual who (i) was a participant in the SERP and elects to switch under the Pacific Gas and Electric Company Retirement Plan for Management Employees to a cash-balance formula pension benefit effective January 1, 2014, (ii) becomes an Officer in Bands I-V of Company or a Participating Subsidiary on or after the Effective Date; or (iii) is an employee of Company or a Participating Employer, and is designated as a Plan Participant by the Chief Executive Officer of Company. Notwithstanding the forgoing, any individual who is a participant in the Excess Plan shall not become an Eligible Employee until January 1 of the calendar year after satisfying any of the criteria in (ii)-(iii) above. If an individual ceases to be an Officer in Bands I-V or if his or her participation in this Plan is terminated by the Chief Executive Officer, then any accrued benefits will be handled in accordance with Article 6.

1.09 " **Employer** " means any entity that employs an Eligible Employee, whether that entity is the Company or any of the Participating Subsidiaries designated by the Plan Administrator.

1.10 " **ERISA** " means the Employee Retirement Income Security Act of 1974, as amended.

1.11 " **Excess Plan** " means the Retirement Excess Plan of the Pacific Gas and Electric Company, as amended from time to time.

1.12 " **Investment Fund** " means each deemed investment vehicle which serves as a means to measure value, increases or decreases with respect to an Eligible Employee's Account.

1.13 " **Participating Subsidiary"** means a United States-based subsidiary of Company, which has been designated by the Plan Administrator as a Participating Subsidiary under this Plan and which has agreed to make payments or reimbursements with respect to its Eligible Employees pursuant to Section 11.04. At such times and under such conditions as the Plan Administrator may direct, one or more other subsidiaries of Company may become Participating Subsidiaries or a Participating Subsidiary may be withdrawn from the Plan. An initial list of the Participating Subsidiaries is contained in Appendix A to this Plan.

1.14 " **Plan** " means the PG&E Corporation Defined Contribution Executive Supplemental Retirement Plan.

1.15 " **Plan Year** " means each calendar year during which the Plan is in effect

1.16 " **SERP** " means the Supplemental Executive Retirement Plan of PG&E Corporation, as amended from time to time.

1.17 " **Salary** " means only the gross amount of an Eligible Employee's base salary as reflected in the payroll records of the applicable Employer. Salary shall not include amounts received by an employee after such employee ceases to be an Eligible Employee or prior to

becoming an Eligible Employee. Salary shall be calculated before reduction for compensation voluntarily deferred or contributed by the Eligible Employee pursuant to all qualified or nonqualified plans of the applicable Employer and shall be calculated to include amounts not otherwise included in the Eligible Employee's gross income under Code Sections 125, 132, 402(e)(3), 402(h), or 403(b) pursuant to plans or arrangements established by the Employers; provided, however, that all such amounts will be included in compensation only to the extent that had there been no such plan, the amount would have been payable in cash to the Eligible Employee. Without limiting the foregoing, "Salary" shall not include any amount paid pursuant to a disability plan or pursuant to a disability insurance policy or distributions from nonqualified deferred compensation plans, incentive payments of any kind, commissions, overtime, fringe benefits, or any non-cash benefit.

1.18 "S **eparation from Service** " means a "separation from service" with Company and its Affiliates within the meaning of Code Section 409A(a)(2)(A)(i) and related Treasury Regulations and other guidance, as determined by the Plan Administrator in its discretion.

1.19 " **STIP Payment** " means the gross amount of an Eligible Employee's bonus under the annual cash Short-Term Incentive Plan adopted and maintained each year by Company or its Participating Subsidiaries. STIP Payments shall not include amounts received by an employee after such employee ceases to be an Eligible Employee or prior to becoming an Eligible Employee. For purposes of calculating benefits under the Plan, STIP Payment shall be calculated before reduction for compensation voluntarily deferred or contributed by the Eligible Employee pursuant to all qualified or nonqualified plans of the applicable Employer, and shall be calculated to include amounts not otherwise included in the Eligible Employee's gross income under Code Sections 125, 132, 402(e)(3), 402(h), or 403(b) pursuant to plans or arrangements established by the Employer; provided, however, that all such amounts will be included in compensation only to the extent that had there been no such plan, the amount would have been payable in cash to the Eligible Employee.

1.20 **"Valuation Date"** means:

(1) For purposes of valuing Plan assets and Eligible Employees' Accounts for periodic reports and statements, the date as of which such reports or statements are made; and

(2) For purposes of determining the amount of assets actually distributed to the Eligible Employee, his or her beneficiary, or an Alternate Payee (or available for withdrawal), a date that shall not be more than thirty business days prior to the date the check is issued to the Eligible Employee.

In any other case, the Valuation Date shall be the date designated by the Plan Administrator (in its discretion) or the date otherwise set forth in this Plan. In all cases, the Plan Administrator (in its discretion) may change the Valuation Date, on a uniform and nondiscriminatory basis, as is necessary or appropriate. Notwithstanding the foregoing, the Valuation Date shall occur at least annually.

## Article 2 - Company Contributions

2.01 **Company Contribution s** . Company will make a deemed contribution to each Eligible Employee's Account in a percentage amount designated by the Committee, in its sole discretion, of the Eligible Employee's Salary and STIP Payment, at the time that such Salary or STIP Payment is paid.

2.02 **Excess Plan Participants** . Company will make an additional deemed contribution to the Account of each Eligible Employee who was a participant in the Excess Plan on or after January 1, 2013. The amount of such contribution will be approximately equal to the difference between the amounts that the Eligible Employee could have received under the Plan if contributions, if any, under Section 2.01 had commenced upon satisfying any of the eligibility criteria in Section 1.08(ii)-(iii), and the amount actually accrued under the Excess Plan, in each case through December 31 of such year. Such payments shall be made only for the portion of the calendar year prior to the individual becoming an Eligible Employee. Such calculation shall be done at the Company's discretion, using such assumptions and methodologies as determined by the Company in its sole discretion. Amounts provided pursuant to this Section will distributed in a lump-sum, in accordance with Section 6.01 (2).

## Article 3 - Vesting

3.01 **Vesting of Company Contribution s** . Except as otherwise determined by the Plan Administrator in its sole discretion, and provided that the Eligible Employee has not Separated from Service, an Eligible Employee shall become one hundred percent (100%) vested in the Eligible Employee's Account after completing at least three (3) cumulative years of service with any Employer(s). For this purpose, years of service shall be calculated on an elapsed-time, anniversary date of hire basis. "Years of cumulative service" shall include all service while an active participant in the Plan or in the SERP, including active service prior to any break in service. An Employee's service will be deemed to continue while on approved leave of absence.

3.02 **Amounts Not Veste d** . Subject to the foregoing, any amounts credited to an Eligible Employee's Account that are not vested at the time of the Eligible Employee's Separation from Service shall be forfeited.

## Article 4 – Investment Funds

Although no assets will be segregated or otherwise set aside with respect to an Eligible Employee's Account, the amount that is ultimately payable to the Eligible Employee with respect to such Account shall be determined as if such Account had been invested in some or all of the Investment Funds. The Plan Administrator, in its sole discretion, shall adopt (and modify from time to time) such rules and procedures as it deems necessary or appropriate to implement the deemed investment of the Eligible Employees' Accounts. Such procedures generally

shall provide that an Eligible Employee's Account shall be deemed to be invested among the available Investment Funds in the manner elected by the Eligible Employee in such percentages and manner as prescribed by the Plan Administrator. In the event no election has been made by the Eligible Employee, such Account will be deemed to be invested in the Investment Funds designated by the Plan Administrator. Eligible Employees shall be able to reallocate their Accounts between the Investment Funds and reallocate amounts newly credited to their Accounts at such time and in such manner as the Plan Administrator shall prescribe. Anything to the contrary herein notwithstanding, an Eligible Employee may not reallocate Account balances between Investment Funds if such reallocation would result in a non-exempt Discretionary Transaction as defined in Rule 16b-3 of the Securities Exchange Act of 1934, as amended, or any successor to Rule 16b-3, as in effect when the reallocation is requested. The available Investment Funds shall be designated by the Plan Administrator and may be changed from time to time by the Plan Administrator at its discretion.

**Article 5 - Accountings**

5.01 **Eligible Employees' Accounts** . At the direction of the Plan Administrator, there shall be established and maintained on the books of the Employer, a separate account for each Eligible Employee in order to reflect his or her interest under the Plan.

5.02 **Investment Earnings** . Each Eligible Employee's Account shall initially reflect the value of his or her Account's interest in each of the Investment Funds, deemed acquired with the amounts credited thereto. Each Eligible Employee's Account shall also be credited (or debited) with the net appreciation (or depreciation), earnings and gains (or losses) with respect to the investments deemed made by his or her Account. Any such net earnings or gains deemed realized with respect to any investment of any Eligible Employee's Account shall be deemed reinvested in additional amounts of the same investment and credited to the Eligible Employee's Account.

5.03 **Accounting Methods** . The accounting methods or formulae to be used under the Plan for the purpose of maintaining the Eligible Employees' Accounts shall be determined by the Plan Administrator. The accounting methods or formulae selected by the Plan Administrator may be revised from time to time but shall conform to the extent practicable with the accounting methods used under the Plan.

5.04 **Valuations and Reports** . The fair market value of each Eligible Employee's Account shall be determined as of each Valuation Date. In making such determinations and in crediting net deemed earnings and gains (or losses) in the Investment Funds to the Eligible Employees' Accounts, the Plan Administrator (in its discretion) may employ such accounting methods as the Plan Administrator (in its discretion) may deem appropriate in order to fairly reflect the fair market values of the Investment Funds and each Eligible Employee's Account. For this purpose, the Plan Administrator may rely upon information provided by the Plan Administrator or other persons believed by the Plan Administrator to be competent.

5.05 **Statements of Eligible Employee's Accounts** . Each Eligible Employee shall be furnished with periodic statements of his or her interest in the Plan.

**Article 6 - Distributions.**

6.01 **Distribution of Account Balances** .

(1) **Participants in SERP.** Distribution of the balance credited to the Account of any Eligible Employee who was a participant in the SERP will be made according to the time and form provisions applicable to that Eligible Employee's benefits under the SERP. Sections 6.01(2), 6.02, 6.03, 6.04 and 6.05 shall not apply to the Eligible Employees described above in this Section 6.01(1).

(2) **Other Eligible Employees.** Except to the extent the Eligible Employee has elected otherwise under this Section 6 at the time of deferral, distribution of the balance credited to an Eligible Employee's Account shall be made in a single lump sum as soon as reasonably practicable (but in any event within 90 days) following the date that is seven (7) months following Separation from Service.

(3) **DROs.** In the case of an Alternate Payee (as defined in Section 7.01(1)), to the extent allowable under Code Section 409A, distribution shall be made as directed in a domestic relations order approved by the Plan Administrator, but only as to the portion of the Eligible Employee's Account which the domestic relations order states is payable to the Alternate Payee.

6.02 **Election of Installment Payments** . In lieu of the single sum payment under Section 6.01, an Eligible Employee may elect in writing, on such form or in such other manner as it may prescribe, and file with the Plan Administrator an election that payment of amounts credited to the Eligible Employee's Account be made in from 2 to 10 equal annual installments. Installment payments will be considered separate payments for purposes of Code Section 409A and will commence as soon as reasonably practicable (but in any event within 90 days) following the date that is seven (7) months following Separation from Service ("Benefit Commencement Date"), and subsequent installments will be paid on each anniversary of the Benefit Commencement Date thereof until all installments are paid. However, if during the installment payment period after the Benefit Commencement Date the Account balance plus the Eligible Employee's interest in all other Aggregated Plans is less than the dollar limit set forth in Code Section 402(g)(1)(B) in the aggregate, the value of the remaining installments and such other interest(s) may be accelerated by written election of the Plan Administrator and subsequently paid as a lump sum at the sole discretion of the Plan Administrator, except to the extent that would result in a violation of Code Section 409A. Notwithstanding anything in this Section 6.02 to the contrary, if the Eligible Employee's vested Account balance on the Benefit Commencement Date is less than $50,000, then the distribution election described in this Section 6.02 shall be disregarded and the Eligible Employee's entire vested Account balance shall be paid in a lump sum distribution as described in Section 6.01(2) above.

6.03 **Timing of Elections.**

(1) **General Rule.** The election described in Section 6.02 shall be made no later than December 31 of the calendar year immediately

preceding the calendar year in which the Salary or STIP Payment commences to be earned that is the basis of the Company Contribution for which an election is being made, in accordance with such procedures established by the Company in its sole discretion.

**(2) Initial Eligibility.** Notwithstanding Section 6.03(1), an Eligible Employee that is newly eligible to participate in the Plan (or in any Aggregated Plan) must make an election regarding whether distributions shall be made in a lump-sum or installments, as provided in Section 6.02. Such election must be made within thirty (30) days after he or she first becomes an Eligible Employee (or within such other earlier deadline as may be established by the Company, in its sole discretion) but only with respect to Company Contributions attributable to Salary and STIP Payments that are paid with respect to services performed after such election is made; provided, however, that for this purpose only such thirty (30) day period shall begin to run on the date that the Eligible Employee first becomes eligible to participate in this Plan (or, if earlier, any Aggregated Plan). In the event an Eligible Employee fails to timely make such election, Section 6.01(2) shall apply. Notwithstanding anything to the contrary herein, no Company Contributions shall be earned or made to a newly Eligible Employee's Account with respect to service performed prior to the earlier of (1) the day after the Eligible Employee returns an initial election pursuant to Section 6.03(2) or (2) 31 days after the individual first qualifies as an Eligible Employee.

(3) **Performance-Based Compensation.** Notwithstanding Section 6.03(1), with respect to STIP Payments that qualify as "Performance-Based Compensation," the Company may, in its sole discretion, permit an election pertaining to Company Contributions attributable to such Performance-Based Compensation to be made no later than six (6) months before the end of the performance service period and in accordance with Code Section 409A. For this purpose, "Performance-Based Compensation" shall be compensation, the payment or amount of which is contingent on pre-established organizational or individual performance criteria, which satisfies the requirements of Code Section 409A.

6.04 **Change in Distribution Election** . An Eligible Employee may change a distribution election previously made pursuant to Section 6.02 only in accordance with the rules under Code Section 409A. Generally, a subsequent election pursuant to this Section 6.04: (1) cannot take effect for twelve (12) months, (2) must occur at least twelve (12) months before the first scheduled payment, and (3) must defer a previously elected distribution at least five (5) additional years. The Plan Administrator may establish additional rules or restrictions on changes in distribution elections.

6.05 **Death Distributions** . If an Eligible Employee dies before the balance of his or her Account has been distributed (whether or not the Eligible Employee had previously had a Separation from Service), the Eligible Employee's Account shall be distributed in a single lump sum to the beneficiary designated or otherwise determined in accordance with Section 6.07, as soon as practicable the date of death (but in any event within 90 days after the date of death).

6.06 **Effect of Change in Eligible Employee Status** . If an Eligible Employee ceases to be an Eligible Employee but does not experience a Separation from Service, the balance credited to his or her Account shall continue to be credited (or debited) with appreciation, depreciation, earnings, gains or losses under the terms of the Plan and shall be distributed to him or her at the time and in the manner set forth in this Section 6.

6.07 **Payments to Incompetents** . If any individual to whom a benefit is payable under the Plan is a minor or if the Plan Administrator determines that any individual to whom a benefit is payable under the Plan is incompetent to receive such payment or to give a valid release therefor, payment shall be made to the guardian, committee, or other representative of the estate of such individual which has been duly appointed by a court of competent jurisdiction. If no guardian, committee, or other representative has been appointed, payment may be made to any person as custodian for such individual under the California Uniform Transfers to Minors Act (or similar law of another state) or may be made to or applied to or for the benefit of the minor or incompetent, the incompetent's spouse, children or other dependents, the institution or persons maintaining the minor or incompetent, or any of them, in such proportions as the Plan Administrator from time to time shall determine; and the release of the person or institution receiving the payment shall be a valid and complete discharge of any liability of Company with respect to any benefit so paid.

6.08 **Beneficiary Designations** . Each Eligible Employee may designate, in a signed writing delivered to the Plan Administrator, on such form or in such other manner as it may prescribe, one or more beneficiaries to receive any distribution which may become payable under the Plan as the result of the Eligible Employee's death. Such an Eligible Employee may designate different beneficiaries at any time by delivering a new designation in like manner. Any designation shall become effective only upon its receipt by the Plan Administrator, and the last effective designation received by the Plan Administrator shall supersede all prior designations. If such an Eligible Employee dies without having designated a beneficiary or if no beneficiary survives that Eligible Employee, that Eligible Employee's Account shall be payable to the beneficiary or beneficiaries designated or otherwise determined under the PG&E Corporation Retirement Savings Plan or any predecessor qualified retirement plan sponsored by Company or any of its subsidiary companies.

6.09 **Undistributable Accounts** . Each Eligible Employee and (in the event of death) his or her beneficiary shall keep the Plan Administrator advised of his or her current address. If the Plan Administrator is unable to locate the Eligible Employee or beneficiary to whom an Eligible Employee's Account is payable under this Section 6, the Eligible Employee's Account shall be frozen as of the date on which distribution would have been completed in accordance with this Section 6, and no further appreciation, depreciation, earnings, gains or losses shall be credited (or debited) thereto. Company shall have the right to assign or transfer the liability for payment of any undistributable Account to the Eligible Employee's former Employer (or any successor thereto).

6.10 **Plan Administrator Discretion** . Within the specific time periods described in this Section 6, the Plan Administrator shall have

sole discretion to determine the specific timing of the payment of any Account balance under the Plan.

## Article 7 - Domestic Relations Orders.

7.01 **Domestic Relations Orders** . The Plan Administrator shall establish written procedures for determining whether a domestic relations order purporting to dispose of any portion of an Eligible Employee's Account is a domestic relations order within the meaning of Section 414(p) of the Code that is acceptable to the Plan (a "DRO").

**(1)** **No Payment Unless a DRO** . No payment shall be made to any person designated in a domestic relations order (an " **Alternate Payee** ") until the Plan Administrator (or a court of competent jurisdiction reversing an initial adverse determination by the Plan Administrator) determines that the order is a DRO. Payment shall be made to each Alternate Payee as specified in the DRO.

**(2)** **Time of Payment** . Payment may be made to an Alternate Payee in the form of a lump sum, at the time specified in the DRO, but no earlier than the date the DRO determination is made by the Plan.

**(3)** **Hold Procedures** . Notwithstanding any contrary Plan provision, prior to the receipt of a domestic relations order, the Plan Administrator may, in its sole discretion, place a hold upon all or a portion of an Eligible Employee's Account for a reasonable period of time (as determined by the Plan Administrator in accordance with Code Section 409A) if the Plan Administrator receives notice that (a) a domestic relations order is being sought by the Eligible Employee, his or her spouse, former spouse, child or other dependent, and (b) the Eligible Employee's Account is a source of the payment under such domestic relations order. For purposes of this Section 7.01, a "hold" means that no withdrawals, distributions, or investment transfers may be made with respect to an Eligible Employee's Account. If the Plan Administrator places a hold upon an Eligible Employee's Account pursuant to this Section 7.01, it shall inform the Eligible Employee of such fact.

## Article 8 - Tax Withholding

Each Eligible Employee shall be responsible for FICA taxes on amounts credited to his or her Account under Section 2. Without limiting the foregoing, the applicable Employer shall have the right to withhold such amounts from other payments due to the Eligible Employee. Company Contributions will not be reduced to cover Eligible Employees' FICA tax liabilities.

The applicable Employer, as applicable, will withhold from other amounts owed to an Eligible Employee or require the Eligible Employee to remit to Employer, as applicable, an amount sufficient to satisfy federal, state and local tax withholding requirements with respect to any Plan benefit or the vesting, payment or cancellation of any Plan benefit.

## Article 9 - Administration of the Plan .

9.01 **Plan Administrator** . The Employee Benefit Committee of Company is hereby designated as the administrator of the Plan (within the meaning of Section 3(16)(A) of ERISA). The Plan Administrator delegates to the most senior human resource officer for Company, or his or her designee, the authority to carry out all duties and responsibilities of the Plan Administrator under the Plan. The Plan Administrator shall have the authority to control and manage the operation and administration of the Plan.

9.02 **Powers of Plan Administrator** . The Plan Administrator shall have all discretion and powers necessary to supervise the administration of the Plan and to control its operation in accordance with its terms, including, but not by way of limitation, the power to interpret the provisions of the Plan and to determine, in its sole discretion, any question arising under, or in connection with the administration or operation of, the Plan.

9.03 **Decisions of Plan Administrator** . All decisions of the Plan Administrator and any action taken by it in respect of the Plan and within the powers granted to it under the Plan shall be conclusive and binding on all persons and shall be given the maximum deference permitted by law.

## Article 10 - Modification or Termination of Plan .

10.01 **Employers' Obligations Limited** . The Plan is voluntary on the part of the Employers, and the Employers do not guarantee to continue the Plan. Company at any time may, by appropriate amendment of the Plan, or suspend Company Contributions , with or without cause.

10.02 **Right to Amend or Terminate** . The Board of Directors, acting through the Committee, reserves the right to alter, amend, or terminate the Plan, or any part thereof, in such manner as it may determine, for any reason whatsoever.

**(1)** **Limitations** . Any alteration, amendment, or termination shall take effect upon the date indicated in the document embodying such alteration, amendment, or termination, provided that no such alteration or amendment shall divest any portion of an Account that is then vested under the Plan.

**(2)** **Appendices** . Notwithstanding the above, the Plan Administrator may amend the Appendices in its discretion.

10.03 **Effect of Termination** . If the Plan is terminated, the balances credited to the Accounts of the Eligible Employees affected by such termination shall be distributed to them at the time and in the manner set forth in Section 6; provided, however, that the Plan Administrator, in its sole discretion, may authorize accelerated distribution of Eligible Employees' Accounts to the extent provided in Treasury Regulation Sections 1-409A-3(j)(4)(ix) (A) (relating to terminations in connection with certain corporate dissolutions), (B) (relating to terminations in

connection with certain change of control events), and (C) (relating to general terminations).

## Article 11 - General Provisions

11.01 **Inalienability** . Except to the extent otherwise directed by a domestic relations order which the Plan Administrator determines is a DRO (as defined in Section 7.01) or mandated by applicable law, in no event may either an Eligible Employee, a former Eligible Employee or his or her spouse, beneficiary or estate sell, transfer, anticipate, assign, hypothecate, or otherwise dispose of any right or interest under the Plan; and such rights and interests shall not at any time be subject to the claims of creditors nor be liable to attachment, execution, or other legal process.

11.02 **Rights and Duties** . Neither the Employers nor the Plan Administrator shall be subject to any liability or duty under the Plan except as expressly provided in the Plan, or for any action taken, omitted, or suffered in good faith.

11.03 **No Enlargement of Employment Rights** . Neither the establishment or maintenance of the Plan nor any action of any Employer or Plan Administrator, shall be held or construed to confer upon any individual any right to be continued as an Employee nor, upon dismissal, any right or interest in any specific assets of the Employers other than as provided in the Plan. Each Employer expressly reserves the right to discharge any Employee at any time, with or without cause or advance notice.

11.04. **Apportionment of Costs and Duties** . All acts required of the Employers under the Plan may be performed by Company for itself and its Participating Subsidiaries, and the costs of the Plan may be equitably apportioned by the Plan Administrator among Company and the other Employers. Whenever an Employer is permitted or required under the terms of the Plan to do or perform any act, matter or thing, it shall be done and performed by any officer or employee of the Employer who is thereunto duly authorized by the board of directors of the Employer. Each Participating Subsidiary shall be responsible for making benefit payments pursuant to the Plan on behalf of its Eligible Employees or for reimbursing Company for the cost of such payments, as determined by Company in its sole discretion. In the event the respective Participating Subsidiary fails to make such payment or reimbursement, and Company does not exercise its discretion to make the payment on such Participating Subsidiary’s behalf, participation in the Plan by the Eligible Employees of that Participating Subsidiary shall be suspended in a manner consistent with Code Section 409A. If at some future date, the Participating Subsidiary makes all past-due payments and reimbursements, plus interest at a rate determined by Company in its sole discretion, the suspended participation of its Eligible Employees eligible to participate in the Plan will be recognized in a manner consistent with Code Section 409A. In the event the respective Participating Subsidiary fails to make such payment or reimbursement, an Eligible Employee’s (or other payee’s) sole recourse shall be against the respective Participating Subsidiary, and not against Company. An Eligible Employee’s participation in the Plan shall constitute agreement with this provision.

11.05 **Applicable Law** . The provisions of the Plan shall be construed, administered, and enforced in accordance with the laws of the State of California and, to the extent applicable, ERISA. The Plan is intended to comply with the provisions of Code Section 409A. However, Company makes no representation that the benefits provided under the Plan will comply with Code Section 409A and makes no undertaking to prevent Code Section 409A from applying to the benefits provided under the Plan or to mitigate its effects on any deferrals or payments made under the Plan.

11.06 **Severability** . If any provision of the Plan is held invalid or unenforceable, its invalidity or unenforceability shall not affect any other provisions of the Plan, and the Plan shall be construed and enforced as if such provision had not been included.

11.07 **Captions** . The captions contained in and the table of contents prefixed to the Plan are inserted only as a matter of convenience and for reference and in no way define, limit, enlarge, or describe the scope or intent of the Plan nor in any way shall affect the construction of any provision of the Plan.

**APPENDIX A**
**PARTICIPATING SUBSIDIARIES**
**(As of January 1, 2013)**

– Pacific Gas and Electric Company
– All U.S. subsidiaries of PG&E Corporation or the above-named corporation(s)

**Director Compensation**

**RESOLUTION OF THE**
**BOARD OF DIRECTORS OF**
**PG&E CORPORATION**

September 18, 2012

BE IT RESOLVED that, effective January 1, 2013, advisory directors and directors who are not employees of this corporation or Pacific Gas and Electric Company (collectively, "non-employee directors") shall be paid a retainer of $15,000 per calendar quarter, which shall be in addition to fees paid for attendance at Board meetings, Board committee meetings, and shareholder meetings; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, the non-employee director who serves as lead director shall be paid an additional retainer of $12,500 per calendar quarter; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, the non-employee director who is duly appointed to chair the Audit Committee of this Board shall be paid an additional retainer of $12,500 per calendar quarter, the non-employee director who is duly appointed to chair the Compensation Committee of this Board shall be paid an additional retainer of $3,750, and the non-employee directors who are duly appointed to chair the other permanent committees of this Board shall be paid an additional retainer of $2,500 per calendar quarter; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, each non-employee director shall be paid a fee of $1,750 for each meeting of the Board and each meeting of a Board committee (of which such non-employee director is a member) attended; provided, however, that each non-employee director who is a member of the Audit Committee shall be paid a fee of $2,750 for each meeting of the Audit Committee attended; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, non-employee directors attending any meeting of this corporation's shareholders that is not held on the same day as a meeting of this Board shall be paid a fee of $1,750 for each such meeting attended; and

BE IT FURTHER RESOLVED that non-employee directors shall be eligible to participate in the PG&E Corporation 2006 Long-Term Incentive Plan under the terms and conditions of that Plan, as adopted by this Board and as may be amended from time to time; and

BE IT FURTHER RESOLVED that members of this Board shall be reimbursed for reasonable expenses incurred in connection with attending Board, Board committee, or shareholder meetings, or participating in other activities undertaken on behalf of this corporation; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, the resolution on this subject adopted by the Board of Directors on December 15, 2010 is hereby superseded.

**Director Compensation**

**RESOLUTION OF THE**
**BOARD OF DIRECTORS OF**
**PACIFIC GAS AND ELECTRIC COMPANY**

September 18, 2012

BE IT RESOLVED that, effective January 1, 2013, advisory directors and directors who are not employees of this company or PG&E Corporation (collectively, "non-employee directors") shall be paid a retainer of $15,000 per calendar quarter, which shall be in addition to any fees paid for attendance at Board meetings, Board committee meetings, and shareholder meetings; provided, however, that a non-employee director shall not be paid a retainer by this company for any calendar quarter during which such director also serves as a non-employee director of PG&E Corporation; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, the non-employee director who serves as lead director shall be paid an additional retainer of $12,500 per calendar quarter; provided, however, that a non-employee director who serves as lead director shall not be paid an additional retainer by this company for any calendar quarter during which such director also serves as lead director of the PG&E Corporation Board of Directors; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, the non-employee director who is duly appointed to chair the Audit Committee of this Board shall be paid an additional retainer of $12,500 per calendar quarter, and the non-employee directors who are duly appointed to chair the other permanent committees of this Board shall be paid an additional retainer of $2,500 per calendar quarter; provided, however, that a non-employee director duly appointed to chair a permanent committee of this Board shall not be paid an additional retainer by this company for any calendar quarter during which such director also serves as chair of the corresponding committee of the PG&E Corporation Board of Directors; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, each non-employee director attending any meeting of the Board that is not held concurrently or sequentially with a meeting of the Board of Directors of PG&E Corporation, or any meeting of a Board committee (of which such non-employee director is a member) that is not held concurrently or sequentially with a meeting of the corresponding committee of the PG&E Corporation Board, shall be paid a fee of $1,750 for each such Board or Board committee meeting attended; provided, however, that each non-employee director who is a member of the Audit Committee of this Board attending any meeting of such Audit Committee that is not held concurrently or sequentially with a meeting of the Audit Committee of the PG&E Corporation Board shall be paid a fee of $2,750 for each such meeting attended; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, non-employee directors attending any meeting of this company's shareholders that (1) is not held on the same day as a meeting of this Board or a meeting of the Board of Directors of PG&E Corporation, and (2) is not held concurrently or sequentially with a meeting of the shareholders of PG&E Corporation shall be paid a fee of $1,750 for each such meeting attended; and

BE IT FURTHER RESOLVED that members of this Board shall be reimbursed for reasonable expenses incurred in connection with attending Board, Board committee, or shareholder meetings, or participating in other activities undertaken on behalf of this company; and

BE IT FURTHER RESOLVED that, effective January 1, 2013, the resolution on this subject adopted by the Board of Directors on December 15, 2010 is hereby superseded.

PLAN HISTORY AND NOTES TO COMPANY

| | |
|---|---|
| December 15, 2004 | Board adopts Plan with a reserve of 12 million shares. |
| April 20, 2005 | Shareholders approve Plan. |
| January 1, 2006 | Plan Effective Date |
| February 15, 2006 | Change in control provisions are amended |
| December 20, 2006 | Board amends Section 7 containing the terms for automatic awards for Non-Employee Directors, effective January 1, 2007 |
| October 17, 2007 | Board amends Section 7 as follows:<br>Define "Grant Date" for a particular calendar year as the first business day in March of that calendar year. Previously, the grant date for awards in 2006 and 2007 was the first business day in January of that particular calendar year. This amendment becomes effective starting with grants for 2008.<br>Amend the basis for calculating the per share value of stock option awards, so it is based on the average closing price of Stock during the months of November, December, and January preceding the grant. Previously, the per share value of stock options awards for grants in 2006 and 2007 was based on the average closing price of Stock during the preceding month of November. This amendment becomes effective starting with grants for 2008.<br>Clarify the language for settling restricted stock awards upon a Nonemployee Director's retirement from the Board, to indicate that shares credited to a Nonemployee Director's Restricted Stock Unit account may be settled after a Nonemployee Director ceases to be a member of the Board of Directors following five years of service on the Board. |
| September 17, 2008 | Board amends Section 7 containing the terms for automatic awards for Nonemployee Directors, effective January 1, 2009, to increase the total value of annual equity awards to Nonemployee Directors from $80,000 to $90,000. Of this amount, $45,000 of equity awards shall be Restricted Stock, and the remaining $45,000 shall be a mixture of Options and Restricted Stock Units, consistent with the Plan and with each Nonemployee Director's election. |
| Effective January 1, 2009 | Plan is amended to comply with the final regulations under Section 409A of the Code |
| February 18, 2009 | Plan is amended to delay grant and pricing of 2009 grants for non-employee directors, to be consistent with 2009 grants to employees. |
| December 16, 2009 | Plan is amended to (1) establish March 10, 2010 as the date of grant of 2010 Plan awards for non-employee directors and calculate the number of shares of restricted stock and restricted stock units (RSUs) to be awarded based upon the average closing price of PG&E Corporation common stock over the five trading days on March 4 through March 10, 2010, and (2) beginning in March 2011, establish that the date of grant of Plan awards for non-employee directors and the price of PG&E Corporation common stock to be used to calculate the number of shares of restricted stock and RSUs to be awarded to non-employee directors be the same as the date of grant and stock price used for the annual LTIP awards for employees. |
| May 12, 2010 | Plan is amended (following approval from the PG&E Corporation Board of Directors and shareholders) to obtain reapproval of the material terms of performance goals, as amended, to have the compensation paid based on these performance goals be eligible for full deductibility under Section 162(m) of the Internal Revenue Code. |
| December 15, 2010 | Plan is amended such that (1) all Nonemployee Director LTIP awards are comprised solely of RSUs granted upon a director's election to the Board of Directors of PG&E Corporation to serve a one-year term, which vest at the completion of the one-year term of service (unless vesting occurs earlier due to enumerated events and (2) the LTIP prohibits option/SAR cash buyouts or recycling. |
| June 15, 2011 | Plan is amended such that the number of annual RSUs granted to Nonemployee directors is rounded down to the nearest whole number. (Previously, the number of RSUs granted included fractional units calculated to three decimal points.) |
| January 1, 2013 | Section 7 of the Plan is amended to (1) increase the value of annual equity awards to Nonemployee Directors from $90,000 to $105,000 and (2) permit deferral of non-employee director awards that are granted pursuant to section 7 of the Plan. |

# PG&E Corporation
# 2006 Long-Term Incentive Plan

(As adopted effective January 1, 2006, and
as amended effective on February 15, 2006, December 20, 2006, October 17, 2007, September 17, 2008, January 1, 2009, February 18, 2009, December 16, 2009, May 12, 2010, December 15, 2010, June 15, 2011, and January 1, 2013)

1. **Establishment, Purpose and Term of Plan .**

1.1 **Establishment .** The PG&E Corporation 2006 Long-Term Incentive Plan (the " ***Plan*** " ) is hereby established effective as of January 1, 2006 (the " ***Effective Date*** " ), provided it has been approved by the shareholders of the Company.

1.2 **Purpose .** The purpose of the Plan is to advance the interests of the Participating Company Group and its shareholders by providing an incentive to attract and retain the best qualified personnel to perform services for the Participating Company Group, by motivating such persons to contribute to the growth and profitability of the Participating Company Group, by aligning their interests with interests of the Company's shareholders, and by rewarding such persons for their services by tying a significant portion of their total compensation package to the success of the Company. The Plan seeks to achieve this purpose by providing for Awards in the form of Options, Stock Appreciation Rights, Restricted Stock Awards, Performance Shares, Performance Units, Restricted Stock Units, Deferred Compensation Awards and other Stock-Based Awards as described below.

1.3 **Term of Plan.** The Plan shall continue in effect until the earlier of its termination by the Board or the date on which all of the shares of Stock available for issuance under the Plan have been issued and all restrictions on such shares under the terms of the Plan and the agreements evidencing Awards granted under the Plan have lapsed. However, all Awards shall be granted, if at all, within ten (10) years from the Effective Date. Moreover, Incentive Stock Options shall not be granted later than ten (10) years from the date of shareholder approval of the Plan.

2. **Definitions and Construction .**

2.1 **Definitions.** Whenever used herein, the following terms shall have their respective meanings set forth below:

(a) " ***Affiliate*** " means (i) an entity, other than a Parent Corporation, that directly, or indirectly through one or more intermediary entities, controls the Company or (ii) an entity, other than a Subsidiary Corporation, that is controlled by the Company directly, or indirectly through one or more intermediary entities. For this purpose, the term "control" (including the term "controlled by") means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of the relevant entity, whether through the ownership of voting securities, by contract or otherwise; or shall have such other meaning assigned such term for the purposes of registration on Form S-8 under the Securities Act.

(b) " ***Award*** " means any Option, SAR, Restricted Stock Award, Performance Share, Performance Unit, Restricted Stock Unit or Deferred Compensation Award or other Stock-Based Award granted under the Plan.

(c) " ***Award Agreement*** " means a written agreement between the Company and a Participant setting forth the terms, conditions and restrictions of the Award granted to the Participant.

(d) " ***Board*** " means the Board of Directors of the Company.

(e) " ***Change in Control*** " means, unless otherwise defined by the Participant's Award Agreement or contract of employment or service, the occurrence of any of the following:

(i) any "person" (as such term is used in Sections 13(d) and 14(d) of the Exchange Act, but excluding any benefit plan for Employees or any trustee, agent or other fiduciary for any such plan acting in such person's capacity as such fiduciary), directly or indirectly, becomes the "beneficial owner" (as defined in Rule 13d-3 promulgated under the Exchange Act), of stock of the Company representing twenty percent (20%) or more of the combined voting power of the Company's then outstanding voting stock; or

(ii) during any two consecutive years, individuals who at the beginning of such period constitute the Board cease for any reason to constitute at least a majority of the Board, unless the election, or the nomination for election by the shareholders of the Company, of each new Director was approved by a vote of at least two-thirds (2/3) of the Directors then still in office who were Directors at the beginning of the period; or

(iii) the consummation of any consolidation or merger of the Company other than a merger or consolidation which would result in the voting stock of the Company outstanding immediately prior thereto continuing to represent (either by remaining outstanding or by being converted into voting stock of the surviving entity or any parent of such surviving entity) at least seventy percent (70%) of the Combined Voting Power of the Company, such surviving entity or the parent of such surviving entity outstanding immediately after the merger or consolidation; or

(iv) the approval of the Shareholders of the Company of any (1) sale, lease, exchange or other transfer (in one or a

series of related transactions) of all or substantially all of the assets of the Company, or (2) any plan or proposal for the liquidation or dissolution of the Company.

For purposes of paragraph (iii), the term ***"Combined Voting Power"*** shall mean the combined voting power of the Company's or other relevant entity's then outstanding voting stock.

(f) " ***Code*** " means the Internal Revenue Code of 1986, as amended, and any applicable regulations promulgated thereunder.

(g) " ***Committee*** " means the Compensation Committee or other committee of the Board duly appointed to administer the Plan and having such powers as shall be specified by the Board. If no committee of the Board has been appointed to administer the Plan, the Board shall exercise all of the powers of the Committee granted herein, and, in any event, the Board may in its discretion exercise any or all of such powers.

(h) " ***Company*** " means PG&E Corporation, a California corporation, or any successor corporation thereto.

(i) " ***Consultant*** " means a person engaged to provide consulting or advisory services (other than as an Employee or a member of the Board) to a Participating Company, provided that the identity of such person, the nature of such services or the entity to which such services are provided would not preclude the Company from offering or selling securities to such person pursuant to the Plan in reliance on registration on a Form S-8 Registration Statement under the Securities Act.

(j) " ***Deferred Compensation Award*** " means an award of Stock Units granted to a Participant pursuant to Section 12 of the Plan.

(k) " ***Director*** " means a member of the Board.

(l) " ***Disability*** " means the permanent and total disability of the Participant, within the meaning of Section 22(e)(3) of the Code, except as otherwise set forth in the Plan or an Award Agreement.

(m) " ***Dividend Equivalent*** " means a credit, made at the discretion of the Committee or as otherwise provided by the Plan, to the account of a Participant in an amount equal to the cash dividends paid on one share of Stock for each share of Stock represented by an Award held by such Participant.

(n) " ***Employee*** " means any person treated as an employee (including an Officer or a member of the Board who is also treated as an employee) in the records of a Participating Company and, with respect to any Incentive Stock Option granted to such person, who is an employee for purposes of Section 422 of the Code; provided, however, that neither service as a member of the Board nor payment of a director's fee shall be sufficient to constitute employment for purposes of the Plan. The Company shall determine in good faith and in the exercise of its discretion whether an individual has become or has ceased to be an Employee and the effective date of such individual's employment or termination of employment, as the case may be. For purposes of an individual's rights, if any, under the Plan as of the time of the Company's determination, all such determinations by the Company shall be final, binding and conclusive, notwithstanding that the Company or any court of law or governmental agency subsequently makes a contrary determination.

(o) " ***Exchange Act*** " means the Securities Exchange Act of 1934, as amended.

(p) " ***Fair Market Value*** " means, as of any date, the value of a share of Stock or other property as determined by the Committee, in its discretion, or by the Company, in its discretion, if such determination is expressly allocated to the Company herein, subject to the following:

(i) Except as otherwise determined by the Committee, if, on such date, the Stock is listed on a national or regional securities exchange or market system, the Fair Market Value of a share of Stock shall be the closing price of a share of Stock as quoted on the New York Stock Exchange or such other national or regional securities exchange or market system constituting the primary market for the Stock, as reported in *The Wall Street Journal* or such other source as the Company deems reliable. If the relevant date does not fall on a day on which the Stock has traded on such securities exchange or market system, the date on which the Fair Market Value shall be established shall be the last day on which the Stock was so traded prior to the relevant date, or such other appropriate day as shall be determined by the Committee, in its discretion.

(ii) Notwithstanding the foregoing, the Committee may, in its discretion, determine the Fair Market Value on the basis of the opening, closing, high, low or average sale price of a share of Stock or the actual sale price of a share of Stock received by a Participant, on such date, the preceding trading day, the next succeeding trading day or an average determined over a period of trading days. The Committee may vary its method of determination of the Fair Market Value as provided in this Section for different purposes under the Plan.

(iii) If, on such date, the Stock is not listed on a national or regional securities exchange or market system, the Fair Market Value of a share of Stock shall be as determined by the Committee in good faith without regard to any restriction other than a restriction which, by its terms, will never lapse.

(q) " ***Incentive Stock Option*** " means an Option intended to be (as set forth in the Award Agreement) and which qualifies as an incentive stock option within the meaning of Section 422(b) of the Code.

(r) "***Insider***" means an Officer, a Director or any other person whose transactions in Stock are subject to Section 16 of the Exchange Act.

(s) ***"Net-Exercise"*** means a procedure by which the Participant will be issued a number of shares of Stock determined in accordance with the following formula:

X = Y(A-B)/A, where
X = the number of shares of Stock to be issued to the Participant upon exercise of the Option;
Y = the total number of shares with respect to which the Participant has elected to exercise the Option;
A = the Fair Market Value of one (1) share of Stock;
B = the exercise price per share (as defined in the Participant's Award Agreement).

(t) "***Nonemployee Director***" means a Director who is not an Employee.

(u) "***Nonemployee Director Award***" means an Award granted to a Nonemployee Director pursuant to Section 7 of the Plan.

(v) "***Nonstatutory Stock Option***" means an Option not intended to be (as set forth in the Award Agreement) an incentive stock option within the meaning of Section 422(b) of the Code.

(w) "***Officer***" means any person designated by the Board as an officer of the Company.

(x) "***Option***" means the right to purchase Stock at a stated price for a specified period of time granted to a Participant pursuant to Section 6 or Section 7 of the Plan. An Option may be either an Incentive Stock Option or a Nonstatutory Stock Option.

(y) ***"Option Expiration Date"*** means the date of expiration of the Option's term as set forth in the Award Agreement.

(z) "***Parent Corporation***" means any present or future "parent corporation" of the Company, as defined in Section 424(e) of the Code.

(aa) "***Participant***" means any eligible person who has been granted one or more Awards.

(bb) "***Participating Company***" means the Company or any Parent Corporation, Subsidiary Corporation or Affiliate.

(cc) "***Participating Company Group***" means, at any point in time, all entities collectively which are then Participating Companies.

(dd) "***Performance Award***" means an Award of Performance Shares or Performance Units.

(ee) "***Performance Award Formula***" means, for any Performance Award, a formula or table established by the Committee pursuant to Section 10.3 of the Plan which provides the basis for computing the value of a Performance Award at one or more threshold levels of attainment of the applicable Performance Goal(s) measured as of the end of the applicable Performance Period.

(ff) "***Performance Goal***" means a performance goal established by the Committee pursuant to Section 10.3 of the Plan.

(gg) "***Performance Period***" means a period established by the Committee pursuant to Section 10.3 of the Plan at the end of which one or more Performance Goals are to be measured.

(hh) "***Performance Share***" means a bookkeeping entry representing a right granted to a Participant pursuant to Section 10 of the Plan to receive a payment equal to the value of a Performance Share, as determined by the Committee, based on performance.

(ii) "***Performance Unit***" means a bookkeeping entry representing a right granted to a Participant pursuant to Section 10 of the Plan to receive a payment equal to the value of a Performance Unit, as determined by the Committee, based upon performance.

(jj) "***Restricted Stock Award***" means an Award of Restricted Stock.

(kk) "***Restricted Stock Unit"*** or "***Stock Unit***" means a bookkeeping entry representing a right granted to a Participant pursuant to Section 11 or Section 12 of the Plan, respectively, to receive a share of Stock on a date determined in accordance with the provisions of Section 11 or Section 12, as applicable, and the Participant's Award Agreement.

(ll) "***Restriction Period***" means the period established in accordance with Section 9.4 of the Plan during which shares subject to a Restricted Stock Award are subject to Vesting Conditions.

(mm) ***"Retirement"*** means termination as an Employee of a Participating Company at age 55 or older, provided that the Participant was an Employee for at least five consecutive years prior to the date of such termination.

(nn) "***Rule 16b-3***" means Rule 16b-3 under the Exchange Act, as amended from time to time, or any successor rule or regulation.

(oo) " ***SAR*** " or " ***Stock Appreciation Right*** " means a bookkeeping entry representing, for each share of Stock subject to such SAR, a right granted to a Participant pursuant to Section 8 of the Plan to receive payment in any combination of shares of Stock or cash of an amount equal to the excess, if any, of the Fair Market Value of a share of Stock on the date of exercise of the SAR over the exercise price.

(pp) " ***Section 162(m)*** " means Section 162(m) of the Code.

(qq) " ***Section 409A Change in Control*** " means a "change in the ownership or effective control of the corporation, or in the ownership of a substantial portion of the assets of the corporation," within the meaning of Section 409A of the Code, as such definition applies to the Company.

(rr) " ***Securities Act*** " means the Securities Act of 1933, as amended.

(ss) " ***Separation from Service*** " means a Participant's "separation from service," within the meaning of Section 409A of the Internal Revenue Code.

(tt) " ***Service*** " means a Participant's employment or service with the Participating Company Group, whether in the capacity of an Employee, a Director or a Consultant. A Participant's Service shall not be deemed to have terminated merely because of a change in the capacity in which the Participant renders such Service or a change in the Participating Company for which the Participant renders such Service, provided that there is no interruption or termination of the Participant's Service. Furthermore, a Participant's Service shall not be deemed to have terminated if the Participant takes any military leave, sick leave, or other bona fide leave of absence approved by the Company. However, if any such leave taken by a Participant exceeds ninety (90) days, then on the one hundred eighty-first (181st) day following the commencement of such leave any Incentive Stock Option held by the Participant shall cease to be treated as an Incentive Stock Option and instead shall be treated thereafter as a Nonstatutory Stock Option, unless the Participant's right to return to Service with the Participating Company Group is guaranteed by statute or contract. Notwithstanding the foregoing, unless otherwise designated by the Company or required by law, a leave of absence shall not be treated as Service for purposes of determining vesting under the Participant's Award Agreement. A Participant's Service shall be deemed to have terminated either upon an actual termination of Service or upon the entity for which the Participant performs Service ceasing to be a Participating Company. Subject to the foregoing, the Company, in its discretion, shall determine whether the Participant's Service has terminated and the effective date of such termination.

(uu) " ***Stock*** " means the common stock of the Company, as adjusted from time to time in accordance with Section 4.2 of the Plan.

(vv) " ***Stock-Based Awards*** " means any award that is valued in whole or in part by reference to, or is otherwise based on, the Stock, including dividends on the Stock, but not limited to those Awards described in Sections 6 through 12 of the Plan.

(ww) " ***Subsidiary Corporation*** " means any present or future "subsidiary corporation" of the Company, as defined in Section 424(f) of the Code.

(xx) " ***Ten Percent Owner*** " means a Participant who, at the time an Option is granted to the Participant, owns stock possessing more than ten percent (10%) of the total combined voting power of all classes of stock of a Participating Company (other than an Affiliate) within the meaning of Section 422(b)(6) of the Code.

(yy) " ***Vesting Conditions*** " mean those conditions established in accordance with Section 9.4 or Section 11.2 of the Plan prior to the satisfaction of which shares subject to a Restricted Stock Award or Restricted Stock Unit Award, respectively, remain subject to forfeiture or a repurchase option in favor of the Company upon the Participant's termination of Service.

2.2 **Construction.** Captions and titles contained herein are for convenience only and shall not affect the meaning or interpretation of any provision of the Plan. Except when otherwise indicated by the context, the singular shall include the plural and the plural shall include the singular. Use of the term "or" is not intended to be exclusive, unless the context clearly requires otherwise.

3. **ADMINISTRATION .**

3.1 **Administration by the Committee.** The Plan shall be administered by the Committee. All questions of interpretation of the Plan or of any Award shall be determined by the Committee, and such determinations shall be final and binding upon all persons having an interest in the Plan or such Award.

3.2 **Authority of Officers.** Any Officer shall have the authority to act on behalf of the Company with respect to any matter, right, obligation, determination or election which is the responsibility of or which is allocated to the Company herein, provided the Officer has apparent authority with respect to such matter, right, obligation, determination or election. In addition, to the extent specified in a resolution adopted by the Board, the Chief Executive Officer of the Company shall have the authority to grant Awards to an Employee who is not an Insider and who is receiving a salary below the level which requires approval by the Committee; provided that the terms of such Awards conform to guidelines established by the Committee and provided further that at the time of making such Awards the Chief Executive Officer also is a Director.

3.3 **Administration with Respect to Insiders.** With respect to participation by Insiders in the Plan, at any time that any class of equity security of the Company is registered pursuant to Section 12 of the Exchange Act, the Plan shall be administered in compliance with the requirements, if any, of Rule 16b-3.

3.4 **Committee Complying with Section 162(m).** While the Company is a "publicly held corporation" within the meaning of Section 162(m), the Board may establish a Committee of "outside directors" within the meaning of Section 162(m) to approve the grant of any Award which might reasonably be anticipated to result in the payment of employee remuneration that would otherwise exceed the limit on employee remuneration deductible for income tax purposes pursuant to Section 162(m).

3.5 **Powers of the Committee .** In addition to any other powers set forth in the Plan and subject to the provisions of the Plan, the Committee shall have the full and final power and authority, in its discretion:

(a) to determine the persons to whom, and the time or times at which, Awards shall be granted and the number of shares of Stock or units to be subject to each Award based on the recommendation of the Chief Executive Officer of the Company (except that Awards to the Chief Executive Officer shall be based on the recommendation of the independent members of the Board in compliance with applicable stock exchange rules and Awards to Nonemployee Directors shall be granted automatically pursuant to Section 7 of the Plan);

(b) to determine the type of Award granted and to designate Options as Incentive Stock Options or Nonstatutory Stock Options;

(c) to determine the Fair Market Value of shares of Stock or other property;

(d) to determine the terms, conditions and restrictions applicable to each Award (which need not be identical) and any shares acquired pursuant thereto, including, without limitation, (i) the exercise or purchase price of shares purchased pursuant to any Award, (ii) the method of payment for shares purchased pursuant to any Award, (iii) the method for satisfaction of any tax withholding obligation arising in connection with Award, including by the withholding or delivery of shares of Stock, (iv) the timing, terms and conditions of the exercisability or vesting of any Award or any shares acquired pursuant thereto, (v) the Performance Award Formula and Performance Goals applicable to any Award and the extent to which such Performance Goals have been attained, (vi) the time of the expiration of any Award, (vii) the effect of the Participant's termination of Service on any of the foregoing, and (viii) all other terms, conditions and restrictions applicable to any Award or shares acquired pursuant thereto not inconsistent with the terms of the Plan;

(e) to determine whether an Award will be settled in shares of Stock, cash, or in any combination thereof;

(f) to approve one or more forms of Award Agreement;

(g) to amend, modify, extend, cancel or renew any Award or to waive any restrictions or conditions applicable to any Award or any shares acquired pursuant thereto;

(h) to accelerate, continue, extend or defer the exercisability or vesting of any Award or any shares acquired pursuant thereto, including with respect to the period following a Participant's termination of Service;

(i) without the consent of the affected Participant and notwithstanding the provisions of any Award Agreement to the contrary, to unilaterally substitute at any time a Stock Appreciation Right providing for settlement solely in shares of Stock in place of any outstanding Option, provided that such Stock Appreciation Right covers the same number of shares of Stock and provides for the same exercise price (subject in each case to adjustment in accordance with Section 4.2 ) as the replaced Option and otherwise provides substantially equivalent terms and conditions as the replaced Option, as determined by the Committee;

(j) to prescribe, amend or rescind rules, guidelines and policies relating to the Plan, or to adopt sub-plans or supplements to, or alternative versions of, the Plan, including, without limitation, as the Committee deems necessary or desirable to comply with the laws or regulations of or to accommodate the tax policy, accounting principles or custom of, foreign jurisdictions whose citizens may be granted Awards;

(k) to correct any defect, supply any omission or reconcile any inconsistency in the Plan or any Award Agreement and to make all other determinations and take such other actions with respect to the Plan or any Award as the Committee may deem advisable to the extent not inconsistent with the provisions of the Plan or applicable law; and

(l) to delegate to the Chief Executive Officer or the Senior Vice President of Human Resources the authority with respect to ministerial matters regarding the Plan and Awards made under the Plan.

3.6 **Option or SAR Repricing/Buyout.** Notwithstanding anything to the contrary set forth in the Plan, without the affirmative vote of holders of a majority of the shares of Stock cast in person or by proxy at a meeting of the shareholders of the Company at which a quorum representing a majority of all outstanding shares of Stock is present or represented by proxy, the Company shall not approve a program providing for any of the following: (a) the cancellation of outstanding Options or SARs and the grant in substitution therefore of new Options or SARs having a lower exercise price, (b) the amendment of outstanding Options or SARs to reduce the exercise price thereof or (c) the purchase of outstanding unexercised Options or SARs by the Company whether by cash payment or otherwise. This paragraph shall not be construed to apply to "issuing or assuming a stock option in a transaction to which section 424(a) applies," within the meaning of Section 424 of the Code.

3.7 **Indemnification.** In addition to such other rights of indemnification as they may have as members of the Board or the Committee or as officers or employees of the Participating Company Group, members of the Board or the Committee and any officers or employees of the Participating Company Group to whom authority to act for the Board, the Committee or the Company is delegated shall be indemnified by the Company against all reasonable expenses, including attorneys' fees, actually and necessarily incurred in connection with the

defense of any action, suit or proceeding, or in connection with any appeal therein, to which they or any of them may be a party by reason of any action taken or failure to act under or in connection with the Plan, or any right granted hereunder, and against all amounts paid by them in settlement thereof (provided such settlement is approved by independent legal counsel selected by the Company) or paid by them in satisfaction of a judgment in any such action, suit or proceeding, except in relation to matters as to which it shall be adjudged in such action, suit or proceeding that such person is liable for gross negligence, bad faith or intentional misconduct in duties; provided, however, that within sixty (60) days after the institution of such action, suit or proceeding, such person shall offer to the Company, in writing, the opportunity at its own expense to handle and defend the same.

4. **SHARES SUBJECT TO PLAN .**

4.1 **Maximum Number of Shares Issuable.** Subject to adjustment as provided in Section 4.2 and subject to Section 409A of the Code, the maximum aggregate number of shares of Stock that may be issued under the Plan shall be twelve million (12,000,000) and shall consist of authorized but unissued or reacquired shares of Stock or any combination thereof. If an outstanding Award for any reason expires or is terminated or canceled without having been exercised or settled in full, or if shares of Stock acquired pursuant to an Award subject to forfeiture or repurchase are forfeited or repurchased by the Company, the shares of Stock allocable to the terminated portion of such Award or such forfeited or repurchased shares of Stock shall again be available for issuance under the Plan. Shares of Stock shall not be deemed to have been issued pursuant to the Plan with respect to any portion of an Award that is settled in cash (other than in the case of Options or SARs, in which case shares of Stock having a Fair Market Value equal to the cash delivered shall be deemed issued pursuant to the Plan). In addition, shares of Stock shall not be deemed to have been issued pursuant to the Plan to the extent such shares are withheld or reacquired by the Company in satisfaction of tax withholding obligations pursuant to Section 16.2 (other than in the case of such shares withheld in connection with the exercise of Options or SARs, which shall be deemed to be issued pursuant to the Plan). Upon the exercise of an SAR, the number of shares available for issuance under the Plan shall be reduced by the gross number of shares for which the SAR is exercised. If the exercise price of an Option is paid by tender to the Company, or attestation to the ownership, of shares of Stock owned by the Participant, or by means of a Net-Exercise, the number of shares available for issuance under the Plan shall be reduced by the gross number of shares for which the Option is exercised.

4.2 **Adjustments for Changes in Capital Structure .** Subject to any required action by the shareholders of the Company, in the event of any change in the Stock effected without receipt of consideration by the Company, whether through merger, consolidation, reorganization, reincorporation, recapitalization, reclassification, stock dividend, stock split, reverse stock split, split-up, split-off, spin-off, combination of shares, exchange of shares, or similar change in the capital structure of the Company, or in the event of payment of a dividend or distribution to the shareholders of the Company in a form other than Stock (excepting normal cash dividends) that has a material effect on the Fair Market Value of shares of Stock, appropriate adjustments shall be made in the number and kind of shares subject to the Plan and to any outstanding Awards, in the Award limits set forth in Section 5.4 , in the Nonemployee Director Awards to be granted automatically pursuant to Section 7, and in the exercise or purchase price per share under any outstanding Award in order to prevent dilution or enlargement of Participants' rights under the Plan. For purposes of the foregoing, conversion of any convertible securities of the Company shall not be treated as "effected without receipt of consideration by the Company." Any fractional share resulting from an adjustment pursuant to this Section 4.2 shall be rounded down to the nearest whole number. The Committee in its sole discretion, may also make such adjustments in the terms of any Award to reflect, or related to, such changes in the capital structure of the Company or distributions as it deems appropriate, including modification of Performance Goals, Performance Award Formulas and Performance Periods. The adjustments determined by the Committee pursuant to this Section 4.2 shall be final, binding and conclusive.

5. **ELIGIBILITY AND AWARD LIMITATIONS .**

5.1 **Persons Eligible for Awards.** Awards may be granted only to Employees, Consultants and Directors. For purposes of the foregoing sentence, "Employees," "Consultants" and "Directors" shall include prospective Employees, prospective Consultants and prospective Directors to whom Awards are granted in connection with written offers of an employment or other service relationship with the Participating Company Group; provided, however, that no Stock subject to any such Award shall vest, become exercisable or be issued prior to the date on which such person commences Service. A Nonemployee Director Award may be granted only to a person who, at the time of grant, is a Nonemployee Director.

5.2 **Participation.** Awards other than Nonemployee Director Awards are granted solely at the discretion of the Committee. Eligible persons may be granted more than one Award. However , excepting Nonemployee Director Awards, eligibility in accordance with this Section shall not entitle any person to be granted an Award, or, having been granted an Award, to be granted an additional Award.

5.3 **Incentive Stock Option Limitations.**

(a) ***Persons Eligible.*** An Incentive Stock Option may be granted only to a person who, on the effective date of grant, is an Employee of the Company, a Parent Corporation or a Subsidiary Corporation (each being an " ***ISO-Qualifying Corporation*** "). Any person who is not an Employee of an ISO-Qualifying Corporation on the effective date of the grant of an Option to such person may be granted only a Nonstatutory Stock Option. An Incentive Stock Option granted to a prospective Employee upon the condition that such person become an Employee of an ISO-Qualifying Corporation shall be deemed granted effective on the date such person commences Service with an ISO-Qualifying Corporation, with an exercise price determined as of such date in accordance with Section 6.1 .

(b) ***Fair Market Value Limitation.*** To the extent that options designated as Incentive Stock Options (granted under all stock option plans of the Participating Company Group, including the Plan) become exercisable by a Participant for the first time during any calendar year for stock having a Fair Market Value greater than One Hundred Thousand Dollars ($100,000), the portion of such options which exceeds such amount shall be treated as Nonstatutory Stock Options. For purposes of this Section, options designated as Incentive Stock

Options shall be taken into account in the order in which they were granted, and the Fair Market Value of stock shall be determined as of the time the option with respect to such stock is granted. If the Code is amended to provide for a limitation different from that set forth in this Section, such different limitation shall be deemed incorporated herein effective as of the date and with respect to such Options as required or permitted by such amendment to the Code. If an Option is treated as an Incentive Stock Option in part and as a Nonstatutory Stock Option in part by reason of the limitation set forth in this Section, the Participant may designate which portion of such Option the Participant is exercising. In the absence of such designation, the Participant shall be deemed to have exercised the Incentive Stock Option portion of the Option first. Upon exercise, shares issued pursuant to each such portion shall be separately identified.

5.4 **Award Limits.**

(a) ***Maximum Number of Shares Issuable Pursuant to Incentive Stock Options.*** Subject to adjustment as provided in Section 4.2 , the maximum aggregate number of shares of Stock that may be issued under the Plan pursuant to the exercise of Incentive Stock Options shall not exceed twelve million (12,000,000) shares. The maximum aggregate number of shares of Stock that may be issued under the Plan pursuant to all Awards other than Incentive Stock Options shall be the number of shares determined in accordance with Section 4.1 , subject to adjustment as provided in Section 4.2 and further subject to the limitation set forth in Section 5.4(b) below.

(b) ***Aggregate Limit on Full Value Awards.*** Subject to adjustment as provided in Section 4.2 , in no event shall more than twelve million (12,000,000) shares in the aggregate be issued under the Plan pursuant to the exercise or settlement of Restricted Stock Awards, Restricted Stock Unit Awards and Performance Awards ("Full Value Awards"). Except with respect to a maximum of five percent (5%) of the shares of Stock authorized in this Section 5.4(b), any Full Value Awards which vest on the basis of the Participant's continued Service shall not provide for vesting which is any more rapid than annual pro rata vesting over a three (3) year period and any Full Value Awards which vest upon the attainment of Performance Goals shall provide for a Performance Period of at least twelve (12) months.

(c) ***Section 162(m) Award Limits.*** The following limits shall apply to the grant of any Award if, at the time of grant, the Company is a "publicly held corporation" within the meaning of Section 162(m).

(i) **Options and SARs.** Subject to adjustment as provided in Section 4.2 , no Employee shall be granted within any fiscal year of the Company one or more Options or Freestanding SARs which in the aggregate are for more than 400,000 shares of Stock reserved for issuance under the Plan.

(ii) **Restricted Stock and Restricted Stock Unit Awards.** Subject to adjustment as provided in Section 4.2 , no Employee shall be granted within any fiscal year of the Company one or more Restricted Stock Awards or Restricted Stock Unit Awards, subject to Vesting Conditions based on the attainment of Performance Goals, for more than 400,000 shares of Stock reserved for issuance under the Plan.

(iii) **Performance Awards.** Subject to adjustment as provided in Section 4.2 , no Employee shall be granted (1) one or more awards of Performance Shares which could result in such Employee receiving more than 400,000 shares of Stock reserved for issuance under the Plan for each full fiscal year of the Company contained in the Performance Period for such Award, and (2) one or more awards of Performance Units which could result in such Employee receiving more than five million dollars ($5 million) for each full fiscal year of the Company contained in the Performance Period for such Award, with such amount to be pro-rated for Performance Periods of less than one full fiscal year.

6. **TERMS AND CONDITIONS OF OPTIONS .**

Options shall be evidenced by Award Agreements specifying the number of shares of Stock covered thereby, in such form as the Committee shall from time to time establish. No Option or purported Option shall be a valid and binding obligation of the Company unless evidenced by a fully executed Award Agreement. Award Agreements evidencing Options may incorporate all or any of the terms of the Plan by reference and , except as otherwise set forth in Section 7 with respect to Nonemployee Director Options, if any, shall comply with and be subject to the following terms and conditions:

6.1 **Exercise Price .** The exercise price for each Option shall be established in the discretion of the Committee; provided, however, that (a) the exercise price per share shall be not less than the Fair Market Value of a share of Stock on the effective date of grant of the Option and (b) no Incentive Stock Option granted to a Ten Percent Owner shall have an exercise price per share less than one hundred ten percent (110%) of the Fair Market Value of a share of Stock on the effective date of grant of the Option. Notwithstanding the foregoing, an Option (whether an Incentive Stock Option or a Nonstatutory Stock Option) may be granted with an exercise price lower than the minimum exercise price set forth above if such Option is granted pursuant to an assumption or substitution for another option in a manner qualifying under the provisions of Section 424(a) of the Code.

6.2 **Exercisability and Term of Options .** Options shall be exercisable at such time or times, or upon such event or events, and subject to such terms, conditions, performance criteria and restrictions as shall be determined by the Committee and set forth in the Award Agreement evidencing such Option; provided, however, that (a) no Option shall be exercisable after the expiration of ten (10) years after the effective date of grant of such Option, (b) no Incentive Stock Option granted to a Ten Percent Owner shall be exercisable after the expiration of five (5) years after the effective date of grant of such Option, and (c) no Option granted to a prospective Employee, prospective Consultant or prospective Director may become exercisable prior to the date on which such person commences Service. Subject to the foregoing, unless otherwise specified by the Committee in the grant of an Option, any Option granted hereunder shall terminate ten (10) years after the effective date of grant of the Option, unless earlier terminated in accordance with its provisions.

6.3 **Payment of Exercise Price.**

(a) ***Forms of Consideration Authorized.*** Except as otherwise provided below, payment of the exercise price for the number of shares of Stock being purchased pursuant to any Option shall be made (i) in cash, by check or in cash equivalent, (ii) by tender to the Company, or attestation to the ownership, of shares of Stock owned by the Participant having a Fair Market Value not less than the exercise price, (iii) by delivery of a properly executed notice of exercise together with irrevocable instructions to a broker providing for the assignment to the Company of the proceeds of a sale or loan with respect to some or all of the shares being acquired upon the exercise of the Option (including, without limitation, through an exercise complying with the provisions of Regulation T as promulgated from time to time by the Board of Governors of the Federal Reserve System) (a " ***Cashless Exercise*** "), (iv) by delivery of a properly executed notice of exercise electing a Net-Exercise, (v) by such other consideration as may be approved by the Committee from time to time to the extent permitted by applicable law, or (vi) by any combination thereof. The Committee may at any time or from time to time grant Options which do not permit all of the foregoing forms of consideration to be used in payment of the exercise price or which otherwise restrict one or more forms of consideration.

(b) ***Limitations on Forms of Consideration.***

(i) **Tender of Stock.** Notwithstanding the foregoing, an Option may not be exercised by tender to the Company, or attestation to the ownership, of shares of Stock to the extent such tender or attestation would constitute a violation of the provisions of any law, regulation or agreement restricting the redemption of the Company's stock.

(ii) **Cashless Exercise.** The Company reserves, at any and all times, the right, in the Company's sole and absolute discretion, to establish, decline to approve or terminate any program or procedures for the exercise of Options by means of a Cashless Exercise, including with respect to one or more Participants specified by the Company notwithstanding that such program or procedures may be available to other Participants.

6.4 **Effect of Termination of Service.**

(a) ***Option Exercisability .*** Subject to earlier termination of the Option as otherwise provided herein and unless otherwise provided by the Committee, an Option shall be exercisable after a Participant's termination of Service only during the applicable time periods provided in the Award Agreement.

(b) ***Extension if Exercise Prevented by Law .*** Notwithstanding the foregoing, unless the Committee provides otherwise in the Award Agreement, if the exercise of an Option within the applicable time periods is prevented by the provisions of Section 14.1 below, the Option shall remain exercisable until three (3) months (or such longer period of time as determined by the Committee, in its discretion) after the date the Participant is notified by the Company that the Option is exercisable, but in any event no later than the Option Expiration Date.

(c) ***Extension if Participant Subject to Section 16(b*** **).** Notwithstanding the foregoing, if a sale within the applicable time periods of shares acquired upon the exercise of the Option would subject the Participant to suit under Section 16(b) of the Exchange Act, the Option shall remain exercisable until the earliest to occur of (i) the tenth (10th) day following the date on which a sale of such shares by the Participant would no longer be subject to such suit, (ii) the one hundred and ninetieth (190th) day after the Participant's termination of Service, or (iii) the Option Expiration Date.

6.5 **Transferability of Options.** During the lifetime of the Participant, an Option shall be exercisable only by the Participant or the Participant's guardian or legal representative. Prior to the issuance of shares of Stock upon the exercise of an Option, the Option shall not be subject in any manner to anticipation, alienation, sale, exchange, transfer, assignment, pledge, encumbrance, or garnishment by creditors of the Participant or the Participant's beneficiary, except transfer by will or by the laws of descent and distribution. Notwithstanding the foregoing, to the extent permitted by the Committee, in its discretion, and set forth in the Award Agreement evidencing such Option, a Nonstatutory Stock Option shall be assignable or transferable subject to the applicable limitations, if any, described in the General Instructions to Form S-8 Registration Statement under the Securities Act.

7. **TERMS AND CONDITIONS OF NONEMPLOYEE DIRECTOR AWARDS .**

Nonemployee Director Awards granted under this Plan shall be automatic and non-discretionary and shall comply with and be subject to the terms and conditions set forth in this Section 7.

For purposes of this Section 7 as amended on December 15, 2010, the grant date for all Nonemployee Director awards to be made under this Section 7 shall be the date on which the independent inspector of election certifies the results of the annual election of directors by shareholders of PG&E Corporation; provided, however, that in extraordinary circumstances, the grant shall be delayed until the first business day of the next open trading window period following certification of the director election results, as determined by the General Counsel of PG&E Corporation (the "Grant Date")

Grants made pursuant to this Section 7, but prior to December 15, 2010, shall be subject to the terms of the Plan in effect at the time of grant.

7.1 **Grant of Restricted Stock Unit.**

(a) ***Timing and Amount of Grant .*** Each person who is a Nonemployee Director on the Grant Date shall receive a grant of Restricted Stock Units with the number of Restricted Stock Units determined by dividing $105,000 by the Fair Market Value of the Stock on

the Grant Date (rounded down to the nearest whole Restricted Stock Unit). The Restricted Stock Units awarded to a Nonemployee Director shall be credited to the director's Restricted Stock Unit account. Each Restricted Stock Unit awarded to a Nonemployee Director in accordance with this Section 7.1(a) shall be deemed to be equal to one (1) (or fraction thereof) share of Stock on the Grant Date, and the value of the Restricted Stock Unit shall thereafter fluctuate in value in accordance with the Fair Market Value of the Stock. No person shall receive more than one grant of Restricted Stock Units pursuant to this Section 7.1(a) during any calendar year.

(b) ***Dividend Rights*** . Each Nonemployee Director's Restricted Stock Unit account shall be credited quarterly on each dividend payment date with additional shares of Restricted Stock Units (including fractions computed to three decimal places) determined by dividing (1) the amount of cash dividends paid on such date with respect to the number of shares of Stock represented by the Restricted Stock Units previously credited to the account by (2) the Fair Market Value per share of Stock on such date. Such additional Restricted Stock Units shall be subject to the same terms and conditions and shall be settled in the same manner and at the same time as the Restricted Stock Units originally subject to the Restricted Stock Unit Award.

(c) ***Settlement of Restricted Stock Units*** . Restricted Stock Units credited to a Nonemployee Director's Restricted Stock Unit account shall be settled in a lump sum by the issuance of an equal number of shares of Stock, rounded down to the nearest whole share, upon the earliest of (i) the first anniversary of the Grant Date (normal vesting date), (ii) the Nonemployee Director's death, (iii) the Nonemployee Director's Disability (within the meaning of Section 409A of the Code), (iv) a Change in Control that also constitutes a Section 409A Change in Control, or (v) the Nonemployee Director's Separation from Service following a Change in Control. However, commencing with Restricted Stock Units having a Grant Date in 2013, a Nonemployee Director may irrevocably elect, no later than December 31 of the calendar year prior to the Grant Date of the Restricted Stock Units (or such later time permitted by Section 409A) to have the Nonemployee Director's Restricted Stock Unit account settled in (1) a series of 10 approximately equal annual installments (which shall be separate payments for purposes of Section 409A) commencing in January of any year following the normal vesting date, or (2) a lump sum in January of any future year following the normal vesting date. In the event that the Nonemployee Director elects settlement of the Restricted Stock Units in accordance with the immediately preceding sentence, the Restricted Stock Units shall be earlier settled in a lump sum upon the occurrence of any of the events set forth in Section 7.1(c)(ii) through 7.1(c)(v) prior to the elected settlement date (or commencement thereof in the case of settlement in 10 equal annual installments). In the event that a Nonemployee Director elects to have the Nonemployee Director's Restricted Stock Unit account settled in a series of 10 approximately equal annual installments commencing in January of any year following the normal vesting date and one of the events set forth in Section 7.1(c)(ii) through 7.1(c)(v) occurs after commencement of such installments but prior to full settlement of the Nonemployee Director's Restricted Stock Units, then any remaining unsettled Restricted Stock Units will be settled in a lump sum upon the occurrence of the applicable event but only to the extent that such acceleration would not result in the imposition of taxation under Section 409A.

7.2 **Effect of Termination of Service as a Nonemployee Director.**

(a) ***Forfeiture of Award .*** If the Nonemployee Director has a Separation from Service prior to the normal vesting date, other than for the occurrence of any of the distribution events set forth in Section 7.1(c), all Restricted Stock Units credited to the Participant's account shall be forfeited to the Company and from and after the date of such Separation from Service, and the Participant shall cease to have any rights with respect thereto; provided, however, that if the Nonemployee Director Separates from Service due to a pending Disability determination, such forfeiture shall not occur until a finding that such Disability has not occurred.

(b) ***Death or Disability*** . If the Nonemployee Director becomes "disabled," within the meaning of Section 409A of the Code or in the event of the Nonemployee Director's death, all Restricted Stock Units credited to the Nonemployee Director's account shall immediately vest and become payable, in accordance with Section 7.1(c), to the Participant (or the Participant's legal representative or other person who acquired the rights to the Restricted Stock Units by reason of the Participant's death) in the form of a number of shares of Stock equal to the number of Restricted Stock Units credited to the Restricted Stock Unit account, rounded down to the nearest whole share.

(c) Notwithstanding the provisions of Section 7.1(c) above, the Board, in its sole discretion, may establish different terms and conditions pertaining to Nonemployee Director Awards.

7.3 **Effect of Change in Control on Nonemployee Director Awards.** Upon the occurrence of a Change in Control, all Restricted Stock Units shall immediately vest but shall not be settled until such time set forth in Section 7.1(c) occurs.

8. **TERMS AND CONDITIONS OF STOCK APPRECIATION RIGHTS .**

Stock Appreciation Rights shall be evidenced by Award Agreements specifying the number of shares of Stock subject to the Award, in such form as the Committee shall from time to time establish. No SAR or purported SAR shall be a valid and binding obligation of the Company unless evidenced by a fully executed Award Agreement. Award Agreements evidencing SARs may incorporate all or any of the terms of the Plan by reference and shall comply with and be subject to the following terms and conditions:

8.1 **Types of SARs Authorized.** SARs may be granted in tandem with all or any portion of a related Option (a " ***Tandem SAR*** ") or may be granted independently of any Option (a " ***Freestanding SAR*** "). A Tandem SAR may be granted either concurrently with the grant of the related Option or at any time thereafter prior to the complete exercise, termination, expiration or cancellation of such related Option.

8.2 **Exercise Price.** The exercise price for each SAR shall be established in the discretion of the Committee; provided, however, that (a) the exercise price per share subject to a Tandem SAR shall be the exercise price per share under the related Option and (b) the exercise price per share subject to a Freestanding SAR shall be not less than the Fair Market Value of a share of Stock on the effective date of grant of the SAR.

8.3 **Exercisability and Term of SARs.**

(a) ***Tandem SARs.*** Tandem SARs shall be exercisable only at the time and to the extent, and only to the extent, that the related Option is exercisable, subject to such provisions as the Committee may specify where the Tandem SAR is granted with respect to less than the full number of shares of Stock subject to the related Option.

(b) ***Freestanding SARs.*** Freestanding SARs shall be exercisable at such time or times, or upon such event or events, and subject to such terms, conditions, performance criteria and restrictions as shall be determined by the Committee and set forth in the Award Agreement evidencing such SAR; provided, however, that no Freestanding SAR shall be exercisable after the expiration of ten (10) years after the effective date of grant of such SAR.

8.4 **Deemed Exercise of SARs.** If, on the date on which an SAR would otherwise terminate or expire, the SAR by its terms remains exercisable immediately prior to such termination or expiration and, if so exercised, would result in a payment to the holder of such SAR, then any portion of such SAR which has not previously been exercised shall automatically be deemed to be exercised as of such date with respect to such portion.

8.5 **Effect of Termination of Service.** Subject to earlier termination of the SAR as otherwise provided herein and unless otherwise provided by the Committee in the grant of an SAR and set forth in the Award Agreement, an SAR shall be exercisable after a Participant's termination of Service only as provided in the Award Agreement.

8.6 **Nontransferability of SARs.** During the lifetime of the Participant, an SAR shall be exercisable only by the Participant or the Participant's guardian or legal representative. Prior to the exercise of an SAR, the SAR shall not be subject in any manner to anticipation, alienation, sale, exchange, transfer, assignment, pledge, encumbrance, or garnishment by creditors of the Participant or the Participant's beneficiary, except transfer by will or by the laws of descent and distribution.

9. **TERMS AND CONDITIONS OF RESTRICTED STOCK AWARDS .**

Restricted Stock Awards shall be evidenced by Award Agreements specifying the number of shares of Stock subject to the Award, in such form as the Committee shall from time to time establish. No Restricted Stock Award or purported Restricted Stock Award shall be a valid and binding obligation of the Company unless evidenced by a fully executed Award Agreement. Award Agreements evidencing Restricted Stock Awards may incorporate all or any of the terms of the Plan by reference and shall comply with and be subject to the following terms and conditions:

9.1 **Types of Restricted Stock Awards Authorized.** Restricted Stock Awards may or may not require the payment of cash compensation for the stock. Restricted Stock Awards may be granted upon such conditions as the Committee shall determine, including, without limitation, upon the attainment of one or more Performance Goals described in Section 10.4 . If either the grant of a Restricted Stock Award or the lapsing of the Restriction Period is to be contingent upon the attainment of one or more Performance Goals, the Committee shall follow procedures substantially equivalent to those set forth in Sections 10.3 through 10.5(a) .

9.2 **Purchase Price.** The purchase price, if any, for shares of Stock issuable under each Restricted Stock Award and the means of payment shall be established by the Committee in its discretion.

9.3 **Purchase Period.** A Restricted Stock Award requiring the payment of cash consideration shall be exercisable within a period established by the Committee; provided, however, that no Restricted Stock Award granted to a prospective Employee, prospective Consultant or prospective Director may become exercisable prior to the date on which such person commences Service.

9.4 **Vesting and Restrictions on Transfer.** Shares issued pursuant to any Restricted Stock Award may or may not be made subject to Vesting Conditions based upon the satisfaction of such Service requirements, conditions, restrictions or performance criteria, including, without limitation, Performance Goals as described in Section 10.4 , as shall be established by the Committee and set forth in the Award Agreement evidencing such Award. During any Restriction Period in which shares acquired pursuant to a Restricted Stock Award remain subject to Vesting Conditions, such shares may not be sold, exchanged, transferred, pledged, assigned or otherwise disposed of other than as provided in the Award Agreement or as provided in Section 9.7 . Upon request by the Company, each Participant shall execute any agreement evidencing such transfer restrictions prior to the receipt of shares of Stock hereunder and shall promptly present to the Company any and all certificates representing shares of Stock acquired hereunder for the placement on such certificates of appropriate legends evidencing any such transfer restrictions.

9.5 **Voting Rights, Dividends and Distributions.** Except as provided in this Section, Section 9.4 and any Award Agreement, during the Restriction Period applicable to shares subject to a Restricted Stock Award, the Participant shall have all of the rights of a shareholder of the Company holding shares of Stock, including the right to vote such shares and to receive all dividends and other distributions paid with respect to such shares. However, in the event of a dividend or distribution paid in shares of Stock or any other adjustment made upon a change in the capital structure of the Company as described in Section 4.2 , any and all new, substituted or additional securities or other property (other than normal cash dividends) to which the Participant is entitled by reason of the Participant's Restricted Stock Award shall be immediately subject to the same Vesting Conditions as the shares subject to the Restricted Stock Award with respect to which such dividends or distributions were paid or adjustments were made.

9.6 **Effect of Termination of Service.** Unless otherwise provided by the Committee in the grant of a Restricted Stock Award and set forth in the Award Agreement, if a Participant's Service terminates for any reason, whether voluntary or involuntary (including the Participant's death or disability), then the Participant shall forfeit to the Company any shares acquired by the Participant pursuant to a Restricted

Stock Award which remain subject to Vesting Conditions as of the date of the Participant's termination of Service in exchange for the payment of the purchase price, if any, paid by the Participant. The Company shall have the right to assign at any time any repurchase right it may have, whether or not such right is then exercisable, to one or more persons as may be selected by the Company.

9.7 **Nontransferability of Restricted Stock Award Rights.** Prior to the issuance of shares of Stock pursuant to a Restricted Stock Award, rights to acquire such shares shall not be subject in any manner to anticipation, alienation, sale, exchange, transfer, assignment, pledge, encumbrance or garnishment by creditors of the Participant or the Participant's beneficiary, except transfer by will or the laws of descent and distribution. All rights with respect to a Restricted Stock Award granted to a Participant hereunder shall be exercisable during his or her lifetime only by such Participant or the Participant's guardian or legal representative.

10. **TERMS AND CONDITIONS OF PERFORMANCE AWARDS .**

Performance Awards shall be evidenced by Award Agreements in such form as the Committee shall from time to time establish. No Performance Award or purported Performance Award shall be a valid and binding obligation of the Company unless evidenced by a fully executed Award Agreement. Award Agreements evidencing Performance Awards may incorporate all or any of the terms of the Plan by reference and shall comply with and be subject to the following terms and conditions:

10.1 **Types of Performance Awards Authorized.** Performance Awards may be in the form of either Performance Shares or Performance Units. Each Award Agreement evidencing a Performance Award shall specify the number of Performance Shares or Performance Units subject thereto, the Performance Award Formula, the Performance Goal(s) and Performance Period applicable to the Award, and the other terms, conditions and restrictions of the Award.

10.2 **Initial Value of Performance Shares and Performance Units.** Unless otherwise provided by the Committee in granting a Performance Award, each Performance Share shall have an initial value equal to the Fair Market Value of one (1) share of Stock, subject to adjustment as provided in Section 4.2 , on the effective date of grant of the Performance Share. Each Performance Unit shall have an initial value determined by the Committee. The final value payable to the Participant in settlement of a Performance Award determined on the basis of the applicable Performance Award Formula will depend on the extent to which Performance Goals established by the Committee are attained within the applicable Performance Period established by the Committee.

10.3 **Establishment of Performance Period, Performance Goals and Performance Award Formula.** In granting each Performance Award, the Committee shall establish in writing the applicable Performance Period, Performance Award Formula and one or more Performance Goals which, when measured at the end of the Performance Period, shall determine on the basis of the Performance Award Formula the final value of the Performance Award to be paid to the Participant. To the extent compliance with the requirements under Section 162(m) with respect to "performance-based compensation" is desired, the Committee shall establish the Performance Goal(s) and Performance Award Formula applicable to each Performance Award no later than the earlier of (a) the date ninety (90) days after the commencement of the applicable Performance Period or (b) the date on which 25% of the Performance Period has elapsed, and, in any event, at a time when the outcome of the Performance Goals remains substantially uncertain. Once established, the Performance Goals and Performance Award Formula shall not be changed during the Performance Period. The Company shall notify each Participant granted a Performance Award of the terms of such Award, including the Performance Period, Performance Goal(s) and Performance Award Formula.

10.4 **Measurement of Performance Goals.** Performance Goals shall be established by the Committee on the basis of targets to be attained ( " ***Performance Targets*** " ) with respect to one or more measures of business or financial performance (each, a " ***Performance Measure*** " ), subject to the following:

(a) ***Performance Measures.*** Performance Measures shall be calculated with respect to the Company and/or each Subsidiary Corporation and/or such division or other business unit as may be selected by the Committee. Performance Measures may be based upon one or more of the following objectively defined and non-discretionary business criteria and any other objectively verifiable and non-discretionary adjustments permitted and pre-established by the Committee in accordance with Section 162(m), as determined by the Committee: (i) sales revenue; (ii) gross margin; (iii) operating margin; (iv) operating income; (v) pre-tax profit; (vi) earnings before interest, taxes and depreciation and amortization (EBITDA)/adjusted EBITDA; (vii) net income; (viii) expenses; (ix) the market price of the Stock; (x) earnings per share; (xi) return on shareholder equity or assets; (xii) return on capital; (xiii) return on net assets; (xiv) economic profit or economic value added (EVA); (xv) market share; (xvi) customer satisfaction; (xvii) safety; (xviii) total shareholder return; (xix) earnings; (xx) cash flow; (xxi) revenue; (xxii) profits before interest and taxes; (xxiii) profit/loss; (xxiv) profit margin; (xxv) working capital; (xxvi) price/earnings ratio; (xxvii) debt or debt-to-equity; (xxviii) accounts receivable; (xxix) write-offs; (xxx) cash; (xxxi) assets; (xxxii) liquidity; (xxxiii) earnings from operations; (xxxiv) operational reliability; (xxxv) environmental performance; (xxxvi) funds from operations; (xxxvii) adjusted revenues; (xxxviii) free cash flow; or (xxxix) core earnings.

(b) ***Performance Targets.*** Performance Targets may include a minimum, maximum, target level and intermediate levels of performance, with the final value of a Performance Award determined under the applicable Performance Award Formula by the level attained during the applicable Performance Period. A Performance Target may be stated as an absolute value or as a value determined relative to a standard selected by the Committee.

10.5 **Settlement of Performance Awards.**

(a) ***Determination of Final Value.*** As soon as practicable, but no later than the 15th day of the third month following the completion of the Performance Period applicable to a Performance Award, the Committee shall certify in writing the extent to which the applicable Performance Goals have been attained and the resulting final value of the Award earned by the Participant and to be paid upon its settlement in accordance with the applicable Performance Award Formula.

(b) ***Discretionary Adjustment of Award Formula.*** In its discretion, the Committee may, either at the time it grants a Performance Award or at any time thereafter, provide for the positive or negative adjustment of the Performance Award Formula applicable to a Performance Award that is not intended to constitute "qualified performance based compensation" to a "covered employee" within the meaning of Section 162(m) (a " ***Covered Employee*** " ) to reflect such Participant's individual performance in his or her position with the Company or such other factors as the Committee may determine. With respect to a Performance Award intended to constitute qualified performance-based compensation to a Covered Employee, the Committee shall have the discretion to reduce some or all of the value of the Performance Award that would otherwise be paid to the Covered Employee upon its settlement notwithstanding the attainment of any Performance Goal and the resulting value of the Performance Award determined in accordance with the Performance Award Formula.

(c) ***Payment in Settlement of Performance Awards.*** As soon as practicable following the Committee's determination and certification in accordance with Sections 10.5 (a) and (b) but, in any case, no later than the 15th day of the third month following completion of the Performance Period applicable to a Performance Award, payment shall be made to each eligible Participant (or such Participant's legal representative or other person who acquired the right to receive such payment by reason of the Participant's death) of the final value of the Participant's Performance Award. Payment of such amount shall be made in cash, shares of Stock, or a combination thereof as determined by the Committee.

10.6 **Voting Rights, Dividend Equivalent Rights and Distributions.** Participants shall have no voting rights with respect to shares of Stock represented by Performance Share Awards until the date of the issuance of such shares, if any (as evidenced by the appropriate entry on the books of the Company or of a duly authorized transfer agent of the Company). However, the Committee, in its discretion, may provide in the Award Agreement evidencing any Performance Share Award that the Participant shall be entitled to receive Dividend Equivalents with respect to the payment of cash dividends on Stock having a record date prior to the date on which the Performance Shares are settled or forfeited. Such Dividend Equivalents, if any, shall be credited to the Participant in the form of additional whole Performance Shares as of the date of payment of such cash dividends on Stock. The number of additional Performance Shares (rounded to the nearest whole number) to be so credited shall be determined by dividing (a) the amount of cash dividends paid on such date with respect to the number of shares of Stock represented by the Performance Shares previously credited to the Participant by (b) the Fair Market Value per share of Stock on such date. Dividend Equivalents may be paid currently or may be accumulated and paid to the extent that Performance Shares become nonforfeitable, as determined by the Committee in accordance with Section 409A of the Code. Settlement of Dividend Equivalents may be made in cash, shares of Stock, or a combination thereof as determined by the Committee, and may be paid on the same basis as settlement of the related Performance Share as provided in Section 10.5 . Dividend Equivalents shall not be paid with respect to Performance Units. In the event of a dividend or distribution paid in shares of Stock or any other adjustment made upon a change in the capital structure of the Company as described in Section 4.2 , appropriate adjustments shall be made in the Participant's Performance Share Award so that it represents the right to receive upon settlement any and all new, substituted or additional securities or other property (other than normal cash dividends) to which the Participant would be entitled by reason of the shares of Stock issuable upon settlement of the Performance Share Award, and all such new, substituted or additional securities or other property shall be immediately subject to the same Performance Goals as are applicable to the Award.

10.7 **Effect of Termination of Service.** Unless otherwise provided by the Committee in the grant of a Performance Award and set forth in the Award Agreement, the effect of a Participant's termination of Service on the Performance Award shall be as follows:

(a) ***Death or Disability.*** If the Participant's Service terminates because of the death or Disability of the Participant before the completion of the Performance Period applicable to the Performance Award, the final value of the Participant's Performance Award shall be determined by the extent to which the applicable Performance Goals have been attained with respect to the entire Performance Period and shall be prorated based on the number of months of the Participant's Service during the Performance Period. Payment shall be made following the end of the Performance Period in any manner permitted by Section 10.5 .

(b) ***Other Termination of Service.*** If the Participant's Service terminates for any reason except death or Disability before the completion of the Performance Period applicable to the Performance Award, such Award shall be forfeited in its entirety; provided, however, that in the event of an involuntary termination of the Participant's Service, the Committee, in its sole discretion, may waive the automatic forfeiture of all or any portion of any such Award.

10.8 **Nontransferability of Performance Awards.** Prior to settlement in accordance with the provisions of the Plan, no Performance Award shall be subject in any manner to anticipation, alienation, sale, exchange, transfer, assignment, pledge, encumbrance, or garnishment by creditors of the Participant or the Participant's beneficiary, except transfer by will or by the laws of descent and distribution. All rights with respect to a Performance Award granted to a Participant hereunder shall be exercisable during his or her lifetime only by such Participant or the Participant's guardian or legal representative.

11. **Terms and Conditions of Restricted Stock Unit Awards** .

Restricted Stock Unit Awards shall be evidenced by Award Agreements specifying the number of Restricted Stock Units subject to the Award, in such form as the Committee shall from time to time establish. No Restricted Stock Unit Award or purported Restricted Stock Unit Award shall be a valid and binding obligation of the Company unless evidenced by a fully executed Award Agreement. Award Agreements evidencing Restricted Stock Units may incorporate all or any of the terms of the Plan by reference and shall comply with and be subject to the following terms and conditions:

11.1 **Grant of Restricted Stock Unit Awards.** Restricted Stock Unit Awards may be granted upon such conditions as the Committee shall determine, including, without limitation, upon the attainment of one or more Performance Goals described in Section 10.4 . If either the grant of a Restricted Stock Unit Award or the Vesting Conditions with respect to such Award is to be contingent upon the attainment of one or more Performance Goals, the Committee shall follow procedures substantially equivalent to those set forth in Sections 10.3 through

10.5(a) .

11.2 **Vesting.** Restricted Stock Units may or may not be made subject to Vesting Conditions based upon the satisfaction of such Service requirements, conditions, restrictions or performance criteria, including, without limitation, Performance Goals as described in Section 10.4 , as shall be established by the Committee and set forth in the Award Agreement evidencing such Award.

11.3 **Voting Rights, Dividend Equivalent Rights and Distributions.** Participants shall have no voting rights with respect to shares of Stock represented by Restricted Stock Units until the date of the issuance of such shares (as evidenced by the appropriate entry on the books of the Company or of a duly authorized transfer agent of the Company). However, the Committee, in its discretion, may provide in the Award Agreement evidencing any Restricted Stock Unit Award that the Participant shall be entitled to receive Dividend Equivalents with respect to the payment of cash dividends on Stock having a record date prior to the date on which Restricted Stock Units held by such Participant are settled. Such Dividend Equivalents, if any, shall be paid by crediting the Participant with additional whole Restricted Stock Units as of the date of payment of such cash dividends on Stock. The number of additional Restricted Stock Units (rounded to the nearest whole number) to be so credited shall be determined by dividing (a) the amount of cash dividends paid on such date with respect to the number of shares of Stock represented by the Restricted Stock Units previously credited to the Participant by (b) the Fair Market Value per share of Stock on such date. Such additional Restricted Stock Units shall be subject to the same terms and conditions and shall be settled in the same manner and at the same time as the Restricted Stock Units originally subject to the Restricted Stock Unit Award, provided that Dividend Equivalents may be settled in cash, shares of Stock, or a combination thereof as determined by the Committee. In the event of a dividend or distribution paid in shares of Stock or any other adjustment made upon a change in the capital structure of the Company as described in Section 4.2 , appropriate adjustments shall be made in the Participant's Restricted Stock Unit Award so that it represents the right to receive upon settlement any and all new, substituted or additional securities or other property (other than normal cash dividends) to which the Participant would be entitled by reason of the shares of Stock issuable upon settlement of the Award, and all such new, substituted or additional securities or other property shall be immediately subject to the same Vesting Conditions as are applicable to the Award.

11.4 **Effect of Termination of Service.** Unless otherwise provided by the Committee in the grant of a Restricted Stock Unit Award and set forth in the Award Agreement, if a Participant's Service terminates for any reason, whether voluntary or involuntary (including the Participant's death or disability), then the Participant shall forfeit to the Company any Restricted Stock Units pursuant to the Award which remain subject to Vesting Conditions as of the date of the Participant's termination of Service.

11.5 **Settlement of Restricted Stock Unit Awards.** The Company shall issue to a Participant on the date on which Restricted Stock Units subject to the Participant's Restricted Stock Unit Award vest or on such other date determined by the Committee, in its discretion, and set forth in the Award Agreement one (1) share of Stock (and/or any other new, substituted or additional securities or other property pursuant to an adjustment described in Section 11.3 ) for each Restricted Stock Unit then becoming vested or otherwise to be settled on such date, subject to the withholding of applicable taxes. Notwithstanding the foregoing, if permitted by the Committee and set forth in the Award Agreement, the Participant may elect in accordance with terms specified in the Award Agreement to defer receipt of all or any portion of the shares of Stock or other property otherwise issuable to the Participant pursuant to this Section.

11.6 **Nontransferability of Restricted Stock Unit Awards.** Prior to the issuance of shares of Stock in settlement of a Restricted Stock Unit Award, the Award shall not be subject in any manner to anticipation, alienation, sale, exchange, transfer, assignment, pledge, encumbrance, or garnishment by creditors of the Participant or the Participant's beneficiary, except transfer by will or by the laws of descent and distribution. All rights with respect to a Restricted Stock Unit Award granted to a Participant hereunder shall be exercisable during his or her lifetime only by such Participant or the Participant's guardian or legal representative.

12. **DEFERRED COMPENSATION AWARDS .**

12.1 **Establishment of Deferred Compensation Award Programs.** This Section 12 shall not be effective unless and until the Committee determines to establish a program pursuant to this Section. The Committee, in its discretion and upon such terms and conditions as it may determine, may establish one or more programs pursuant to the Plan under which:

(a) Participants designated by the Committee who are Insiders or otherwise among a select group of highly compensated Employees may irrevocably elect, prior to a date specified by the Committee, to reduce such Participant's compensation otherwise payable in cash (subject to any minimum or maximum reductions imposed by the Committee) and to be granted automatically at such time or times as specified by the Committee one or more Awards of Stock Units with respect to such numbers of shares of Stock as determined in accordance with the rules of the program established by the Committee and having such other terms and conditions as established by the Committee.

(b) Participants designated by the Committee who are Insiders or otherwise among a select group of highly compensated Employees may irrevocably elect, prior to a date specified by the Committee, to be granted automatically an Award of Stock Units with respect to such number of shares of Stock and upon such other terms and conditions as established by the Committee in lieu of cash or shares of Stock otherwise issuable to such Participant upon the settlement of a Performance Award or Performance Unit.

12.2 **Terms and Conditions of Deferred Compensation Awards.** Deferred Compensation Awards granted pursuant to this Section 12 shall be evidenced by Award Agreements in such form as the Committee shall from time to time establish. No such Deferred Compensation Award or purported Deferred Compensation Award shall be a valid and binding obligation of the Company unless evidenced by a fully executed Award Agreement. Award Agreements evidencing Deferred Compensation Awards may incorporate all or any of the terms of the Plan by reference and shall comply with and be subject to the following terms and conditions:

(a) ***Vesting Conditions*** . Deferred Compensation Awards shall not be subject to any vesting conditions.

(b) ***Terms and Conditions of Stock Units*** .

(i) **Voting Rights, Dividend Equivalent Rights and Distributions.** Participants shall have no voting rights with respect to shares of Stock represented by Stock Units until the date of the issuance of such shares (as evidenced by the appropriate entry on the books of the Company or of a duly authorized transfer agent of the Company). However, a Participant shall be entitled to receive Dividend Equivalents with respect to the payment of cash dividends on Stock having a record date prior to the date on which Stock Units held by such Participant are settled. Such Dividend Equivalents shall be paid by crediting the Participant with additional whole and/or fractional Stock Units as of the date of payment of such cash dividends on Stock. The method of determining the number of additional Stock Units to be so credited shall be specified by the Committee and set forth in the Award Agreement. Such additional Stock Units shall be subject to the same terms and conditions and shall be settled in the same manner and at the same time as the Stock Units originally subject to the Stock Unit Award. In the event of a dividend or distribution paid in shares of Stock or any other adjustment made upon a change in the capital structure of the Company as described in Section 4.2 , appropriate adjustments shall be made in the Participant's Stock Unit Award so that it represents the right to receive upon settlement any and all new, substituted or additional securities or other property (other than normal cash dividends) to which the Participant would be entitled by reason of the shares of Stock issuable upon settlement of the Award.

(ii) **Settlement of Stock Unit Awards.** A Participant electing to receive an Award of Stock Units pursuant to this Section 12 , shall specify at the time of such election a settlement date with respect to such Award in accordance with rules established by the Committee. The Company shall issue to the Participant upon the earlier of the settlement date elected by the Participant or the date of the Participant's Separation from Service, a number of whole shares of Stock equal to the number of whole Stock Units subject to the Stock Unit Award. Such shares of Stock shall be fully vested, and the Participant shall not be required to pay any additional consideration (other than applicable tax withholding) to acquire such shares. Any fractional Stock Unit subject to the Stock Unit Award shall be settled by the Company by payment in cash of an amount equal to the Fair Market Value as of the payment date of such fractional share.

(iii) **Nontransferability of Stock Unit Awards.** Prior to their settlement in accordance with the provision of the Plan, no Stock Unit Award shall be subject in any manner to anticipation, alienation, sale, exchange, transfer, assignment, pledge, encumbrance, or garnishment by creditors of the Participant or the Participant's beneficiary, except transfer by will or by the laws of descent and distribution. All rights with respect to a Stock Unit Award granted to a Participant hereunder shall be exercisable during his or her lifetime only by such Participant or the Participant's guardian or legal representative.

13. **OTHER STOCK-BASED AWARDS** .

In addition to the Awards set forth in Sections 6 through 12 above, the Committee, in its sole discretion, may carry out the purpose of this Plan by awarding Stock-Based Awards as it determines to be in the best interests of the Company and subject to such other terms and conditions as it deems necessary and appropriate.

14. **CHANGE IN CONTROL .**

14.1 **Effect of Change in Control on Options and SARs .** In the event of a Change in Control, the surviving, continuing, successor, or purchasing corporation or other business entity or parent thereof, as the case may be (the "Acquiror " ), may, without the consent of any Participant, either assume or continue the Company's rights and obligations under outstanding Options or SARs or substitute for outstanding Options or SARs substantially equivalent options or SARs covering the Acquiror's stock. Any Options or SARs which are neither assumed or continued by the Acquiror in connection with the Change in Control nor exercised as of the Change in Control shall, contingent on the Change in Control, become fully vested and exercisable immediately prior to the Change in Control. Options and SARs which are assumed or continued in connection with a Change in Control shall be subject to such additional accelerated vesting and/or exercisability in connection with the Participant's subsequent termination of Service as the Board may determine.

14.2 **Effect of Change in Control on Other Awards .** In the event of a Change in Control, the Acquiror may, without the consent of any Participant, either assume or continue the Company's rights and obligations under outstanding Awards other than Options or SARs or substitute for such Awards substantially equivalent Awards covering the Acquiror's stock. Any such Awards which are neither assumed or continued by the Acquiror in connection with the Change in Control shall, contingent on the Change in Control, become fully vested. Awards which are assumed or continued in connection with a Change in Control shall be subject to such additional accelerated vesting or lapse of restrictions in connection with the Participant's subsequent termination of Service as the Board may determine.

14.3 **Nonemployee Director Awards** . Notwithstanding the foregoing, Nonemployee Director Awards shall be subject to the terms of Section 7, and not this Section 14.

15. **COMPLIANCE WITH SECURITIES LAW .**

The grant of Awards and the issuance of shares of Stock pursuant to any Award shall be subject to compliance with all applicable requirements of federal, state and foreign law with respect to such securities and the requirements of any stock exchange or market system upon which the Stock may then be listed. In addition, no Award may be exercised or shares issued pursuant to an Award unless (a) a registration statement under the Securities Act shall at the time of such exercise or issuance be in effect with respect to the shares issuable pursuant to the Award or (b) in the opinion of legal counsel to the Company, the shares issuable pursuant to the Award may be issued in accordance with the terms of an applicable exemption from the registration requirements of the Securities Act. The inability of the Company to obtain from any regulatory body having jurisdiction the authority, if any, deemed by the Company's legal counsel to be necessary to the lawful issuance and sale of any shares hereunder shall relieve the Company of any liability in respect of the failure to issue or sell such shares as to which such requisite authority shall not have been obtained. As a condition to issuance of any Stock, the Company may require the Participant to satisfy any qualifications that may be necessary or appropriate, to evidence compliance with any applicable law or regulation and to make any

representation or warranty with respect thereto as may be requested by the Company.

16. **TAX WITHHOLDING .**

16.1 **Tax Withholding in General.** The Company shall have the right to deduct from any and all payments made under the Plan, or to require the Participant, through payroll withholding, cash payment or otherwise, including by means of a Cashless Exercise or Net Exercise of an Option, to make adequate provision for, the federal, state, local and foreign taxes, if any, required by law to be withheld by the Participating Company Group with respect to an Award or the shares acquired pursuant thereto. The Company shall have no obligation to deliver shares of Stock, to release shares of Stock from an escrow established pursuant to an Award Agreement, or to make any payment in cash under the Plan until the Participating Company Group's tax withholding obligations have been satisfied by the Participant.

16.2 **Withholding in Shares.** The Company shall have the right, but not the obligation, to deduct from the shares of Stock issuable to a Participant upon the exercise or settlement of an Award, or to accept from the Participant the tender of, a number of whole shares of Stock having a Fair Market Value, as determined by the Company, equal to all or any part of the tax withholding obligations of the Participating Company Group. The Fair Market Value of any shares of Stock withheld or tendered to satisfy any such tax withholding obligations shall not exceed the amount determined by the applicable minimum statutory withholding rates.

17. **AMENDMENT OR TERMINATION OF PLAN .**

The Board or the Committee may amend, suspend or terminate the Plan at any time. However, without the approval of the Company's shareholders, there shall be (a) no increase in the maximum aggregate number of shares of Stock that may be issued under the Plan (except by operation of the provisions of Section 4.2), (b) no change in the class of persons eligible to receive Incentive Stock Options, and (c) no other amendment of the Plan that would require approval of the Company's shareholders under any applicable law, regulation or rule. Notwithstanding the foregoing, only the Board may amend Section 7. No amendment, suspension or termination of the Plan shall affect any then outstanding Award unless expressly provided by the Board or the Committee. In any event, no amendment, suspension or termination of the Plan may adversely affect any then outstanding Award without the consent of the Participant unless necessary to comply with any applicable law, regulation or rule.

18. **MISCELLANEOUS PROVISIONS .**

18.1 **Repurchase Rights .** Shares issued under the Plan may be subject to one or more repurchase options, or other conditions and restrictions as determined by the Committee in its discretion at the time the Award is granted. The Company shall have the right to assign at any time any repurchase right it may have, whether or not such right is then exercisable, to one or more persons as may be selected by the Company. Upon request by the Company, each Participant shall execute any agreement evidencing such transfer restrictions prior to the receipt of shares of Stock hereunder and shall promptly present to the Company any and all certificates representing shares of Stock acquired hereunder for the placement on such certificates of appropriate legends evidencing any such transfer restrictions.

18.2 **Provision of Information.** Each Participant shall be given access to information concerning the Company equivalent to that information generally made available to the Company's common shareholders.

18.3 **Rights as Employee, Consultant or Director.** No person, even though eligible pursuant to Section 5 , shall have a right to be selected as a Participant, or, having been so selected, to be selected again as a Participant. Nothing in the Plan or any Award granted under the Plan shall confer on any Participant a right to remain an Employee, Consultant or Director or interfere with or limit in any way any right of a Participating Company to terminate the Participant's Service at any time. To the extent that an Employee of a Participating Company other than the Company receives an Award under the Plan, that Award shall in no event be understood or interpreted to mean that the Company is the Employee's employer or that the Employee has an employment relationship with the Company.

18.4 **Rights as a Shareholder.** A Participant shall have no rights as a shareholder with respect to any shares covered by an Award until the date of the issuance of such shares (as evidenced by the appropriate entry on the books of the Company or of a duly authorized transfer agent of the Company). No adjustment shall be made for dividends, distributions or other rights for which the record date is prior to the date such shares are issued, except as provided in Section 4.2 or another provision of the Plan.

18.5 **Fractional Shares.** The Company shall not be required to issue fractional shares upon the exercise or settlement of any Award.

18.6 **Severability .** If any one or more of the provisions (or any part thereof) of this Plan shall be held invalid, illegal or unenforceable in any respect, such provision shall be modified so as to make it valid, legal and enforceable, and the validity, legality and enforceability of the remaining provisions (or any part thereof) of the Plan shall not in any way be affected or impaired thereby.

18.7 **Beneficiary Designation.** Subject to local laws and procedures, each Participant may file with the Company a written designation of a beneficiary who is to receive any benefit under the Plan to which the Participant is entitled in the event of such Participant's death before he or she receives any or all of such benefit. Each designation will revoke all prior designations by the same Participant, shall be in a form prescribed by the Company, and will be effective only when filed by the Participant in writing with the Company during the Participant's lifetime. If a married Participant designates a beneficiary other than the Participant's spouse, the effectiveness of such designation may be subject to the consent of the Participant's spouse. If a Participant dies without an effective designation of a beneficiary who is living at the time of the Participant's death, the Company will pay any remaining unpaid benefits to the Participant's legal representative.

18.8 **Unfunded Obligation.** Participants shall have the status of general unsecured creditors of the Company. Any amounts

payable to Participants pursuant to the Plan shall be unfunded and unsecured obligations for all purposes, including, without limitation, Title I of the Employee Retirement Income Security Act of 1974. No Participating Company shall be required to segregate any monies from its general funds, or to create any trusts, or establish any special accounts with respect to such obligations. The Company shall retain at all times beneficial ownership of any investments, including trust investments, which the Company may make to fulfill its payment obligations hereunder. Any investments or the creation or maintenance of any trust or any Participant account shall not create or constitute a trust or fiduciary relationship between the Committee or any Participating Company and a Participant, or otherwise create any vested or beneficial interest in any Participant or the Participant's creditors in any assets of any Participating Company. The Participants shall have no claim against any Participating Company for any changes in the value of any assets which may be invested or reinvested by the Company with respect to the Plan. Each Participating Company shall be responsible for making benefit payments pursuant to the Plan on behalf of its Participants or for reimbursing the Company for the cost of such payments, as determined by the Company in its sole discretion. In the event the respective Participating Company fails to make such payment or reimbursement, a Participant's (or other individual's) sole recourse shall be against the respective Participating Company, and not against the Company. A Participant's acceptance of an Award pursuant to the Plan shall constitute agreement with this provision.

18.9 **Choice of Law.** Except to the extent governed by applicable federal law, the validity, interpretation, construction and performance of the Plan and each Award Agreement shall be governed by the laws of the State of California, without regard to its conflict of law rules.

18.10 **Section 409A of the Code.** Notwithstanding anything to the contrary in the Plan, to the extent any Award payable in connection with a Participant's Separation from Service constitutes deferred compensation subject to (and not exempt from) Section 409A of the Code and (ii) the Participant is deemed at the time of such separation to be a "specified employee" under Section 409A of the Code and the Treasury regulations thereunder, then payment shall not be made or commence until the earlier of (i) six (6)-months after such Separation from Service or (ii) the date of the Participant's death following such Separation from Service; provided, however, that such delay shall only be effected to the extent required to avoid adverse tax treatment to the Participant, including (without limitation) the additional twenty percent (20%) tax for which the Participant would otherwise be liable under Section 409A(a)(1)(B) of the Code in the absence of such delay. Upon the expiration of the applicable delay period, any payment which would have otherwise been paid during that period (whether in a single sum or in installments) in the absence of this paragraph shall be paid to the Participant or the Participant's beneficiary in one lump sum on the first business day immediately following such delay.

Note:
For the purpose of computing PG&E Corporation's ratios of earnings to fixed charges, “earnings” represent income from continuing operations adjusted for income taxes, fixed charges (excluding capitalized interest), and pre-tax earnings required to cover the preferred stock dividend of consolidated subsidiaries. “Fixed charges” include interest on long-term debt and short-term borrowings (including a representative portion of rental expense), amortization of bond premium, discount and expense, interest on capital leases, AFUDC debt, and earnings required to cover preferred stock dividends of consolidated subsidiaries. Fixed charges exclude interest on tax liabilities.

[1] In 2008, PG&E Corporation recorded $154 million in income from discontinued operations related to losses incurred and synthetic fuel tax credits claimed by PG&E Corporation's former subsidiary, National Energy & Gas Transmission, Inc.

[2] Information about the frequency and amount of dividends and restrictions on the payment of dividends is set forth in "Liquidity and Financial Resources – Dividends" within "Management's Discussion and Analysis of Financial Condition and Results of Operations," and in PG&E Corporation's Consolidated Statements of Equity, the Utility's Consolidated Statements of Shareholders' Equity, and Note 6 of the Notes to the Consolidated Financial Statements.

[3] The capital lease obligations amounts are included in noncurrent liabilities – other in PG&E Corporation's and the Utility's Consolidated Balance Sheets.

[4] See Note 5 of the Notes to the Consolidated Financial Statements.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

### OVERVIEW

PG&E Corporation, incorporated in California in 1995, is a holding company that conducts its business through Pacific Gas and Electric Company ("Utility"), a public utility operating in northern and central California. The Utility generates revenues mainly through the sale and delivery of electricity and natural gas to customers. The Utility served approximately 5.2 million electricity distribution customers and approximately 4.4 million natural gas distribution customers at December 31, 2012.

The Utility is regulated primarily by the California Public Utilities Commission ("CPUC") and the Federal Energy Regulatory Commission ("FERC"). In addition, the Nuclear Regulatory Commission ("NRC") oversees the licensing, construction, operation, and decommissioning of the Utility's nuclear generation facilities. The CPUC has jurisdiction over the rates and terms and conditions of service for the Utility's electricity and natural gas distribution operations, electric generation, and natural gas transportation and storage. The FERC has jurisdiction over the rates and terms and conditions of service governing the Utility's electric transmission operations and over the rates and terms and conditions of service governing the Utility on its interstate natural gas transportation contracts. The Utility also is subject to the jurisdiction of other federal, state, and local governmental agencies.

Before setting rates, the CPUC and the FERC conduct proceedings to determine the annual amount of revenue ("revenue requirements") that the Utility is authorized to collect from its customers to recover its reasonable operating and capital costs (depreciation, tax, and financing expenses) of providing utility services. The primary CPUC proceedings are the general rate case ("GRC") and the gas transmission and storage ("GT&S") rate case which generally occur every few years and result in revenue requirements that are set for multi-year periods. The CPUC also periodically conducts a cost of capital proceeding, where it determines the capital structure the Utility must maintain (i.e., the relative weightings of common equity, long-term debt, and preferred equity) and authorizes the Utility to earn a specific rate of return on each capital component, including a rate of return on equity ("ROE"). The authorized revenue requirements the CPUC sets in the GRC and GT&S rate cases are set at levels to provide the Utility an opportunity to earn its authorized rates of return on its "rate base" – the Utility's net investment in facilities, equipment, and other property used or useful in providing utility service to its customers. The primary FERC proceeding is the electric transmission owner ("TO") rate case which generally occurs on an annual basis. The FERC does not conduct a separate proceeding to authorize a specific rate of return on the Utility's FERC-jurisdictional assets. Instead, the rate of return is embedded in electric transmission revenues authorized by the FERC in TO rate cases. If the outcome of a TO rate case is reached through a FERC-approved settlement, the rate of return may not be specifically identified but rates would have been set to provide the Utility an opportunity to earn a reasonable rate of return. In other TO rate cases, the FERC may determine a specific rate of return after the FERC has held hearings and the parties have submitted briefs.

The Utility's ability to recover the revenue requirements that have been authorized by the CPUC in a GRC does not depend on the volume of the Utility's sales of electricity and natural gas services. This decoupling of revenues and sales eliminates volatility in the revenues earned by the Utility due to fluctuations in customer demand. However, fluctuations in operating and maintenance costs and the amount and timing of capital expenditures may impact the Utility's ability to earn its authorized rate of return. The Utility's ability to recover a portion of its revenue requirements that have been authorized by the CPUC in GT&S rate cases depends on the volume of natural gas transported. The Utility's ability to recover its revenue requirements that have been authorized by the FERC in a TO rate case depends on the volume of electricity sales.

The Utility also collects additional revenue requirements to recover certain costs that the CPUC has authorized the Utility to pass on to customers, including costs to purchase electricity and natural gas; and to fund public purpose, demand response, and customer energy efficiency programs. Therefore, although the timing and amount of these costs can impact the Utility's revenue, these costs generally do not impact net income. The Utility's revenues and net income, however, also may be affected by incentive ratemaking mechanisms that adjust rates depending on the extent to which the Utility meets or fails to meet certain performance criteria, such as customer energy efficiency goals.

The Utility's revenue requirements are set based on forecasted costs. Differences in actual costs could negatively affect the Utility's ability to earn its authorized return. Differences can occur for numerous reasons, including unanticipated costs related to storms, outages, catastrophic events, or to comply with new legislation, regulations, or orders; or if the Utility is required to pay third-party claims that are not recoverable through insurance. The CPUC could also disallow recovery of costs that it finds were not prudently or reasonably incurred. Finally, there may be some types of costs that the CPUC has determined will not be recoverable through rates or for which the Utility does not seek recovery, such as certain costs associated with the Utility's natural gas system, penalties associated with investigations or violations, and environmental-related liabilities associated with the Utility's natural gas compressor station located in Hinkley, California, as described more fully below.

This is a combined annual report of PG&E Corporation and the Utility, and includes separate Consolidated Financial Statements for each of these two entities. PG&E Corporation's Consolidated Financial Statements include the accounts of PG&E Corporation, the Utility, and other wholly owned and controlled subsidiaries. The Utility's Consolidated Financial Statements include the accounts of the Utility and its wholly owned and controlled subsidiaries. This combined Management's Discussion and Analysis of Financial Condition and Results of Operations ("MD&A") of PG&E Corporation and the Utility should be read in conjunction with the Consolidated Financial Statements and the Notes to the Consolidated Financial Statements included in this annual report.

**Key Factors Affecting Results of Operations and Financial Condition**

PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows have continued to be materially affected by costs the Utility has incurred to improve the safety and reliability of its natural gas operations, as well as by costs related to the ongoing regulatory proceedings, investigations, and civil lawsuits that commenced following the rupture of one of the Utility's natural gas transmission pipelines in San Bruno, California on September 9, 2010 (the "San Bruno accident"). Through December 31, 2012, PG&E Corporation and the Utility have incurred cumulative charges of approximately $1.83 billion related to the San Bruno accident and natural gas matters. For 2012, this amount includes pipeline-related expenses of $477 million and capital expenditures of $353 million that will not be recoverable through rates. (See "CPUC Gas Safety Rulemaking Proceeding" below.) These matters and a number of other factors will continue to have a material negative impact on PG&E Corporation's and the Utility's future results of operations, financial condition, and cash flows.

- *The Outcome of Matters Related to the Utility's Natural Gas System.* The Utility forecasts that it will incur total pipeline-related costs ranging from $400 million to $500 million in 2013 that will not be recoverable through rates. These amounts include costs to perform work under the Utility's pipeline safety enhancement plan that were disallowed by the CPUC, as well as costs related to the Utility's multi-year effort to identify and remove encroachments from transmission pipeline rights-of-way; costs associated with the integrity of transmission pipelines and other gas-related work; and legal and regulatory expenses. (See "Operating and Maintenance" below.) In addition, PG&E Corporation and the Utility believe that the CPUC will impose penalties on the Utility of at least $200 million in connection with three pending CPUC investigations and other potential enforcement matters. The ultimate amount of penalties could be materially higher and the Utility may also incur costs to implement any remedial actions the CPUC may order the Utility to perform. (See "Pending CPUC Investigations and Enforcement Matters" below.) An ongoing investigation of the San Bruno accident by federal, state, and local authorities may result in the imposition of civil or criminal penalties on the Utility. (See "Criminal Investigation" below.) Finally, PG&E Corporation and the Utility believe it is reasonably possible that they may incur additional charges of up to $145 million for estimated third-party claims related to the San Bruno accident. (See "Third-Party Claims" below.)

- *Authorized Rate of Return, Capital Structure, and Financing Needs* . The CPUC has authorized the Utility's capital structure through 2015 for the Utility's electric generation, electric and natural gas distribution, and natural gas transmission and storage rate base , consisting of 52% common equity and 48% debt and preferred stock. The CPUC also authorized the Utility to earn a ROE of 10.40% beginning January 1, 2013, compared to the 11.35% previously authorized. (See "2013 Cost of Capital Proceeding" below.) In addition, the FERC has ordered the Utility to revise its requested revenue requirements and rates in its pending TO rate case to reflect a 9.1% ROE on electric transmission assets, rather than the 11.5% ROE originally requested by the Utility. (See "FERC Transmission Owner Rate Case" below.) PG&E Corporation contributes equity to the Utility as needed by the Utility to maintain its CPUC-authorized capital structure. The Utility has incurred significant expenses that are not recoverable through rates, which has increased the Utility's equity needs. In 2012, PG&E Corporation made equity contributions to the Utility of $885 million, which were funded primarily through common stock issuances that had a material dilutive effect on PG&E Corporation's earnings per common share. PG&E Corporation forecasts that it will issue additional common stock of approximately $1 billion in 2013 to fund the Utility's equity needs. Issuances that are used to fund the Utility's equity needs that are attributable to unrecoverable costs and penalties will have an additional dilutive effect. The Utility's debt and equity financing needs also will be affected by other factors, including the timing and amount of the Utility's capital expenditures, operating expenses, and collateral requirements associated with price risk management activities. The Utility forecasts that capital spending will total approximately $5.1 billion in 2013, including capital projects related to its pipeline safety enhancement plan. PG&E Corporation's and the Utility's ability to access the capital markets and the terms and rates of future financings could be affected by changes in their respective credit ratings, the outcome of natural gas matters, general economic and market conditions, and other factors. (See "Liquidity and Financial Resources" below.)

- *The Timing and Outcome of Ratemaking Proceedings* . The Utility's financial results are affected by the timing and outcome of ratemaking proceedings. The CPUC issued decisions in 2011 that determined the majority of the Utility's base revenue requirements through 2013. In November 2012, the Utility filed its 2014 GRC application with the CPUC to request that the CPUC determine the amount of revenue requirements the Utility is authorized to collect through rates for its electric generation operations and electric and natural gas distribution from 2014 through 2016. The Utility has requested that the CPUC increase the Utility's base revenues for 2014 by $1.28 billion over the comparable revenues for 2013 that were previously authorized. (See "2014 General Rate Case" below.) The FERC is expected to determine in the pending TO rate case the amount of electric transmission revenues the Utility can recover beginning in May 2013. (See "FERC Transmission Owner Rate Case" below.) In addition, in late 2013, the Utility expects to file an application with the CPUC to initiate the Utility's 2015 GT&S rate case in which the CPUC will determine the rates, and terms and conditions of the Utility's gas transmission and storage services beginning January 1, 2015. The outcome of these ratemaking proceedings can be affected by many factors, including general economic conditions, the level of customer rates, regulatory policies, and political considerations.

- *The Ability of the Utility to Control Operating Costs and Capital Expenditures.* Rates are primarily set based on forecasts and assumptions about the amount of operating costs and capital expenditures the Utility will incur in future periods. PG&E Corporation's and the Utility's net income is negatively affected when the revenues provided by rates are not sufficient for the Utility to recover the costs it actually incurs. In 2012, in addition to the non-recoverable costs related to the Utility's natural gas system described above, the Utility incurred costs of $255 million to improve the safety and reliability of its electric and natural gas operations that it will not recover in rates. The Utility forecasts that it will incur approximately $250 million to make additional incremental improvements in 2013 that it will not recover in rates. (See "Operating and Maintenance" below.) In addition, 2013 net income will be negatively affected by costs related to capital expenditures that the Utility forecasts will exceed authorized levels. Any future increase in the Utility's environmental-related liabilities that are not recoverable through rates, such as costs associated with its natural gas compressor station located in Hinkley, California, also will negatively affect PG&E Corporation's and the Utility's net income. For 2012, the Utility recorded total charges to net income of $127 million for environmental remediation related to the Hinkley site. (See "Environmental Matters" below.) Other differences between the amount or timing of the Utility's actual costs and forecasted or authorized amounts may also affect the Utility's ability to earn its authorized ROE.

**Summary of Changes in Earnings per Common Share and Income Available for Common Shareholders for 2012**

The following table is a summary reconciliation of the key changes, after-tax, in PG&E Corporation's income available for common shareholders and earnings per common share for the year ended December 31, 2012:

| (in millions, except per share amounts) | Earnings | Earnings Per Common Share (Diluted) |
|---|---|---|
| **Income Available for Common Shareholders - 2011** | $ 844 | $ 2.10 |
| Increase in rate base earnings | 80 | 0.19 |
| Natural gas matters [(1)] | 32 | 0.15 |
| Storm and outage expenses | 28 | 0.06 |
| Litigation and regulatory matters | 27 | 0.06 |
| Gas transmission revenues | 15 | 0.04 |
| Environmental-related costs | 11 | 0.03 |
| Planned incremental work | (151) | (0.36) |
| Employee operational performance incentive | (33) | (0.08) |
| Energy efficiency incentive | (3) | (0.01) |
| Increase in shares outstanding [(2)] | - | (0.19) |
| Other | (34) | (0.07) |
| **Income Available for Common Shareholders - 2012** | **$ 816** | **$ 1.92** |

[(1)] The Utility incurred charges related to natural gas matters of $812 million and $739 million, pre-tax, for 2012 and 2011, respectively. The amount shown above represents the favorable tax impact attributable to the lower amount of non-deductible penalties recorded in 2012 of $17 million, as compared to $200 million recorded in 2011.

[(2)] Represents the impact of a higher number of shares outstanding at December 31, 2012, compared to the number of shares outstanding at December 31, 2011. PG&E Corporation issues shares to fund its equity contributions to the Utility to maintain the Utility's capital structure and fund operations, including expenses related to natural gas matters. This has no dollar impact on earnings.

## CAUTIONARY LANGUAGE REGARDING FORWARD-LOOKING STATEMENTS

This 2012 Annual Report contains forward-looking statements that are necessarily subject to various risks and uncertainties. These statements reflect management's judgment and opinions which are based on current estimates, expectations, and projections about future events and assumptions regarding these events and management's knowledge of facts as of the date of this report.

These forward-looking statements relate to, among other matters, estimated losses associated with various investigations; estimated losses and insurance recoveries associated with the civil litigation arising from the San Bruno accident; forecasts of costs the Utility will incur to make safety and reliability improvements, including costs to perform work under the pipeline safety enhancement plan, that the Utility will not recover through rates; forecasts of capital expenditures; estimates and assumptions used in critical accounting policies, including those relating to environmental remediation, tax, litigation, third-party claims, and other liabilities; and the level of future equity or debt issuances. These statements are also identified by words such as "assume," "expect," "intend," "forecast," "plan," "project," "believe," "estimate," "predict," "anticipate," "may," "should," "would," "could," "potential" and similar expressions. PG&E Corporation and the Utility are not able to predict all the factors that may affect future results. Some of the factors that could cause future results to differ materially from those expressed or implied by the forward-looking statements, or from historical results, include, but are not limited to:

- the timing and terms of the resolution of pending investigations and enforcement matters related to the Utility's natural gas system operating practices and the San Bruno accident, including the ultimate amount of penalties the Utility will be required to pay, the cost of any remedial actions the Utility may be ordered to perform, and whether the resolution is reached through settlement negotiations, or a fully litigated proceeding; the ultimate amount of third-party claims associated with the San Bruno accident and the timing and amount of related insurance recoveries; the ultimate amount of punitive damages, if any, the Utility may incur related to third-party claims; and the ultimate amount of civil or criminal penalties, if any, the Utility may incur related to the criminal investigation;

- the outcomes of current ratemaking proceedings, such as the 2014 GRC and the pending TO rate case; the outcome of future ratemaking and regulatory proceedings, such as the 2015 GT&S rate case, and the CPUC's natural gas rulemaking proceeding in which the CPUC will consider the Utility's proposed scope, timing, and cost recovery mechanisms that will apply to the second phase of the pipeline safety enhancement plan; and the outcomes of other ratemaking and regulatory proceedings;

- the ultimate amount of costs the Utility incurs in the future that are not recovered through rates, including costs to perform work under the pipeline safety enhancement plan, to identify and remove encroachments from transmission pipeline easements, and to perform incremental work to improve the safety and reliability of electric and natural gas operations;

- the outcome of future investigations or proceedings that may be commenced by the CPUC or other regulatory authorities relating to the Utility's compliance with laws, rules, regulations, or orders applicable to the operation, inspection, and maintenance of its electric and gas facilities;

- whether PG&E Corporation and the Utility are able to repair the reputational harm that they have suffered, and may suffer in the future, due to the negative publicity surrounding the San Bruno accident, the related civil litigation, and the pending investigations, including any charge or finding of criminal liability;

- the level of equity contributions that PG&E Corporation must make to the Utility to enable the Utility to maintain its authorized capital structure as the Utility incurs charges and costs, including costs associated with natural gas matters and penalties imposed in connection with the pending investigations, that are not recoverable through rates or insurance;

- the impact of environmental remediation laws, regulations, and orders; the ultimate amount of costs incurred to discharge the Utility's known and unknown remediation obligations; the extent to which the Utility is able to recover compliance and remediation costs from third parties or through rates or insurance; and the ultimate amount of costs the Utility incurs in connection with environmental remediation liabilities that are not recoverable through rates or insurance, such as the remediation costs associated with the Utility's natural gas compressor station site located near Hinkley, California;

- the impact of new legislation or NRC regulations, recommendations, policies, decisions, or orders relating to the operations, seismic design, security, safety, or decommissioning of nuclear facilities, including the Utility's Diablo Canyon nuclear power plant ("Diablo Canyon"), or relating to the storage of spent nuclear fuel, cooling water intake, or other issues; and the ability of the Utility to relicense the Diablo Canyon units;

- the impact of weather-related conditions or events (such as storms, tornadoes, floods, drought, solar or electromagnetic events, and wildland and other fires), natural disasters (such as earthquakes, tsunamis, and pandemics), and other events (such as explosions, fires, accidents, mechanical breakdowns, equipment failures, human errors, and labor disruptions), as well as acts of terrorism, war, or vandalism, including cyber-attacks, that can cause unplanned outages, reduce generating output, disrupt the Utility's service to customers, or damage or disrupt the facilities, operations, or information technology and systems owned by the Utility, its customers, or third parties on which the Utility relies; and subject the Utility to third-party liability for property damage or personal injury, or result in the imposition of civil, criminal, or regulatory penalties on the Utility;

- the impact of environmental laws and regulations aimed at the reduction of carbon dioxide and other greenhouse gases ("GHG"s), and whether the Utility is able to recover associated compliance costs, including the cost of emission allowances and offsets, that the Utility may incur under cap-and-trade regulations;

- changes in customer demand for electricity ("load") and natural gas resulting from unanticipated population growth or decline in the Utility's service area, general and regional economic and financial market conditions, the extent of municipalization of the Utility's electric distribution facilities, changing levels of "direct access" customers who procure electricity from alternative energy providers, changing levels of customers who purchase electricity from governmental bodies that act as "community choice aggregators," and the development of alternative energy technologies including self-generation and distributed generation technologies;

- the adequacy and price of electricity, natural gas, and nuclear fuel supplies; the extent to which the Utility can manage and respond to the volatility of energy commodity prices; the ability of the Utility and its counterparties to post or return collateral in connection with price risk management activities; and whether the Utility is able to recover timely its energy commodity costs through rates;

- whether the Utility's information technology, operating systems and networks, including the advanced metering system infrastructure, customer billing, financial, and other systems, can continue to function accurately while meeting regulatory requirements; whether the Utility is able to protect its operating systems and networks from damage, disruption, or failure caused by cyber-attacks, computer viruses, or other hazards; whether the Utility's security measures are sufficient to protect customer, vendor, and financial data contained in such systems and networks; and whether the Utility can continue to rely on third-party vendors and contractors that maintain and support some of the Utility's operating systems;

- the extent to which costs incurred in connection with third-party claims or litigation are not recoverable through insurance, rates, or from other third parties;

- the ability of PG&E Corporation and the Utility to access capital markets and other sources of debt and equity financing in a timely manner on acceptable terms;

- the impact of federal or state laws or regulations, or their interpretation, on energy policy and the regulation of utilities and their holding companies, including how the CPUC interprets and enforces the financial and other conditions imposed on PG&E Corporation when it became the Utility's holding company, and whether the outcome of proceedings and investigations relating to the Utility's natural gas operations affects the Utility's ability to make distributions to PG&E Corporation in the form of dividends or share repurchases; and, in turn, PG&E Corporation's ability to pay dividends;

- the outcome of federal or state tax audits and the impact of any changes in federal or state tax laws, policies, or regulations; and

- the impact of changes in generally accepted accounting principles, standards, rules, or policies, including those related to regulatory accounting, and the impact of changes in their interpretation or application.

For more information about the significant risks that could affect the outcome of these forward-looking statements and PG&E Corporation's and the Utility's future financial condition, results of operations, and cash flows, see "Risk Factors" below. PG&E Corporation and the Utility do not undertake an obligation to update forward-looking statements, whether in response to new information, future events, or otherwise.

**RESULTS OF OPERATIONS**

The table below details certain items from the accompanying Consolidated Statements of Income for 2012, 2011, and 2010:

| | Year ended December 31, | | |
|---|---|---|---|
| **(in millions)** | **2012** | **2011** | **2010** |
| **Utility** | | | |
| Electric operating revenues | $ 12,014 | $ 11,601 | $ 10,644 |
| Natural gas operating revenues | 3,021 | 3,350 | 3,196 |
| **Total operating revenues** | **15,035** | **14,951** | **13,840** |
| Cost of electricity | 4,162 | 4,016 | 3,898 |
| Cost of natural gas | 861 | 1,317 | 1,291 |
| Operating and maintenance | 6,045 | 5,459 | 4,432 |
| Depreciation, amortization, and decommissioning | 2,272 | 2,215 | 1,905 |
| **Total operating expenses** | **13,340** | **13,007** | **11,526** |
| Operating income | 1,695 | 1,944 | 2,314 |

The following presents the Utility's operating results for 2012, 2011, and 2010.

***Electric Operating Revenues***

The Utility's electric operating revenues consist of amounts charged to customers for electricity generation, transmission and distribution services, as well as amounts charged to customers to recover the cost of electricity procurement and the cost of public purpose, energy efficiency, and demand response programs.

The following table provides a summary of the Utility's total electric operating revenues:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| Revenues excluding passed-through costs | $ 6,280 | $ 6,150 | $ 5,473 |
| Revenues for recovery of passed-through costs | 5,734 | 5,451 | 5,171 |
| **Total electric operating revenues** | **$ 12,014** | **$ 11,601** | **$ 10,644** |

The Utility's total electric operating revenues, including revenues intended to recover costs that are passed through to customers, increased by $413 million, or 4%, in 2012 compared to 2011. Revenues intended to recover costs that are passed through to customers and do not impact net income increased by $283 million, primarily due to an increase in the cost of electricity (See "Cost of Electricity" below), the cost of public purpose programs, and pension contributions. Electric operating revenues, excluding revenues intended to recover costs that are passed through to customers, increased by $130 million, primarily due to an increase in base revenues as authorized in the 2011 GRC and in the TO rate case.

The Utility's total electric operating revenues, including revenues intended to recover costs that are passed through to customers, increased by $957 million, or 9%, in 2011 compared to 2010. Revenues intended to recover costs that are passed through to customers and do not impact net income increased by $280 million, primarily due to increases in the cost of electricity (see "Cost of Electricity" below), the cost of public purpose programs, and pension contributions. Electric operating revenues, excluding revenues intended to recover costs that are passed through to customers, increased by $677 million. The increase is primarily due to additional base revenues that were authorized by the CPUC in the 2011 GRC and for various separately funded projects, and authorized by the FERC in the TO rate case that became effective March 1, 2011.

The Utility's future electric operating revenues, excluding revenues intended to recover costs that are passed through to customers , are expected to increase in 2013 as authorized by the CPUC in the 2011 GRC. This increase to future revenues will be offset by the lower revenues authorized by the CPUC in the 2013 Cost of Capital proceeding. (See "Regulatory Matters" below.) Additionally, the Utility's future electric operating revenues are expected to be impacted by revenues authorized by the FERC in the TO rate case (these increased revenues are expected to become effective on May 1, 2013) and by the CPUC in the 2014 GRC, which was filed on November 14, 2012. Future electric operating revenues will also be impacted by the cost of electricity and other revenues intended to recover costs that are passed through to customers.

***Cost of Electricity***

The Utility's cost of electricity includes the costs of power purchased from third parties, transmission, fuel used in its own generation facilities, fuel supplied to other facilities under power purchase agreements, and realized gains and losses on price risk management activities. (See Note 10 of the Notes to the Consolidated Financial Statements.) The Utility's cost of electricity is passed through to customers. The Utility's cost of electricity excludes non-fuel costs associated with operating the Utility's own generation facilities and electric transmission and distribution system, which are included in operating and maintenance expense in the Consolidated Statements of Income.

The following table provides a summary of the Utility's cost of electricity and the total amount and average cost of purchased power:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| Cost of purchased power | $ 3,873 | $ 3,719 | $ 3,647 |
| Fuel used in own generation facilities | 289 | 297 | 251 |
| **Total cost of electricity** | **$ 4,162** | **$ 4,016** | **$ 3,898** |
| Average cost of purchased power per kWh [1] | $ 0.079 | $ 0.089 | $ 0.081 |
| Total purchased power (in millions of kWh) | **48,933** | **41,958** | **44,837** |

[1] Kilowatt-hour

The Utility's total cost of electricity increased by $146 million, or 4%, in 2012 compared to 2011, primarily due to an increase in the volume of power purchased as customer demand increased and higher costs to purchase renewable energy. The higher cost of electricity was partially offset by the decrease in the average cost of purchased power which reflected lower spot prices. The volume of power the Utility purchases is driven by customer demand, the availability of the Utility's own generation facilities, and the cost effectiveness of each source of electricity.

The Utility's total cost of electricity increased by $118 million, or 3%, in 2011 compared to 2010. The increase was due to an increase in the average cost of purchased power resulting from increased renewable energy deliveries and higher transmission costs.

Various factors will affect the Utility's future cost of electricity, including the market prices for electricity and natural gas, the availability of Utility-owned generation, and changes in customer demand. Additionally, the cost of electricity is expected to be impacted by the higher cost of procuring renewable energy as the Utility increases the amount of its renewable energy deliveries to comply with current and future California law and regulatory requirements. The Utility's future cost of electricity also will be affected by legislation and rules applicable to GHG emissions. (See "Environmental Matters" below.)

***Natural Gas Operating Revenues***

The Utility's natural gas operating revenues consist of amounts charged for transportation, distribution, and storage services, as well as amounts charged to customers to recover the cost of natural gas procurement and public purpose programs.

The following table provides a summary of the Utility's natural gas operating revenues:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| Revenues excluding passed-through costs | $ 1,772 | $ 1,696 | $ 1,627 |
| Revenues for recovery of passed-through costs | 1,249 | 1,654 | 1,569 |
| **Total natural gas operating revenues** | **$ 3,021** | **$ 3,350** | **$ 3,196** |

The Utility's natural gas operating revenues, including revenues intended to recover costs that are passed through to customers, decreased by $329 million, or 10%, in 2012 compared to 2011. Revenues intended to recover costs that are passed through to customers and do not impact net income decreased by $405 million primarily due to a decrease in the cost of natural gas. Natural gas operating revenues, excluding revenues intended to recover costs that are passed through to customers, increased by $76 million, primarily due to an increase in base revenues as authorized in the 2011 GT&S rate case and the 2011 GRC and increases in natural gas storage revenues.

The Utility's natural gas operating revenues, including revenues intended to recover costs that are passed through to customers, increased by $154 million, or 5%, in 2011 compared to 2010. Revenues intended to recover costs that are passed through to customers and do not impact net income increased by $85 million, primarily due to an increase in the costs of public purpose programs and pension contributions. Natural gas operating revenues, excluding revenues intended to recover costs that are passed through to customers, increased by $69 million, primarily due to an increase in authorized base revenue, partially offset by a decrease in natural gas storage revenues. (The Utility's storage facilities were at capacity throughout 2011 and less gas was transported from storage due to the milder weather that prevailed in 2011 compared to 2010. As result, the Utility was unable to accept more gas for storage.)

The Utility's operating revenues for natural gas transmission services are expected to increase for 2013 and 2014 as authorized by the CPUC in the 2011 GT&S rate case and will also be impacted by revenues authorized by the CPUC in the 2014 GRC. The Utility's revenues for natural gas distribution services in 2013, excluding revenues intended to recover passed-through costs, will also reflect revenue increases authorized by the CPUC in the 2011 GRC. These increases to future revenues will be offset by the lower revenues authorized by the CPUC in the 2013 Cost of Capital proceeding. (See "Regulatory Matters" below.) Additionally, the Utility's future operating revenues will reflect those revenues authorized by the CPUC under the Utility's pipeline safety enhancement plan. (See "Natural Gas Matters" below.) The Utility's future gas operating revenues also will be impacted by the cost of natural gas, natural gas throughput volume, and other factors.

***Cost of Natural Gas***

The Utility's cost of natural gas includes the costs of procurement, storage, transportation of natural gas and realized gains and losses on price risk management activities. (See Note 10 of the Notes to the Consolidated Financial Statements.) The Utility's cost of natural gas is passed through to customers. The Utility's cost of natural gas excludes the cost of operating the Utility's gas transmission and distribution system, which is included in operating and maintenance expense in the Consolidated Statements of Income.

The following table provides a summary of the Utility's cost of natural gas:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| Cost of natural gas sold | $ 676 | $ 1,136 | $ 1,119 |
| Transportation cost of natural gas sold | 185 | 181 | 172 |
| **Total cost of natural gas** | **$ 861** | **$ 1,317** | **$ 1,291** |
| Average cost per Mcf of natural gas sold | $ 2.91 | $ 4.49 | $ 4.69 |
| Total natural gas sold (in millions of Mcf) (1) | 232 | 253 | 249 |

(1) One thousand cubic feet

The Utility's total cost of natural gas decreased by $456 million, or 35%, in 2012 compared to 2011, primarily due to a lower average market price of natural gas during 2012.

The Utility's total cost of natural gas increased by $26 million, or 2%, in 2011 compared to 2010, primarily due to the absence of a $49 million refund the Utility received in 2010 to be passed through to customers as part of a litigation settlement.

The Utility's future cost of natural gas will be affected by the market price of natural gas and changes in customer demand. In addition, the Utility's future cost of natural gas may be affected by federal or state legislation or rules to regulate the GHG emissions from the Utility's natural gas transportation and distribution facilities and from natural gas consumed by the Utility's customers.

***Operating and Maintenance***

Operating and maintenance expenses consist mainly of the Utility's costs to operate and maintain its electricity and natural gas facilities, customer billing and service expenses, the cost of public purpose programs, and administrative and general expenses. The Utility's ability to earn its authorized rate of return depends in part on its ability to manage its expenses and to achieve operational and cost efficiencies.

The Utility's operating and maintenance expenses (including costs passed through to customers) increased by $586 million, or 11%, from $5,459 million in 2011 to $6,045 million in 2012. Excluding costs passed through to customers, operating and maintenance expense increased $488 million, primarily due to costs incurred to improve the safety and reliability of electric and natural gas operations that were $255 million higher than amounts assumed under the 2011 rate cases. The remaining increase was attributable to $73 million of net costs associated with natural gas matters (see table below), $56 million of employee operational performance incentive, and $26 million of planned maintenance costs associated with the Gateway Generating Station. These costs were partially offset by a $25 million decrease in legal and regulatory matters, including penalties associated with the Rancho Cordova accident in 2011. Costs that are passed through to customers and do not impact net income increased by $98 million, primarily due to costs associated with advanced electric and gas meters that use SmartMeter ™ technology and pension contributions.

The Utility's operating and maintenance expenses (including costs passed through to customers) increased by $1,027 million, or 23%, from $4,432 million in 2010 to $5,459 million in 2011. Excluding costs passed through to customers, operating and maintenance expenses increased by $817 million in 2011 compared to 2010, primarily due to a $456 million increase in costs for natural gas matters. (See table below.) The remaining increase in operating and maintenance costs was attributable to a number of factors, including $122 million for estimated environmental remediation costs and other liabilities associated with Hinkley natural gas compressor site and approximately $82 million for labor and other maintenance-related costs, primarily associated with higher storm costs. Additionally, legal and regulatory matters increased $32 million, including penalties associated with the Rancho Cordova accident. Costs that are passed through to customers and do not impact net income increased by $210 million primarily due to pension expense, public purpose programs, and meter reading.

The following table provides a summary of the Utility's costs associated with natural gas matters, included in operating and maintenance expenses:

| (in millions) | 2012 | 2011 | 2010 | Total |
|---|---|---|---|---|
| Pipeline-related expenses | $ 477 | $ 483 | $ 63 | $ 1,023 |
| Disallowed capital expenditures | 353 | - | - | 353 |
| Accrued penalties | 17 | 200 | - | 217 |
| Third-party claims | 80 | 155 | 220 | 455 |
| Insurance recoveries | (185) | (99) | - | (284) |
| Contribution to City of San Bruno | 70 | - | - | 70 |
| **Total natural gas matters** | **$ 812** | **$ 739** | **$ 283** | **$ 1,834** |

The Utility incurred net costs of $812 million, $739 million, and $283 million during 2012, 2011 and 2010, respectively, in connection with natural gas matters that are not recoverable through rates. These amounts primarily include pipeline-related expenses which consist of costs to validate safe operating pressures, conduct strength testing, and perform other work (including work within the scope of the Utility's pipeline safety enhancement plan), as well as associated legal and regulatory costs. In addition, a $353 million charge was recorded in 2012 for disallowed capital expenditures related to the Utility's pipeline safety enhancement plan that are forecasted to exceed the CPUC's authorized levels or that were specifically disallowed. Also included above are estimated penalties related to the CPUC's pending investigations and other potential enforcement matters, accruals for third-party claims related to the San Bruno accident, and a contribution to the City of San Bruno. These costs were partially offset by insurance recoveries related to third-party claims. (See "Natural Gas Matters" below.)

The Utility forecasts that it will incur total pipeline-related costs ranging from $400 million to $500 million in 2013 that will not be recoverable through rates. These amounts include costs to perform work under the Utility's pipeline safety enhancement plan that were disallowed by the CPUC. These amounts also include emerging work related to the Utility's multi-year effort to identify and remove encroachments (such as building structures and vegetation overgrowth) from transmission pipeline rights-of-way, as well as costs associated with the integrity of transmission pipelines and other gas-related work. The Utility also expects it will continue to incur legal and regulatory expenses associated with its natural gas system. The Utility may incur costs to implement any remedial actions the CPUC may order the Utility to perform. (See "Natural Gas Matters – Pending CPUC Investigations and Enforcement Matters" below.)

Future operating and maintenance expense will also continue to be affected by other costs associated with natural gas matters that are not recoverable through rates, including any additional charges for third-party claims arising from the San Bruno accident that are not recoverable through insurance, additional charges for civil or criminal penalties, or punitive damages, if any, that may be imposed on the Utility. (See "Natural Gas Matters" below.)

The Utility forecasts that it will incur expenses in 2013 that are approximately $250 million higher than amounts assumed under the 2011 GRC and GT&S rate case as the Utility works to improve the safety and reliability of its electric and natural gas operations.

***Depreciation, Amortization, and Decommissioning***

The Utility's depreciation and amortization expense consists of depreciation and amortization on plant and regulatory assets, and decommissioning expenses associated with fossil fuel-fired generation facilities and nuclear power facilities. The Utility's depreciation, amortization, and decommissioning expenses increased by $57 million, or 3%, in 2012 compared to 2011, primarily due to capital additions.

The Utility's depreciation, amortization, and decommissioning expenses increased by $310 million, or 16%, in 2011 compared to 2010, primarily due to capital additions and an increase in depreciation rates as authorized by the 2011 GRC and 2011 GT&S rate cases.

The Utility's depreciation expense for future periods is expected to be affected as a result of changes in capital expenditures and the implementation of new depreciation rates as authorized by the CPUC in future GRCs and GT&S rate cases. Future TO rate cases authorized by the FERC will also have an impact on depreciation rates.

***Interest Income and Interest Expense***

There were no material changes to interest income and interest expense for 2012 compared to 2011 or for 2011 compared to 2010.

***Other Income, Net***

The Utility's other income, net increased by $35 million, in 2012 compared to 2011. The increase was primarily due to an increase in allowance for equity funds used during construction ("AFUDC") as the average balance of construction work in progress was higher in 2012 as compared to 2011.

The Utility's other income, net increased by $31 million, in 2011 compared to 2010 when the Utility incurred costs to support a California ballot initiative that appeared on the June 2010 ballot that were not recoverable in rates. The increase was partially offset by a decrease in AFUDC as the average balance of construction work in progress was lower in 2011 compared to 2010.

***Income Tax Provision***

The Utility's income tax provision decreased by $182 million, or 38%, in 2012 compared to 2011. The effective tax rates were 27% and 36% for 2012 and 2011, respectively. The effective tax rates for 2012 decreased compared to 2011, primarily due to lower non-tax deductible penalties related to natural gas matters, and higher state benefits received and deductions in 2012, including a benefit associated with a California research and development claim, with no comparable amount in 2011; a higher California tax deduction resulting from an accounting method change for repairs as compared to 2011; and a California tax benefit associated with shorter depreciable lives related to meters that use SmartMeter ™ technology recorded in 2012 with no comparable amount in 2011.

The Utility's income tax provision decreased by $94 million, or 16%, in 2011 compared to 2010. The effective tax rates were 36% and 34% for 2011 and 2010, respectively. The effective tax rate for 2011 increased as compared to 2010, mainly due to non- tax deductible penalties related to natural gas matters recorded in 2011, with no comparable penalties recorded in 2010, partially offset by a benefit associated with a loss carryback recorded in 2011 and the reversal of a deferred tax asset attributable to the Medicare Part D subsidy, which affected the tax provision balance in 2010, with no comparable effect in 2011.

The differences between the Utility's income taxes and amounts calculated by applying the federal statutory rate to income before income tax expense for continuing operations for 2012, 2011, and 2010 were as follows:

| | **2012** | **2011** | **2010** |
|---|---|---|---|
| Federal statutory income tax rate | 35.0% | 35.0% | 35.0% |
| Increase (decrease) in income tax rate resulting from: | | | |
| State income tax (net of federal benefit) | (3.0) | 1.6 | 1.0 |
| Effect of regulatory treatment of fixed asset differences | (3.9) | (4.2) | (3.0) |
| Tax credits | (0.6) | (0.5) | (0.4) |
| Benefit of loss carryback | (0.4) | (2.1) | - |
| Non deductible penalties | 0.5 | 6.3 | 0.2 |
| Other, net | (0.8) | 0.1 | 1.1 |
| **Effective tax rate** | **26.8%** | **36.2%** | **33.9%** |

**PG&E Corporation, Eliminations, and Other**

***Operating Revenues and Expenses***

PG&E Corporation's revenues consist mainly of billings to its affiliates for services rendered, all of which are eliminated in consolidation. PG&E Corporation's operating expenses consist mainly of employee compensation and payments to third parties for goods and services. Generally, PG&E Corporation's operating expenses are allocated to affiliates. These allocations are made without mark-up and are eliminated in consolidation. PG&E Corporation's interest expense relates to PG&E Corporation's outstanding senior notes, and is not allocated to affiliates.

There were no material changes to PG&E Corporation's operating results in 2012 compared to 2011 and 2011 compared to 2010.

## LIQUIDITY AND FINANCIAL RESOURCES

**Overview**

The Utility's ability to fund operations and make distributions to PG&E Corporation depends on the levels of its operating cash flows and access to the capital and credit markets. The levels of the Utility's operating cash and short-term debt fluctuate as a result of seasonal load, volatility in energy commodity costs, collateral requirements related to price risk management activities, the timing and amount of tax payments or refunds, and the timing and effect of regulatory decisions and long-term financings, among other factors. The Utility generally utilizes equity contributions from PG&E Corporation and long-term senior unsecured debt issuances to maintain its CPUC-authorized capital structure. The Utility relies on short-term debt, including commercial paper, to fund temporary financing needs. The CPUC authorizes the aggregate amount of long-term debt and short-term debt that the Utility may issue and authorizes the Utility to recover its related debt financing costs. The Utility has short-term borrowing authority of $4.0 billion, including $500 million that is restricted to certain contingencies.

PG&E Corporation's ability to fund operations, make scheduled principal and interest payments, fund Utility equity contributions as needed for the Utility to maintain its CPUC-authorized capital structure, and pay dividends primarily depends on the level of cash distributions received from the Utility and PG&E Corporation's access to the capital and credit markets.

PG&E Corporation's and the Utility's credit ratings may affect their access to the credit and capital markets and their respective financing costs in those markets. Credit rating downgrades may increase the cost of short-term borrowing, including the Utility's commercial paper and the costs associated with their respective credit facilities, and long-term debt.

PG&E Corporation and the Utility maintain separate bank accounts and primarily invest their cash in money market funds. The following table summarizes PG&E Corporation's and the Utility's cash positions:

| | December 31, | |
|---|---|---|
| **(in millions)** | **2012** | **2011** |
| PG&E Corporation | $ 207 | $ 209 |
| Utility | 194 | 304 |
| **Total consolidated cash and cash equivalents** | **$ 401** | **$ 513** |

In addition to these cash and cash equivalents, PG&E Corporation and the Utility hold restricted cash that primarily consists of cash held in escrow pending the resolution of the remaining disputed claims that were filed in the Utility's reorganization proceeding under Chapter 11 of the U.S. Bankruptcy Code ("Chapter 11"). (See Note 13 of the Notes to the Consolidated Financial Statements.)

**Revolving Credit Facilities and Commercial Paper Program**

The following table summarizes PG&E Corporation's and the Utility's outstanding borrowings under their revolving credit facilities and the Utility's commercial paper program at December 31, 2012:

| (in millions) | Termination Date | Facility Limit | Letters of Credit Outstanding | Borrowings | Commercial Paper | Facility Availability |
|---|---|---|---|---|---|---|
| PG&E Corporation | May 2016 | $ 300[1] | $ - | $ 120 | $ - | $ 180 |
| Utility | May 2016 | 3,000[2] | 266 | - | 370[3] | 2,364[3] |
| **Total revolving credit facilities** | | **$ 3,300** | **$ 266** | **$ 120** | **$ 370** | **$ 2,544** |

[1] Includes a $100 million sublimit for letters of credit and a $100 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.

[2] Includes a $1.0 billion sublimit for letters of credit and a $300 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.

[3] The Utility treats the amount of its outstanding commercial paper as a reduction to the amount available under its revolving credit facility.

For 2012, the average outstanding borrowings under PG&E Corporation's revolving credit facility were $21 million and the maximum outstanding balance during the year was $120 million. For 2012, the Utility's average outstanding commercial paper balance was $665 million and the maximum outstanding balance during the year was $1.4 billion. The Utility did not borrow under its credit facility in 2012.

The revolving credit facilities include usual and customary covenants for revolving credit facilities of this type, including covenants limiting liens to those permitted under PG&E Corporation's and the Utility's senior note indentures, mergers, sales of all or substantially all of PG&E Corporation's and the Utility's assets, and other fundamental changes. In addition, the revolving credit facilities require that PG&E Corporation and the Utility maintain a ratio of total consolidated debt to total consolidated capitalization of at most 65% as of the end of each fiscal quarter. PG&E Corporation's revolving credit facility agreement also requires that PG&E Corporation own, directly or indirectly, at least 80% of the common stock and at least 70% of the voting capital stock of the Utility. At December 31, 2012, PG&E Corporation and the Utility were in compliance with all covenants under their respective revolving credit facilities.

See Note 4 of the Notes to the Consolidated Financial Statements for additional information about the credit facilities and the Utility's commercial paper program.

**2012 Financings**

***Utility***

The following table summarizes long-term debt issuances in 2012:

| (in millions) | Issue Date | Amount |
|---|---|---|
| **Senior Notes** | | |
| 4.45%, due 2042 | April 16 | $ 400 |
| 2.45%, due 2022 | August 16 | 400 |
| 3.75%, due 2042 | August 16 | 350 |
| **Total debt issuances in 2012** | | **$ 1,150** |

The net proceeds from the issuance of Utility senior notes in 2012 were used to repay a portion of outstanding commercial paper, and for general corporate purposes.

The Utility also received cash contributions of $885 million from PG&E Corporation during 2012 to ensure that the Utility had adequate capital to maintain the 52% common equity ratio authorized by the CPUC.

***PG&E Corporation***

In November 2011, PG&E Corporation entered into an Equity Distribution Agreement providing for the sale of PG&E Corporation common stock having an aggregate gross offering price of up to $400 million. Sales of the shares are made by means of ordinary brokers' transactions on the New York Stock Exchange, or in such other transactions as agreed upon by PG&E Corporation and the sales agents and in conformance with applicable securities laws. For 2012, PG&E Corporation sold 5,446,760 shares of its common stock under the Equity Distribution Agreement for cash proceeds of $234 million, net of fees and commissions paid of $2 million. The proceeds from these sales were used for general corporate purposes, including the infusion of equity into the Utility. As of December 31, 2012, PG&E Corporation had the ability to issue an additional $64 million of its common stock under the November Equity Distribution Agreement.

In March 2012, PG&E Corporation sold 5,900,000 shares of its common stock in an underwritten public offering for cash proceeds of $254 million, net of fees and commissions. In addition, during 2012, PG&E Corporation issued 6,803,101 shares of common stock under its 401 (k) plan, its Dividend Reinvestment and Stock Purchase Plan, and its share-based compensation plans, generating $263 million of cash.

**Future Financing Needs**

The amount and timing of the Utility's future debt financings and equity needs will depend on various factors, including:

- the amount of cash internally generated through normal business operations;
- the timing and amount of forecasted capital expenditures;
- the timing and amount of payments made to third parties in connection with the San Bruno accident, and the timing and amount of related insurance recoveries (see "Natural Gas Matters" below);
- the timing and amount of penalties imposed on the Utility in connection with the pending investigations and other potential enforcement matters related to the San Bruno accident and the Utility's natural gas operations (see "Natural Gas Matters" below);
- the timing and amount of pipeline-related expenses and other expenses to improve the safety and reliability of the Utility's electric and natural gas operations that are not recoverable through rates (see "Operating and Maintenance" above);
- the timing of the resolution of the Chapter 11 disputed claims and the amount of interest on these claims that the Utility will be required to pay (see Note 13 of the Notes to the Consolidated Financial Statements);
- the amount of future tax payments; and
- the conditions in the capital markets, and other factors.

PG&E Corporation contributes equity to the Utility as needed to maintain the Utility's CPUC-authorized capital structure. In December 2012, the CPUC issued a final decision authorizing the Utility to maintain a capital structure consisting of 52% equity, 47% long-term debt and 1% preferred stock, beginning on January 1, 2013. The decision also reduced the authorized ROE from 11.35% to 10.40%. (See the "2013 Cost of Capital Proceeding" discussion in "Regulatory Matters" below.) The Utility's future equity needs will continue to be affected by costs that are not recoverable through rates, including costs related to natural gas matters. Further, given the Utility's significant ongoing capital expenditures, it will continue to need equity contributions from PG&E Corporation to maintain its authorized capital structure.

PG&E Corporation's equity contributions to the Utility are funded primarily through common stock issuances. PG&E Corporation also may use draws under its revolving credit facility to occasionally fund equity contributions on an interim basis. Additional common stock issued by PG&E Corporation in the future to fund further equity contributions to the Utility could have a material dilutive effect on PG&E Corporation's earnings per common share.

**Dividends**

The Board of Directors of PG&E Corporation and the Utility have each adopted a common stock dividend policy that is designed to meet the following three objectives:

- *Comparability:* Pay a dividend competitive with the securities of comparable companies based on payout ratio (the proportion of earnings paid out as dividends) and, with respect to PG&E Corporation, yield (i.e., dividend divided by share price);

- *Flexibility:* Allow sufficient cash to pay a dividend and to fund investments while avoiding having to issue new equity unless PG&E Corporation's or the Utility's capital expenditure requirements are growing rapidly and PG&E Corporation or the Utility can issue equity at reasonable cost and terms; and

- *Sustainability:* Avoid reduction or suspension of the dividend despite fluctuations in financial performance except in extreme and unforeseen circumstances.

Each Board of Directors retains authority to change the common stock dividend rate at any time, especially if unexpected events occur that would change its view as to the prudent level of cash conservation. No dividend is payable unless and until declared by the applicable Board of Directors. In addition, before declaring a dividend, the CPUC requires that the PG&E Corporation Board of Directors give first priority to the Utility's capital requirements, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner. The Boards of Directors must also consider the CPUC requirement that the Utility maintain, on average, its CPUC-authorized capital structure including a 52% equity component.

The Board of Directors of PG&E Corporation declared dividends of $0.455 per share for each of the quarters of 2012, for an annual dividend of $1.82 per share.

The following table summarizes PG&E Corporation's and the Utility's dividends paid:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| **PG&E Corporation:** | | | |
| Common stock dividends paid | $ 746 | $ 704 | $ 662 |
| Common stock dividends reinvested in Dividend Reinvestment and Stock Purchase Plan | 22 | 24 | 18 |
| **Utility:** | | | |
| Common stock dividends paid | $ 716 | $ 716 | $ 716 |
| Preferred stock dividends paid | 14 | 14 | 14 |

In December 2012, the Board of Directors of PG&E Corporation declared quarterly dividends of $0.455 per share, totaling $196 million, of which $191 million was paid on January 15, 2013 to shareholders of record on December 31, 2012. The remaining $5 million was reinvested under the Dividend Reinvestment and Stock Purchase Plan.

In December 2012, the Board of Directors of the Utility declared dividends on its outstanding series of preferred stock, payable on February 15, 2013, to shareholders of record on January 31, 2013.

As the Utility focuses on improving the safety and reliability of its natural gas and electric operations, and subject to the outcome of the matters described under "Natural Gas Matters" below, PG&E Corporation expects that its Board will continue to maintain the current quarterly common stock dividend.

**Utility**

***Operating Activities***

The Utility's cash flows from operating activities primarily consist of receipts from customers less payments of operating expenses, other than expenses such as depreciation that do not require the use of cash.

The Utility's cash flows from operating activities for 2012, 2011, and 2010 were as follows:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| Net income | $ 811 | $ 845 | $ 1,121 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | | |
| Depreciation, amortization, and decommissioning | 2,272 | 2,215 | 1,905 |
| Allowance for equity funds used during construction | (107) | (87) | (110) |
| Deferred income taxes and tax credits, net | 684 | 582 | 762 |
| Disallowed capital expenditures | 353 | - | 36 |
| Other | 236 | 289 | 221 |
| Effect of changes in operating assets and liabilities: | | | |
| Accounts receivable | (40) | (227) | (105) |
| Inventories | (24) | (63) | (43) |
| Accounts payable | (26) | 51 | 109 |
| Income taxes receivable/payable | (50) | (192) | (58) |
| Other current assets and liabilities | 272 | 36 | 123 |
| Regulatory assets, liabilities, and balancing accounts, net | 291 | (100) | (394) |
| Other noncurrent assets and liabilities | 256 | 414 | (331) |
| **Net cash provided by operating activities** | **$ 4,928** | **$ 3,763** | **$ 3,236** |

During 2012, net cash provided by operating activities increased by $1,165 million compared to 2011. This increase was primarily due to a decrease of $352 million in net collateral paid by the Utility related to price risk management activities, a $353 million disallowance for capital expenditures incurred in connection with its pipeline safety enhancement plan, a receipt of $250 million, net of legal fees, from the U.S. Treasury related to spent nuclear fuel costs, and a decrease in tax payments of $224 million. The remaining changes in cash flows from operating activities consisted of fluctuations in activities within the normal course of business such as the timing and amount of customer billings and collections.

During 2011, net cash provided by operating activities increased $527 million compared to 2010 primarily due to a decrease of $214 million in net collateral paid by the Utility related to price risk management activities. This increase also reflects a decrease in tax payments of $121 million in 2011 compared to 2010. The remaining changes in cash flows from operating activities consisted of fluctuations in activities within the normal course of business such as collateral and the timing and amount of customer billings and collections.

Future cash flow from operating activities will be affected by the timing and amount of payments to be made to third parties in connection with the San Bruno accident, including related insurance recoveries; the timing and amount of penalties that may be assessed, as well as any remedial actions the CPUC may order the Utility to perform; and the anticipated higher operating and maintenance costs associated with the Utility's natural gas and electric operations, among other factors. (See "Operating and Maintenance" above and "Natural Gas Matters" below.)

***Investing Activities***

The Utility's investing activities primarily consist of construction of new and replacement facilities necessary to deliver safe and reliable electricity and natural gas services to its customers. The amount and timing of the Utility's capital expenditures is affected by many factors such as the occurrence of storms and other events causing outages or damages to the Utility's infrastructure. Cash used in investing activities also includes the proceeds from sales of nuclear decommissioning trust investments which are largely offset by the amount of cash used to purchase new nuclear decommissioning trust investments. The funds in the decommissioning trusts, along with accumulated earnings, are used exclusively for decommissioning and dismantling the Utility's nuclear generation facilities.

The Utility's cash flows from investing activities for 2012, 2011, and 2010 were as follows:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| Capital expenditures | $ (4,624) | $ (4,038) | $ (3,802) |
| Decrease in restricted cash | 50 | 200 | 66 |
| Proceeds from sales and maturities of nuclear decommissioning trust investments | 1,133 | 1,928 | 1,405 |
| Purchases of nuclear decommissioning trust investments | (1,189) | (1,963) | (1,456) |
| Other | 16 | 14 | 19 |
| **Net cash used in investing activities** | **$ (4,614)** | **$ (3,859)** | **$ (3,768)** |

Net cash used in investing activities increased by $755 million in 2012 compared to 2011. This increase was primarily due to an increase of $586 million in capital expenditures and a reduction in restricted cash released for resolved Chapter 11 disputed claims of $150 million.

Net cash used in investing activities increased by $91 million in 2011 compared to 2010, primarily due to an increase in capital expenditures of $236 million as compared to 2010. This increase was partially offset by a decrease of $134 million in restricted cash that was primarily due to releases from escrow for resolved Chapter 11 disputed claims in 2011, with few similar releases in 2010.

Future cash flows used in investing activities are largely dependent on the timing and amount of capital expenditures. (See "Capital Expenditures" below for further discussion of expected spending and significant capital projects.)

***Financing Activities***

The Utility's cash flows from financing activities for 2012, 2011, and 2010 were as follows:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| Borrowings under revolving credit facilities | $ - | $ 208 | $ 400 |
| Repayments under revolving credit facilities | - | (208) | (400) |
| Net issuances (repayments) of commercial paper, net of discount of $3 in 2012, $4 in 2011, and $3 in 2010 | (1,021) | 782 | 267 |
| Proceeds from issuance of short-term debt, net of issuance costs of $1 in 2011 and 2010 | - | 250 | 249 |
| Proceeds from issuance of long-term debt, net of premium, discount, and issuance costs of $13 in 2012, $8 in 2011, and $23 in 2010 | 1,137 | 792 | 1,327 |
| Short-term debt matured | (250) | (250) | (500) |
| Long-term debt matured or repurchased | (50) | (700) | (95) |
| Energy recovery bonds matured | (423) | (404) | (386) |
| Preferred stock dividends paid | (14) | (14) | (14) |
| Common stock dividends paid | (716) | (716) | (716) |
| Equity contribution | 885 | 555 | 190 |
| Other | 28 | 54 | (73) |
| **Net cash provided by (used in) financing activities** | **$ (424)** | **$ 349** | **$ 249** |

In 2012, net cash provided by financing activities decreased by $773 million compared to the same period in 2011. In 2011, net cash provided by financing activities increased by $100 million compared to 2010. Cash provided by or used in financing activities is driven by the Utility's financing needs, which depend on the level of cash provided by or used in operating activities and the level of cash provided by or used in investing activities. The Utility generally utilizes long-term senior unsecured debt issuances and equity contributions from PG&E Corporation to maintain its CPUC-authorized capital structure, and relies on short-term debt to fund temporary financing needs.

**PG&E Corporation**

As of December 31, 2012, PG&E Corporation's affiliates had entered into four tax equity agreements with two privately held companies to fund residential and commercial retail solar energy installations. Under these agreements, PG&E Corporation has agreed to provide lease payments and investment contributions of up to $396 million to these companies in exchange for the right to receive benefits from local rebates, federal grants, and a share of the customer payments made to these companies. PG&E Corporation's financial exposure from these arrangements is generally limited to its lease payments and investment contributions to these companies. As of December 31, 2012, PG&E Corporation had made total payments of $361 million under these tax equity agreements and received $228 million in benefits and customer payments. Lease payments, investment contributions, benefits, and customer payments received are included in cash flows from operating and investing activities within the Consolidated Statements of Cash Flows.

In addition to the investments above, PG&E Corporation had the following material cash flows on a stand-alone basis for the years ended December 31, 2012, 2011, and 2010: dividend payments, common stock issuances, borrowings and repayments under the revolving credit facility in 2012 and 2011, and transactions between PG&E Corporation and the Utility.

**CONTRACTUAL COMMITMENTS**

| | Payment due by period | | | | | |
|---|---|---|---|---|---|---|
| (in millions) | Less Than 1 Year | 1–3 Years | 3–5 Years | More Than 5 Years | | Total |
| **Contractual Commitments:** | | | | | | |
| **Utility** | | | | | | |
| Long-term debt [1] : | | | | | | |
| Fixed rate obligations | $ 1,035 | $ 2,148 | $ 1,824 | $ 17,305 | | $ 22,312 |
| Variable rate obligations | 2 | 8 | 941 | 153 | | 1,104 |
| Purchase obligations [2] : | | | | | | |
| Power purchase agreements : | | | | | | |
| Qualifying facilities ("QF") | 892 | 1,641 | 1,108 | 2,238 | | 5,879 |
| Renewable contracts (other than QF) | 1,356 | 3,881 | 4,107 | 30,958 | | 40,302 |
| Other power purchase agreements | 846 | 1,326 | 1,223 | 3,322 | | 6,717 |
| Natural gas supply, transportation and storage | 707 | 400 | 260 | 865 | | 2,232 |
| Nuclear fuel agreements | 113 | 322 | 295 | 878 | | 1,608 |
| Pension and other benefits [3] | 455 | 796 | 796 | 398 | [6] | 2,445 |
| Capital lease obligations [4] | 35 | 51 | 40 | 20 | | 146 |
| Operating leases [4] | 42 | 69 | 55 | 206 | | 372 |
| Preferred dividends [5] | 14 | 28 | 28 | - | | 70 |
| **PG&E Corporation** | | | | | | |
| Long-term debt [1] : | | | | | | |
| Fixed rate obligations | 20 | 355 | - | - | | 375 |

[1] Includes interest payments over the terms of the debt. Interest is calculated using the applicable interest rate at December 31, 2012 and outstanding principal for each instrument with the terms ending at each instrument's maturity. Variable rate obligations consist of pollution control bonds, due in 2016 and 2026 and related loans and are backed by letters of credit that expire on May 31, 2016. (See Note 4 of the Notes to the Consolidated Financial Statements.)

[2] This table includes power purchase agreements that have been approved by the CPUC and have completed major milestones for construction. (See Note 15 of the Notes to the Consolidated Financial Statements.)

[3] PG&E Corporation's and the Utility's funding policy is to contribute tax-deductible amounts, consistent with applicable regulatory decisions and federal minimum funding requirements. (See Note 12 of the Notes to the Consolidated Financial Statements.)

[4] See Note 15 of the Notes to the Consolidated Financial Statements.

[5] Based on historical performance, it is assumed for purposes of the table above that dividends are payable within a fixed period of five years.

[6] Payments into the pension and other benefits plans are based on annual contribution requirements. As these annual requirements continue indefinitely into the future, the amount reflected represents only 1 year of contributions for the Utility's pension and other benefit plans.

The contractual commitments table above excludes potential commitments associated with the conversion of existing overhead electric facilities to underground electric facilities. At December 31, 2012, the Utility was committed to spending approximately $277 million for these conversions. These funds are conditionally committed depending on the timing of the work, including the schedules of the respective cities, counties, and communication utilities involved. The Utility expects to spend $86 million each year in connection with these projects. Consistent with past practice, the Utility expects that these capital expenditures will be included in rate base as each individual project is completed, resulting in the capital expenditures being recoverable from customers.

The contractual commitments table above also excludes potential payments associated with unrecognized tax positions. Due to the uncertainty surrounding tax audits, PG&E Corporation and the Utility cannot make reliable estimates of the amounts and periods of future payments to major tax jurisdictions related to unrecognized tax benefits. Matters relating to tax years that remain subject to examination are discussed in Note 9 of the Notes to the Consolidated Financial Statements.

## CAPITAL EXPENDITURES

The Utility makes various capital investments in its electric generation and electric and natural gas transmission and distribution infrastructure to maintain and improve system reliability, safety, and customer service; to extend the life of or replace existing infrastructure; and to add new infrastructure to meet growth. Most of the Utility's revenue requirements to recover forecasted capital expenditures are authorized in the GRC, TO, and GT&S rate cases. (See "2014 General Rate Case" below.) The Utility also collects additional revenue requirements to recover capital expenditures related to projects that have been specifically authorized by the CPUC, such as new power plants, gas or electric distribution projects, and the SmartMeter ™ advanced metering infrastructure.

The Utility's capital expenditures for property, plant, and equipment totaled $4.8 billion in 2012, $4.2 billion in 2011, and $3.9 billion in 2010. The Utility forecasts that capital expenditures will total approximately $5.1 billion in 2013, including expenditures related to its pipeline safety enhancement plan.

### *Natural Gas Pipeline Safety Enhancement Plan*

On December 28, 2012, the CPUC issued a decision that approved the Utility's proposed pipeline safety enhancement plan (filed in August 2011) but disallowed the Utility's request for rate recovery of a significant portion of plan-related costs the Utility forecasted it would incur over the first phase of the plan (2011 through 2014). The CPUC decision limited the Utility's recovery of capital expenditures to $1.0 billion of the total $1.4 billion requested. As a result, the Utility recorded a charge of $353 million in 2012 for disallowed capital expenditures. (See "Natural Gas Matters – CPUC Gas Safety Rulemaking Proceeding" below.)

### *Oakley Generation Facility*

On December 20, 2012, the CPUC approved an amended purchase and sale agreement between the Utility and a third-party developer that provides for the construction of a 586-megawatt natural gas-fired facility in Oakley, California. The CPUC authorized the Utility to recover the purchase price through rates. During January 2013, several parties filed applications for rehearing of the CPUC decision. PG&E Corporation and Utility are uncertain whether the CPUC will modify its decision based on these applications.

## NATURAL GAS MATTERS

PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows, have continued to be negatively affected by costs the Utility has incurred to improve the safety and reliability of the Utility's natural gas operations, as well as by costs related to the on-going regulatory proceedings, investigations, and civil lawsuits related to the San Bruno accident and the Utility's natural gas operations. Since the San Bruno accident, PG&E Corporation and the Utility have incurred total cumulative charges to net income of $1.83 billion related to natural gas matters.

| **(in millions)** | **2012** | **2011** | **2010** | **Total** |
|---|---|---|---|---|
| Pipeline-related expenses [1] | $ 477 | $ 483 | $ 63 | $ 1,023 |
| Disallowed capital expenditures [1] | 353 | - | - | 353 |
| Accrued penalties [2] | 17 | 200 | - | 217 |
| Third-party claims [3] | 80 | 155 | 220 | 455 |
| Insurance recoveries [3] | (185) | (99) | - | (284) |
| Contribution to City of San Bruno (4) | 70 | - | - | 70 |
| **Total natural gas matters** | **$ 812** | **$ 739** | **$ 283** | **$ 1,834** |

[1] See "CPUC Gas Safety Rulemaking Proceeding" below.

[2] See "Pending CPUC Investigations and Enforcement Matters" below.

[3] See "Third-Party Claims" below.

[4] On March 12, 2012, the Utility and the City of San Bruno entered into an agreement under which the Utility contributed $70 million to support the city and the community's recovery efforts.

**Pending CPUC Investigations and Enforcement Matters**

The CPUC is conducting three investigations of the Utility's natural gas operations that relate to (1) the Utility's safety recordkeeping for its natural gas transmission system, (2) the Utility's operation of its natural gas transmission pipeline system in or near locations of higher population density, and (3) the Utility's pipeline installation, integrity management, recordkeeping and other operational practices, and other events or courses of conduct, that could have led to or contributed to the San Bruno accident. (See Note 15 of the Notes to the Consolidated Financial Statements.) Although the Utility, the CPUC's Safety and Enforcement Division ("SED"), and other parties have engaged in settlement discussions in an effort to reach a stipulated outcome to resolve the investigations, the parties have not reached an agreement. PG&E Corporation and the Utility are uncertain whether or when any stipulated outcome might be reached. Any agreement regarding a stipulated outcome would be subject to CPUC approval.

The CPUC has concluded evidentiary hearings in each of these investigations. The CPUC administrative law judges ("ALJs") who oversee the investigations have adopted a revised procedural schedule, including the dates by which the parties' briefs must be submitted. The ALJs have also permitted the other parties (the City of San Bruno, The Utility Reform Network, and the City and County of San Francisco) to separately address in their opening briefs their allegations against the Utility, if any, in addition to the allegations made by the SED. The ALJs have ordered the SED and other parties to file single coordinated briefs to address potential monetary penalties and remedies (which could include remedial operational or policy measures) for all three investigations by April 26, 2013. After briefing has been completed, the ALJs will issue one or more presiding officer's decisions listing the violations determined to have been committed, the amount of penalties, and any required remedial actions. Based on the revised procedural schedule, one or more presiding officer's decisions will be issued by July 23, 2013. The decisions would become the final decisions of the CPUC thirty days after issuance unless the Utility or another party filed an appeal, or a CPUC commissioner requested review of the decision, within such time. (See "Penalties Conclusion" below.)

*Other Potential Enforcement Matters*

California gas corporations are required to provide notice to the CPUC of any self-identified or self-corrected violations of certain state and federal regulations related to the safety of natural gas facilities and the corporations' natural gas operating practices. The CPUC has authorized the SED to issue citations and impose penalties based on self-reported violations. In April 2012, the CPUC affirmed a $17 million penalty that had been imposed by the SED based on the Utility's self-report that it failed to conduct periodic leak surveys because it had not included 16 gas distribution maps in its leak survey schedule. (The Utility has paid the penalty and completed all of the missed leak surveys.) As of December 31, 2012, the Utility has submitted 34 self-reports with the CPUC, plus additional follow-up reports. The SED has not yet taken formal action with respect to the Utility's other self-reports. The SED may issue additional citations and impose penalties on the Utility associated with these or future reports that the Utility may file. (See "Penalties Conclusion" below.)

In addition, in July 2012, the Utility reported to the CPUC that it had discovered that its access to some pipelines has been limited by vegetation overgrowth or building structures that encroach upon some of the Utility's gas transmission pipeline rights-of-way. The Utility is undertaking a system-wide effort to identify and remove encroachments from its pipeline rights-of-way over a multi-year period. (See "Operating and Maintenance" above.) PG&E Corporation and the Utility are uncertain how this matter will affect the above investigative proceedings related to natural gas operations, or whether additional proceedings or investigations will be commenced that could result in regulatory orders or the imposition of penalties on the Utility.

*Penalties Conclusion*

The CPUC can impose penalties of up to $20,000 per day, per violation. (For violations that are considered to have occurred on or after January 1, 2012, the statutory penalty has increased to a maximum of $50,000 per day, per violation.) The CPUC has wide discretion to determine the amount of penalties based on the totality of the circumstances, including such factors as the gravity of the violations; the type of harm caused by the violations and the number of persons affected; and the good faith of the entity charged in attempting to achieve compliance, after notification of a violation. The CPUC is also required to consider the appropriateness of the amount of the penalty to the size of the entity charged. The CPUC has historically exercised this wide discretion in determining penalties. The CPUC's delegation of enforcement authority to the SED allows the SED to use these factors in exercising discretion to determine the number of violations, but the SED is required to impose the maximum statutory penalty for each separate violation that the SED finds.

The CPUC has stated that it is prepared to impose significant penalties on the Utility if the CPUC determines that the Utility violated applicable laws, rules, and orders. In determining the amount of penalties the ALJs may consider the testimony of financial consultants engaged by the SED and the Utility. The SED's financial consultant prepared a report concluding that PG&E Corporation could raise approximately $2.25 billion through equity issuances, in addition to equity PG&E Corporation had already forecasted it would issue in 2012, to fund CPUC-imposed penalties on the Utility. The Utility's financial consultant disagreed with this financial analysis and asserted that a fine in excess of financial analysts' expectations, which the consultant's report cited as a mean of $477 million, would make financing more difficult and expensive. The ALJs have scheduled a hearing to be held on March 4 and March 5, 2013 to consider the SED's and Utility's testimony. The SED and other parties are scheduled to file briefs to address potential monetary penalties and remedies in all three investigations by April 26, 2013.

PG&E Corporation and the Utility believe it is probable that the Utility will incur penalties of at least $200 million in connection with these pending investigations and potential enforcement matters and have accrued this amount in their consolidated financial statements. PG&E Corporation and the Utility are unable to make a better estimate of probable losses or estimate the range of reasonably possible losses in excess of the amount accrued due to the many variables that could affect the final outcome of these matters and the ultimate amount of penalties imposed on the Utility could be materially higher than the amount accrued. These variables include how the CPUC and the SED will exercise their discretion in calculating the amount of penalties, including how the total number of violations will be counted; how the duration of the violations will be determined; whether the amount of penalties in each investigation will be determined separately or in the aggregate; how the financial resources testimony submitted by the SED and the Utility will be considered; whether the Utility's costs to perform any required remedial actions will be considered; and whether and how the financial impact of non-recoverable costs the Utility has already incurred, and will continue to incur, to improve the safety and reliability of its pipeline system, will be considered. (See "CPUC Gas Safety Rulemaking Proceeding" below.)

These estimates, and the assumptions on which they are based, are subject to change based on many factors, including rulings, orders, or decisions that may be issued by the ALJs; whether the outcome of the investigations is resolved through a fully litigated process or a stipulated outcome that is approved by the CPUC; whether the SED will take additional action with respect to the Utility's self-reports; and whether the CPUC or the SED takes any action with respect to the encroachment matter described above. Future changes in these estimates or the assumptions on which they are based could have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

**CPUC Gas Safety Rulemaking Proceeding**

The CPUC is conducting a rulemaking proceeding to develop and adopt new safety and reliability regulations for natural gas transmission and distribution pipelines in California and the related ratemaking mechanisms. On December 28, 2012, the CPUC issued a decision that approved most of the Utility's proposed pipeline safety enhancement plan to modernize and upgrade its natural gas transmission system, but disallowed the Utility's request for rate recovery of a significant portion of plan-related costs the Utility forecasted it would incur over the first phase of the plan (2011 through 2014).

In its application filed in August 2011, the Utility forecasted that it would incur total plan-related costs of approximately $2.2 billion, composed of $1.4 billion in capital expenditures and $750 million in expenses. The CPUC decision prohibited the Utility from recovering any expenses incurred before December 20, 2012, the effective date of the decision, and from recovering certain categories of expenses that the Utility forecasts it will incur in 2013 and 2014. The CPUC decision also limits the Utility's recovery of capital expenditures to $1 billion. The Utility will be unable to recover any costs in excess of the adopted capital and expense amounts and the adopted amounts will be reduced by the cost of any plan project not completed and not replaced with a higher priority project. The CPUC also determined that the Utility should not recover in rates the costs of pressure testing pipeline placed into service after January 1, 1956 for which the Utility is unable to produce pressure test records. The CPUC may disallow additional costs based on the final results of the Utility's pipeline records search and pipeline pressure validation work, which the Utility expects to complete by May 2013. The Utility is required to update its plan and file an application within 30 days after this work is completed.

The following table compares the Utility's requested expense and capital amounts (based on forecasts included in the August 2011 application) with the amounts authorized by the CPUC:

| (in millions) | 2011 | 2012 | 2013 | 2014 | Total |
|---|---|---|---|---|---|
| **Expense** | | | | | |
| Requested | $ 221[1] | $ 231 | $ 155 | $ 144 | $ 751 |
| Authorized | - | 3 | 73 | 89 | 165 |
| Difference | $ 221[1] | $ 228 | $ 82 | $ 55 | $ 586 |
| **Capital** | | | | | |
| Requested | $ 69 | $ 384 | $ 480 | $ 500 | $ 1,433 |
| Authorized | 47 | 260 | 348 | 348 | 1,003 |
| Difference | $ 22 | $ 124 | $ 132 | $ 152 | $ 430 |

(1) The Utility's August 2011 application did not request recovery of forecast 2011 plan-related expenses of $221 million.

For the year ended December 31, 2012, the Utility incurred total pipeline-related expenses of $477 million, including plan-related expenses of $271 million. As a result of the decision, the Utility also recorded a charge of $353 million for capital expenditures that are forecast to exceed the CPUC's authorized levels or that were specifically disallowed. All plan-related costs for 2013 and 2014 will be charged to net income in the period incurred. Unrecoverable plan-related costs are expected to range from approximately $150 million to $200 million in 2013 and a comparable amount in 2014. The CPUC stated that the Utility's recovery of the amounts authorized in the decision will be subject to refund, noting the possibility that further ratemaking adjustments may be made in the pending CPUC investigations in which the CPUC will address potential penalties to be imposed on the Utility. (See "Pending CPUC Investigations and Enforcement Matters" above.)

The CPUC delegated authority to the SED to oversee all of the Utility's work performed pursuant to the pipeline safety enhancement plan, including the authority to participate in all plan-related activities and review and modify all changes proposed by the Utility. The Utility must submit quarterly compliance reports to the CPUC that will include information about actual cost compared to authorized cost for each work project; the construction status of projects; and changes in scope and prioritization of projects. As a result of the compliance reporting process, the Utility could incur additional non-recoverable costs. The CPUC also ordered the SED to engage consultants to conduct management and financial audits to address safety-related corporate culture and historical spending. (As discussed below, the financial audit of the Utility's natural gas distribution spending will be considered in the 2014 GRC, but the scope and timing of the management audit is still uncertain.) (See "2014 GRC" below.)

On January 28, 2013, several parties filed applications for rehearing of the CPUC's decision. The applications for rehearing state, among other arguments, that the CPUC should have disallowed more of the Utility's costs and that the CPUC should have approved a reduced ROE for capital expenditures made under the plan. Several parties also have filed petitions for modification of the decision. It is uncertain whether or when the CPUC will grant these requests.

The second phase of the Utility's pipeline safety enhancement plan in 2015 will focus on pipeline segments in less populated areas, as well as certain pressure testing and pipeline replacement work that the CPUC deferred from the first phase. The Utility expects to address the scope, timing, and cost recovery of the second phase in late 2013 and request that changes to rates be made effective January 1, 2015.

**Criminal Investigation**

The U.S. Department of Justice, the California Attorney General's Office, and the San Mateo County District Attorney's Office are conducting an investigation of the San Bruno accident and have indicated that the Utility is a target of the investigation. The Utility is cooperating with the investigation. PG&E Corporation and the Utility are uncertain whether any criminal charges will be brought against either company or any of their current or former employees.

PG&E Corporation and the Utility are unable to estimate the amount (or range of amounts) of reasonably possible losses associated with any civil or criminal penalties that could be imposed on the Utility as a consequence of this investigation.

**Third-Party Claims**

In addition to the investigations and proceedings discussed above, at December 31, 2012, approximately 140 lawsuits involving third-party claims for personal injury and property damage, including two class action lawsuits, had been filed against PG&E Corporation and the Utility in connection with the San Bruno accident on behalf of approximately 450 plaintiffs. The lawsuits seek compensation for personal injury and property damage, and other relief, including punitive damages. These cases were coordinated and assigned to one judge in the San Mateo County Superior Court. Many of the plaintiffs' claims have been resolved through settlements. The trial of the first group of remaining cases began on January 2, 2013 with pretrial motions and hearings. On January 14, 2013, the court vacated the trial and all pending hearings due to the significant number of cases that have been settled outside of court. The court has urged the parties to settle the remaining cases. As of February 8, 2013, the Utility has entered into settlement agreements to resolve the claims of approximately 140 plaintiffs. It is uncertain whether or when the Utility will be able to resolve the remaining claims through settlement.

At December 31, 2012, the Utility had recorded cumulative charges of $455 million for estimated third-party claims related to the San Bruno accident, including an $80 million charge made during 2012, primarily to reflect settlements and information exchanged by the parties during the settlement and discovery process. The Utility estimates it is reasonably possible that it may incur as much as an additional $145 million for third-party claims, for a total possible loss of $600 million. PG&E Corporation and the Utility are unable to estimate the amount (or range of amounts) of reasonably possible losses associated with punitive damages, if any, related to these matters. The Utility has publicly stated that it is liable for the San Bruno accident and will take financial responsibility to compensate all of the victims for the injuries they suffered as a result of the accident. (See Note 15 to the Consolidated Financial Statements.)

The Utility has recognized cumulative insurance recoveries of $284 million for third-party claims, which included $185 million for 2012 and $99 million for 2011. Although the Utility believes that a significant portion of costs incurred for third-party claims relating to the San Bruno accident will ultimately be recovered through its insurance, it is unable to predict the amount and timing of additional insurance recoveries. (See Note 15 to the Consolidated Financial Statements.)

**Class Action Complaint**

On August 23, 2012, a complaint was filed in the San Francisco Superior Court against PG&E Corporation and the Utility (and other unnamed defendants) by individuals who seek certification of a class consisting of all California residents who were customers of the Utility between 1997 and 2010, with certain exceptions. The plaintiffs allege that the Utility collected more than $100 million in customer rates from 1997 through 2010 for the purpose of various safety measures and operations projects but instead used the funds for general corporate purposes such as executive compensation and bonuses. To state their claims, the plaintiffs cited the SED's January 2012 investigative report of the San Bruno accident that alleged, from 1996 to 2010, the Utility spent less on capital expenditures and operations and maintenance expense for its natural gas transmission operations than it recovered in rates, by $95 million and $39 million, respectively. The SED recommended that the Utility should use such amounts to fund future gas transmission expenditures and operations. Plaintiffs allege that PG&E Corporation and the Utility engaged in unfair business practices in violation of Section 17200 of the California Business and Professions Code ("Section 17200") and claim that this violation also constitutes a violation of California Public Utilities Code Section 2106 ("Section 2106"), which provides a private right of action for violations of the California constitution or state laws by public utilities. Plaintiffs seek restitution and disgorgement under Section 17200 and compensatory and punitive damages under Section 2106.

PG&E Corporation and the Utility contest the plaintiffs' allegations. In January 2013, PG&E Corporation and the Utility requested that the court dismiss the complaint on the grounds that the CPUC has exclusive jurisdiction to adjudicate the issues raised by the plaintiffs' allegations. In the alternative, PG&E Corporation and the Utility requested that the court stay the proceeding until the CPUC investigations described above are concluded. The court has set a hearing on the motion for April 26, 2013. Due to the early stage of this proceeding, PG&E Corporation and the Utility are unable to estimate the amount (or range of amounts) of reasonably possible losses that may be incurred in connection with this matter.

**Other Pending Lawsuits and Claim**

In October 2010, a purported shareholder derivative lawsuit was filed in San Mateo Superior Court following the San Bruno accident to seek recovery on behalf of PG&E Corporation and the Utility for alleged breaches of fiduciary duty by officers and directors, among other claims, relating to the Utility's natural gas business. The judge has ordered that proceedings in the derivative lawsuit be delayed until further order of the court. On February 7, 2013, another purported shareholder derivative lawsuit was filed in U.S. District Court for the Northern District of California to seek recovery on behalf of PG&E Corporation for alleged breaches of fiduciary duty by officers and directors, among other claims.

In February 2011, the Board of Directors of PG&E Corporation authorized PG&E Corporation to reject a demand made by another shareholder that the Board of Directors (1) institute an independent investigation of the San Bruno accident and related alleged safety issues; (2) seek recovery of all costs associated with such issues through legal proceedings against those determined to be responsible, including Board of Directors members, officers, other employees, and third parties; and (3) adopt corporate governance initiatives and safety programs. The Board of Directors also reserved the right to commence further investigation or litigation regarding the San Bruno accident if the Board of Directors deems such investigation or litigation appropriate.

## REGULATORY MATTERS

The Utility is subject to substantial regulation by the CPUC, the FERC, the NRC and other federal and state regulatory agencies. The resolutions of these and other proceedings may affect PG&E Corporation's and the Utility's results of operations and financial condition.

### 2013 Cost of Capital Proceeding

On December 20, 2012, the CPUC issued a final decision authorizing the Utility to maintain a capital structure consisting of 52% equity, 47% long-term debt, and 1% preferred stock, beginning on January 1, 2013. This capital structure applies to the Utility's electric generation, electric and natural gas distribution, and natural gas transmission and storage rate base. In addition, the CPUC authorized the Utility to earn a rate of return on each component of the capital structure, including a ROE of 10.40%, compared to the 11% ROE requested by the Utility. The following table compares the 2012 and 2013 authorized capital structure and rates of return:

| | 2012 Authorized | | | 2013 Authorized | | |
|---|---|---|---|---|---|---|
| | Cost | Capital Structure | Weighted Cost | Cost | Capital Structure | Weighted Cost |
| Long-term debt | 6.05% | 46% | 2.78% | 5.52% | 47% | 2.59% |
| Preferred stock | 5.68% | 2% | 0.11% | 5.60% | 1% | 0.06% |
| Return on common equity | 11.35% | 52% | 5.90% | 10.40% | 52% | 5.41% |
| Overall Rate of Return | | | 8.79% | | | 8.06% |

The Utility estimates that the 2013 revenue requirement associated with the authorized cost of capital will be approximately $235 million less than the currently authorized revenue requirement. Approximately $165 million of this estimated decrease is attributable to the lower authorized ROE. Changes to the Utility's revenue requirement became effective on January 1, 2013.

The Utility and other parties have submitted a joint stipulation to the CPUC in which the parties agreed to continue the annual cost of capital adjustment mechanism that had been in effect since 2008, and to file the next full cost of capital applications in April 2015 for the 2016 test year. Under the mechanism as proposed to be continued, the Utility's ROE would be adjusted if the 12-month October-through-September average of the Moody's Investors Service long-term Baa utility bond index increases or decreases by more than 1.00% as compared to the applicable benchmark. If the adjustment mechanism is triggered, the Utility's authorized ROE, beginning January 1st of the following year, would be adjusted by one-half of the difference between the index and the benchmark. Additionally, the Utility's authorized costs of long-term debt and preferred stock would be updated to reflect actual August month-end embedded costs and forecasted interest rates for variable long-term debt, as well as new long-term debt and preferred stock scheduled to be issued. In any year where the 12-month average yield triggers an automatic ROE adjustment, that average would become the new benchmark.

The CPUC is scheduled to issue a proposed decision by March 15, 2013 with a final decision by April 18, 2013.

### 2014 General Rate Case

On November 15, 2012, the Utility filed its 2014 GRC application with the CPUC. In the Utility's 2014 GRC, the CPUC will determine the annual amount of revenue requirements that the Utility will be authorized to collect from customers from 2014 through 2016 to recover its anticipated costs for electric and natural gas distribution and electric generation operations and to provide the Utility an opportunity to earn its authorized rate of return.

The Utility has requested that the CPUC increase the Utility's authorized base revenues for 2014 by a total of $1.28 billion over the comparable base revenues for 2013 that were previously authorized by the CPUC. Over the 2014-2016 GRC period, the Utility plans to make annual additional capital investments of nearly $4 billion in electric and natural gas distribution and electric generation infrastructure. The Utility forecasts that its 2014 weighted average rate base for the portion of the Utility's business reviewed in the GRC will be $21.4 billion.

The following tables compare the requested 2014 revenue requirement amounts by line of business with the comparable revenue requirements currently authorized for 2013:

| **(in millions)**<br>**Line of Business:** | **Amounts requested in the GRC application** | **Amounts currently authorized for 2013** | **Increase compared to currently athorized amounts** |
|---|---|---|---|
| Electric distribution | $ 4,355 | $ 3,768 | $ 587 |
| Gas distribution | 1,810 | 1,324 | 486 |
| Electric generation | 1,946 | 1,737 | 209 |
| **Total revenue requirements** | **$ 8,111** | **$ 6,829** | **$ 1,282** |

The Utility's 2014 forecast for gas distribution operations includes increased costs to replace 180 miles of distribution line per year (compared to 30 miles currently), use new leak detection technologies and survey the entire system more frequently, remotely monitor and control a significant number of valves, implement an asset management system to provide detailed, readily accessible information about the gas distribution system, and reduce response times for customer gas odor reports. The Utility's forecast for electric distribution operations includes increased costs to upgrade and replace assets to improve safety and reduce outages, use infrared technology to identify and correct equipment issues, install more automation to limit the impact and duration of outages, mitigate wildfire risk, increase system capacity to meet new customer demand, and enhance asset records management and integrate it with key systems. The Utility's forecast for electric generation includes increased costs to operate the Utility's hydroelectric system (including costs related to the Helms pumped storage facility and costs associated with operating licenses issued by the FERC), comply with new requirements adopted by the NRC applicable to the Utility's Diablo Canyon nuclear power plant, and operate and maintain the Utility's fossil fuel-fired and other generating facilities. In addition, the Utility's forecast includes increased costs to improve service at the Utility's local offices and customer contact centers and to improve the service provided by field account representatives to small and mid-sized business customers.

In its application, the Utility has requested that the CPUC establish new balancing accounts to allow the Utility to recover costs associated with gas leak survey and repair work, major emergencies, and new regulatory requirements related to nuclear operations and hydroelectric relicensing, because these costs are subject to a high degree of uncertainty. The Utility also requested that the CPUC establish a ratemaking mechanism that would increase the Utility's authorized revenues in 2015 and 2016, primarily to reflect increases in rate base due to capital investments in infrastructure and, to a lesser extent, anticipated increases in wages and other expenses. The Utility also has requested that revenue requirements be adjusted to reflect certain externally driven changes in the Utility's costs, such as changes in franchise fees. The Utility estimates that this mechanism would result in increases in revenue of $492 million in 2015 and an additional $504 million in 2016.

Independent consultants engaged by the SED are reviewing and evaluating certain operational plans underlying the Utility's 2014 cost forecast to ensure that safety and security concerns have been addressed and that the plans properly incorporate risk assessments and mitigation measures. The SED has also engaged independent consultants to conduct a financial audit of the Utility's gas distribution system, which will examine the Utility's authorized and budgeted capital investments and operation and maintenance expenditures for its last two authorized GRC cycles. The SED reports on the results of the consultants' evaluations and financial audit are due May 31, 2013. The Utility and other parties will be able to respond to the reports.

According to the CPUC's current procedural schedule for the proceeding, which may be subject to change in the future, the CPUC's Division of Ratepayer Advocates ("DRA") is scheduled to serve its report on the Utility's application by May 3, 2013. Additional testimony from other parties must be submitted by May 17, 2013. The schedule contemplates evidentiary hearings to be held this summer, followed by a proposed decision to be released in November 2013 and a final CPUC decision to be issued in December 2013. If the decision is delayed, the Utility will, consistent with CPUC practice in prior GRCs, request that the CPUC issue an order directing that the authorized revenue requirement changes be effective January 1, 2014, even if the decision is issued after that date.

**FERC Transmission Owner Rate Case**

On September 28, 2012, the Utility filed an application with the FERC to increase the Utility's retail and wholesale electric transmission customer rates that have been in effect since March 1, 2011. The proposed rate changes will become effective on May 1, 2013, subject to refund following the FERC's issuance of a final decision. The most significant factors driving the requested increase are the Utility's continuing needs to replace and modernize aging electric transmission infrastructure; to interconnect new electric generation, including renewable resources; and to accommodate the magnitude and location of forecasted electric load growth in California. The Utility forecasts that it will make investments of $783 million in 2012 and an additional $837 million in 2013 in various capital projects, including projects to add transmission capacity, expand automation technology, improve overall system reliability, and maintain and replace equipment at substations. The proposed rate base in 2013 is forecast to be $4.5 billion compared to $3.6 billion in 2011. The operations and maintenance costs associated with this request are forecast to be approximately $191 million in 2013, compared to $152 million in 2011.

Compared to present rates, the Utility estimated that revenues would increase by $254 million based on the Utility's requested ROE of 11.5%, for total 2013 electric transmission revenues of $1.2 billion. On November 29, 2012, the FERC issued an order that accepted the Utility's application but directed the Utility to reduce its proposed revenue requirement and rates to reflect the median ROE of a comparative group of other utilities. In response to the FERC's order, on December 21, 2012, the Utility revised its requested revenue requirements and rates to reflect a 9.1% ROE. Based on the reduced ROE, the Utility estimates that revenues would increase by approximately $158 million, for total annual electric transmission revenues of $1.1 billion beginning on May 1, 2013. On December 21, 2012, the Utility also filed a request for rehearing of the FERC's order. It is uncertain when the FERC will act on the request for rehearing. The ultimate resolution of revenue requirements and rates will be addressed through hearings and settlement procedures.

**Energy Efficiency Programs and Incentive Ratemaking**

On December 20, 2012, the CPUC approved a new energy efficiency incentive mechanism to reward the Utility and other California energy utilities for the successful implementation of their 2010-2012 energy efficiency programs. The CPUC awarded the Utility $21 million for the successful implementation of the Utility's 2010 energy efficiency programs. The CPUC decision also established the process that is expected to apply to incentive claims for program years 2011 and 2012. After the CPUC completes its audit of the utilities' 2011 program expenditures, the utilities must file their incentive claims in the third quarter of 2013 for approval by the CPUC in the fourth quarter of 2013. Similarly, the utilities will file their incentive claims based on the CPUC-audited 2012 program expenditures in the third quarter of 2014 for approval by the CPUC in the fourth quarter of 2014.

**Diablo Canyon Nuclear Power Plant**

In March 2012, the NRC issued several orders to the owners of all U.S. operating nuclear reactors to implement the highest-priority recommendations issued by the NRC's task force to incorporate the lessons learned from the March 2011 earthquake and tsunami that caused significant damage to the Fukushima-Dai-ichi nuclear facilities in Japan. Among other directives, the NRC requested nuclear power plant owners to provide additional information about seismic and flooding hazards and emergency preparedness. In response to the orders, the utilities are required to re-evaluate the models used to determine compliance with the license conditions relating to seismic and flooding design. Each nuclear power plant owner will be required to be in full compliance with the NRC orders within two refueling outages or by December 31, 2016, whichever comes first. The Utility has already provided the initially requested information to the NRC and will continue to respond to the NRC orders as required. After reviewing the information submitted by the Utility and other nuclear power plant owners, the NRC may issue further orders which may include facility-specific orders. The Utility will incur costs to comply with Fukushima related NRC orders. The Utility has requested that the CPUC allow the Utility to recover costs incurred in 2014 through 2016 to comply with NRC orders through rates to be authorized by the CPUC in the Utility's 2014 GRC.

The Utility also has filed an application at the NRC to renew the operating licenses for the two operating units at Diablo Canyon which expire in 2024 and 2025. In May 2011, after the Fukushima-Dai-ichi event, the NRC granted the Utility's request to delay processing the Utility's application until certain advanced seismic studies were completed by the Utility. When the Utility began the studies in 2010, it was anticipated that the studies would be completed in 2013 or 2014, depending upon whether required permits were timely obtained from environmental and local government agencies. In November 2012, the California Coastal Commission denied the Utility's request for permits to conduct off-shore three-dimensional high-energy seismic studies, in part, based on the finding that, because the studies were not necessary for NRC compliance, the potential environmental effects did not outweigh the risks. The Utility has completed the data collection phases for the on-shore advanced seismic studies as well as other off-shore low-energy seismic studies. The Utility is assessing whether it has sufficient seismic data without conducting high energy off-shore studies or if other studies are needed. Depending on the outcome of the Utility's assessment, it is uncertain when the Utility would request the NRC to resume the relicensing proceeding. In order to receive renewed operating licenses, the Utility also must undergo a consistency review by the California Coastal Commission. The disposition of the Utility's relicensing application also will be affected by the terms and timing of the NRC's "waste confidence" decision regarding the environmental impacts of the storage of spent nuclear fuel which is not expected to be issued before September 2014. The NRC has stated that it will not take action in licensing or re-licensing proceedings until it issues a new "waste confidence decision." (See "Risk Factors" below.)

Finally, the CPUC is also considering the Utility's application to recover estimated costs to decommission the Utility's nuclear facilities at Diablo Canyon and the retired nuclear facility located at the Utility's Humboldt Bay Generation Station. The Utility files an application with the CPUC every three years requesting approval of the Utility's estimated decommissioning costs and authorization to recover the estimated costs through rates. (See the discussion of the 2012 Nuclear Decommissioning Cost Triennal Proceeding in Note 2 of the Notes to the Consolidated Financial Statements.)

## Other Matters

### *Electric Distribution Facilities*

The Utility conducted a system-wide review of its patrol and inspection records for underground and overhead electric distribution facilities after the Utility reported to the CPUC in July 2012 that some of the Utility's facilities were not patrolled and/or inspected at the periodic intervals required by the CPUC's rules. The Utility concluded a system-wide review and found that approximately 0.4% of its total electric distribution facilities had not been patrolled and/or inspected at the intervals required by CPUC rules. The Utility has submitted the results of its review to the SED and has completed the patrols and inspections of all such facilities.

In October 2012, the Utility also reported to the CPUC that it planned to re-inspect electric distribution underground and overhead facilities that had been identified as inspected by a contractor after a review determined that the inspection practices used by some of the contractor's employees did not meet the Utility's standards. The re-inspections have been completed.

PG&E Corporation and the Utility are uncertain how the above matters will affect the other regulatory proceedings and current investigations involving the Utility, or whether additional proceedings or investigations will be commenced that could result in regulatory orders or the imposition of penalties on the Utility.

### *Residential Rate Design*

In June 2012, the CPUC opened a rulemaking proceeding to examine electric rate design for residential customers among California's electric utilities and consider regulatory and legislative changes that may be needed to the current rate structure. PG&E Corporation and the Utility are uncertain how the outcome of this rulemaking proceeding will affect the Utility's future electric rate structure.

## ENVIRONMENTAL MATTERS

The Utility's operations are subject to extensive federal, state, and local laws and permits relating to the protection of the environment and the safety and health of the Utility's personnel and the public. (See "Risk Factors" below.) These laws and requirements relate to a broad range of the Utility's activities, including the remediation of hazardous wastes; the reporting and reduction of carbon dioxide and other GHG emissions; the discharge of pollutants into the air, water, and soil; and the transportation, handling, storage, and disposal of spent nuclear fuel.

## Remediation

The Utility has been, and may be, required to pay for environmental remediation costs at sites where it is identified as a potentially responsible party under federal and state environmental laws. These sites include former manufactured gas plant ("MGP") sites, current and former power plant sites, former gas gathering and gas storage sites, sites where natural gas compressor stations are located, current and former substations, service center and general construction yard sites, and sites currently and formerly used by the Utility for the storage, recycling, or disposal of hazardous substances. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site. (See Note 15 of the Notes to the Consolidated Financial Statements.)

The Utility is legally responsible for remediating groundwater contamination caused by hexavalent chromium used in the past at the Utility's natural gas compressor sites. The Utility is also required to take measures to abate the effects of the contamination on the environment. At the Hinkley natural gas compressor site, the Utility's remediation and abatement efforts are subject to the regulatory authority of the California Regional Water Quality Control Board, Lahontan Region ("Regional Board"). The Regional Board has issued several orders directing the Utility to implement interim remedial measures to reduce the mass of the underground plume of hexavalent chromium, monitor and control movement of the plume, and provide replacement water to affected residents.

The Utility submitted its proposed final remediation plan to the Regional Board in September 2011 recommending a combination of remedial methods to clean up groundwater contamination, including using pumped groundwater from extraction wells to irrigate agricultural land and in-situ treatment of the contaminated water. In August 2012, the Regional Board issued a draft environmental impact report ("EIR") that evaluated the Utility's proposed methods and the potential environmental impacts. The Utility expects that the Regional Board will consider certification of the final EIR in the second quarter of 2013. Following certification of the EIR, the Regional Board is expected to issue the final cleanup standards.

The Regional Board ordered the Utility in October 2011 to provide an interim and permanent replacement water system for resident households located near the chromium plume that have domestic wells containing hexavalent chromium in concentrations greater than 0.02 parts per billion. The Utility filed a petition with the California State Water Resources Control Board ("California Water Board") to contest certain provisions of the order. In June 2012, the Regional Board issued an amended order to allow the Utility to implement a whole house water replacement program for resident households located near the chromium plume boundary. Eligible residents may decide whether to accept a replacement water supply or have the Utility purchase their properties, or alternatively not participate in the program. As of January 31, 2013, approximately 350 residential households are covered by the program and the majority have opted to accept the Utility's offer to purchase their properties. The Utility is required to complete implementation of the whole house water replacement systems by August 31, 2013. The Utility will maintain and operate the whole house replacement systems for five years or until the State of California has adopted a drinking water standard specifically for hexavalent chromium at which time the program will be evaluated.

At December 31, 2012 and 2011, $226 million and $149 million, respectively, were accrued in PG&E Corporation's and the Utility's Consolidated Balance Sheets for estimated undiscounted future remediation costs associated with the Hinkley site. The increase primarily reflects the Utility's best estimate of costs associated with the developments described above. Remediation costs for the Hinkley natural gas compressor site are not recovered from customers through rates. Future costs will depend on many factors, including the Regional Board's certification of the final EIR **,** the levels of hexavalent chromium the Utility is required to use as the standard for remediation, the Utility's required time frame for remediation, and adoption of a final drinking water standard currently under development by the State of California, as mentioned above. As more information becomes known regarding these factors, these estimates and the assumptions on which they are based regarding the amount of liability incurred may be subject to further changes. Future changes in estimates or assumptions may have a material impact on PG&E Corporation's and the Utility's future financial condition, results of operations, and cash flows.

**Climate Change**

A report issued in 2012 by the U.S. Environmental Protection Agency ("EPA") entitled, "Climate Change Indicators in the United States, 2012" states that the increase of GHG emissions in the atmosphere is changing the fundamental measures of climate in the United States, including rising temperatures, shifting snow and rainfall patterns, and more extreme climate events. (See "Risk Factors" below.) Although no comprehensive federal legislation has been enacted to address the reduction of GHG emissions, the California legislature has taken action to address climate change.

***GHG Cap-and-Trade***

The California Global Warming Solutions Act of 2006 (also known as California Assembly Bill 32 or AB 32) requires the gradual reduction of state-wide GHG emissions to the 1990 level by 2020. The California Air Resources Board ("CARB") is the state agency charged with monitoring GHG levels and adopting regulations to implement and enforce AB 32. The CARB has approved various regulations, including regulations that established a state-wide, comprehensive "cap-and-trade" program that sets a gradually declining limit (or "cap") on the amount of GHGs that may be emitted by the major sources of GHG emissions each year. The cap and trade program's first two-year compliance period, which began January 1, 2013, applies to the electricity generation and large industrial sectors. The next compliance period, from January 1, 2015 through December 31, 2017, will expand to include the natural gas supply and transportation sectors, effectively covering all the capped sectors until 2020. Emitters may meet up to 8% of their compliance obligation through the purchase of "offset credits" which represent GHG emissions abatement achieved in sectors that are not subject to the cap.

Each year the CARB will issue emission allowances (i.e., the rights to emit GHGs) equal to the amount of GHG emissions allowed for that year. Emitters (also known as covered entities) are required to obtain and surrender allowances equal to the amount of their GHG emissions within a particular compliance period. Emitters can obtain allowances from the CARB at quarterly auctions held by the CARB or from third parties or exchanges on the secondary market for trading GHG allowances. The CARB's first quarterly auction was held on November 14, 2012.

Also, during each year of the program, the CARB will allocate a fixed number of allowances (which will decrease each year) for free to regulated electric distribution utilities, including the Utility, for the benefit of their electricity customers. The utilities are required to consign their allowances for auction by the CARB. The CPUC has ordered the utilities to allocate their auction revenues, including accrued interest, among certain classes of their electricity distribution customers in accordance with existing state law. Although the CPUC had previously authorized the utilities to recover their GHG compliance costs through rates, the CPUC decided that the recovery of GHG compliance costs should be deferred until the CPUC adopted a final auction revenue allocation methodology. Until a final methodology is adopted, the utilities have been ordered to track GHG costs and auction revenues for future rate recovery. (See Note 3 of the Notes to the Consolidated Financial Statements.) The CARB has not yet decided whether and to what extent allowances will be freely allocated to regulated gas utilities for the benefit of their natural gas customers starting in the second compliance period beginning in 2015.

The Utility expects all costs and revenues associated with GHG cap-and-trade to be passed through to customers.

### *Renewable Energy Resources*

California's Renewables Portfolio Standard ("RPS") program increases the amount of renewable energy that load-serving entities, such as the Utility, must deliver to their customers from at least 20% of their total retail sales, as required by the prior law, to 33% of their total retail sales. The RPS program, which became effective in December 2011, established compliance periods: 2011 through 2013, 2014 through 2016, 2017 through 2020, and 2021 and thereafter. The RPS compliance requirement that must be met for each of these compliance periods will gradually increase through 2020 and will be determined on an annual basis thereafter. In June 2012, the CPUC adopted rules for transitioning between the prior 20% RPS program and the 33% RPS program, applying excess procurement quantities across compliance periods, using procurement from short-term contracts to meet compliance requirements, and reporting annual RPS compliance to the CPUC.

The Utility has made substantial financial commitments under third-party renewable energy contracts to meet RPS procurement quantity requirements. (See Note 15 of the Notes to the Consolidated Financial Statements.) The Utility currently forecasts that it will comply with its procurement requirements. The costs incurred by the Utility under third-party contracts to meet RPS requirements are expected to be recovered with other procurement costs through rates. The costs of Utility-owned renewable generation projects will be recoverable through traditional cost-of-service ratemaking mechanisms provided that costs do not exceed the maximum amounts authorized by the CPUC for the respective project.

### Water Quality

The EPA published draft regulations in April 2011 to implement the requirements of the federal Clean Water Act that requires cooling water intake structures at electric power plants, such as the nuclear generation facilities at Diablo Canyon, reflect the best technology available to minimize adverse environmental impacts. In June 2012, the EPA proposed changes to these draft regulations which, if adopted, would provide more flexibility in complying with some of the requirements. The EPA is required to issue final regulations by July 2013.

At the state level, the California Water Board has adopted a policy on once-through cooling that generally requires the installation of cooling towers or other significant measures to reduce the impact on marine life from existing power generation facilities in California by at least 85%. The California Water Board has appointed a committee to evaluate the feasibility and cost of using alternative technologies to achieve compliance at nuclear power plants. The committee's assessment is due by October 2013. If the California Water Board does not require the installation of cooling towers at Diablo Canyon, the Utility could incur significant costs to comply with alternative compliance measures or to make payments to support various environmental mitigation projects. The Utility would seek to recover such costs in rates. If the California Water Board requires the installation of cooling towers that the Utility believes are not technically or economically feasible, the Utility may be forced to cease operations at Diablo Canyon and may incur a material charge. The Utility's Diablo Canyon operations must be in compliance with the California Water Board's policy by December 31, 2024.

## LEGAL MATTERS

In addition to the provisions made for contingencies related to the San Bruno accident, PG&E Corporation's and the Utility's Consolidated Financial Statements also include provisions for claims and lawsuits that have arisen in the ordinary course of business, regulatory proceedings, and other legal matters. (See "Legal and Regulatory Contingencies" in Note 15 of the Notes to the Consolidated Financial Statements.)

## OFF-BALANCE SHEET ARRANGEMENTS

PG&E Corporation and the Utility do not have any off-balance sheet arrangements that have had, or are reasonably likely to have, a current or future material effect on their financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures, or capital resources, other than those discussed in Note 2 (PG&E Corporation's tax equity financing agreements) and Note 15 of the Notes to the Consolidated Financial Statements (the Utility's commodity purchase agreements).

## RISK MANAGEMENT ACTIVITIES

The Utility and PG&E Corporation, mainly through its ownership of the Utility, are exposed to market risk, which is the risk that changes in market conditions will adversely affect net income or cash flows. PG&E Corporation and the Utility face market risk associated with their operations; their financing arrangements; the marketplace for electricity, natural gas, electric transmission, natural gas transportation, and storage; emissions allowances, other goods and services; and other aspects of their businesses. PG&E Corporation and the Utility categorize market risks as "price risk" and "interest rate risk." The Utility is also exposed to "credit risk," the risk that counterparties fail to perform their contractual obligations.

The Utility actively manages market risk through risk management programs designed to support business objectives, discourage unauthorized risk-taking, reduce commodity cost volatility, and manage cash flows. The Utility uses derivative instruments only for non-trading purposes (i.e., risk mitigation) and not for speculative purposes. The Utility's risk management activities include the use of energy and financial instruments such as forward contracts, futures, swaps, options, and other instruments and agreements, most of which are accounted for as derivative instruments. Some contracts are accounted for as leases.

On July 21, 2010, President Obama signed into law federal financial reform legislation, the Dodd-Frank Wall Street Reform and Consumer Protection Act ("Dodd-Frank"). PG&E Corporation and the Utility are implementing programs to comply with the final regulations that have been issued pursuant to Dodd-Frank.

### Commodity Price Risk

The Utility is exposed to commodity price risk as a result of its electricity and natural gas procurement activities, including the procurement of natural gas and nuclear fuel necessary for electricity generation and natural gas procurement for core customers. As long as the Utility can conclude that it is probable that its reasonably incurred wholesale electricity procurement costs and natural gas costs are recoverable, fluctuations in electricity and natural gas prices will not affect earnings. Such fluctuations, however, may impact cash flows. The Utility's natural gas transportation and storage costs for core customers are also fully recoverable through a ratemaking mechanism.

The Utility's natural gas transportation and storage costs for non-core customers may not be fully recoverable. The Utility is subject to price and volumetric risk for the portion of intrastate natural gas transportation and storage capacity that has not been sold under long-term contracts providing for the recovery of all fixed costs through the collection of fixed reservation charges. The Utility sells most of its capacity based on the volume of gas that the Utility's customers actually ship, which exposes the Utility to volumetric risk.

The Utility uses value-at-risk to measure its shareholders' exposure to price and volumetric risks resulting from variability in the price of, and demand for, natural gas transportation and storage services that could impact revenues due to changes in market prices and customer demand. Value-at-risk measures this exposure over a rolling 12-month forward period and assumes that the contract positions are held through expiration. This calculation is based on a 95% confidence level, which means that there is a 5% probability that the impact to revenues on a pre-tax basis, over the rolling 12-month forward period, will be at least as large as the reported value-at-risk. Value-at-risk uses market data to quantify the Utility's price exposure. When market data is not available, the Utility uses historical data or market proxies to extrapolate the required market data. Value-at-risk as a measure of portfolio risk has several limitations, including, but not limited to, inadequate indication of the exposure to extreme price movements and the use of historical data or market proxies that may not adequately capture portfolio risk.

The Utility's value-at-risk calculated under the methodology described above was approximately $13 million and $11 million at December 31, 2012 and 2011, respectively. During the 12 months ended December 31, 2012, the Utility's approximate high, low, and average values-at-risk were $13 million, $10 million and $12 million, respectively. And during 2011, the value-at-risk amounts were $11 million, $7 million and $9 million, respectively. (See Note 10 of the Notes to the Consolidated Financial Statements for further discussion of price risk management activities.)

### Interest Rate Risk

Interest rate risk sensitivity analysis is used to measure interest rate risk by computing estimated changes in cash flows as a result of assumed changes in market interest rates. At December 31, 2012 and December 31, 2011, if interest rates changed by 1% for all current PG&E Corporation and Utility variable rate and short-term debt and investments, the change would affect net income for the next 12 months by $7 million and $13 million, respectively, based on net variable rate debt and other interest rate-sensitive instruments outstanding.

**Energy Procurement Credit Risk**

The Utility conducts business with counterparties mainly in the energy industry, including other California investor-owned electric utilities, municipal utilities, energy trading companies, financial institutions, and oil and natural gas production companies located in the United States and Canada. If a counterparty fails to perform on its contractual obligation to deliver electricity or gas, then the Utility may find it necessary to procure electricity or gas at current market prices, which may be higher than the contract prices.

The Utility manages credit risk associated with its counterparties by assigning credit limits based on evaluations of their financial conditions, net worth, credit ratings, and other credit criteria as deemed appropriate. Credit limits and credit quality are monitored periodically. The Utility ties many energy contracts to master commodity enabling agreements that may require security (referred to as "Credit Collateral" in the table below). Credit collateral may be in the form of cash or letters of credit. The Utility may accept other forms of performance assurance in the form of corporate guarantees of acceptable credit quality or other eligible securities (as deemed appropriate by the Utility). Credit collateral or performance assurance may be required from counterparties when current net receivables and replacement cost exposure exceed contractually specified limits.

The following table summarizes the Utility's net credit risk exposure to its counterparties, as well as the Utility's credit risk exposure to counterparties accounting for greater than 10% net credit exposure, as of December 31, 2012 and December 31, 2011:

| (in millions) | Gross Credit Exposure Before Credit Collateral [(1)] | Credit Collateral | Net Credit Exposure [(2)] | Number of Wholesale Customers or Counterparties >10% | Net Credit Exposure to Wholesale Customers or Counterparties >10% |
|---|---|---|---|---|---|
| December 31, 2012 | $ 94 | $ (9) | $ 85 | 2 | 62 |
| December 31, 2011 | 151 | (13) | 138 | 2 | 106 |

(1) Gross credit exposure equals mark-to-market value on physically and financially settled contracts, and net receivables (payables) where netting is contractually allowed. Gross and net credit exposure amounts reported above do not include adjustments for time value or liquidity.

(2) Net credit exposure is the Gross Credit Exposure Before Credit Collateral minus Credit Collateral (cash deposits and letters of credit). For purposes of this table, parental guarantees are not included as part of the calculation.

## CRITICAL ACCOUNTING POLICIES

The preparation of Consolidated Financial Statements in accordance with accounting principles generally accepted in the United States of America ("GAAP") involves the use of estimates and assumptions that affect the recorded amounts of assets and liabilities as of the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. The accounting policies described below are considered to be critical accounting policies due, in part, to their complexity and because their application is relevant and material to the financial position and results of operations of PG&E Corporation and the Utility, and because these policies require the use of material judgments and estimates. Actual results may differ substantially from these estimates. These policies and their key characteristics are outlined below.

**Regulatory Assets and Liabilities**

The Utility's rates are primarily set by the CPUC and the FERC and are designed to recover the cost of providing service. The Utility capitalizes and records, as regulatory assets, costs that would otherwise be charged to expense if it is probable that the incurred costs will be recovered in future rates. Regulatory assets are amortized over the future periods that the costs are expected to be recovered. If costs expected to be incurred in the future are currently being recovered through rates, the Utility records those expected future costs as regulatory liabilities. In addition, the Utility records regulatory liabilities when the CPUC or the FERC requires a refund to be made to customers or has required that a gain or other reduction of net allowable costs be given to customers over future periods.

Determining probability requires significant judgment by management and includes, but is not limited to, consideration of testimony presented in regulatory hearings, proposed regulatory decisions, final regulatory orders, and the strength or status of applications for rehearing or state court appeals. For some of the Utility's regulatory assets, including utility retained generation, the Utility has determined that the costs are recoverable based on specific approval from the CPUC. The Utility also records a regulatory asset when a mechanism is in place to recover current expenditures and historical experience indicates that recovery of incurred costs is probable, such as the regulatory assets for pension benefits; deferred income tax; price risk management; and unamortized loss, net of gain, on reacquired debt. The CPUC has not denied during 2012, 2011, and 2010, the recovery of any material costs previously recognized by the Utility as regulatory assets.

If the Utility determined that it is no longer probable that regulatory assets would be recovered or reflected in future rates, or if the Utility ceased to be subject to rate regulation, the regulatory assets would be charged against income in the period in which that determination was made. At December 31, 2012, PG&E Corporation and the Utility reported regulatory assets (including current regulatory balancing accounts receivable) of $8.3 billion and regulatory liabilities (including current balancing accounts payable) of $6.1 billion.

**Loss Contingencies**

***Environmental Remediation Liabilities***

The Utility is subject to loss contingencies pursuant to federal and California environmental laws and regulations that in the future may require the Utility to pay for environmental remediation at sites where it has been, or may be, a potentially responsible party. Such contingencies may exist for the remediation of hazardous substances at various potential sites, including former MGP sites, power plant sites, gas compressor stations, and sites used by the Utility for the storage, recycling, or disposal of potentially hazardous materials, even if the Utility did not deposit those substances on the site.

The Utility generally commences the environmental remediation assessment process upon notification from federal or state agencies, or other parties, of a potential site requiring remedial action. (In some instances, the Utility may initiate action to determine its remediation liability for sites that it no longer owns in cooperation with regulatory agencies. For example, the Utility has begun a program related to certain former MGP sites.) Based on such notification, the Utility completes an assessment of the potential site and evaluates whether it is probable that a remediation liability has been incurred. The Utility records an environmental remediation liability when site assessments indicate remediation is probable and it can reasonably estimate the loss or a range of possible losses. Given the complexities of the legal and regulatory environment and the inherent uncertainties involved in the early stages of a remediation project, the process for estimating remediation liabilities is subjective and requires significant judgment. Key factors evaluated in developing cost estimates include the extent and types of hazardous substances at a potential site, the range of technologies that can be used for remediation, the determination of the Utility's liability in proportion to other responsible parties, and the extent to which such costs are recoverable from third parties.

When possible, the Utility estimates costs using site-specific information, but also considers historical experience for costs incurred at similar sites depending on the level of information available. Estimated costs are composed of the direct costs of the remediation effort and the costs of compensation for employees who are expected to devote a significant amount of time directly to the remediation effort. These estimated costs include remedial site investigations, remediation actions, operations and maintenance activities, post remediation monitoring, and the costs of technologies that are expected to be approved to remediate the site. Remediation efforts for a particular site generally extend over a period of several years. During this period, the laws governing the remediation process may change, as well as site conditions, thereby possibly affecting the cost of the remediation effort.

At December 31, 2012 and 2011, the Utility's accruals for undiscounted gross environmental liabilities were $910 million and $785 million, respectively. The Utility's undiscounted future costs could increase to as much as $1.6 billion if the extent of contamination or necessary remediation is greater than anticipated or if the other potentially responsible parties are not financially able to contribute to these costs, and could increase further if the Utility chooses to remediate beyond regulatory requirements. Although the Utility has provided for known environmental obligations that are probable and reasonably estimable, estimated costs may vary significantly from actual costs, and the amount of additional future costs may be material to results of operations in the period in which they are recognized.

***Legal and Regulatory Matters***

PG&E Corporation and the Utility are subject to various laws and regulations and, in the normal course of business, PG&E Corporation and the Utility are subject to claims or named as parties in lawsuits. In addition, the Utility can incur penalties for failure to comply with federal, state, or local laws and regulations. PG&E Corporation and the Utility record a provision for a loss when it is both probable that a loss has been incurred and the amount of the loss can be reasonably estimated. PG&E Corporation and the Utility evaluate the range of reasonably estimated losses and record a provision based on the minimum amount, unless an amount within the range is a better estimate than any other amount. These accruals, and the estimates of any additional reasonably possible losses (or reasonably possible losses in excess of the amounts accrued), are reviewed quarterly and are adjusted to reflect the impacts of negotiations, discovery, settlements and payments, rulings, advice of legal counsel, and other information and events pertaining to a particular matter. In assessing the amount of such losses, PG&E Corporation's and the Utility's policy is to exclude anticipated legal costs. (See "Legal and Regulatory Contingencies" in Note 15 of the Notes to the Consolidated Financial Statements.)

**Asset Retirement Obligations**

PG&E Corporation and the Utility account for an asset retirement obligation ("ARO") at fair value in the period during which the legal obligation is incurred if a reasonable estimate of fair value and its settlement date can be made. A legal obligation can arise from an existing or enacted law, statute, or ordinance; a written or oral contract; or under the legal doctrine of promissory estoppel.

At the time of recording an ARO, the associated asset retirement costs are capitalized as part of the carrying amount of the related long-lived asset. The Utility recognizes a regulatory asset or liability for the timing differences between the recognition of expenses and costs recovered through the ratemaking process.

Most of PG&E Corporation's and the Utility's AROs relate to the Utility's obligation to decommission its nuclear generation facilities and certain fossil fuel-fired generation facilities. The Utility estimates its obligation for the future decommissioning of its nuclear generation facilities and certain fossil fuel-fired generation facilities. In December 2012, the Utility submitted an updated estimate of the cost to decommission its nuclear facilities to the CPUC. The increase in the estimated obligation of $1.3 billion was primarily due to higher spent nuclear fuel disposal costs and an increase in the scope of work. To estimate the liability, the Utility uses a discounted cash flow model based upon significant estimates and assumptions about future decommissioning costs, inflation rates, and the estimated date of decommissioning. The estimated future cash flows are discounted using a credit-adjusted risk-free rate that reflects the risk associated with the decommissioning obligation. (See Note 2 of the Notes to the Consolidated Financial Statements.)

Changes in these estimates and assumptions could materially affect the amount of the recorded ARO for these assets. For example, a premature shutdown of the nuclear facilities at Diablo Canyon would increase the likelihood of an earlier start to decommissioning and cause an increase in the ARO. Additionally, if the inflation adjustment increased 25 basis points, the amount of the ARO would increase by approximately 1.57%. Similarly, an increase in the discount rate by 25 basis points would decrease the amount of the ARO by 4.03%. At December 31, 2012, the Utility's recorded ARO for the estimated cost of retiring these long-lived assets was $2.9 billion.

**Pension and Other Postretirement Benefit Plans**

PG&E Corporation and the Utility provide a non-contributory defined benefit pension plan for eligible employees as well as contributory postretirement health care and medical plans for eligible retirees and their eligible dependents, and non-contributory postretirement life insurance plans for eligible employees and retirees.

The pension and other postretirement benefit obligations are calculated using actuarial models as of the December 31 measurement date. The significant a ctuarial assumptions used in determining pension and other benefit obligations include the discount rate, the average rate of future compensation increases, the health care cost trend rate and the expected return on plan assets. PG&E Corporation and the Utility review these assumptions on an annual basis and adjust them as necessary. While PG&E Corporation and the Utility believe that the assumptions used are appropriate, significant differences in actual experience, plan changes or amendments, or significant changes in assumptions may materially affect the recorded pension and other postretirement benefit obligations and future plan expenses.

PG&E Corporation and the Utility recognize the funded status of their respective plans on their respective Consolidated Balance Sheets with an offsetting entry to accumulated other comprehensive income (loss); or, to the extent that the cost of the plans are recoverable in utility rates, to regulatory assets and liabilities, resulting in no impact to their respective Consolidated Statements of Income.

Pension and other benefit expense is based on the differences between actuarial assumptions and actual plan results and is deferred in accumulated other comprehensive income (loss) and amortized into income on a gradual basis. The differences between pension benefit expense recognized in accordance with GAAP and amounts recognized for ratemaking purposes are recorded as regulatory assets or liabilities as amounts are probable of recovery from customers. (See Note 3 of the Notes to the Consolidated Financial Statements.)

PG&E Corporation and the Utility review recent cost trends and projected future trends in establishing health care cost trend rates. This evaluation suggests that current rates of inflation are expected to continue in the near term. In recognition of continued high inflation in health care costs and given the design of PG&E Corporation's plans, the assumed health care cost trend rate for 2012 is 7.5%, gradually decreasing to the ultimate trend rate of 5% in 2018 and beyond.

Expected rates of return on plan assets were developed by determining projected stock and bond returns and then applying these returns to the target asset allocations of the employee benefit trusts, resulting in a weighted average rate of return on plan assets. Fixed-income returns were projected based on real maturity and credit spreads added to a long-term inflation rate. Equity returns were estimated based on estimates of dividend yield and real earnings growth added to a long-term rate of inflation. For the Utility's defined benefit pension plan, the assumed return of 5.4% compares to a ten-year actual return of 10.2%.

The rate used to discount pension benefits and other benefits was based on a yield curve developed from market data of approximately 648 Aa-grade non-callable bonds at December 31, 2012. This yield curve has discount rates that vary based on the duration of the obligations. The estimated future cash flows for the pension and other postretirement benefit obligations were matched to the corresponding rates on the yield curve to derive a weighted average discount rate.

The following reflects the sensitivity of pension costs and projected benefit obligation to changes in certain actuarial assumptions:

| (in millions) | Increase (Decrease) in Assumption | Increase in 2012 Pension Costs | Increase in Projected Benefit Obligation at December 31, 2012 |
|---|---|---|---|
| Discount rate | (0.50) % | $ 110 | $ 1,262 |
| Rate of return on plan assets | (0.50) % | 54 | - |
| Rate of increase in compensation | 0.50% | 50 | 308 |

The following reflects the sensitivity of other postretirement benefit costs and accumulated benefit obligation to changes in certain actuarial assumptions:

| (in millions) | Increase (Decrease) in Assumption | Increase in 2012 Other Postretirement Benefit Costs | Increase in Accumulated Benefit Obligation at December 31, 2012 |
|---|---|---|---|
| Health care cost trend rate | 0.50 % | $ 4 | $ 53 |
| Discount rate | (0.50) % | 2 | 132 |
| Rate of return on plan assets | (0.50) % | 7 | - |

**RISK FACTORS**

***PG&E Corporation's and the Utility's reputations have been significantly affected by the negative publicity surrounding the San Bruno accident, the related investigations and civil litigation, and the various reports the Utility has submitted to the CPUC to disclose noncompliance with applicable regulations. Their reputations may be further adversely affected by publicity regarding developments in the pending CPUC and criminal investigations, and by future investigations or other regulatory or governmental proceedings that may be commenced, and by media or public scrutiny of the Utility's electricity and natural gas operations. Such further reputational harm or the inability of PG&E Corporation and the Utility to restore their reputations may further affect their financial conditions, results of operations and cash flows.***

The reputations of PG&E Corporation and the Utility have seriously suffered as a result of the San Bruno accident for which the Utility has acknowledged liability; the June 2011 investigative report from the CPUC's independent review panel and the August 2011 National Transportation Safety Board ("NTSB") report, both of which criticized the Utility's safety recordkeeping for its natural gas transmission system and the Utility's pipeline installation, integrity management, and other operational practices; and the media coverage of the accident and the related investigations and lawsuits. After the San Bruno accident, the CPUC initiated three investigations pertaining to the Utility's natural gas transmission pipeline operations, including an investigation of the San Bruno accident. (See "Natural Gas Matters" above.) A criminal investigation of the San Bruno accident also has been commenced. The media also has widely reported on the civil lawsuits arising from the San Bruno accident which seek compensation and punitive damages for personal injuries, deaths, and property damage.

In addition, the Utility has notified the SED of various self-identified violations of regulations applicable to natural gas safety and operating practices since December 2011 when the CPUC imposed the self-reporting requirement and authorized the SED to impose penalties based on the self-identified violations. In January 2012, the SED imposed penalties of $17 million on the Utility for self-reported failure to perform certain leak surveys and the SED may impose additional penalties based on other self-reported violations. These self-reports also have received negative media attention.

The Utility's operations are also subject to heightened and well-publicized concerns about many aspects of its operations, such as the Utility's nuclear generation operations at Diablo Canyon and the risks of terrorist acts, earthquakes, or a nuclear accident; the Utility's environmental remediation activities; and the accuracy, privacy, and safety of the Utility's information and operating systems, including those used to measure customer energy usage and generate bills. These concerns have often led to additional adverse media coverage and could later result in investigations or other action by regulators, legislators and law enforcement officials or in lawsuits.

Further, these concerns may cause investors to question management's ability to repair the reputational harm that PG&E Corporation and the Utility have suffered, resulting in an adverse impact on the market price of PG&E Corporation common stock. Given PG&E Corporation's and the Utility's greater equity needs, a declining stock price would cause further dilution in net income per share. The extent to which their reputations can be restored will depend, in part, on the success of the Utility's efforts to improve the safety and reliability of the natural gas system as planned in the Utility's pipeline safety enhancement plan, whether they can respond to the findings and recommendations made by the CPUC's independent review panel and the NTSB, and whether they are able to adequately convince regulators, legislators, law enforcement officials, the media and the public that they have done so. Their ability to repair their reputations also may be affected by developments that may occur in the pending investigations, including the amount of civil or criminal penalties that may be imposed on the Utility; whether there are new investigations or citations; and developments that may occur in the San Bruno accident-related civil litigation. If PG&E Corporation and the Utility are unable to repair their reputations, their financial conditions, results of operations and cash flows may be further negatively affected.

***PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected by the ultimate amount of penalties imposed on the Utility; the costs of taking required remedial actions; the ultimate amount of criminal penalties, if any, imposed by governmental authorities; and the ultimate amount of third–party liability arising from the San Bruno accident and the availability, timing and amount of related insurance recoveries.***

The CPUC has stated that it is prepared to impose substantial penalties on the Utility in connection with the investigations. Although the parties have engaged in settlement discussions in an effort to reach a stipulated outcome to resolve the investigations, the parties have not reached an agreement. If a stipulated outcome is not reached and the CPUC issues a decision that finds that the Utility violated applicable laws, rules or orders, the CPUC can impose penalties of up to $20,000 per day, per violation. (For violations that are considered to have occurred on or after January 1, 2012, the statutory penalty has increased to a maximum of $50,000 per day, per violation.) The CPUC has wide discretion to determine the amount of penalties based on the totality of the circumstances, including such factors as the gravity of the violations; the type of harm caused by the violations and the number of persons affected; and the good faith of the entity charged in attempting to achieve compliance, after notification of a violation. The CPUC is also required to consider the appropriateness of the amount of the penalty to the size of the entity charged. The CPUC has historically exercised this discretion in determining penalties. The SED also has this discretion under the authority delegated to it by the CPUC, but the SED is required to impose the maximum statutory penalty per violation, per day.

PG&E Corporation and the Utility have concluded that it is probable that the Utility will be required to pay penalties in connection with the investigations and potential SED enforcement related to the self-reports and have accrued an amount in their financial statements that reflects the reasonably estimable minimum amount of penalties they believe it is probable that the Utility will incur. After considering the many variables that could affect the ultimate amount of penalties the Utility may be required to pay, PG&E Corporation and the Utility are unable to make a better estimate of the probable loss or estimate the reasonably possible amount of penalties that the Utility could incur in excess of the amount accrued and such amount could be material. In addition to penalties, the Utility could incur significant costs to implement any remedial actions the CPUC may order the Utility to perform.

PG&E Corporation and the Utility also are unable to estimate the amount (or range of amounts) of reasonably possible losses associated with any criminal penalties that may be imposed in connection with the pending criminal investigation. Any civil or criminal penalties imposed on the Utility will not be recoverable from customers. (See Note 15 of the Notes to the Consolidated Financial Statements.) PG&E Corporation and the Utility also have concluded that it is probable that the Utility will incur a loss in connection with the lawsuits arising from the San Bruno accident and have accrued an amount in their financial statements for the reasonably estimable minimum amount of loss. PG&E Corporation and the Utility believe that a significant portion of the third-party liabilities the Utility incurs will be recoverable through insurance, but there is a risk that the insurers could deny coverage for claims under the terms of the policies, deem settlement amounts excessive and not payable, or be financially unable to pay the Utility's claims. Further, although many of the San Bruno lawsuits have been settled, a substantial number of cases are unresolved and plaintiffs continue to pursue compensatory and punitive damages. PG&E Corporation and the Utility are unable to estimate the amount (or range of amounts) of reasonably possible losses associated with any punitive damages that could be awarded to plaintiffs in the civil litigation. (See Note 15 of the Notes to the Consolidated Financial Statements.)

The estimates and assumptions underlying the accrued amounts and the ultimate amount of penalties and third-party losses are subject to change based on the amount of penalties actually imposed by the CPUC or agreed to in a stipulated outcome that may be reached to resolve the investigations, by the outcome of trials in the San Bruno litigation, and the terms of additional settlement agreements that may be reached with remaining plaintiffs. Future changes to estimates and assumptions could result in additional accruals in future periods which could have a material impact on PG&E Corporation's and the Utility's financial condition and results of operations in the period in which they are recognized.

***PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows have been, and will continue to be, materially affected by costs incurred by the Utility to perform work under its pipeline safety enhancement plan, to undertake other pipeline-related work, and to improve the safety and reliability of its natural gas and electricity operations.***

Although the CPUC approved most of the proposed scope and timing of projects under the Utility's pipeline safety enhancement plan, the CPUC disallowed the Utility's request for rate recovery of a significant portion of capital costs and expenses through 2014, including costs of pressure testing pipelines placed into service after January 1, 1956 for which the Utility is unable to produce pressure test records. The CPUC may disallow additional costs based on the final results of the Utility's pipeline records search and pipeline pressure validation work, which the Utility expects to complete by May 2013. (See "Natural Gas Matters" above.) The Utility will be unable to recover any costs in excess of the adopted capital and expense amounts and the adopted amounts will be reduced by the cost of any plan project not completed during the first phase and not replaced with a higher priority project. Further, actual costs for 2013 and 2014 may be materially higher than the Utility currently forecasts. During 2013, the Utility expects to request that the CPUC approve the proposed timing, scope and cost recovery for the first three years (2015, 2016, and 2017) of the second phase of the plan beginning on January 1, 2015. While the Utility's request will include updated cost forecasts based on the Utility's experience during the first phase, there is some risk that categories of costs that were disallowed by the CPUC in its decision on the first phase also will be disallowed in the second phase.

In addition, the Utility forecasts that it will incur additional costs outside of the scope of the pipeline safety enhancement plan in 2013 and 2014 that are not expected to be recoverable through rates. This includes costs to establish the parameters of the Utility's "rights-of-way" surrounding pipelines and to identify and remove encroachments from these pipeline rights-of-way. The Utility also forecasts it will continue to incur additional costs associated with the integrity of transmission pipelines, conduct other gas-related work, and legal and regulatory expenses. The Utility also forecasts that it will incur costs to improve electric and gas distribution operations in 2013 that exceed the amounts assumed when rates were set in the last rate cases. (See "Operating and Maintenance" above.) Actual costs may be materially higher than forecast. Further, as the Utility continues to review its natural gas system and operating practices and as industry practices and standards evolve, the Utility may undertake additional work in the future to improve the safety and reliability of its natural gas utility services, for example, to validate the maximum allowable operating pressure of other facilities in its natural gas transmission system, such as compressor stations. The Utility may be unable to recover the costs of such additional work through rates. The Utility also may incur third-party liability related to service disruptions caused by changes in pressure on its natural gas transmission system as work is performed.

***PG&E Corporation's and the Utility's financial condition depends upon the Utility's ability to recover its operating expenses and its electricity and natural gas procurement costs and to earn a reasonable rate of return on capital investments, in a timely manner from the Utility's customers through regulated rates.***

The Utility's ability to recover its costs and earn its authorized rate of return can be affected by many factors, including the time lag between when costs are incurred and when those costs are recovered in customers' rates and differences between the forecast or authorized costs embedded in rates (which are set on a prospective basis) and the amount of actual costs incurred. (See "Regulatory Matters – 2014 General Rate Case" above.) The CPUC or the FERC may not allow the Utility to recover costs on the basis that such costs were not reasonably or prudently incurred or for other reasons. For example, the CPUC has prohibited the Utility from recovering a material portion of costs that the Utility has already incurred, and will continue to incur, as it performs work under the pipeline safety enhancement plan, in part, because the CPUC found that such costs were incurred as a result of imprudent management. The CPUC may order the Utility to propose cost-sharing methods for certain costs or the Utility may decide for other reasons not to seek recovery of certain costs. In either case, the Utility would incur costs that are not recovered through rates. (See "Natural Gas Matters" above.)

Further, to serve its customers in a safe and reliable manner, the Utility may be required to incur expenses before the CPUC approves the recovery of such costs. The Utility is generally unable to recover costs incurred before CPUC authorization is obtained, unless the CPUC authorizes the Utility to track costs for potential future recovery. For example, the Utility requested that the CPUC allow the Utility to track costs incurred in 2012 under the pipeline safety enhancement plan before the CPUC approved the plan. The CPUC did not address the Utility's request and as a result the Utility was unable to recover costs incurred before the effective date of the decision, December 20, 2012. The Utility's failure to recover these and other pipeline-related costs has materially affected PG&E Corporation's and the Utility's financial condition, results of operations and cash flows.

Fluctuating commodity prices, changes in laws and regulations or changes in the political and regulatory environment also may have an adverse effect on the Utility's ability to timely recover its costs and earn its authorized rate of return. Current law and regulatory mechanisms permit the Utility to pass through its costs to procure electricity and natural gas to customers in rates. A significant and sustained rise in commodity prices, caused by costs associated with new renewable energy resources and California's new cap-and-trade program and other factors, could create overall rate pressures that make it more difficult for the Utility to recover its costs. This pressure could increase as the Utility continues to collect authorized rates to support public purpose programs, such as energy efficiency programs, and low-income rate subsidies, and to fund customer incentive programs. Further, current California law restricts the ability of the CPUC to adjust electricity rates for certain customer classes which could lead to a perception that some customers are unfairly subsidizing other customers and that some commercial customers are competitively disadvantaged as compared to similar customers in other states. The customer concerns caused by these perceived inequities could also make it more difficult for the Utility to recover its operational costs.

The Utility's ability to recover its costs also may be affected by the economy and the economy's corresponding impact on the Utility's customers. For example, a sustained downturn or sluggishness in the economy could reduce the Utility's sales to industrial and commercial customers. Although the Utility generally recovers its costs through rates, regardless of sales volume, rate pressures increase when the costs are borne by a smaller sales base. A portion of the Utility's revenues depends on the level of customer demand for the Utility's natural gas transportation services which can fluctuate based on economic conditions, the price of natural gas, and other factors.

The Utility's failure to recover its operating expenses, including electricity and natural gas procurement costs in a timely manner through rates could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

***The Utility's ability to procure electricity to meet customer demand at reasonable prices and recover procurement costs timely may be affected by increasing renewable energy requirements, the continuing functioning of the wholesale electricity market in California, and the new cap-and-trade market.***

The Utility meets customer demand for electricity from a variety of sources, including electricity generated from the Utility's own generation facilities, electricity provided by third parties under power purchase agreements, and purchases on the wholesale electricity market. The Utility must manage these sources using the principles of "least cost dispatch."

The Utility enters into power purchase agreements, including contracts to purchase renewable energy, in compliance with a long-term procurement plan approved by the CPUC. The Utility executes power purchase agreements following competitive requests for offers. The Utility submits the winning contracts to the CPUC for approval and authorization to recover contract costs through rates. There is a risk that the contractual prices the Utility is required to pay will become uneconomic in the future for a variety of reasons, including developments in alternative energy technology, increased self-generation by customers, an increase in distributed generation, and lower customer demand due to economic conditions or the loss of the Utility's customers to other generation providers. In particular, as the market for renewable energy develops in response to California's renewable energy requirements, there is a risk that the Utility's contractual commitments could result in procurement costs that are higher than the market price of renewable energy. This could create a further risk that, despite original CPUC approval of the contracts, the CPUC would disallow contract costs in the future if the CPUC determines that the costs are unreasonably above market. In addition, the CPUC could disallow procurement costs if the CPUC determined that the Utility incurred procurement costs that were not in compliance with its CPUC-approved procurement plan, or that the Utility did not prudently administer the power purchase agreements that were executed in compliance with the plan. The Utility also purchases energy through the day-ahead wholesale electricity market operated by the California Independent System Operator ("CAISO"). The amount of electricity the Utility purchases on the wholesale market fluctuates due to a variety of factors, including, the level of electricity generated by the Utility's own generation facilities, changes in customer demand, periodic expirations or terminations of power purchase contracts, the execution of new power purchase contracts, fluctuation in the output of hydroelectric and other renewable power facilities owned or under contract by the Utility, and the implementation of new energy efficiency and demand response programs. The market prices of electricity also fluctuate. Although market mechanisms are designed to limit excessive prices, these market mechanisms could fail, or the related systems and software on which the market mechanisms rely may not perform as intended, which could result in excessive market prices. For example, during the 2000 and 2001 energy crisis, the market mechanism flaws in California's newly established wholesale electricity market led to dramatically high market prices for electricity that the Utility was unable to recover through customer rates, ultimately causing the Utility to file a petition for reorganization under Chapter 11 of the U.S. Bankruptcy Code.

In addition, with the beginning of the first compliance period under the new California cap-and-trade regulations on January 1, 2013, electricity costs include associated cap-and-trade compliance costs. Although some of these costs will be offset by revenues from the sale of emission allowances by the Utility on behalf of some classes of electricity customers, it is uncertain how the cap-and-trade market will develop in the future especially as the cap-and-trade compliance periods expand to cover other sources of GHG emissions and as other regional or federal cap-and-trade programs are adopted.

PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected if the Utility is unable to recover a material portion of the costs it incurs to deliver electricity to customers.

***The completion of capital investment projects is subject to substantial risks, and the timing of the Utility's capital expenditures and recovery of capital-related costs through rates, if at all, will directly affect net income.***

The Utility's ability to invest capital in its electric and natural gas businesses is subject to many risks, including risks related to obtaining regulatory approval, securing adequate and reasonably priced financing, obtaining and complying with the terms of permits, meeting construction budgets and schedules, and satisfying operating and environmental performance standards. Third-party contractors on which the Utility depends to develop or construct these projects also face many of these risks. Changes in tax laws or policies, such as those relating "bonus" depreciation, may also affect when or whether a potential project is developed. In addition, reduced forecasted demand for electricity and natural gas as a result of an economic slow-down, or other reasons, may also increase the risk that projects are deferred, abandoned, or cancelled. Some of the Utility's future capital investments may also be affected by evolving federal and state policies regarding the development of a "smart" electric transmission grid.

In addition, differences in the amount or timing of actual capital expenditures compared to the amount and timing of forecast capital expenditures authorized to be recovered through rates, can directly affect net income. Further, if capital expenditures are disallowed, the Utility would be required to write-off such expenses which could have a material effect on PG&E Corporation's and the Utility's financial condition and results of operations.

***PG&E Corporation's and the Utility's financial results could be affected by the loss of Utility customers and decreased new customer growth due to municipalization, an increase in the number of community choice aggregators, increasing levels of "direct access," and the development and integration of self-generation and distributed generation technologies, if the CPUC fails to adjust the Utility's rates to reflect such events.***

The Utility's customers could bypass its distribution and transmission system by obtaining such services from other providers. This may result in stranded investment capital, loss of customer growth, and additional barriers to cost recovery. Forms of bypass of the Utility's electricity distribution system include construction of duplicate distribution facilities to serve specific existing or new customers. In addition, local government agencies could exercise their power of eminent domain to acquire the Utility's facilities and use the facilities to provide utility service to their local residents and businesses. The Utility may be unable to fully recover its investment in the distribution assets that it no longer owns. The Utility's natural gas transmission facilities could be bypassed by interstate pipeline companies that construct facilities in the Utility's markets, by customers who build pipeline connections that bypass the Utility's natural gas transmission and distribution system, or by customers who use and transport liquefied natural gas.

Alternatively, the Utility's customers could become direct access customers who purchase electricity from alternative energy suppliers or they could become customers of governmental bodies registered as community choice aggregators to purchase and sell electricity for their residents and businesses. Although the Utility is permitted to collect a non-bypassable charge for generation-related costs incurred on behalf of these customers, or distribution, metering, or other services it continues to provide, the fee may not be sufficient for the Utility to fully recover the costs to provide these services. Furthermore, if the former customers return to receiving electricity supply from the Utility, the Utility could incur costs to meet their electricity needs that it may not be able to timely recover through rates or that it may not be able to recover at all.

In addition, increasing levels of self-generation of electricity by customers (primarily solar installations) and the use of customer net energy metering, which allows self-generating customers to receive bill credits for surplus power at the full retail rate, could put upward rate pressure on remaining customers. Also, a confluence of technology-related cost declines and sustained federal or state subsidies make a combination of distributed generation and storage a viable, cost-effective alternative to the Utility's bundled electric service which could further threaten the Utility's ability to recover its generation, transmission, and distribution investments.

If the CPUC fails to adjust the Utility's rates to reflect the impact of changing loads, increasing self-generation and net energy metering, and the growth of distributed generation, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially adversely affected.

***The operation of the Utility's electricity and natural gas generation, transmission, and distribution facilities involve significant risks which, if they materialize, can adversely affect PG&E Corporation's and the Utility's financial condition, results of operations and cash flows, and the Utility's insurance may not be sufficient to cover losses caused by an operating failure or catastrophic event.***

The Utility owns and operates extensive electricity and natural gas facilities, including two nuclear generation units and an extensive hydroelectric generating system. The Utility's service territory covers approximately 70,000 square miles in northern and central California and is composed of diverse geographic regions with varying climates and weather conditions that create numerous operating challenges. The Utility's facilities are interconnected to the U.S. western electricity grid and numerous interstate and continental natural gas pipelines. The Utility's ability to earn its authorized rate of return depends on its ability to efficiently maintain and operate its facilities and provide electricity and natural gas services safely and reliably. The maintenance and operation of the Utility's facilities, and the facilities of third parties on which the Utility relies, involve numerous risks, including the risks discussed elsewhere in this section and those that arise from:

- the breakdown or failure of equipment, electric transmission or distribution lines, or natural gas transmission and distribution pipelines, that can cause explosions, fires, or other catastrophic events;
- the failure of generation facilities to perform at expected or at contracted levels of output or efficiency;
- the failure of a large dam or other major hydroelectric facility;
- the failure to take expeditious or sufficient action to mitigate operating conditions, facilities, or equipment, that the Utility has identified, or reasonably should have identified, as unsafe, which failure then leads to a catastrophic event;
- severe weather events such as storms, tornadoes, floods, drought, earthquakes, tsunamis, wildland and other fires, pandemics, solar events, electromagnetic events, or other natural disasters;
- operator or other human error;
- fuel supply interruptions or the lack of available fuel which reduces or eliminates the Utility's ability to provide electricity and/or natural gas service;
- the release of hazardous or toxic substances into the air or water;
- use of new or unproven technologies;
- cyber-attack; and
- acts of terrorism, vandalism, or war.

The occurrence of any of these events could affect demand for electricity or natural gas; cause unplanned outages or reduce generating output which may require the Utility to incur costs to purchase replacement power; cause damage to the Utility's assets or operations requiring the Utility to incur unplanned expenses to respond to emergencies and make repairs; damage the assets or operations of third parties on which the Utility relies; subject the Utility to claims by customers or third parties for damages to property, personal injury, or wrongful death, or subject the Utility to penalties. These costs may not be recoverable through rates or insurance. Insurance, equipment warranties, or other contractual indemnification requirements may not be sufficient or effective to provide full or even partial recovery under all circumstances or against all hazards or liabilities to which the Utility may become subject. An uninsured loss could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. Future insurance coverage may not be available at rates and on terms as favorable as the rates and terms of the Utility's current insurance coverage or may not be available at all.

***The Utility's operational and information systems on which it relies to conduct its business and serve customers could fail to function properly due to technological problems, a cyber-attack, acts of terrorism, severe weather, a solar event, an electromagnetic event, a natural disaster, the age and condition of information technology assets, human error, or other reasons, that could disrupt the Utility's operations and cause the Utility to incur unanticipated losses and expense.***

The operation of the Utility's extensive electricity and natural gas systems rely on evolving information and operational technology systems and network infrastructures that are becoming more complex as new technologies and systems are implemented to modernize capabilities to safely and reliably deliver gas and electric services. The Utility's business is highly dependent on its ability to process and monitor, on a daily basis, a very large number of tasks and transactions, many of which are highly complex. The failure of the Utility's information and operational systems and networks could significantly disrupt operations; result in public and employee safety lapse; result in outages; reduced generating output; damage to the Utility's assets or operations or those of third parties; and subject the Utility to claims by customers or third parties, any of which could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

The Utility's systems, including its financial information, operational systems, advanced metering, and billing systems, require constant maintenance, modification, and updating, which can be costly and increases the risk of errors and malfunction. Any disruptions or deficiencies in existing systems, or disruptions, delays or deficiencies in the modification or implementation of new systems, could result in increased costs, the inability to track or collect revenues, the diversion of management's and employees' attention and resources, and could negatively affect the effectiveness of the companies' control environment, and/or the companies' ability to timely file required regulatory reports.

The Utility's ability to measure customer energy usage and generate bills depends on the successful functioning of the advanced metering system. The Utility relies on third party contractors and vendors to service, support, and maintain certain proprietary functional components of the advanced metering system. If such a vendor or contractor ceased operations, if there was a contractual dispute or a failure to renew or negotiate the terms of a contract so that the Utility becomes unable to continue relying on such a third-party vendor or contractor, then the Utility could experience costs associated with disruption of billing and measurement operations and would incur costs as it seeks to find other replacement contractors or vendors or hire and train personnel to perform such services.

Despite implementation of security and mitigation measures, all of the Utility's technology systems are vulnerable to disability or failures due to cyber-attacks, viruses, human errors, acts of war or terrorism, and other events. If the Utility's information technology systems or network infrastructure were to fail, the Utility might be unable to fulfill critical business functions and serve its customers, which could have a material effect on PG&E Corporation's and the Utility's financial conditions, results of operations, and cash flows.

In addition, in the ordinary course of its business, the Utility collects and retains sensitive information including personal identification information about customers and employees, customer energy usage, and other information. The theft, damage, or improper disclosure of sensitive electronic data can subject the Utility to penalties for violation of applicable privacy laws, subject the Utility to claims from third parties, and harm the Utility's reputation.

***The Utility's success depends on the availability of the services of a qualified workforce and its ability to maintain satisfactory collective bargaining agreements which cover a substantial number of employees. PG&E Corporation's and the Utility's results may suffer if the Utility is unable to attract and retain qualified personnel and senior management talent, or if prolonged labor disruptions occur.***

The Utility's workforce is aging and many employees will become eligible to retire within the next few years. Although the Utility has undertaken efforts to recruit and train new field service personnel, the Utility may not be successful. The Utility may be faced with a shortage of experienced and qualified personnel. The majority of the Utility's employees are covered by collective bargaining agreements with three unions. The terms of these agreements affect the Utility's labor costs. It is possible that labor disruptions could occur. In addition, it is possible that some of the remaining non-represented Utility employees will join one of these unions in the future. It is also possible that PG&E Corporation and the Utility may face challenges in attracting and retaining senior management talent especially if they are unable to restore the reputational harm generated by the negative publicity stemming from the San Bruno accident. Any such occurrences could negatively impact PG&E Corporation's and the Utility's financial condition and results of operations.

***The operation and decommissioning of the Utility's nuclear power plants expose it to potentially significant liabilities that it may not be able to recover from its insurance or other sources, and the Utility may incur significant capital expenditures and compliance costs that it may be unable to fully recover, adversely affecting PG&E Corporation's and the Utility's s financial conditions, results of operations, and cash flows.***

The operation of the Utility's nuclear generation facilities expose it to potentially significant liabilities from environmental, health and financial risks, such as risks relating to the storage, handling and disposal of spent nuclear fuel, the release of radioactive materials caused by a nuclear accident, seismic activity, natural disaster, or terrorist act. There are also significant uncertainties related to the regulatory, technological, and financial aspects of decommissioning nuclear generation plants when their licenses expire. To reduce the Utility's financial exposure to these risks, the Utility maintains insurance and manages decommissioning trusts that hold nuclear decommissioning charges collected through customer rates. However, the costs or damages the Utility may incur in connection with the operation and decommissioning of its nuclear power plants could exceed the amount of the Utility's insurance coverage and nuclear decommissioning trust assets. The Utility has insurance coverage for property damages and business interruption losses, as well as coverage for acts of terrorism at its nuclear power plants as a member of Nuclear Electric Insurance Limited ("NEIL"), a mutual insurer owned by utilities with nuclear facilities. NEIL provides coverage for both nuclear (meaning that nuclear material is released) and non-nuclear losses. Due to multiple large non-nuclear losses in the industry, NEIL has notified the Utility and the other NEIL members that it will be significantly reducing its coverage for non-nuclear losses. This change will affect the Utility beginning in April 2013. While the Utility is seeking alternative insurance options, efforts to obtain additional coverage may not be successful. Even if the Utility is able to obtain additional coverage, this future insurance coverage is not likely to be available at rates and on terms as favorable as the rates and terms of the Utility's current NEIL insurance coverage. If the Utility incurs losses that are either not covered by insurance or exceed the amount of insurance available, such losses could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

In addition, as an operator of the two operating nuclear reactor units at Diablo Canyon, the Utility may be required under federal law to pay up to $235 million of liabilities arising out of each nuclear incident occurring not only at the Utility's Diablo Canyon facility but at any other nuclear power plant in the United States. (See Note 15 of the Notes to the Consolidated Financial Statements.) The Utility's ability to continue to operate its nuclear generation facilities also is subject to the availability of adequate nuclear fuel supplies on terms that the CPUC will find reasonable.

The NRC oversees the licensing, construction, and decommissioning of nuclear facilities and has broad authority to impose requirements relating to the maintenance and operation of nuclear facilities; the storage, handling and disposal of spent fuel; and the safety, radiological, environmental, and security aspects of nuclear facilities. The NRC has adopted regulations that are intended to protect nuclear facilities, nuclear facility employees, and the public from potential terrorist and other threats to the safety and security of nuclear operations, including threats posed by radiological sabotage or cyber-attack. The Utility incurs substantial costs to comply with these regulations. In addition, in March 2012, the NRC issued several orders to the owners of all U.S. operating nuclear reactors to implement the highest-priority recommendations issued by the NRC's task force to incorporate the lessons learned from the March 2011 earthquake and tsunami that caused significant damage to the Fukushima-Dai-ichi nuclear facilities in Japan. The NRC may issue further orders to implement the recommendations, including facility-specific orders, which could require the Utility to incur additional costs.

The Utility has filed an application at the NRC to renew the operating licenses for the two operating units at Diablo Canyon which expire in 2024 and 2025. In May 2011, after the Fukushima-Dai-ichi event, the NRC granted the Utility's request to delay processing the Utility's application until certain advanced seismic studies that the CPUC ordered the Utility to conduct were completed. In November 2012, the California Coastal Commission denied the Utility's request for permits to conduct some of these advanced studies. The Utility is assessing whether it has sufficient seismic data without conducting the high energy off-shore studies or if other studies are needed. It is uncertain when the Utility would request the NRC to resume the relicensing proceeding. In order to receive renewed operating licenses, the Utility also must undergo a sufficiency review by the California Coastal Commission. The disposition of the Utility's relicensing application also will be affected by the terms and timing of the NRC's "waste confidence" decision regarding the environmental impacts of the storage of spent nuclear fuel. The NRC's original "waste confidence decision" in which the NRC found that spent nuclear fuel can be safely managed until a permanent off-site repository is established, was successfully challenged on the basis that the NRC's environmental review was deficient. In August 2012, the NRC ruled that it will not issue final decisions in licensing or re-licensing proceedings, including the Utility's re-licensing application, until it had reconsidered the waste confidence issues. The NRC stated that it would consider all available options for resolving the waste confidence issue, which could include generic or site-specific NRC actions, or some combination of both. The NRC has instructed its staff to develop and issue a new waste confidence decision and temporary storage rule by September 2014.

The CPUC has authority to determine the rates the Utility can collect to recover its nuclear fuel, operating, maintenance, compliance, and decommissioning costs. The Utility also could incur significant expense to comply with regulations or orders the NRC may issue in the future to impose new safety requirements, to obtain license renewal, and to comply with federal and state policies and regulations applicable to the use of cooling water intake systems at generation facilities, such as Diablo Canyon. (See "Environmental Matters" above.) The Utility expects that it would seek rate recovery of these additional costs. The outcome of these rate proceedings at the CPUC can be influenced by public and political opposition to nuclear power. If the Utility were unable to recover costs related to its nuclear facilities, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected. The Utility may determine that it cannot comply with the new regulations or orders in a feasible and economic manner and voluntarily cease operations at Diablo Canyon. Alternatively, the NRC may order the Utility to cease its nuclear operations until it can comply with new regulations or orders. Further, the Utility could fail to obtain renewed operating licenses for Diablo Canyon requiring nuclear operations to cease when the current licenses expire in 2024 and 2025.

***The Utility's operations are subject to extensive environmental laws and changes in or liabilities under these laws could adversely affect PG&E Corporation's and the Utility's financial conditions, results of operations, and cash flows.***

The Utility's operations are subject to extensive federal, state, and local environmental laws, regulations, orders, relating to air quality, water quality and usage, remediation of hazardous wastes, and the protection and conservation of natural resources and wildlife. The Utility can incur significant capital, operating, and other costs associated with compliance with these environmental statutes, rules, and regulations. These costs can be difficult to forecast because the extent of contamination may be unknown. For example, the Utility's costs to perform hydrostatic pressure testing of natural gas pipelines have included costs to obtain local agency and environmental permits to conduct the tests as well as costs to treat and dispose of the water used in the tests that becomes contaminated as the water travels through the pipes. Further, even if the extent of contamination is known, remediation costs can be difficult to estimate due to many factors, including which remediation alternatives will be used, the applicable remediation levels, and the financial ability of other potentially responsible parties. Environmental remediation costs could increase in the future as a result of new legislation, the current trend toward more stringent standards, and stricter and more expansive application of existing environmental regulations. Failure to comply with these laws and regulations, or failure to comply with the terms of licenses or permits issued by environmental or regulatory agencies, could expose the Utility to claims by third parties or the imposition of civil or criminal penalties or other sanctions.

The Utility has been, and may be, required to pay for environmental remediation costs at sites where it is identified as a potentially responsible party under federal and state environmental laws. These sites, some of which the Utility no longer owns, include former manufactured gas plant sites, current and former power plant sites, former gas gathering and gas storage sites, sites where natural gas compressor stations are located, current and former substations, service center and general construction yard sites, and sites currently and formerly used by the Utility for the storage, recycling, or disposal of hazardous substances. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site. Although the Utility has provided for known environmental obligations that are probable and reasonably estimable, estimated costs may vary significantly from actual costs, and the amount of additional future costs may be material to results of operations in the period in which they are recognized. (See Note 15 to the Notes to the Consolidated Financial Statements for more information.)

The CPUC has authorized the Utility to recover its environmental remediation costs for certain sites through various ratemaking mechanisms. One of these mechanisms allows the Utility rate recovery for 90% of its hazardous substance remediation costs for certain approved sites without a reasonableness review. The CPUC may discontinue or change these ratemaking mechanisms in the future or the Utility may incur environmental costs that exceed amounts the CPUC has authorized the Utility to recover in rates.

Further, the CPUC has ruled that the Utility's environmental costs for certain sites, such as the remediation costs associated with the Hinkley natural gas compressor site, are not recoverable through this ratemaking mechanism. The Utility's costs to remediate groundwater contamination near the Hinkley natural gas compressor site and to abate the effects of the contamination have had, and may continue to have, a material effect on PG&E Corporation's and the Utility's financial conditions, results of operations, and cash flows. (See "Environmental Matters" above.)

***The Utility's future operations may be affected by climate change that may have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.***

A report issued in 2012 by the EPA entitled, "Climate Change Indicators in the United States, 2012" states that the increase of GHG emissions in the atmosphere is changing the fundamental measures of climate in the United States, including rising temperatures, shifting snow and rainfall patterns, and more extreme climate events. In December 2009, the EPA issued a finding that GHG emissions cause or contribute to air pollution that endangers public health and welfare. The impact of events or conditions caused by climate change could range widely, from highly localized to worldwide, and the extent to which the Utility's operations may be affected is uncertain. For example, if reduced snowpack decreases the Utility's hydroelectric generation, the Utility will need to acquire additional generation from other sources. Under certain circumstances, the events or conditions caused by climate change could result in a full or partial disruption of the ability of the Utility – or one or more of the entities on which it relies – to generate, transmit, transport, or distribute electricity or natural gas. The Utility has been studying the potential effects of climate change on the Utility's operations and is developing contingency plans to adapt to those events and conditions that the Utility believes are most significant. Events or conditions caused by climate change could have a greater impact on the Utility's operations than the Utility's studies suggest and could result in lower revenues or increased expenses, or both. If the CPUC fails to adjust the Utility's rates to reflect the impact of events or conditions caused by climate change, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected.

***The Utility is subject to penalties for failure to comply with federal, state, or local statutes and regulations. Changes in the political and regulatory environment could cause federal and state statutes, regulations, rules, and orders to become more stringent and difficult to comply with, and required permits, authorizations, and licenses may be more difficult to obtain, increasing the Utility's expenses or making it more difficult for the Utility to execute its business strategy.***

The Utility must comply in good faith with all applicable statutes, regulations, rules, tariffs, and orders of the CPUC, the FERC, the NRC, and other regulatory agencies relating to the aspects of its electricity and natural gas utility operations that fall within the jurisdictional authority of such agencies. In addition to the NRC requirements described above, these include meeting new renewable energy delivery requirements, resource adequacy requirements, federal electric reliability standards, customer billing, customer service, affiliate transactions, vegetation management, operating and maintenance practices, and safety and inspection practices. The Utility is subject to penalties and sanctions for failure to comply with applicable statutes, regulations, rules, tariffs, and orders.

On January 1, 2012, the CPUC's statutory authority to impose penalties increased from up to $20,000 per day, per violation, to up to $50,000 per day, per violation. The CPUC has wide discretion to determine, based on the facts and circumstances, whether a single violation or multiple violations were committed and to determine the length of time a violation existed for purposes of calculating the amount of penalties. The CPUC has delegated authority to the SED to levy citations and impose penalties for violations of certain regulations related to the safety of natural gas facilities and utilities' natural gas operating practices. Like the CPUC, the SED has discretion to determine how to count the number of violations, but the delegated authority requires the SED to assess the maximum statutory fine per violation. (For a discussion of pending investigations and potential enforcement proceedings, see MD&A "Natural Gas Matters" above.) There is a risk that the CPUC could delegate additional enforcement authority to its staff or that legislation could be enacted to require the CPUC to further delegate enforcement authority.

In addition, the federal Pipeline and Hazardous Materials Safety Administration can impose penalties for violation of federal pipeline safety regulations in amounts that range from $100,000 to $200,000 for an individual violation and from $1 million to $2 million for a series of violations.

The Utility must comply with federal electric reliability standards that are set by the North American Electric Reliability Corporation and approved by the FERC. These standards relate to maintenance, training, operations, planning, vegetation management, facility ratings, and other subjects. These standards are designed to maintain the reliability of the nation's bulk power system and to protect the system against potential disruptions from cyber-attacks and physical security breaches. The FERC can impose penalties (up to $1 million per day, per violation) for failure to comply with these mandatory electric reliability standards. As these and other standards and rules evolve, and as the wholesale electricity markets become more complex, the Utility's risk of noncompliance may increase.

In addition, statutes, regulations, rules, tariffs, and orders, or their interpretation and application, may become more stringent and difficult to comply with in the future. If this occurs, the Utility could be exposed to increased costs to comply with the more stringent requirements or new interpretations and to potential liability for customer refunds, penalties, or other amounts. If it is determined that the Utility did not comply with applicable statutes, regulations, rules, tariffs, or orders, and the Utility is ordered to pay a material amount in customer refunds, penalties, or other amounts, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows would be materially affected.

The Utility also must comply with the terms of various permits, authorizations, and licenses. These permits, authorizations, and licenses may be revoked or modified by the agencies that granted them if facts develop that differ significantly from the facts assumed when they were issued. In addition, discharge permits and other approvals and licenses often have a term that is less than the expected life of the associated facility. Licenses and permits may require periodic renewal, which may result in additional requirements being imposed by the granting agency. In connection with a license renewal for one or more of the Utility's hydroelectric generation facilities or assets, the FERC may impose new license conditions that could, among other things, require increased expenditures or result in reduced electricity output and/or capacity at the facility.

If the Utility cannot obtain, renew, or comply with necessary governmental permits, authorizations, or licenses, or if the Utility cannot recover any increased costs of complying with additional license requirements or any other associated costs in its rates in a timely manner, PG&E Corporation's and the Utility's financial condition and results of operations could be materially affected.

***Market performance or changes in other assumptions could require PG&E Corporation and the Utility to make significant unplanned contributions to its pension plan, other postretirement benefits plans, and nuclear decommissioning trusts.***

PG&E Corporation and the Utility provide defined benefit pension plans and other postretirement benefits for eligible employees and retirees. The Utility also maintains three trusts for the purposes of providing funds to decommission its nuclear facilities. Up to approximately 60% of the plan assets and trust assets have generally been invested in equity securities, which are subject to market fluctuation. A decline in the market value may increase the funding requirements for these plans and trusts.

The cost of providing pension and other postretirement benefits is also affected by other factors, including the assumed rate of return on plan assets, employee demographics, discount rates used in determining future benefit obligations, rates of increase in health care costs, levels of assumed interest rates, future government regulation, and prior contributions to the plans. Similarly, funding requirements for the nuclear decommissioning trusts are affected by changes in the laws or regulations regarding nuclear decommissioning or decommissioning funding requirements, changes in assumptions as to decommissioning dates, technology and costs of labor, materials and equipment change, and assumed rate of return on plan assets. For example, changes in interest rates affect the liabilities under the plans: as interest rates decrease, the liabilities increase, potentially increasing the funding requirements.

The Utility has recorded an asset retirement obligation related to decommissioning its nuclear facilities based on various estimates and assumptions. Changes in these estimates and assumptions can materially affect the amount of the recorded asset retirement obligation. (See Note 2 of the Notes to the Consolidated Financial Statements for a discussion of the increase in the recorded asset retirement obligation to reflect increased estimated decommissioning costs.)

The CPUC has authorized the Utility to recover forecasted costs to fund pension and postretirement plan contributions and nuclear decommissioning through rates. If the Utility is required to make significant unplanned contributions to fund the pension and postretirement plans and nuclear decommissioning trusts and is unable to recover such contributions in rates, the contributions would negatively affect PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

Other Utility obligations, such as its workers' compensation obligations, are not separately earmarked for recovery through rates. Therefore, increases in the Utility's workers' compensation liabilities and other unfunded liabilities also can negatively affect net income.

***PG&E Corporation's and the Utility's financial statements reflect various estimates, assumptions, and values and are prepared in accordance with applicable accounting rules, standards, policies, guidance, and interpretations, including those related to regulatory assets and liabilities. Changes to these estimates, assumptions, values, and accounting rules, or changes in the application of these rules, could materially affect PG&E Corporation's and the Utility's financial condition or results of operations.***

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of revenues, expenses, assets, and liabilities, and the disclosure of contingencies. (See the discussion under Notes 1 and 2 of the Notes to the Consolidated Financial Statements and "Critical Accounting Policies" above.) If the information on which the estimates and assumptions are based proves to be incorrect or incomplete, if future events do not occur as anticipated, or if there are changes in applicable accounting guidance, policies, or interpretation, management's estimates and assumptions will change as appropriate. A change in management's estimates or assumptions, or the recognition of actual losses that differ from the amount of estimated losses, could have a material impact on PG&E Corporation's and the Utility's financial condition or results of operations.

As a regulated entity, the Utility's rates are designed to recover the costs of providing service. The Utility capitalizes and records, as regulatory assets, costs that would otherwise be charged to expense if it is probable that the incurred costs will be recovered in future rates. If costs expected to be incurred in the future are currently being recovered through rates, the Utility records those expected future costs as regulatory liabilities. At December 31, 2012, PG&E Corporation and the Utility reported regulatory assets of $8.3 billion and regulatory liabilities of $6.1 billion. (See Note 3 of the Notes to the Consolidated Financial Statements.) Management believes that currently available facts support the continued application of regulatory accounting and that all regulatory assets and liabilities are recoverable or refundable in the current rate environment. Since the San Bruno accident in September 2010, the Utility has recorded cumulative charges of approximately $1.83 billion related to its natural gas operations that are not recoverable through rates. To the extent that rates are not set at a level that allows the Utility to recover the cost of providing service and a reasonable return on its investment in future periods, the Utility may be required to discontinue the application of regulatory accounting for portions of its operations. If that occurs, the related regulatory assets and liabilities would be charged against income in the period in which that determination was made and could have a material impact on PG&E Corporation's and the Utility's future financial condition and results of operations.

***As a holding company, PG&E Corporation depends on cash distributions and reimbursements from the Utility to meet its debt service and other financial obligations and to pay dividends on its common stock.***

PG&E Corporation is a holding company with no revenue generating operations of its own. PG&E Corporation's ability to pay interest on its outstanding debt, the principal at maturity, and to pay dividends on its common stock, as well as satisfy its other financial obligations, primarily depends on the earnings and cash flows of the Utility and the ability of the Utility to distribute cash to PG&E Corporation (in the form of dividends and share repurchases) and reimburse PG&E Corporation for the Utility's share of applicable expenses. Before it can distribute cash to PG&E Corporation, the Utility must use its resources to satisfy its own obligations, including its obligation to serve customers, to pay principal and interest on outstanding debt, to pay preferred stock dividends, and meet its obligations to employees and creditors. The Utility's ability to pay common stock dividends is constrained by regulatory requirements, including that the Utility maintain its authorized capital structure with an average 52% equity component. Further, the CPUC could adopt the SED's financial recommendations made in its January 12, 2012 report on the San Bruno accident, including that the Utility "should target retained earnings towards safety improvements before providing dividends, especially if the Utility's ROE exceeds the level set in a GRC." PG&E Corporation's and the Utility's ability to pay dividends also could be affected by financial covenants contained in their respective credit agreements that require each company to maintain a ratio of consolidated total debt to consolidated capitalization of at most 65%. If the Utility is not able to make distributions to PG&E Corporation or to reimburse PG&E Corporation, PG&E Corporation's ability to meet its own obligations could be impaired and its ability to pay dividends could be restricted.

***PG&E Corporation could be required to contribute capital to the Utility or be denied distributions from the Utility to the extent required by the CPUC's determination of the Utility's financial condition.***

The CPUC imposed certain conditions when it approved the original formation of a holding company for the Utility, including an obligation by PG&E Corporation's Board of Directors to give "first priority" to the capital requirements of the Utility, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner. The CPUC later issued decisions adopting an expansive interpretation of PG&E Corporation's obligations under this condition, including the requirement that PG&E Corporation "infuse the Utility with all types of capital necessary for the Utility to fulfill its obligation to serve." The Utility's financial condition will be affected by the amount of costs the Utility incurs that it is not allowed to recover through rates, the amount of third-party losses it is unable to recover through insurance, and the amount of penalties the Utility incurs in connection with the pending investigations and future citations for self-reported violations. After considering these impacts, the CPUC's interpretation of PG&E Corporation's obligation under the first priority condition could require PG&E Corporation to infuse the Utility with significant capital in the future or could prevent distributions from the Utility to PG&E Corporation, or both, any of which could materially restrict PG&E Corporation's ability to pay principal and interest on its outstanding debt or pay its common stock dividend, meet other obligations, or execute its business strategy. Further, laws or regulations could be enacted or adopted in the future that could impose additional financial or other restrictions or requirements pertaining to transactions between a holding company and its regulated subsidiaries.

***PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows will be affected by their ability to continue accessing the capital markets and by the terms of debt and equity financings.***

The Utility relies on access to capital and credit markets as significant sources of liquidity to fund capital expenditures, pay principal and interest on its debt, provide collateral to support its natural gas and electricity procurement hedging contracts, and fund other operations requirements that are not satisfied by operating cash flows. See the discussion of the Utility's future financing needs above in "Liquidity and Financial Resources." PG&E Corporation relies on independent access to the capital and credit markets to fund its operations, make capital expenditures, and contribute equity to the Utility as needed to maintain the Utility's CPUC-authorized capital structure, if funds received from the Utility (in the form of dividends or share repurchases) are insufficient to meet such needs. Following the San Bruno accident, PG&E Corporation has issued a material amount of equity to fund its equity contributions to the Utility as the Utility has incurred costs and expenses it cannot recover through rates.

PG&E Corporation forecasts that it will continue to issue additional material amounts of equity as the Utility continues to incur costs that it cannot recover through rates, such as costs under its pipeline safety enhancement plan, to improve electricity and natural gas operations, and to pay penalties. PG&E Corporation may also be required to access the capital markets when the Utility is successful in selling long-term debt so that PG&E Corporation can contribute equity to the Utility as needed to maintain the Utility's authorized capital structure.

PG&E Corporation's and the Utility's ability to access the capital and credit markets and the costs and terms of available financing depend on many factors, including the amount of penalties imposed on the Utility in connection with the matters described above under "Natural Gas Maters;" changes in their credit ratings; changes in the federal or state regulatory environment affecting energy companies generally or PG&E Corporation and the Utility in particular; the overall health of the energy industry; volatility in electricity or natural gas prices; disruptions, uncertainty or volatility in the capital and credit markets; and general economic and market conditions. If PG&E Corporation's or the Utility's credit ratings were downgraded to below investment grade, their ability to access the capital and credit markets could be negatively affected and could result in higher borrowing costs, fewer financing options, including reduced access to the commercial paper market, additional collateral posting requirements, which in turn could affect liquidity and lead to an increased financing need.

If the Utility were unable to access the capital markets, it could be required to decrease or suspend dividends to PG&E Corporation. PG&E Corporation also would need to consider its alternatives, such as contributing capital to the Utility, to enable the Utility to fulfill its obligation to serve. If PG&E Corporation is required to contribute equity to the Utility in these circumstances, it would be required to seek these funds from the capital or credit markets. To maintain PG&E Corporation's dividend level in these circumstances, PG&E Corporation would be further required to access the capital or credit markets. PG&E Corporation may need to decrease or discontinue its common stock dividend if it is unable to access the capital or credit markets on reasonable terms.

See accompanying Notes to the Consolidated Financial Statements.

**NOTE 1: ORGANIZATION AND BASIS OF PRESENTATION**

PG&E Corporation is a holding company that conducts its business through Pacific Gas and Electric Company ("Utility"), a public utility operating in northern and central California. The Utility generates revenues mainly through the sale and delivery of electricity and natural gas to customers. The Utility is primarily regulated by the California Public Utilities Commission ("CPUC") and the Federal Energy Regulatory Commission ("FERC"). In addition, the Nuclear Regulatory Commission ("NRC") oversees the licensing, construction, operation, and decommissioning of the Utility's nuclear generation facilities. The Utility's accounts for electric and gas operations are maintained in accordance with the Uniform System of Accounts prescribed by the FERC.

This is a combined annual report of PG&E Corporation and the Utility. The Notes to the Consolidated Financial Statements apply to both PG&E Corporation and the Utility. PG&E Corporation's Consolidated Financial Statements include the accounts of PG&E Corporation, the Utility, and other wholly owned and controlled subsidiaries. The Utility's Consolidated Financial Statements include the accounts of the Utility and its wholly owned and controlled subsidiaries. All intercompany transactions have been eliminated from the Consolidated Financial Statements. PG&E Corporation and the Utility operate in one segment.

The accompanying Consolidated Financial Statements have been prepared in accordance with accounting principles generally accepted in the United States of America ("GAAP") for annual financial statements and in accordance with the instructions to Form 10-K and Regulation S-X promulgated by the Securities and Exchange Commission ("SEC"). The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions based on a wide range of factors, including future regulatory decisions and economic conditions, that are difficult to predict. Some of the more critical estimates and assumptions relate to the Utility's regulatory assets and liabilities, legal and regulatory contingencies, environmental remediation liabilities, asset retirement obligations ("ARO"), and pension and other postretirement benefit plans obligations. Management believes that its estimates and assumptions reflected in the Consolidated Financial Statements are appropriate and reasonable. Actual results could differ materially from those estimates.

**NOTE 2: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES**

**Cash and Cash Equivalents**

Cash and cash equivalents consist of cash and short-term, highly liquid investments with original maturities of three months or less. Cash equivalents are stated at fair value.

**Restricted Cash**

Restricted cash consists primarily of the Utility's cash held in escrow pending the resolution of the remaining disputed claims made by electricity suppliers in the Utility's proceeding under Chapter 11 of the U.S. Bankruptcy Code ("Chapter 11"). (See Note 13 below.)

**Allowance for Doubtful Accounts Receivable**

PG&E Corporation and the Utility recognize an allowance for doubtful accounts to record accounts receivable at estimated net realizable value. The allowance is determined based upon a variety of factors, including historical write-off experience, aging of receivables, current economic conditions, and assessment of customer collectability.

**Inventories**

Inventories are carried at weighted-average cost. Inventories include natural gas stored underground and materials and supplies. Natural gas stored underground represents purchases that are recorded to inventory and then expensed at weighted average cost when withdrawn and distributed to customers or used in electric generation. Materials and supplies are recorded to inventory when purchased and then expensed or capitalized to plant, as appropriate, when consumed or installed.

**Property, Plant, and Equipment**

Property, plant, and equipment are reported at their original cost. These original costs include labor and materials, construction overhead, and allowance for funds used during construction ("AFUDC"). The Utility's estimated useful lives and balances of its property, plant, and equipment were as follows:

| | Estimated Useful | Balance at December 31, | |
|---|---|---|---|
| **(in millions, except estimated useful lives)** | **Lives (years)** | **2012** | **2011** |
| Electricity generating facilities [1] | 10 to 100 | $ 8,253 | $ 6,488 |
| Electricity distribution facilities | 10 to 55 | 23,767 | 22,395 |
| Electricity transmission | 10 to 70 | 7,681 | 6,968 |
| Natural gas distribution facilities | 20 to 53 | 8,257 | 7,832 |
| Natural gas transportation and storage | 5 to 48 | 4,314 | 4,099 |
| Construction work in progress | | 1,894 | 1,770 |
| **Total property, plant, and equipment** | | **54,166** | **49,552** |
| Accumulated depreciation | | (16,643) | (15,898) |
| **Net property, plant, and equipment** | | **$ 37,523** | **$ 33,654** |

[1] Balance includes nuclear fuel inventories. Stored nuclear fuel inventory is stated at weighted average cost. Nuclear fuel in the reactor is expensed as it is used based on the amount of energy output. (See Note 15 below.)

**Depreciation**

The Utility depreciates property, plant, and equipment using the composite, or group, method of depreciation, in which a single depreciation rate is applied to the gross investment in a particular class of property. This method approximates the straight line method of depreciation over the useful lives of property, plant, and equipment. The Utility's composite depreciation rates were 3.63% in 2012, 3.67% in 2011, and 3.38% in 2010.

The useful lives of the Utility's property, plant, and equipment are authorized by the CPUC and the FERC, and the depreciation expense is recovered through rates charged to customers. Depreciation expense includes a component for the original cost of assets and a component for estimated cost of future removal, net of any salvage value at retirement. Upon retirement, the original cost of the retired assets, net of salvage value, is charged against accumulated depreciation. The cost of repairs and maintenance, including planned major maintenance activities and minor replacements of property, is charged to operating and maintenance expense as incurred.

**AFUDC**

AFUDC is a method used to compensate the Utility for the estimated cost of debt (i.e., interest) and equity funds used to finance regulated plant additions and is capitalized as part of the cost of construction. AFUDC is recoverable from customers through rates over the life of the related property once the property is placed in service. AFUDC related to the cost of debt is recorded as a reduction to interest expense. AFUDC related to the cost of equity is recorded in other income. The Utility recorded AFUDC of $49 million and $107 million during 2012, $40 million and $87 million during 2011, and $50 million and $110 million during 2010, related to debt and equity, respectively.

**Regulation and Regulated Operations**

As a regulated entity, the Utility's rates are designed to recover the costs of providing service. The Utility capitalizes and records, as regulatory assets, costs that would otherwise be charged to expense if it is probable that the incurred costs will be recovered in future rates. Regulatory assets are amortized over the future periods in which the costs are recovered. If costs expected to be incurred in the future are currently being recovered through rates, the Utility records those expected future costs as regulatory liabilities. In addition, amounts that are probable of being credited or refunded to customers in the future are recorded as regulatory liabilities.

The Utility's ability to recover the revenue requirements that have been authorized by the CPUC in a general rate case ("GRC") and a gas transmission and storage rate case ("GT&S") does not depend on the volume of the Utility's sales of electricity and natural gas services. The Utility's recovery of a significant portion of its authorized revenue requirements through rates is independent, or "decoupled," from the volume of electricity and natural gas sales.

The Utility records differences between actual customer billings and the Utility's authorized revenue requirement, as well as differences between incurred costs and customer billings or authorized revenue meant to recover those costs. To the extent these differences are probable of recovery or refund, the Utility records a regulatory balancing account asset or liability, respectively and the differences do not have an impact on net income. For further discussion, see "Revenue Recognition" below.

To the extent that portions of the Utility's operations cease to be subject to cost-of-service rate regulation, or recovery is no longer probable as a result of changes in regulation or other reasons, the related regulatory assets and liabilities are written off.

**Intangible Assets**

Intangible assets primarily consist of hydroelectric facility licenses with terms ranging from 19 to 53 years. The gross carrying amount of intangible assets was $110 million at December 31, 2012 and $112 million at December 31, 2011. The accumulated amortization was $49 million at December 31, 2012 and $47 million at December 31, 2011.

The Utility's amortization expense related to intangible assets was $2 million in 2012, $3 million in 2011, and $4 million in 2010. The estimated annual amortization expense for 2013 through 2017 based on the December 31, 2012 intangible assets balance is $3 million. Intangible assets are recorded to other noncurrent assets – other in the Consolidated Balance Sheets.

**Asset Retirement Obligations**

PG&E Corporation and the Utility record an ARO at discounted fair value in the period in which the obligation is incurred if the discounted fair value can be reasonably estimated. In the same period, the associated asset retirement costs are capitalized as part of the carrying amount of the related long-lived asset. In each subsequent period, the ARO is accreted to its present value. PG&E Corporation and the Utility also record an ARO if a legal obligation to perform an asset removal exists and can be reasonably estimated, but performance is conditional upon a future event. The Utility recognizes timing differences between the recognition of costs and the costs recovered through the ratemaking process as regulatory assets or liabilities. (See Note 3 below.) The Utility has an ARO primarily for its nuclear generation facilities, certain fossil fuel-fired generation facilities, and gas transmission system assets.

Detailed studies of the cost to decommission the Utility's nuclear generation facilities are conducted every three years in conjunction with the Nuclear Decommissioning Cost Triennial Proceedings ("NDCTP") conducted by the CPUC. In December 2012, the Utility submitted its updated decommissioning cost estimate with the CPUC. The estimated undiscounted cost to decommission the Utility's nuclear power plants increased by $1.4 billion due to higher spent nuclear fuel disposal costs and an increase in the scope of work. The decommissioning cost estimates are based on the plant location and cost characteristics for the Utility's nuclear generation facilities. Actual decommissioning costs may vary from these estimates as a result of changes in assumptions such as decommissioning dates; regulatory requirements; technology; and costs of labor, materials, and equipment. The Utility recovers its revenue requirements for decommissioning costs from customers through a non-bypassable charge that the Utility expects will continue until those costs are fully recovered. A significant portion of the increase in decommissioning cost estimates is due to the need to develop on-site storage for spent nuclear fuel because the federal government has failed to meet its obligation to develop a permanent repository for the disposal of nuclear waste from nuclear facilities in the United States. The Utility expects that it will recover its future on-site storage costs from the federal government. The Utility already has recovered $266 million for spent nuclear fuel costs incurred through 2010. (See "Spent Nuclear Fuel Storage Proceedings" in Note 15 below). Recovered amounts will be refunded to customers through rates. In its 2012 NDCTP application, the Utility requested that the CPUC issue a final decision by the end of 2013.

The estimated undiscounted nuclear decommissioning cost for the Utility's nuclear generation facilities was approximately $3.5 billion at December 31, 2012 and $2.3 billion at December 31, 2011, as filed in the 2012 and 2009 NDCTPs, respectively. In future dollars, the estimated nuclear decommissioning cost is approximately $6.1 billion and $4.4 billion, respectively. These estimates are based on the 2012 and 2009 decommissioning cost studies, respectively, and are prepared in accordance with CPUC requirements. The estimated nuclear decommissioning cost in future dollars is discounted for GAAP purposes and recognized as an ARO on the Consolidated Balance Sheets. The total nuclear decommissioning obligation accrued in accordance with GAAP was $2.5 billion at December 31, 2012 and $1.2 billion at December 31, 2011.

A reconciliation of the changes in the ARO liability is as follows:

| (in millions) | | |
|---|---|---|
| ARO liability at December 31, 2010 | $ | 1,586 |
| Revision in estimated cash flows | | 10 |
| Accretion | | 100 |
| Liabilities settled | | (87) |
| ARO liability at December 31, 2011 | | **1,609** |
| Revision in estimated cash flows | | 1,301 |
| Accretion | | 101 |
| Liabilities settled | | (92) |
| **ARO liability at December 31, 2012** | **$** | **2,919** |

The Utility has identified the following AROs for which a reasonable estimate of fair value could not be made. As a result, the Utility has not recorded a liability related to these AROs:

- *Restoration of land to its pre-use condition under the terms of certain land rights agreements.* Land rights will be maintained for the foreseeable future, and therefore, the Utility cannot reasonably estimate the settlement date(s) or range of settlement dates for the obligations associated with these assets;

- *Removal and proper disposal of lead-based paint contained in some Utility facilities.* The Utility does not have information available that specifies which facilities contain lead-based paint and, therefore, cannot reasonably estimate the settlement date(s) associated with the obligations; and

- *Removal of certain communications equipment from leased property, and retirement activities associated with substation and certain hydroelectric facilities.* The Utility will maintain and continue to operate its hydroelectric facilities until the operation of a facility becomes uneconomical. The operation of the majority of the Utility's hydroelectric facilities is currently, and for the foreseeable future, expected to be economically beneficial. Therefore, the settlement date(s) cannot be reasonably estimated at this time.

**Disallowance of Plant Costs**

PG&E Corporation and the Utility record a charge to net income when it is both probable that costs incurred or projected to be incurred for recently completed plant will not be recoverable through rates charged to customers and the amount of disallowance can be reasonably estimated. During 2012, the Utility recorded a $353 million charge to net income for capital expenditures incurred in connection with its pipeline safety enhancement plan that were either specifically disallowed or that are forecasted to exceed the CPUC's authorized levels. (See "CPUC Gas Safety Rulemaking Proceeding" in Note 15 below). No material disallowance losses were recorded in 2011 and $36 million in disallowance losses were recorded in 2010.

**Gains and Losses on Debt Extinguishments**

Gains and losses on debt extinguishments associated with regulated operations are deferred and amortized over the remaining original amortization period of the debt reacquired, consistent with recovery of costs through regulated rates. PG&E Corporation and the Utility recorded unamortized loss on debt extinguishments, net of gain, of $163 million and $186 million at December 31, 2012 and 2011, respectively. The amortization expense related to this loss was $23 million in 2012, $18 million in 2011, and $23 million in 2010. Deferred gains and losses on debt extinguishments are recorded to current assets – regulatory assets and other noncurrent assets – regulatory assets in the Consolidated Balance Sheets.

Gains and losses on debt extinguishments associated with unregulated operations are fully recognized at the time such debt is reacquired and are reported as a component of interest expense.

**Revenue Recognition**

The Utility recognizes revenues as electricity and natural gas services are delivered, and includes amounts for services rendered but not yet billed at the end of the period.

The CPUC authorizes most of the Utility's revenue requirements in its GRC and its GT&S, which generally occur every three years. The Utility's ability to recover revenue requirements authorized by the CPUC in these rates cases is independent, or "decoupled" from the volume of the Utility's sales of electricity and natural gas services. The Utility recognizes revenues once they have been authorized for rate recovery, amounts are objectively determinable and probable of recovery, and amounts will be collected within 24 months. Generally, the revenue recognition criteria are met ratably over the year. (See Note 3 below.)

The CPUC also has authorized the Utility to collect additional revenue requirements to recover costs that the Utility has been authorized to pass on to customers, including costs to purchase electricity and natural gas; and to fund public purpose, demand response, and customer energy efficiency programs. Generally, the revenue recognition criteria for pass-through costs billed to customers are met at the time the costs are incurred.

The FERC authorizes the Utility's revenue requirements in annual transmission owner rate cases. The Utility's ability to recover revenue requirements authorized by the FERC is dependent on the volume of the Utility's electricity sales, and revenue is recognized only for amounts billed and unbilled.

The Utility's revenues and net income also are affected by incentive ratemaking mechanisms that adjust rates depending on the extent to which the Utility meets certain performance criteria.

**Income Taxes**

PG&E Corporation and the Utility use the liability method of accounting for income taxes. Income tax provision includes current and deferred income taxes resulting from operations during the year. PG&E Corporation and the Utility estimate current period actual tax expense in addition to calculating deferred tax assets and liabilities. Deferred tax assets and liabilities result from temporary tax and accounting timing differences, such as depreciation, and are reported within the PG&E Corporation and Utility's balance sheets. (See Note 9 below.)

PG&E Corporation and the Utility recognize a tax benefit if it is more likely than not that a tax position taken or expected to be taken in a tax return will be sustained upon examination by taxing authorities based on the merits of the position. The tax benefit recognized in the financial statements is measured based on the largest amount of benefit that is greater than 50% likely of being realized upon settlement. As such, the difference between a tax position taken or expected to be taken in a tax return in future periods and the benefit recognized and measured pursuant to this guidance represents an unrecognized tax benefit.

Investment tax credits are deferred and amortized to income over time. The Utility amortizes its investment tax credits over the life of the related property in accordance with regulatory treatment. PG&E Corporation amortizes its investment tax credits over the projected investment recovery period.

PG&E Corporation files a consolidated U.S. federal income tax return that includes domestic subsidiaries in which its ownership is 80% or more. In addition, PG&E Corporation files a combined state income tax return in California. PG&E Corporation and the Utility are parties to a tax-sharing agreement under which the Utility determines its income tax provision (benefit) on a stand-alone basis.

**Nuclear Decommissioning Trusts**

The Utility's nuclear generation facilities consist of two units at Diablo Canyon and the retired facility at Humboldt Bay. Nuclear decommissioning requires the safe removal of a nuclear generation facility from service and the reduction of residual radioactivity to a level that permits termination of the NRC license and release of the property for unrestricted use. The Utility's nuclear decommissioning costs are recovered from customers through rates and are held in trusts until authorized for release by the CPUC.

The Utility classifies its investments held in the nuclear decommissioning trusts as "available-for-sale." Since the Utility's nuclear decommissioning trust assets are managed by external investment managers, the Utility does not have the ability to sell its investments at its discretion. Therefore, all unrealized losses are considered other-than-temporary impairments. Gains or losses on the nuclear decommissioning trust investments are refundable or recoverable, respectively, from customers through rates. Therefore, trust earnings are deferred and included in the regulatory liability for recoveries in excess of the ARO. There is no impact on the Utility's earnings or accumulated other comprehensive income. The cost of debt and equity securities sold is determined by specific identification.

**Accounting for Derivatives**

Derivative instruments are recorded in PG&E Corporation's and the Utility's Consolidated Balance Sheets at fair value, unless they qualify for the normal purchase and sales exception. Changes in the fair value of derivative instruments are recorded in earnings or, to the extent that they are probable of future recovery through regulated rates, are deferred and recorded in regulatory accounts.

The normal purchase and sales exception to derivative accounting requires, among other things, physical delivery of quantities expected to be used or sold over a reasonable period in the normal course of business. Transactions which qualify for the normal purchase and sales exception are not reflected in the Consolidated Balance Sheets at fair value, but are accounted for under the accrual method of accounting. Therefore, expenses are recognized as incurred.

PG&E Corporation and the Utility offset cash collateral paid or cash collateral received against the fair value amounts recognized for derivative instruments executed with the same counterparty under a master netting arrangement where the right of offset and the intention to offset exist. (See Note 10 below.)

**Fair Value Measurements**

PG&E Corporation and the Utility determine the fair value of certain assets and liabilities based on assumptions that market participants would use in pricing the assets or liabilities. Fair value is defined as the price that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants at the measurement date, or the "exit price." PG&E Corporation and the Utility utilize a fair value hierarchy that prioritizes the inputs to valuation techniques used to measure fair value and give precedence to observable inputs in determining fair value. An instrument's level within the hierarchy is based on the lowest level of any significant input to the fair value measurement. The hierarchy gives the highest priority to unadjusted quoted prices in active markets for identical assets or liabilities (Level 1 measurements) and the lowest priority to unobservable inputs (Level 3 measurements). (See Note 11 below.)

**Variable Interest Entities**

PG&E Corporation and the Utility are required to consolidate the financial results of any entities that they control. In most cases, control can be determined based on majority ownership or voting interests. However, there are certain entities known as variable interest entities ("VIEs") for which control is difficult to discern based on ownership or voting interests alone. A VIE is an entity that does not have sufficient equity at risk to finance its activities without additional subordinated financial support from other parties, or whose equity investors lack any characteristics of a controlling financial interest. An enterprise has a controlling financial interest in a VIE if it has the obligation to absorb expected losses or the right to receive expected gains that could potentially be significant to the VIE and if it has any decision-making rights associated with the activities that are most significant to the VIE's economic performance, including the power to design the VIE. An enterprise that has a controlling financial interest in a VIE is known as the VIE's primary beneficiary and is required to consolidate the VIE.

In determining whether consolidation of a particular entity is required, PG&E Corporation and the Utility first evaluate whether the entity is a VIE. If the entity is a VIE, PG&E Corporation and the Utility use a qualitative approach to determine if either is the primary beneficiary of the VIE.

Some of the counterparties to the Utility's power purchase agreements are considered VIEs. Each of these VIEs was designed to own a power plant that would generate electricity for sale to the Utility subject to the terms of a power purchase agreement. In determining whether the Utility is the primary beneficiary of any of these VIEs, it assesses whether it absorbs any of the VIE's expected losses or receives any portion of the VIE's expected residual returns under the terms of the power purchase agreement. This assessment includes an evaluation of how the risks and rewards associated with the power plant's activities are absorbed by variable interest holders, as well as an analysis of the variability in the VIE's gross margin and the impact of the power purchase agreement on the gross margin. Under each of these power purchase agreements, the Utility is obligated to purchase electricity or capacity, or both, from the VIE. The Utility does not provide any other support to these VIEs, and the Utility's financial exposure is limited to the amount it pays for delivered electricity and capacity. (See Note 15 below.) The Utility does not have any decision-making rights associated with the design of any VIEs, nor does the Utility have the power to direct the activities that are most significant to the economic performance of any VIEs such as dispatch rights, operating and maintenance activities, or re-marketing activities of the power plant after the termination of any VIE's power purchase agreement with the Utility. Since the Utility was not the primary beneficiary of any of these VIEs at December 31, 2012, it did not consolidate any of them.

The Utility continued to consolidate the financial results of PG&E Energy Recovery Funding LLC ("PERF"), a VIE, at December 31, 2012, since the Utility is the primary beneficiary of PERF. PERF was formed in 2005 as a wholly owned subsidiary of the Utility to issue energy recovery bonds ("ERBs") in connection with the settlement agreement entered into among PG&E Corporation, the Utility, and the CPUC in 2003 to resolve the Utility's proceeding under Chapter 11 ("Chapter 11 Settlement Agreement"). The Utility has a controlling financial interest in PERF since the Utility is exposed to PERF's losses and returns through the Utility's 100% equity investment in PERF and the Utility was involved in the design of PERF, which was an activity that was significant to PERF's economic performance. PERF is expected to be dissolved in 2013. (See Note 5 below.) While PERF is a wholly owned consolidated subsidiary of the Utility, it is legally separate from the Utility. The assets (including the recovery property) of PERF are not available to creditors of the Utility of PG&E Corporation, and the recovery property is not legally an asset of the Utility or PG&E Corporation.

At December 31, 2012, PG&E Corporation affiliates had entered into four tax equity agreements to fund residential and commercial retail solar energy installations with two privately held companies that are considered VIEs. Under these agreements, PG&E Corporation has agreed to provide lease payments and investment contributions of up to $396 million to these companies in exchange for the right to receive benefits from local rebates, federal grants, and a share of the customer payments made to these companies. The majority of these amounts are recorded in other noncurrent assets – other in PG&E Corporation's Consolidated Balance Sheets. At December 31, 2012, PG&E Corporation had made total payments of $361 million under these agreements and received $228 million in benefits and customer payments. In determining whether PG&E Corporation is the primary beneficiary of any of these VIEs, PG&E Corporation assesses which of the variable interest holders has control over these companies' significant economic activities, such as the design of the companies, vendor selection, construction, customer selection, and re-marketing activities after the termination of customer leases. PG&E Corporation determined that these companies control these activities, while its financial exposure from these agreements is generally limited to its lease payments and investment contributions to these companies. Since PG&E Corporation was not the primary beneficiary of any of these VIEs at December 31, 2012, it did not consolidate any of them.

## NOTE 3: REGULATORY ASSETS, LIABILITIES, AND BALANCING ACCOUNTS

### Regulatory Assets

#### *Current Regulatory Assets*

At December 31, 2012 and 2011, the Utility had current regulatory assets of $564 million and $1,090 million, respectively. At December 31, 2012, current regulatory assets consisted primarily of $230 million of the current portion of the price risk management regulatory asset, $62 million of the current portion of the Utility's retained generation regulatory assets, and $54 million of the current portion of the electromechanical meters regulatory asset, each of which is expected to be recovered over the next year. (See "Long-Term Regulatory Assets" below.)

#### *Long-Term Regulatory Assets*

Long-term regulatory assets are composed of the following:

| | Balance at December 31, | |
|---|---|---|
| **(in millions)** | **2012** | **2011** |
| Pension benefits | $ 3,275 | $ 2,899 |
| Deferred income taxes | 1,627 | 1,444 |
| Utility retained generation | 552 | 613 |
| Environmental compliance costs | 604 | 520 |
| Price risk management | 210 | 339 |
| Electromechanical meters | 194 | 247 |
| Unamortized loss, net of gain, on reacquired debt | 141 | 163 |
| Other | 206 | 281 |
| **Total long-term regulatory assets** | **$ 6,809** | **$ 6,506** |

The regulatory asset for pension benefits represents the cumulative differences between amounts recognized for ratemaking purposes and amounts recognized in accordance with GAAP and also includes amounts that otherwise would be recorded to accumulated other comprehensive loss in the Consolidated Balance Sheets. (See Note 12 below.)

The regulatory asset for deferred income taxes represents deferred income tax benefits previously passed through to customers. The CPUC requires the Utility to pass through certain tax benefits to customers by reducing rates, thereby ignoring the effect of deferred taxes. Based on current regulatory ratemaking and income tax laws, the Utility expects to recover the regulatory asset over the average plant depreciation lives of one to 45 years.

In connection with the Chapter 11 Settlement Agreement, the CPUC authorized the Utility to recover $1.2 billion of costs related to the Utility's retained generation assets. The individual components of these regulatory assets are being amortized over the respective lives of the underlying generation facilities, consistent with the period over which the related revenues are recognized. The weighted average remaining life of the assets is 12 years.

The regulatory asset for environmental compliance costs represents the cumulative differences between amounts recognized for ratemaking purposes and amounts recognized in accordance with GAAP. The Utility expects to recover these costs over the next 32 years, as the environmental compliance work is performed. (See Note 15 below.)

The regulatory asset for price risk management represents the unrealized losses related to price risk management derivative instruments expected to be recovered as they are realized over the next 10 years as part of the Utility's energy procurement costs. (See Note 10 below.)

The regulatory asset for electromechanical meters represents the expected future recovery of the net book value of electromechanical meters that were replaced with SmartMeter™ devices. The Utility expects to recover the regulatory asset over the next four years.

The regulatory asset for unamortized loss, net of gain, on reacquired debt represents the expected future recovery of costs related to debt reacquired or redeemed prior to maturity with associated discount and debt issuance costs. These costs are expected to be recovered over the next 14 years, which is the remaining amortization period of the reacquired debt.

In general, the Utility does not earn a return on regulatory assets if the related costs do not accrue interest. Accordingly, the Utility earns a return only on its regulatory assets for retained generation, regulatory assets for electromechanical meters, and regulatory assets for unamortized loss, net of gain, on reacquired debt.

**Regulatory Liabilities**

***Current Regulatory Liabilities***

At December 31, 2012 and 2011, the Utility had current regulatory liabilities of $337 million and $161 million, respectively, consisting of amounts that it expects to refund to customers over the next 12 months. At December 31, 2012 current regulatory liabilities primarily included $158 million of ERB over collections, $84 million of proceeds from a greenhouse gas ("GHG") emission auction to comply with California Air Resources Board requirements, and electricity supplier settlement agreements of $50 million (See Note 13 below). Current regulatory liabilities are included within current liabilities – other in the Consolidated Balance Sheets.

***Long-Term Regulatory Liabilities***

Long-term regulatory liabilities are composed of the following:

| | Balance at December 31, | |
|---|---|---|
| **(in millions)** | **2012** | **2011** |
| Cost of removal obligations | $ 3,625 | $ 3,460 |
| Recoveries in excess of AROs | 620 | 611 |
| Public purpose programs | 590 | 499 |
| Other | 253 | 163 |
| **Total long-term regulatory liabilities** | **$ 5,088** | **$ 4,733** |

The regulatory liability for cost of removal obligations represents the cumulative differences between asset removal costs recorded and amounts collected in rates for expected asset removal costs.

The regulatory liability for recoveries in excess of AROs represents the cumulative differences between ARO expenses and amounts collected in rates primarily for the decommissioning of the Utility's nuclear generation facilities. Decommissioning costs recovered through rates are primarily placed in nuclear decommissioning trusts. This regulatory liability also represents the deferral of realized and unrealized gains and losses on the nuclear decommissioning trust investments. (See Note 11 below.)

The regulatory liability for public purpose programs represents amounts received from customers designated for public purpose program costs expected to be incurred beyond the next 12 months, primarily related to energy efficiency programs designed to encourage the manufacture, design, distribution, and customer use of energy efficient appliances and other energy-using products, the California Solar Initiative program to promote the use of solar energy in homes and commercial, industrial, and agricultural properties, and the Self-Generation Incentive program to promote distributed generation technologies installed on the customer's side of the utility meter.

**Regulatory Balancing Accounts**

The Utility's current regulatory balancing accounts represent the amounts expected to be collected from or refunded to customers through authorized rate adjustments over the next 12 months. Regulatory balancing accounts that the Utility does not expect to collect or refund over the next 12 months are included in other noncurrent assets – regulatory assets or noncurrent liabilities – regulatory liabilities, respectively, in the Consolidated Balance Sheets.

***Current Regulatory Balancing Accounts, Net***

| | Receivable (Payable) Balance at December 31, | |
|---|---|---|
| **(in millions)** | **2012** | **2011** |
| Distribution revenue adjustment mechanism | $ 219 | $ 223 |
| Utility generation | 117 | 241 |
| Hazardous substance | 56 | 57 |
| Public purpose programs | (83) | 97 |
| Gas fixed cost | 44 | 16 |
| Energy recovery bonds | (43) | (105) |
| Energy procurement | 77 | (48) |
| Department of Energy Settlement | (250) | - |
| Other | 165 | 227 |
| **Total regulatory balancing accounts, net** | **$ 302** | **$ 708** |

The distribution revenue adjustment mechanism balancing account is used to record and recover the authorized electric distribution revenue requirements and certain other electric distribution-related authorized costs. The utility generation balancing account is used to record and recover the authorized revenue requirements associated with Utility-owned electric generation, including capital costs and related non-fuel operating and maintenance expenses. The recovery of these revenue requirements is decoupled from the volume of sales; therefore, the Utility recognizes revenue evenly over the year, even though the level of cash collected from customers fluctuates depending on the volume of electricity sales. During the colder months of winter, there is generally an under-collection in these balancing accounts due to a lower volume of electricity sales and lower rates. During the warmer months of summer, there is generally an over-collection due to a higher volume of electricity sales and higher rates.

The hazardous substance balancing accounts are used to record and recover hazardous substance remediation costs that are eligible for recovery through a CPUC-approved ratemaking mechanism. (See Note 15 below.)

The public purpose programs balancing accounts are primarily used to record and recover the authorized revenue requirements associated with administering public purpose programs, as well as incentive awards earned by the Utility for achieving regulatory targets in the customer energy efficiency programs. The public purpose programs primarily consist of energy efficiency programs, low-income energy efficiency programs, demand response programs, research, development, and demonstration programs, and renewable energy programs.

The gas fixed-cost balancing account is used to record and recover authorized gas distribution revenue requirements and certain other authorized gas distribution-related costs. Similar to the utility generation and the distribution revenue adjustment mechanism balancing accounts discussed above, the recovery of these revenue requirements is decoupled from the volume of sales; therefore, the Utility recognizes revenue evenly over the year, even though the level of cash collected from customers fluctuates depending on the volume of gas sales. During the colder months of winter, there is generally an over-collection in this balancing account primarily due to higher natural gas sales. During the warmer months of summer, there is generally an under-collection primarily due to lower natural gas sales.

The ERBs balancing account is used to record and refund to customers the net refunds, claim offsets, and other credits received by the Utility from electricity suppliers related to Chapter 11 disputed claims and to record and recover authorized ERB servicing costs. (See Note 13 below.)

The Utility is generally authorized to recover 100% of its prudently incurred electric energy procurement costs. The Utility tracks energy procurement costs in balancing accounts and files annual forecasts of energy procurement costs that it expects to incur over the following year. The Utility's energy rates are set to recover such expected costs.

The Department of Energy balancing account is used to record and refund to customers the amounts received from the U.S. Department of Energy ("DOE") during 2012 for a settlement agreement related to spent nuclear fuel storage costs incurred by the Utility.

## NOTE 4: DEBT

### Long-Term Debt

The following table summarizes PG&E Corporation's and the Utility's long-term debt:

| | December 31, | |
|---|---|---|
| **(in millions)** | **2012** | **2011** |
| **PG&E Corporation** | | |
| Senior notes, 5.75%, due 2014 | 350 | 350 |
| Unamortized discount | - | (1) |
| **Total senior notes** | **350** | **349** |
| **Total PG&E Corporation long-term debt** | **350** | **349** |
| **Utility** | | |
| Senior notes: | | |
| 6.25% due 2013 | 400 | 400 |
| 4.80% due 2014 | 1,000 | 1,000 |
| 5.625% due 2017 | 700 | 700 |
| 8.25% due 2018 | 800 | 800 |
| 3.50% due 2020 | 800 | 800 |
| 4.25% due 2021 | 300 | 300 |
| 3.25% due 2021 | 250 | 250 |
| 2.45% due 2022 | 400 | - |
| 6.05% due 2034 | 3,000 | 3,000 |
| 5.80% due 2037 | 950 | 950 |
| 6.35% due 2038 | 400 | 400 |
| 6.25% due 2039 | 550 | 550 |
| 5.40% due 2040 | 800 | 800 |
| 4.50% due 2041 | 250 | 250 |
| 4.45% due 2042 | 400 | - |
| 3.75% due 2042 | 350 | - |
| Less: current portion | (400) | - |
| Unamortized discount, net of premium | (51) | (51) |
| **Total senior notes, net of current portion** | **10,899** | **10,149** |
| Pollution control bonds: | | |
| Series 1996 C, E, F, 1997 B, variable rates (1) , due 2026 (2) | 614 | 614 |
| Series 2004 A-D, 4.75%, due 2023 (3) | 345 | 345 |
| Series 2009 A-D, variable rates (4) , due 2016 and 2026 (5) | 309 | 309 |
| Series 2010 E, 2.25%, due 2026 (6) | - | 50 |
| Less: current portion | - | (50) |
| **Total pollution control bonds** | **1,268** | **1,268** |
| **Total Utility long-term debt, net of current portion** | **12,167** | **11,417** |
| **Total consolidated long-term debt, net of current portion** | **$ 12,517** | **$ 11,766** |

At December 31, 2012, interest rates on these bonds and the related loans ranged from 0.10% to 0.14%.

(2) Each series of these bonds is supported by a separate letter of credit that expires on May 31, 2016. Although the stated maturity date is 2026, each series will remain outstanding only if the Utility extends or replaces the letter of credit related to the series or otherwise obtains consent from the issuer to the continuation of the series without a credit facility.

(3) The Utility has obtained credit support from an insurance company for these bonds.

(4) At December 31, 2012, interest rates on these bonds and the related loans ranged from 0.05% to 0.11%.

(5) Each series of these bonds is supported by a separate direct-pay letter of credit that expires on May 31, 2016. Subject to certain requirements, the Utility may choose not to provide a credit facility without issuer consent.

(6) These bonds bore interest at 2.25% per year through April 1, 2012; and were subject to mandatory tender on April 2, 2012. The Utility repurchased these bonds on April 2, 2012 and continues to hold them.

***Pollution Control Bonds***

The California Pollution Control Financing Authority and the California Infrastructure and Economic Development Bank have issued various series of fixed rate and multi-modal tax-exempt pollution control bonds for the benefit of the Utility. All of the pollution control bonds were used to finance or refinance pollution control and sewage and solid waste disposal facilities at the Geysers geothermal power plant or at the Utility's Diablo Canyon nuclear power plant and were issued as "exempt facility bonds" within the meaning of the Internal Revenue Code of 1954 ("Code"), as amended. In 1999, the Utility sold the Geysers geothermal power plant to Geysers Power Company, LLC pursuant to purchase and sale agreements stating that Geysers Power Company, LLC will use the bond-financed facilities solely as pollution control facilities. The Utility has no knowledge that Geysers Power Company, LLC intends to cease using the bond-financed facilities solely as pollution control facilities.

**Repayment Schedule**

PG&E Corporation's and the Utility's combined aggregate debt principal repayment amounts at December 31, 2012 are reflected in the table below:

| (in millions, except interest rates) | 2013 | 2014 | 2015 | 2016 | 2017 | Thereafter | Total |
|---|---|---|---|---|---|---|---|
| **PG&E Corporation** | | | | | | | |
| Average fixed interest rate | - | 5.75% | - | - | - | - | 5.75% |
| Fixed rate obligations | $ - | $ 350 | $ - | $ - | $ - | $ - | $ 350 |
| **Utility** | | | | | | | |
| Average fixed interest rate | 6.25% | 4.80% | - | - | 5.63% | 5.45% | 5.43% |
| Fixed rate obligations | $ 400 | $ 1,000 | $ - | $ - | $ 700 | $ 9,595 | $ 11,695 |
| Variable interest rate as of December 31, 2012 | - | - | - | 0.11% | - | - | 0.11% |
| Variable rate obligations | $ - | $ - | $ - | $ 923[(1)] | $ - | $ - | $ 923 |
| **Total consolidated debt** | **$ 400** | **$ 1,350** | **$ -** | **$ 923** | **$ 700** | **$ 9,595** | **$ 12,968** |

(1) These bonds, due in 2016 and 2026, are backed by letters of credit that expire on May 31, 2016.

**Short-term Borrowings**

The following table summarizes PG&E Corporation's and the Utility's outstanding borrowings on its revolving credit facilities and commercial paper program at December 31, 2012:

| (in millions) | Termination Date | Facility Limit | Letters of Credit Outstanding | Borrowings | Commercial Paper | Facility Availability |
|---|---|---|---|---|---|---|
| PG&E Corporation | May 2016 | $ 300[(1)] | $ - | $ 120 | $ - | $ 180 |
| Utility | May 2016 | 3,000[(2)] | 266 | - | 370[(3)] | 2,364[(3)] |
| **Total revolving credit facilities** | | **$ 3,300** | **$ 266** | **$ 120** | **$ 370** | **$ 2,544** |

(1) Includes a $100 million sublimit for letters of credit and a $100 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.
(2) Includes a $1.0 billion sublimit for letters of credit and a $300 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.
(3) The Utility treats the amount of its outstanding commercial paper as a reduction to the amount available under its revolving credit facility.

For 2012, the average outstanding borrowings on PG&E Corporation's revolving credit facility was $21 million and the maximum outstanding balance during the year was $120 million. For 2012, the Utility's average outstanding commercial paper balance was $665 million and the maximum outstanding balance during the year was $1.4 billion.

***Revolving Credit Facilities***

PG&E Corporation has a $300 million revolving credit facility with a syndicate of lenders. The Utility has a $3.0 billion revolving credit facility with a syndicate of lenders. The revolving credit facilities have terms of five years and all amounts are due and payable on the facilities' termination date, May 31, 2016. At PG&E Corporation's and the Utility's request and at the sole discretion of each lender, the facilities may be extended for additional periods. The revolving credit facilities may be used for working capital and other corporate purposes. The Utility's revolving credit facility may also be used for the repayment of commercial paper.

Provided certain conditions are met, PG&E Corporation and the Utility have the right to increase, in one or more requests, given not more frequently than once a year, the aggregate lenders' commitments under the revolving credit facilities by up to $100 million and $500 million, respectively, in the aggregate for all such increases.

Borrowings under the revolving credit facilities (other than swingline loans) bear interest based, at PG&E Corporation's and the Utility's election, on (1) a London Interbank Offered Rate ("LIBOR") plus an applicable margin or (2) the base rate plus an applicable margin. The base rate will equal the higher of the following: the administrative agent's announced base rate, 0.5% above the federal funds rate, or the one-month LIBOR plus an applicable margin. Interest is payable quarterly in arrears, or earlier for loans with shorter interest periods. PG&E Corporation and the Utility also will pay a facility fee on the total commitments of the lenders under the revolving credit facilities. The applicable margins and the facility fees will be based on PG&E Corporation's and the Utility's senior unsecured debt ratings issued by Standard & Poor's Rating Services and Moody's Investor Service. Facility fees are payable quarterly in arrears.

The revolving credit facilities include usual and customary covenants for revolving credit facilities of this type, including covenants limiting liens to those permitted under PG&E Corporation's and the Utility's senior note indentures, mergers, sales of all or substantially all of PG&E Corporation's and the Utility's assets, and other fundamental changes. In addition, the revolving credit facilities require that PG&E Corporation and the Utility maintain a ratio of total consolidated debt to total consolidated capitalization of at most 65% as of the end of each fiscal quarter. PG&E Corporation's revolving credit facility agreement also requires that PG&E Corporation own, directly or indirectly, at least 80% of the common stock and at least 70% of the voting capital stock of the Utility. At December 31, 2012, PG&E Corporation and the Utility were in compliance with all covenants under their respective revolving credit facilities.

***Commercial Paper Program***

The Utility has a $1.75 billion commercial paper program, the borrowings from which are used primarily to fund temporary financing needs. Liquidity support for these borrowings is provided by available capacity under the Utility's revolving credit facilities, as described above. The commercial paper may have maturities up to 365 days and ranks equally with the Utility's other unsubordinated and unsecured indebtedness. Commercial paper notes are sold at an interest rate dictated by the market at the time of issuance. At December 31, 2012, the average yield on outstanding commercial paper was 0.36%.

***Other Short-term Borrowings***

In November 2011, the Utility issued $250 million principal amount of Floating Rate Senior Notes which were due and repaid in November 2012. For the years ended December 31, 2012 and 2011, the average interest rate on the Floating Rate Senior Notes was 0.92% and 0.94%, respectively.

**NOTE 5: ENERGY RECOVERY BONDS**

In 2005, PERF issued two series of ERBs. The proceeds of the ERBs were used by PERF to purchase from the Utility the right known as "recovery property" to be paid a specific amount from a dedicated rate component. The first series of ERBs included five classes aggregating to a $1.9 billion principal amount. The proceeds of the first series of ERBs were paid by PERF to the Utility and used by the Utility to refinance the remaining unamortized after-tax balance of the regulatory asset established under the Chapter 11 Settlement Agreement. The second series of ERBs included three classes aggregating to an $844 million principal amount. The proceeds of the second series of ERBs were paid by PERF to the Utility and used to pre-fund the Utility's tax liability for bond-related charges collected from customers.

At December 31, 2011, the total amount of ERB principal outstanding was $423 million. The ERBs were paid in full when the final class matured on December 25, 2012.

## NOTE 6: COMMON STOCK AND SHARE-BASED COMPENSATION

### PG&E Corporation

PG&E Corporation had 430,718,293 shares of common stock outstanding at December 31, 2012. During 2012, PG&E Corporation issued 6,803,101 shares of its common stock under its 401(k) plan, its Dividend Reinvestment and Stock Purchase Plan, and its share-based compensation plans, generating $263 million of cash.

In November 2011, PG&E Corporation entered into an Equity Distribution Agreement providing for the sale of PG&E common stock having an aggregate gross sales price of up to $400 million. Sales of the shares are made by means of ordinary brokers' transactions on the New York Stock Exchange, or in such other transactions as agreed upon by PG&E Corporation and the sales agents and in conformance with applicable securities laws. During 2012, PG&E Corporation sold 5,446,760 shares of its common stock under the Equity Distribution Agreement for cash proceeds of $234 million, net of fees. As of December 31, 2012, PG&E Corporation had the ability to issue an additional $64 million of its common stock under the November 2011 Equity Distribution Agreement. In March 2012, PG&E Corporation sold 5,900,000 shares of its common stock in an underwritten public offering for cash proceeds of $254 million, net of fees and commissions.

### Utility

As of December 31, 2012, PG&E Corporation held all of the Utility's outstanding common stock.

### Dividends

The Board of Directors of PG&E Corporation and the Utility declare dividends quarterly. Under the Utility's Articles of Incorporation, the Utility cannot pay common stock dividends unless all cumulative preferred dividends on the Utility's preferred stock have been paid. In February, June, September, and December, 2012, the Board of Directors of PG&E Corporation declared a quarterly dividend of $0.455 per share.

PG&E Corporation and the Utility each have revolving credit facilities that require the respective company to maintain a ratio of consolidated total debt to consolidated capitalization of at most 65%. Based on the calculation of this ratio for PG&E Corporation, no amount of PG&E Corporation's reinvested earnings was restricted at December 31, 2012. Based on the calculation of this ratio for the Utility, $1.1 billion of the Utility's reinvested earnings was restricted at December 31, 2012. In addition, the CPUC requires the Utility to maintain a capital structure composed of at least 52% equity on average. At December 31, 2012, the Utility was required to maintain reinvested earnings of $6.3 billion as equity to meet this requirement.

In addition, to comply with the revolving credit facility's 65% ratio requirement and the CPUC's requirement to maintain a 52% equity component, $7.0 billion and $12.2 billion of the Utility's net assets, respectively, were restricted at December 31, 2012 and could not be transferred to PG&E Corporation in the form of cash dividends. As a holding company, PG&E Corporation depends on cash distributions from the Utility to meet its debt service and other financial obligations and to pay dividends on its common stock.

**Long-Term Incentive Plan**

The PG&E Corporation 2006 Long-Term Incentive Plan ("2006 LTIP") permits the award of various forms of incentive awards, including stock options, stock appreciation rights, restricted stock awards, restricted stock units ("RSUs"), performance shares, deferred compensation awards, and other share-based awards, to eligible employees of PG&E Corporation and its subsidiaries. Non-employee directors of PG&E Corporation are also eligible to receive share-based awards under the formula grant provisions of the 2006 LTIP. A maximum of 12 million shares of PG&E Corporation common stock (subject to adjustment for changes in capital structure, stock dividends, or other similar events) has been reserved for issuance under the 2006 LTIP, of which 4,548,119 shares were available for award at December 31, 2012.

The following table provides a summary of total compensation expense for PG&E Corporation for share-based incentive awards for 2012, 2011, and 2010:

| **(in millions)** | **2012** | **2011** | **2010** |
|---|---|---|---|
| Restricted stock units | $ 31 | $ 22 | $ 9 |
| Other share-based compensation | - | 1 | 14 |
| Performance shares: | | | |
| Equity awards | 26 | 16 | 11 |
| Liability awards | - | (13) | 22 |
| Total compensation expense (pre-tax) | **$ 57** | **$ 26** | **$ 56** |
| Total compensation expense (after-tax) | **$ 34** | **$ 16** | **$ 33** |

There were no significant share-based compensation costs capitalized during 2012, 2011, and 2010. There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

***Restricted Stock Units***

Each RSU represents one hypothetical share of PG&E Corporation common stock. RSUs generally vest in 20% increments on the first business day of March in year one, two, and three, with the remaining 40% vesting on the first business day of March in year four. Vested RSUs are settled in shares of PG&E Corporation common stock. Additionally, upon settlement, RSU recipients receive payment for the amount of dividend equivalents associated with the vested RSUs that have accrued since the date of grant. RSU expense is recognized ratably over the requisite service period based on the fair values determined, except for the expense attributable to awards granted to retirement-eligible participants, which is recognized on the date of grant.

The weighted average grant-date fair value per RSUs granted during 2012, 2011, and 2010 was $42.17, $45.10, and $42.97, respectively. The total fair value of RSUs that vested during 2012, 2011, and 2010 was $18 million, $11 million, and $5 million, respectively. The tax benefit from RSUs that vested during 2012, 2011, and 2010 was not material. As of December 31, 2012, $44 million of total unrecognized compensation costs related to nonvested RSUs was expected to be recognized over the remaining weighted average period of 2.19 years.

The following table summarizes RSU activity for 2012:

| | **Number of Restricted Stock Units** | **Weighted Average Grant-Date Fair Value** |
|---|---|---|
| Nonvested at January 1 | 1,626,048 | $ 42.57 |
| Granted | 923,001 | $ 42.17 |
| Vested | (424,034) | $ 41.88 |
| Forfeited | (55,724) | $ 42.64 |
| Nonvested at December 31 | **2,069,291** | $ 42.52 |

### *Performance Shares*

In 2012, PG&E Corporation granted 834,420 contingent performance shares to eligible employees. Performance shares vest after three years of service. Performance shares granted in 2012, 2011, and 2010 are settled in shares of PG&E Corporation common stock and are classified as share-based equity awards. Performance-based awards granted prior to 2010 are settled in cash and classified as a liability. The amount of common stock (or cash with respect to grants before 2010) that recipients are entitled to receive, if any, will be determined based on PG&E Corporation's annual total shareholder return relative to the performance of a specified group of peer companies for the applicable three-year performance period. Total compensation expense for performance shares is based on the grant-date fair value, which is determined using a Monte Carlo simulation valuation model. Performance share expense is recognized ratably over the requisite service period based on the fair values determined, except for the expense attributable to awards granted to retirement-eligible participants, which is recognized on the date of grant. Dividend equivalents on performance shares, if any, will be paid in cash upon the vesting date based on the amount of common stock to which the recipients are entitled.

The weighted average grant-date fair value for performance shares granted during 2012, 2011, and 2010 was $41.93, $33.91, and $35.60 respectively. There was no tax benefit associated with performance shares that vested during 2012, 2011, and 2010, as awards that settle in cash have no tax impact, and awards that settle in shares do not generate a tax benefit until vested. The performance shares awarded in March 2010 will vest in March 2013. As of December 31, 2012, $29 million of total unrecognized compensation costs related to nonvested performance shares are expected to be recognized over the remaining weighted average period of 1.28 years.

The following table summarizes performance shares classified as equity awards activity for 2012:

| | Number of Performance Shares | Weighted Average Grant-Date Fair Value |
|---|---|---|
| Nonvested at January 1 | 1,325,406 | $ 34.64 |
| Granted | 834,420 | $ 41.93 |
| Vested | (425) | $ 34.86 |
| Forfeited [1] | (661,928) | $ 35.71 |
| Nonvested at December 31 | **1,497,473** | $ 38.15 |

[1] Includes performance shares that expired with zero value as performance targets were not met.

## NOTE 7: PREFERRED STOCK

### PG&E Corporation

PG&E Corporation has authorized 80 million shares of no par value preferred stock and 5 million shares of $100 par value preferred stock, which may be issued as redeemable or nonredeemable preferred stock. PG&E Corporation does not have any preferred stock outstanding.

### Utility

The Utility has authorized 75 million shares of $25 par value preferred stock and 10 million shares of $100 par value preferred stock. The Utility specifies that 5,784,825 shares of the $25 par value preferred stock authorized are designated as nonredeemable preferred stock without mandatory redemption provisions. All remaining shares of preferred stock may be issued as redeemable or nonredeemable preferred stock.

The following table summarizes the Utility's outstanding preferred stock, none of which had mandatory redemption provisions at December 31, 2012 and 2011:

| (in millions, except share amounts, redemption price, and par value) | Shares Outstanding | Redemption Price | Balance |
|---|---|---|---|
| **Nonredeemable $25 par value preferred stock** | | | |
| 5.00% Series | 400,000 | N/A | $ 10 |
| 5.50% Series | 1,173,163 | N/A | 30 |
| 6.00% Series | 4,211,662 | N/A | 105 |
| **Total nonredeemable preferred stock** | **5,784,825** | | **$ 145** |
| | | | |
| **Redeemable $25 par value preferred stock** | | | |
| 4.36% Series | 418,291 | $ 25.75 | $ 11 |
| 4.50% Series | 611,142 | 26.00 | 15 |
| 4.80% Series | 793,031 | 27.25 | 20 |
| 5.00% Series | 1,778,172 | 26.75 | 44 |
| 5.00% Series A | 934,322 | 26.75 | 23 |
| **Total redeemable preferred stock** | **4,534,958** | | **$ 113** |
| **Preferred stock** | | | **$ 258** |

At December 31, 2012, annual dividends on the Utility's nonredeemable preferred stock ranged from $1.25 to $1.50 per share. The Utility's redeemable preferred stock is subject to redemption at the Utility's option, in whole or in part, if the Utility pays the specified redemption price plus accumulated and unpaid dividends through the redemption date. At December 31, 2012, annual dividends on redeemable preferred stock ranged from $1.09 to $1.25 per share.

Dividends on all Utility preferred stock are cumulative. All shares of preferred stock have voting rights and an equal preference in dividend and liquidation rights. Upon liquidation or dissolution of the Utility, holders of preferred stock would be entitled to the par value of such shares plus all accumulated and unpaid dividends, as specified for the class and series. During each of 2012, 2011, and 2010 the Utility paid $14 million of dividends on preferred stock.

**NOTE 8: EARNINGS PER SHARE**

PG&E Corporation's basic earnings per common share ("EPS") is calculated by dividing the income available for common shareholders by the weighted average number of common shares outstanding. PG&E Corporation applies the treasury stock method of reflecting the dilutive effect of outstanding share-based compensation in the calculation of diluted EPS. The following is a reconciliation of PG&E Corporation's income available for common shareholders and weighted average common shares outstanding for calculating diluted EPS for 2012 and 2011.

| | Year Ended December 31, | |
|---|---|---|
| **(in millions, except per share amounts)** | **2012** | **2011** |
| **Income available for common shareholders** | $ 816 | $ 844 |
| **Weighted average common shares outstanding, basic** | 424 | 401 |
| Add incremental shares from assumed conversions: | | |
| Employee share-based compensation | 1 | 1 |
| **Weighted average common share outstanding, diluted** | 425 | 402 |
| **Total earnings per common share, diluted** | **$ 1.92** | **$ 2.10** |

For 2010, PG&E Corporation calculated EPS using the "two-class" method because PG&E Corporation's convertible subordinated notes that were outstanding prior to June 29, 2010 were considered to be participating securities. In applying the two-class method, undistributed earnings were allocated to both common shares and participating securities. In calculating diluted EPS for 2010, PG&E Corporation applied the "if-converted" method to reflect the dilutive effect of the convertible subordinated notes to the extent that the impact was dilutive when compared to basic EPS. The following is a reconciliation of PG&E Corporation's income available for common shareholders and weighted average common shares outstanding for calculating basic and diluted EPS for 2010:

| | Year Ended December 31, 2010 | |
|---|---|---|
| **(in millions, except per share amounts)** | **Basic** | **Diluted** |
| **Income available for common shareholders** | $ 1,099 | $ 1,099 |
| Less: distributed earnings to common shareholders | 706 | - |
| **Undistributed earnings** | **$ 393** | **$ 1,099** |
| **Allocation of earnings to common shareholders** | | |
| Distributed earnings to common shareholders | $ 706 | $ - |
| Undistributed earnings allocated to common shareholders | 385 | 1,099 |
| Add: Interest expense on convertible subordinated notes, net of tax | - | 8 |
| **Total common shareholders earnings and assumed conversion** | **$ 1,091** | **$ 1,107** |
| **Weighted average common shares outstanding** | 382 | 382 |
| Add incremental shares from assumed conversions: | | |
| Convertible subordinated notes | 8 | 8 |
| Employee share-based compensation | - | 2 |
| **Weighted average common shares outstanding and participating securities** | **390** | **392** |
| **Net earnings per common share, basic** | | |
| Distributed earnings, basic [1] | $ 1.85 | $ - |
| Undistributed earnings | 1.01 | 2.82 |
| **Total** | **$ 2.86** | **$ 2.82** |

[1] Distributed earnings, basic may differ from actual per share amounts paid as dividends, as the EPS computation under GAAP requires the use of the weighted average, rather than the actual, number of shares outstanding.

For each of the periods presented above, the calculation of outstanding common shares on a diluted basis excluded an insignificant amount of options and securities that were antidilutive.

## NOTE 9: INCOME TAXES

The significant components of income tax provision (benefit) by taxing jurisdiction were as follows:

| | PG&E Corporation | | | Utility | | |
|---|---|---|---|---|---|---|
| | Year Ended December 31, | | | | | |
| **(in millions)** | **2012** | **2011** | **2010** | **2012** | **2011** | **2010** |
| Current: | | | | | | |
| Federal | $ (74) | $ (77) | $ (12) | $ (52) | $ (83) | $ (54) |
| State | 33 | 152 | 130 | 41 | 161 | 134 |
| Deferred: | | | | | | |
| Federal | 374 | 504 | 525 | 404 | 534 | 589 |
| State | (92) | (135) | (91) | (91) | (128) | (90) |
| Tax credits | (4) | (4) | (5) | (4) | (4) | (5) |
| **Income tax provision** | **$ 237** | **$ 440** | **$ 547** | **$ 298** | **$ 480** | **$ 574** |

The following table describes net deferred income tax liabilities:

| (in millions) | PG&E Corporation 2012 | PG&E Corporation 2011 | Utility 2012 | Utility 2011 |
|---|---|---|---|---|
| | Year Ended December 31, | | | |
| **Deferred income tax assets:** | | | | |
| Customer advances for construction | $ 101 | $ 108 | $ 101 | $ 108 |
| Reserve for damages | 175 | 243 | 175 | 243 |
| Environmental reserve | 97 | 157 | 97 | 157 |
| Compensation | 229 | 310 | 179 | 258 |
| Net operating loss carry forward | 938 | 728 | 736 | 567 |
| Other | 264 | 217 | 255 | 180 |
| **Total deferred income tax assets** | **$ 1,804** | **$ 1,763** | **$ 1,543** | **$ 1,513** |
| **Deferred income tax liabilities:** | | | | |
| Regulatory balancing accounts | $ 256 | $ 643 | $ 256 | $ 643 |
| Property related basis differences | 7,449 | 6,544 | 7,447 | 6,536 |
| Income tax regulatory asset | 663 | 588 | 663 | 588 |
| Other | 173 | 192 | 99 | 105 |
| **Total deferred income tax liabilities** | **$ 8,541** | **$ 7,967** | **$ 8,465** | **$ 7,872** |
| **Total net deferred income tax liabilities** | **$ 6,737** | **$ 6,204** | **$ 6,922** | **$ 6,359** |
| **Classification of net deferred income tax liabilities:** | | | | |
| Included in current liabilities (assets) | $ (11) | $ 196 | $ (17) | $ 199 |
| Included in noncurrent liabilities | 6,748 | 6,008 | 6,939 | 6,160 |
| **Total net deferred income tax liabilities** | **$ 6,737** | **$ 6,204** | **$ 6,922** | **$ 6,359** |

The following table reconciles income tax expense at the federal statutory rate to the income tax provision:

| | PG&E Corporation 2012 | PG&E Corporation 2011 | PG&E Corporation 2010 | Utility 2012 | Utility 2011 | Utility 2010 |
|---|---|---|---|---|---|---|
| | Year Ended December 31, | | | | | |
| Federal statutory income tax rate | 35.0% | 35.0% | 35.0% | 35.0% | 35.0% | 35.0% |
| Increase (decrease) in income tax rate resulting from: | | | | | | |
| State income tax (net of federal benefit) | (3.9) | 1.1 | 0.7 | (3.0) | 1.6 | 1.0 |
| Effect of regulatory treatment of fixed asset differences | (4.1) | (4.4) | (3.1) | (3.9) | (4.2) | (3.0) |
| Tax credits | (0.6) | (0.5) | (0.4) | (0.6) | (0.5) | (0.4) |
| Benefit of loss carryback | (0.7) | (1.9) | - | (0.4) | (2.1) | - |
| Non deductible penalties | 0.6 | 6.5 | 0.2 | 0.5 | 6.3 | 0.2 |
| Other, net | (3.8) | (1.5) | 0.8 | (0.8) | 0.1 | 1.1 |
| **Effective tax rate** | **22.5%** | **34.3%** | **33.2%** | **26.8%** | **36.2%** | **33.9%** |

*Unrecognized tax benefits*

The following table reconciles the changes in unrecognized tax benefits:

| | PG&E Corporation | | | Utility | | |
|---|---|---|---|---|---|---|
| (in millions) | 2012 | 2011 | 2010 | 2012 | 2011 | 2010 |
| **Balance at beginning of year** | $ 506 | $ 714 | $ 673 | $ 503 | $ 712 | $ 652 |
| Additions for tax position taken during a prior year | 32 | 2 | 27 | 26 | 2 | 27 |
| Reductions for tax position taken during a prior year | (13) | (198) | (20) | (10) | (196) | - |
| Additions for tax position taken during the current year | 67 | 3 | 89 | 67 | - | 87 |
| Settlements | (11) | (15) | (55) | (11) | (15) | (54) |
| **Balance at end of year** | **$ 581** | **$ 506** | **$ 714** | **$ 575** | **$ 503** | **$ 712** |

The component of unrecognized tax benefits that, if recognized, would affect the effective tax rate at December 31, 2012 for PG&E Corporation and the Utility was $18 million, with the remaining balance representing the potential deferral of taxes to later years.

PG&E Corporation and the Utility recognize accrued interest related to unrecognized tax benefits as income tax expense in the Consolidated Statements of Income. Interest income and interest expense for the years ended December 31, 2012, December 31, 2011, and December 31, 2010 were immaterial.

As of December 31, 2012 and December 31, 2011, PG&E Corporation and the Utility had receivables for accrued interest income. The amounts of these receivables were immaterial.

The Internal Revenue Service ("IRS") is working with the utility industry to finalize guidance on what is a repair deduction for tax purposes for the natural gas transmission, natural gas distribution, and electric generation businesses. PG&E Corporation and the Utility expect the IRS to release this guidance in the first half of 2013. PG&E Corporation and the Utility expect the unrecognized tax benefits may change significantly within the next 12 months.

The IRS is auditing a 2008 accounting method change of the Utility to accelerate the amount of deductible repairs. The audit is expected to be completed in 2013. The resolution of the audit could result in a significant change in unrecognized tax benefit. However, PG&E Corporation and the Utility cannot estimate the change of unrecognized tax benefits related to the items discussed above.

***Tax settlements and years that remain subject to examination***

In 2008, PG&E Corporation began participating in the Compliance Assurance Process ("CAP"), a real-time IRS audit intended to expedite resolution of tax matters. The CAP audit culminates with a letter from the IRS indicating its acceptance of the return. The IRS partially accepted the 2008 return, withholding two matters for further review. In December 2010, the IRS accepted the 2009 tax return without change. In September 2011, the IRS partially accepted the 2010 return, withholding two matters for further review. In September 2012, the IRS partially accepted the 2011 return, withholding several matters for future review.

The most significant of the matters withheld for further review in each of these years relates to a tax accounting method change of the Utility related to repairs. The IRS has not completed its review of these claims.

***Loss carry forwards***

As of December 31, 2012, PG&E Corporation had approximately $2.1 billion of federal net operating loss carry forwards and $12 million of tax credit carry forwards, which will expire between 2029 and 2032. In addition, PG&E Corporation had approximately $128 million of loss carry forwards related to charitable contributions, which will expire between 2013 and 2017. PG&E Corporation believes it is more likely than not the tax benefits associated with the federal operating loss, charitable contributions, and tax credits can be realized within the carry forward periods, therefore no valuation allowance was recognized as of December 31, 2012. As of December 31, 2012, PG&E Corporation had approximately $19 million of federal net operating loss carry forwards related to the tax benefit on employee stock plans that would be recorded in additional paid-in capital when used.

## NOTE 10: DERIVATIVES

### Use of Derivative Instruments

The Utility uses both derivative and non-derivative contracts in managing its customers' exposure to commodity-related price risk, including:

- forward contracts that commit the Utility to purchase a commodity in the future;
- swap agreements and futures contracts that require payments to or from counterparties based upon the difference between two prices for a predetermined contractual quantity; and
- option contracts that provide the Utility with the right to buy a commodity at a predetermined price and option contracts that require payments from counterparties if market prices exceed a predetermined price.

These instruments are not held for speculative purposes and are subject to certain regulatory requirements. Customer rates are designed to recover the Utility's reasonable costs of providing services, including the costs related to price risk management activities.

Price risk management activities that meet the definition of derivatives are recorded at fair value on the Consolidated Balance Sheets. As long as the current ratemaking mechanism discussed above remains in place and the Utility's price risk management activities are carried out in accordance with CPUC directives, the Utility expects to recover fully, in rates, all costs related to derivatives. Therefore, all unrealized gains and losses associated with the change in fair value of these derivatives are deferred and recorded within the Utility's regulatory assets and liabilities on the Consolidated Balance Sheets. (See Note 3 above.) Net realized gains or losses on commodity derivatives are recorded in the cost of electricity or the cost of natural gas with corresponding increases or decreases to regulatory balancing accounts for recovery from or refund to customers.

The Utility elects the normal purchase and sale exception for eligible derivatives. Derivatives that require physical delivery in quantities that are expected to be used by the Utility over a reasonable period in the normal course of business, and do not contain pricing provisions unrelated to the commodity delivered are eligible for the normal purchase and sale exception. The fair value of derivatives that are eligible for the normal purchase and sales exception are not reflected in the Consolidated Balance Sheets.

***Electricity Procurement***

The Utility enters into third-party power purchase agreements for electricity to meet customer needs. The Utility's third-party power purchase agreements are generally accounted for as leases, but certain third-party power purchase agreements are considered derivatives. The Utility elects the normal purchase and sale exception for eligible derivatives.

A portion of the Utility's third-party power purchase agreements contain market-based pricing terms. In order to reduce volatility in customer rates, the Utility may enter into financial swap and/or financial option contracts to effectively fix and/or cap the price of future purchases and reduce cash flow variability associated with fluctuating electricity prices. These financial contracts are considered derivatives.

*Electric Transmission Congestion Revenue Rights*

The California electric transmission grid, controlled by the California Independent System Operator ("CAISO"), is subject to transmission constraints when there is insufficient transmission capacity to supply the market. The CAISO imposes congestion charges on market participants to manage transmission congestion. The revenue generated from congestion charges is allocated to holders of congestion revenue rights ("CRRs"). CRRs allow market participants to hedge the financial risk of CAISO-imposed congestion charges in the day-ahead market. The CAISO releases CRRs through an annual and monthly process, each of which includes an allocation phase (in which load-serving entities, such as the Utility, are allocated CRRs at no cost based on the customer demand or "load" they serve) and an auction phase (in which CRRs are priced at market and available to all market participants). The Utility participates in the allocation and auction phases of the annual and monthly CRR processes. CRRs are considered derivatives.

*Natural Gas Procurement (Electric Fuels Portfolio)*

The Utility's electric procurement portfolio is exposed to natural gas price risk primarily through physical natural gas commodity purchases to fuel natural gas generating facilities, and electricity procurement contracts indexed to natural gas prices. To reduce the volatility in customer rates, the Utility may enter into financial swap contracts or financial option contracts, or both. The Utility also enters into fixed-price forward contracts for natural gas to reduce future cash flow variability from fluctuating natural gas prices. These instruments are considered derivatives.

*Natural Gas Procurement (Core Gas Supply Portfolio)*

The Utility enters into physical natural gas commodity contracts to fulfill the needs of its residential and smaller commercial customers known as "core" customers. The Utility does not procure natural gas for industrial and large commercial, or "non-core," customers. Changes in temperature cause natural gas demand to vary daily, monthly, and seasonally. Consequently, varying volumes of natural gas may be purchased or sold in the multi-month, monthly, and to a lesser extent, daily spot market to balance such seasonal supply and demand. The Utility purchases financial instruments, such as swaps and options, as part of its core winter hedging program in order to manage customer exposure to high natural gas prices during peak winter months. These financial instruments are considered derivatives.

**Volume of Derivative Activity**

At December 31, 2012, the volumes of PG&E Corporation's and the Utility's outstanding derivatives were as follows:

| | | Contract Volume (1) | | | |
|---|---|---|---|---|---|
| **Underlying Product** | **Instruments** | **Less Than 1 Year** | **1 Year or Greater but Less Than 3 Years** | **3 Years or Greater but Less Than 5 Years** | **5 Years or Greater (2)** |
| Natural Gas (3) (MMBtus (4)) | Forwards and Swaps | 329,466,510 | 98,628,398 | 5,490,000 | - |
| | Options | 221,587,431 | 216,279,767 | 10,050,000 | - |
| Electricity (Megawatt-hours) | Forwards and Swaps | 2,537,023 | 3,541,046 | 2,009,505 | 2,538,718 |
| | Options | - | 239,015 | 239,233 | 119,508 |
| | Congestion Revenue Rights | 74,198,690 | 74,187,803 | 74,240,147 | 25,699,804 |

(1) Amounts shown reflect the total gross derivative volumes by commodity type that are expected to settle in each period.

(2) Derivatives in this category expire between 2018 and 2023.

(3) Amounts shown are for the combined positions of the electric fuels and core gas portfolios.

(4) Million British Thermal Units.

At December 31, 2011, the volumes of PG&E Corporation's and the Utility's outstanding derivatives were as follows:

| | | Contract Volume [1] | | | |
|---|---|---|---|---|---|
| **Underlying Product** | **Instruments** | **Less Than 1 Year** | **1 Year or Greater but Less Than 3 Years** | **3 Years or Greater but Less Than 5 Years** | **5 Years or Greater [2]** |
| Natural Gas [3] (MMBtus [4]) | Forwards and Swaps | 500,375,394 | 212,088,902 | 6,080,000 | - |
| | Options | 257,766,990 | 336,543,013 | - | - |
| Electricity (Megawatt-hours) | Forwards and Swaps | 4,718,568 | 5,206,512 | 2,142,024 | 3,754,872 |
| | Options | 1,248,000 | 132,048 | 264,348 | 264,096 |
| | Congestion Revenue Rights | 84,247,502 | 72,882,246 | 72,949,250 | 61,673,535 |

[1] Amounts shown reflect the total gross derivative volumes by commodity type that are expected to settle in each period.
[2] Derivatives in this category expire between 2017 and 2022.
[3] Amounts shown are for the combined positions of the electric fuels and core gas portfolios.
[4] Million British Thermal Units .

**Presentation of Derivative Instruments in the Financial Statements**

In PG&E Corporation's and the Utility's Consolidated Balance Sheets, derivatives are presented on a net basis by counterparty where the right and the intention to offset exists under a master netting agreement. The net balances include outstanding cash collateral associated with derivative positions.

At December 31, 2012, PG&E Corporation's and the Utility's outstanding derivative balances were as follows:

| | Commodity Risk | | | |
|---|---|---|---|---|
| **(in millions)** | **Gross Derivative Balance** | **Netting** | **Cash Collateral** | **Total Derivative Balance** |
| Current assets – other | $ 48 | $ (25) | $ 36 | $ 59 |
| Other noncurrent assets – other | 99 | (11) | - | 88 |
| Current liabilities – other | (255) | 25 | 115 | (115) |
| Noncurrent liabilities – other | (221) | 11 | 14 | (196) |
| **Total commodity risk** | **$ (329)** | **$ -** | **$ 165** | **$ (164)** |

At December 31, 2011, PG&E Corporation's and the Utility's outstanding derivative balances were as follows:

| | Commodity Risk | | | |
|---|---|---|---|---|
| **(in millions)** | **Gross Derivative Balance** | **Netting** | **Cash Collateral** | **Total Derivative Balance** |
| Current assets – other | $ 54 | $ (39) | $ 103 | $ 118 |
| Other noncurrent assets – other | 113 | (59) | - | 54 |
| Current liabilities – other | (489) | 39 | 274 | (176) |
| Noncurrent liabilities – other | (398) | 59 | 101 | (238) |
| **Total commodity risk** | **$ (720)** | **$ -** | **$ 478** | **$ (242)** |

Gains and losses recorded on PG&E Corporation's and the Utility's derivatives were as follows:

| (in millions) | Commodity Risk<br>For the year ended December 31,<br>2012 | 2011 | 2010 |
|---|---|---|---|
| Unrealized gain/(loss) - regulatory assets and liabilities [1] | $ 391 | $ 21 | $ (260) |
| Realized loss - cost of electricity [2] | (486) | (558) | (573) |
| Realized loss - cost of natural gas [2] | (38) | (106) | (79) |
| **Total commodity risk** | **$ (133)** | **$ (643)** | **$ (912)** |

[1] Unrealized gains and losses on commodity risk-related derivative instruments are recorded to regulatory assets or liabilities, rather than being recorded to the Consolidated Statements of Income. These amounts exclude the impact of cash collateral postings.

[2] These amounts are fully passed through to customers in rates. Accordingly, net income was not impacted by realized amounts on these instruments.

Cash inflows and outflows associated with derivatives are included in operating cash flows on PG&E Corporation's and the Utility's Consolidated Statements of Cash Flows.

The majority of the Utility's derivatives contain collateral posting provisions tied to the Utility's credit rating from each of the major credit rating agencies. At December 31, 2012, the Utility's credit rating was investment grade. If the Utility's credit rating were to fall below investment grade, the Utility would be required to post additional cash immediately to fully collateralize some of its net liability derivative positions.

The additional cash collateral that the Utility would be required to post if the credit risk-related contingency features were triggered was as follows:

| (in millions) | Balance at December 31,<br>2012 | 2011 |
|---|---|---|
| Derivatives in a liability position with credit risk-related contingencies that are not fully collateralized | $ (266) | $ (611) |
| Related derivatives in an asset position | 59 | 86 |
| Collateral posting in the normal course of business related to these derivatives | 103 | 250 |
| **Net position of derivative contracts/additional collateral posting requirements [1]** | **$ (104)** | **$ (275)** |

[1] This calculation excludes the impact of closed but unpaid positions, as their settlement is not impacted by any of the Utility's credit risk-related contingencies.

## NOTE 11: FAIR VALUE MEASUREMENTS

PG&E Corporation and the Utility measure their cash equivalents, trust assets, and price risk management instruments at fair value. Fair value is an exit price, representing the amount that would be received to sell an asset or paid to transfer a liability in an orderly transaction between market participants. As such, fair value is a market-based measurement that should be determined based on assumptions that market participants would use in pricing an asset or a liability. A three-tier fair value hierarchy is established as a basis for considering such assumptions and for inputs used in the valuation methodologies in measuring fair value:

- **Level 1 –** Observable inputs that reflect quoted prices (unadjusted) for identical assets or liabilities in active markets.
- **Level 2 –** Other inputs that are directly or indirectly observable in the marketplace.
- **Level 3 –** Unobservable inputs which are supported by little or no market activities.

The fair value hierarchy requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value.

Assets and liabilities measured at fair value on a recurring basis for PG&E Corporation and the Utility are summarized below (assets held in rabbi trusts are held by PG&E Corporation and not the Utility):

| | Fair Value Measurements | | | | |
|---|---|---|---|---|---|
| | At December 31, 2012 | | | | |
| (in millions) | Level 1 | Level 2 | Level 3 | Netting [(1)] | Total |
| **Assets:** | | | | | |
| Money market investments | $ 209 | $ - | $ - | $ - | **$ 209** |
| Nuclear decommissioning trusts | | | | | |
| Money market investments | 21 | - | - | - | **21** |
| U.S. equity securities | 940 | 9 | - | - | **949** |
| Non-U.S. equity securities | 379 | - | - | - | **379** |
| U.S. government and agency securities | 681 | 139 | - | - | **820** |
| Municipal securities | - | 59 | - | - | **59** |
| Other fixed-income securities | - | 173 | - | - | **173** |
| Total nuclear decommissioning trusts [(2)] | **2,021** | **380** | **-** | **-** | **2,401** |
| Price risk management instruments (Note 10) | | | | | |
| Electricity | 1 | 60 | 80 | 6 | **147** |
| Gas | - | 5 | 1 | (6) | **-** |
| Total price risk management instruments | **1** | **65** | **81** | **-** | **147** |
| Rabbi trusts | | | | | |
| Fixed-income securities | - | 30 | - | - | **30** |
| Life insurance contracts | - | 72 | - | - | **72** |
| Total rabbi trusts | **-** | **102** | **-** | **-** | **102** |
| Long-term disability trust | | | | | |
| Money market investments | 10 | - | - | - | **10** |
| U.S. equity securities | - | 14 | - | - | **14** |
| Non-U.S. equity securities | - | 11 | - | - | **11** |
| Fixed-income securities | - | 136 | - | - | **136** |
| Total long-term disability trust | 10 | 161 | - | - | **171** |
| **Total assets** | **$ 2,241** | **$ 708** | **$ 81** | **$ -** | **$ 3,030** |
| **Liabilities:** | | | | | |
| Price risk management instruments (Note 10) | | | | | |
| Electricity | $ 155 | $ 144 | $ 160 | $ (156) | **$ 303** |
| Gas | 8 | 9 | - | (9) | **8** |
| **Total liabilities** | **$ 163** | **$ 153** | **$ 160** | **$ (165** | **$ 311** |

(1) Includes the effect of the contractual ability to settle contracts under master netting agreements and margin cash collateral.

(2) Excludes $240 million at December 31, 2012 primarily related to deferred taxes on appreciation of investment value.

| (in millions) | Fair Value Measurements At December 31, 2011 Level 1 | Level 2 | Level 3 | Netting [1] | Total |
|---|---|---|---|---|---|
| **Assets:** | | | | | |
| Money market investments | $ 206 | $ - | $ - | $ - | **$ 206** |
| Nuclear decommissioning trusts | | | | | |

| **Total liabilities** | **$ 442** | **$ 302** | **$ 143** | **$ (473)** | **$ 414** |

[1] Includes the effect of the contractual ability to settle contracts under master netting agreements and margin cash collateral.

[2] Excludes $188 million at December 31, 2011 primarily related to deferred taxes on appreciation of investment value.

**Valuation Techniques**

The following describes the valuation techniques used to measure the fair value of the assets and liabilities shown in the table above:

***Money Market Investments***

PG&E Corporation and the Utility invest in money market funds that seek to maintain a stable net asset value. These funds invest in high quality, short-term, diversified money market instruments, such as U.S. Treasury bills, U.S. agency securities, certificates of deposit, and commercial paper with a maximum weighted average maturity of 60 days or less. PG&E Corporation's and the Utility's investments in these money market funds are valued using unadjusted prices for identical assets in an active market and are thus classified as Level 1. Money market funds are recorded as cash and cash equivalents in PG&E Corporation's and the Utility's Consolidated Balance Sheets.

***Trust Assets***

The assets held by the nuclear decommissioning trusts, the rabbi trusts related to the non-qualified deferred compensation plans, and the long-term disability trust are composed primarily of equity securities, debt securities, and life insurance policies. In general, investments held in the trusts are exposed to various risks, such as interest rate, credit, and market volatility risks.

Equity securities primarily include investments in common stock, which are valued based on unadjusted prices for identical securities in active markets and are classified as Level 1. Equity securities also include commingled funds composed of equity securities traded publicly on exchanges across multiple industry sectors in the U.S. and other regions of the world, which are classified as Level 2. Price quotes for the assets held by these funds are readily observable and available.

Debt securities are primarily composed of U.S. government and agency securities, municipal securities, and other fixed-income securities, including corporate debt securities. U.S. government and agency securities primarily consist of U.S. Treasury securities that are classified as Level 1 because the fair value is determined by observable market prices in active markets. A market approach is generally used to estimate the fair value of debt securities classified as Level 2. Under a market approach, fair values are determined based on evaluated pricing data, such as broker quotes, for similar securities adjusted for observable differences. Significant inputs used in the valuation model generally include benchmark yield curves and issuer spreads. The external credit ratings, coupon rate, and maturity of each security are considered in the valuation model, as applicable.

***Price Risk Management Instruments***

Price risk management instruments include physical and financial derivative contracts, such as power purchase agreements, forwards, swaps, options, and CRRs that are traded either on an exchange or over-the-counter. (See Note 10 above.)

Power purchase agreements, forwards, and swaps are valued using a discounted cash flow model. Exchange-traded forwards and swaps that are valued using observable market forward prices for the underlying commodity are classified as Level 1. Over-the-counter forwards and swaps that are identical to exchange-traded forwards and swaps or are valued using forward prices from broker quotes that are corroborated with market data are classified as Level 2. Long-dated power purchase agreements that are valued using significant unobservable data are classified as Level 3. These Level 3 contracts are valued using either estimated basis adjustments from liquid trading points or techniques, including extrapolation from observable prices, when a contract term extends beyond a period for which market data is available.

Exchange-traded options are valued using observable market data and market-corroborated data and are classified as Level 2. Over-the-counter options are classified as Level 3 and are valued using a standard option pricing model, which includes forward prices for the underlying commodity, time value at a risk-free rate, and volatility. For periods where market data is not available, the Utility extrapolates observable data using internal models.

The Utility holds CRRs to hedge the financial risk of CAISO-imposed congestion charges in the day-ahead market. CRRs are valued based on prices observed in the CAISO auction, which are discounted at the risk-free rate. Limited market data is available in the CAISO auction and between auction dates; therefore, the Utility uses models to forecast CRR prices for those periods not covered in the auctions. CRRs are classified as Level 3.

**Transfers between Levels**

PG&E Corporation and the Utility recognize any transfers between levels in the fair value hierarchy as of the end of the reporting period. For the year ended December 31, 2012, there were no significant transfer between levels.

At December 31, 2011, the valuation of price risk management over-the-counter forwards and swaps and exchange-traded options incorporated market observable and market corroborated inputs, where certain previously-considered unobservable inputs became observable. Therefore, the Utility transferred these instruments out of Level 3 and into Level 2. There were no significant transfers between Levels 1 and 2 in the year ended December 31, 2011.

**Level 3 Measurements and Sensitivity Analysis**

The Utility's Market and Credit Risk Management department is responsible for determining the fair value of the Utility's price risk management derivatives. Market and Credit Risk Management reports to the Chief Risk Officer of the Utility. Market and Credit Risk Management utilizes models to derive pricing inputs for the valuation of the Utility's Level 3 instruments. These models use pricing inputs from brokers and historical data. The Market and Credit Risk Management department and the Controller's organization collaborate to determine the appropriate fair value methodologies and classification for each derivative. Inputs used and fair value of Level 3 instruments are reviewed period-over-period and compared with market conditions to determine reasonableness. Valuation models and techniques are reviewed periodically.

CRRs and power purchase agreements are valued using historical prices or significant unobservable inputs derived from internally developed models. Historical prices include CRR auction prices. Unobservable inputs include forward electricity prices. Significant increases or decreases in any of those inputs would result in a significantly higher or lower fair value, respectively. All reasonable costs related to Level 3 instruments are expected to be recoverable through customer rates; therefore, there is no impact to net income resulting from changes in the fair value of these instruments. (See Note 10 above.)

| **(in millions)** | **Fair Value at December 31, 2012** | | | | |
|---|---|---|---|---|---|
| **Fair Value Measurement** | **Assets** | **Liabilities** | **Valuation Technique** | **Unobservable Input** | **Range [(1)]** |
| Congestion revenue rights | $ 80 | $ 16 | Market approach | CRR auction prices | $ (9.04) - 55.15 |
| Power purchase agreements | $ - | $ 145 | Discounted cash flow | Forward prices | $ 8.59 - 62.90 |

(1) [(1)] Represents price per megawatt-hour

**Level 3 Reconciliation**

The following table presents the reconciliation for Level 3 price risk management instruments for the years ended December 31, 2012 and 2011, respectively:

| | **Price Risk Management Instruments** | |
|---|---|---|
| **(in millions)** | **2012** | **2011** |
| Liability balance as of January 1 | **$ (74)** | **$ (399)** |
| Realized and unrealized gains (losses): | | |
| Included in regulatory assets and liabilities or balancing accounts [(1)] | (5) | 122 |
| Transfers out of Level 3 | - | 203 |
| **Liability balance as of December 31** | **$ (79)** | **$ (74)** |

[(1)] Price risk management activities are recoverable through customer rates, therefore, balancing account revenue is recorded for amounts settled and purchased and there is no impact to net income. Unrealized gains and losses are deferred in regulatory liabilities and assets.

**Financial Instruments**

PG&E Corporation and the Utility use the following methods and assumptions in estimating fair value for financial instruments:

- The fair values of cash, restricted cash, net accounts receivable, short-term borrowings, accounts payable, customer deposits, and the Utility's variable rate pollution control bond loan agreements approximate their carrying values at December 31, 2012 and 2011, as they are short-term in nature or have interest rates that reset daily.

- The fair values of the Utility's fixed-rate senior notes and fixed-rate pollution control bond loan agreements and PG&E Corporation's fixed-rate senior notes were based on quoted market prices at December 31, 2012 and 2011. The fair value of the ERBs issued by PERF was also based on quoted market prices at December 31, 2011.

The carrying amount and fair value of PG&E Corporation's and the Utility's debt instruments were as follows (the table below excludes financial instruments with carrying values that approximate their fair values):

| | At December 31, | | | |
|---|---|---|---|---|
| | 2012 | | 2011 | |
| **(in millions)** | **Carrying Amount** | **Level 2 Fair Value** | **Carrying Amount** | **Level 2 Fair Value** |
| **Debt (Note 4)** | | | | |
| PG&E Corporation | $ 349 | $ 371 | $ 349 | $ 380 |
| Utility | 11,645 | 13,946 | 10,545 | 12,543 |
| **Energy recovery bonds (Note 5)** | - | - | 423 | 433 |

*Nuclear Decommissioning Trust Investments*

The following table provides a summary of available-for-sale investments held in the Utility's nuclear decommissioning trusts:

| (in millions) | Amortized Cost | Total Unrealized Gains | Total Unrealized Losses | Total Fair Value [1] |
|---|---|---|---|---|
| **As of December, 2012** | | | | |
| Money market investments | $ 21 | $ - | $ - | $ 21 |
| Equity securities | | | | |
| U.S. | 331 | 618 | - | 949 |
| Non-U.S. | 199 | 181 | (1) | 379 |
| Debt securities | | | | |
| U.S. government and agency securities | 723 | 97 | - | 820 |
| Municipal securities | 56 | 4 | (1) | 59 |
| Other fixed-income securities | 168 | 5 | - | 173 |
| **Total** | **$ 1,498** | **$ 905** | **$ (2)** | **$ 2,401** |
| **As of December 31, 2011** | | | | |
| Money market investments | $ 24 | $ - | $ - | $ 24 |
| Equity securities | | | | |
| U.S. | 334 | 518 | (3) | 849 |
| Non-U.S. | 194 | 131 | (2) | 323 |
| Debt securities | | | | |
| U.S. government and agency securities | 774 | 102 | - | 876 |
| Municipal securities | 56 | 2 | - | 58 |
| Other fixed-income securities | 96 | 3 | - | 99 |
| **Total** | **$ 1,478** | **$ 756** | **$ (5)** | **$ 2,229** |

[1] Excludes $240 million and $188 million at December 31, 2012 and December 31, 2011, respectively, primarily related to deferred taxes on appreciation of investment value.

The fair value of debt securities by contractual maturity is as follows:

| (in millions) | As of December 31, 2012 |
|---|---|
| Less than 1 year | $ 5 |
| 1–5 years | 456 |
| 5–10 years | 218 |
| More than 10 years | 373 |
| **Total maturities of debt securities** | **$ 1,052** |

The following table provides a summary of activity for the debt and equity securities:

| (in millions) | 2012 | 2011 | 2010 |
|---|---|---|---|
| Proceeds from sales and maturities of nuclear decommissioning trust investments | $ 1,133 | $ 1,928 | $ 1,405 |
| Gross realized gains on sales of securities held as available-for-sale | 19 | 43 | 42 |
| Gross realized losses on sales of securities held as available-for-sale | (17) | (30) | (11) |

**NOTE 12: EMPLOYEE BENEFIT PLANS**

PG&E Corporation and the Utility provide a non-contributory defined benefit pension plan for eligible employees, as well as contributory postretirement medical plans for retirees and their eligible dependents, and non-contributory postretirement life insurance plans for eligible employees and retirees. The trusts underlying certain of these plans are qualified trusts under the Internal Revenue Code of 1986, as amended ("Code"). If certain conditions are met, PG&E Corporation and the Utility can deduct payments made to the qualified trusts, subject to certain Code limitations. PG&E Corporation and the Utility use a December 31 measurement date for all plans.

PG&E Corporation's and the Utility's funding policy is to contribute tax-deductible amounts, consistent with applicable regulatory decisions and federal minimum funding requirements. Based upon current assumptions and available information, the Utility's minimum funding requirements related to its pension plans was zero.

**Change in Plan Assets, Benefit Obligations, and Funded Status**

The following tables show the reconciliation of changes in plan assets, benefit obligations, and the plans' aggregate funded status for pension benefits and other benefits for PG&E Corporation during 2012 and 2011:

***Pension Benefits***

| **(in millions)** | **2012** | **2011** |
|---|---|---|
| **Change in plan assets:** | | |
| **Fair value of plan assets at January 1** | **$ 10,993** | **$ 10,250** |
| Actual return on plan assets | 1,488 | 1,016 |
| Company contributions | 282 | 230 |
| Benefits and expenses paid | (622) | (503) |
| **Fair value of plan assets at December 31** | **$ 12,141** | **$ 10,993** |
| | | |
| **Change in benefit obligation:** | | |
| **Projected benefit obligation at January 1** | **$ 14,000** | **$ 12,071** |
| Service cost for benefits earned | 396 | 320 |
| Interest cost | 658 | 660 |
| Actuarial loss | 1,099 | 1,450 |
| Plan amendments | 9 | - |
| Transitional costs | 1 | 2 |
| Benefits and expenses paid | (622) | (503) |
| **Projected benefit obligation at December 31 [1]** | **$ 15,541** | **$ 14,000** |
| | | |
| **Funded status:** | | |
| Current liability | $ (6) | $ (5) |
| Noncurrent liability | (3,394) | (3,002) |
| **Accrued benefit cost at December 31** | **$ (3,400)** | **$ (3,007)** |

(1) PG&E Corporation's accumulated benefit obligation was $13,778 million and $12,285 million at December 31, 2012 and 2011, respectively.

*Other Benefits*

| **(in millions)** | **2012** | **2011** |
|---|---|---|
| **Change in plan assets:** | | |
| **Fair value of plan assets at January 1** | **$ 1,491** | **$ 1,337** |
| Actual return on plan assets | 191 | 95 |
| Company contributions | 149 | 137 |
| Plan participant contribution | 55 | 52 |
| Benefits and expenses paid | (128) | (130) |
| **Fair value of plan assets at December 31** | **$ 1,758** | **$ 1,491** |
| | | |
| **Change in benefit obligation:** | | |
| **Benefit obligation at January 1** | **$ 1,885** | **$ 1,755** |
| Service cost for benefits earned | 49 | 42 |
| Interest cost | 83 | 91 |
| Actuarial loss | (23) | 63 |
| Plan amendments | 5 | - |
| Benefits paid | (119) | (130) |
| Federal subsidy on benefits paid | 5 | 12 |
| Plan participant contributions | 55 | 52 |
| **Benefit obligation at December 31** | **$ 1,940** | **$ 1,885** |
| | | |
| **Funded status:** | | |
| Noncurrent liability | $ (181) | $ (394) |
| **Accrued benefit cost at December 31** | **$ (181)** | **$ (394)** |

There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

During 2012, the Utility's defined benefit pension plan was amended to include a new cash balance benefit formula. Eligible employees hired after December 31, 2012 will participate in the cash balance benefit. Eligible employees hired before January 1, 2013 will have a one-time opportunity to elect to participate in the cash balance benefit going forward, beginning on January 1, 2014 or to continue participating in the existing defined benefit plan. As long as pension benefit costs continue to be recoverable through customer rates, PG&E Corporation and the Utility anticipate that this amendment will have no impact on net income.

**Components of Net Periodic Benefit Cost**

Net periodic benefit cost as reflected in PG&E Corporation's Consolidated Statements of Income for 2012, 2011, and 2010 was as follows:

***Pension Benefits***

| (in millions) | 2012 | 2011 | 2010 |
|---|---|---|---|
| Service cost for benefits earned | $ 396 | $ 320 | $ 279 |
| Interest cost | 658 | 660 | 645 |
| Expected return on plan assets | (598) | (669) | (624) |
| Amortization of prior service cost | 20 | 34 | 53 |
| Amortization of unrecognized loss | 123 | 50 | 44 |
| **Net periodic benefit cost** | **599** | **395** | **397** |
| Less: transfer to regulatory account [1] | (301) | (139) | (233) |
| **Total** | **$ 298** | **$ 256** | **$ 164** |

[1] The Utility recorded $301 million, $139 million, and $233 million for the years ended December 31, 2012, 2011, and 2010, respectively, to a regulatory account as the amounts are probable of recovery from customers in future rates

***Other Benefits***

| (in millions) | 2012 | 2011 | 2010 |
|---|---|---|---|
| Service cost for benefits earned | $ 49 | $ 42 | $ 36 |
| Interest cost | 83 | 91 | 88 |
| Expected return on plan assets | (77) | (82) | (74) |
| Amortization of transition obligation | 24 | 26 | 26 |
| Amortization of prior service cost | 25 | 27 | 25 |
| Amortization of unrecognized loss (gain) | 6 | 4 | 3 |
| **Net periodic benefit cost** | **$ 110** | **$ 108** | **$ 104** |

There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

**Components of Accumulated Other Comprehensive Income**

PG&E Corporation and the Utility record the net periodic benefit cost for pension benefits and other benefits as a component of accumulated other comprehensive income, net of tax. Net periodic benefit cost is composed of unrecognized prior service costs, unrecognized gains and losses, and unrecognized net transition obligations as components of accumulated other comprehensive income, net of tax.

Regulatory adjustments are recorded in the Consolidated Statements of Income and Consolidated Balance Sheets to reflect the difference between pension expense or income calculated in accordance with GAAP for accounting purposes and pension expense or income for ratemaking, which is based on a funding approach. A regulatory adjustment is also recorded for the amounts that would otherwise be charged to accumulated other comprehensive income for the pension benefits related to the Utility's defined benefit pension plan. The Utility would record a regulatory liability for a portion of the credit balance in accumulated other comprehensive income, should the other benefits be in an overfunded position. However, this recovery mechanism does not allow the Utility to record a regulatory asset for an underfunded position related to other benefits. Therefore, the charge remains in accumulated other comprehensive income (loss) for other benefits.

The estimated amounts that will be amortized into net periodic benefit costs for PG&E Corporation in 2013 are as follows:

| ***Pension Benefit*** **(in millions)** | |
|---|---|
| Unrecognized prior service cost | $ 20 |
| Unrecognized net loss | 110 |
| **Total** | **$ 130** |

| ***Other Benefits*** **(in millions)** | |
|---|---|
| Unrecognized prior service cost | $ 24 |
| Unrecognized net loss | 6 |
| **Total** | **$ 30** |

There were no material differences between the estimated amounts that will be amortized into net periodic benefit costs for PG&E Corporation and the Utility.

**Valuation Assumptions**

The following actuarial assumptions were used in determining the projected benefit obligations and the net periodic benefit costs. The following weighted average year-end assumptions were used in determining the plans' projected benefit obligations and net benefit cost.

| | **Pension Benefits** | | | **Other Benefits** | | |
|---|---|---|---|---|---|---|
| | **December 31,** | | | **December 31,** | | |
| | **2012** | **2011** | **2010** | **2012** | **2011** | **2010** |
| **Discount rate** | 3.98% | 4.66% | 5.42% | 3.75 - 4.08% | 4.41 - 4.77% | 5.11 - 5.56% |
| **Average rate of future compensation increases** | 4.00% | 5.00% | 5.00% | - | - | - |
| **Expected return on plan assets** | 5.40% | 5.50% | 6.60% | 2.90 - 6.10% | 4.40 - 5.50% | 5.20 - 6.60% |

The assumed health care cost trend rate as of December 31, 2012 was 7.5%, decreasing gradually to an ultimate trend rate in 2018 and beyond of approximately 5%. A one-percentage-point change in assumed health care cost trend rate would have the following effects:

| **(in millions)** | **One-Percentage-Point Increase** | **One-Percentage-Point Decrease** |
|---|---|---|
| Effect on postretirement benefit obligation | $ 108 | $ (111) |
| Effect on service and interest cost | 8 | (8) |

Expected rates of return on plan assets were developed by determining projected stock and bond returns and then applying these returns to the target asset allocations of the employee benefit plan trusts, resulting in a weighted average rate of return on plan assets. Returns on fixed-income debt investments were projected based on real maturity and credit spreads added to a long-term inflation rate. Returns on equity investments were estimated based on estimates of dividend yield and real earnings growth added to a long-term inflation rate. For the pension plan, the assumed return of 5.4% compares to a ten-year actual return of 10.2%. The rate used to discount pension benefits and other benefits was based on a yield curve developed from market data of over approximately 648 Aa-grade non-callable bonds at December 31, 2012. This yield curve has discount rates that vary based on the duration of the obligations. The estimated future cash flows for the pension benefits and other benefit obligations were matched to the corresponding rates on the yield curve to derive a weighted average discount rate.

The difference between actual and expected return on plan assets is included in unrecognized gain (loss), and is considered in the determination of future net periodic benefit income (cost). The actual return on plan assets in 2011 exceeded expectations due to a higher than expected return on fixed-income debt investments. The actual return on plan assets in 2012 was in line with expectations.

**Investment Policies and Strategies**

The financial position of PG&E Corporation's and the Utility's funded employee benefit plans is driven by the relationship between plan assets and liabilities. As noted above, the funded status is the difference between the fair value of plan assets and projected benefit obligations. Volatility in funded status occurs when asset values change differently from liability values and can result in fluctuations in costs for financial reporting, as well as the amount of minimum contributions required under the Employee Retirement Income Security Act of 1974, as amended ("ERISA"). PG&E Corporation's and the Utility's investment policies and strategies are designed to increase the ratio of trust assets to plan liabilities at an acceptable level of funded status volatility.

Interest rate, credit, and equity risk are the key determinants of PG&E Corporation's and the Utility's funded status volatility. In addition to affecting the trust's fixed-income portfolio market values, interest rate changes also influence liability valuations as discount rates move with current bond yields. To manage this risk, PG&E Corporation's and the Utility's trusts hold significant allocations to fixed-income investments that include U.S. government securities, corporate securities, and other fixed-income securities. Although they contribute to funded status volatility, equity investments are held to reduce long-term funding costs due to their higher expected return. The equity investment allocation is implemented through portfolios that include common stock and commingled funds across multiple industry sectors. Real assets and absolute return investments are held to diversify the trust's holdings in equity and fixed-income investments by exhibiting returns with low correlation to the direction of these markets. Real assets include commodities futures, global real estate investment trusts ("REITS"), global listed infrastructure equities, and private real estate funds. Absolute return investments include hedge fund portfolios.

Over the last three years, target allocations for equity investments have generally declined in favor of longer-maturity fixed-income investments and real assets as a means of dampening future funded status volatility. In 2012, equity index futures were added to maintain existing equity exposure while adding exposure to fixed-income securities. Historically, the equity investment allocation was implemented through diversified U.S. equity, non-U.S. equity, and global portfolios. In 2012, the U.S. equity and non-U.S. equity allocations were eliminated and became a combined global equity allocation.

In accordance with the pension plan's investment guidelines, derivative instruments such as equity-index futures contracts are used primarily to maintain equity and fixed income portfolio exposure consistent with the investment policy and to rebalance the fixed income/equity allocation of the pension's portfolio. Foreign currency exchange contracts are also used to hedge a portion of the currency of the global equity investments.

PG&E Corporation and the Utility apply a risk management framework for managing the risks associated with employee benefit plan trust assets. The guiding principles of this risk management framework are the clear articulation of roles and responsibilities, appropriate delegation of authority, and proper accountability and documentation. Trust investment policies and investment manager guidelines include provisions designed to ensure prudent diversification, manage risk through appropriate use of physical direct asset holdings and derivative securities, and identify permitted and prohibited investments.

The target asset allocation percentages for major categories of trust assets for pension and other benefit plans are as follows:

| | **Pension Benefits** | | | **Other Benefits** | | |
|---|---|---|---|---|---|---|
| | **2013** | **2012** | **2011** | **2013** | **2012** | **2011** |
| Global equity securities | 25% | 35% | 5% | 28% | 38% | 3% |
| U.S. equity securities | -% | -% | 26% | -% | -% | 28% |
| Non-U.S. equity securities | -% | -% | 14% | -% | -% | 15% |
| Absolute return | 5% | 5% | 5% | 4% | 4% | 4% |
| Real assets | 10% | 10% | -% | 8% | 8% | -% |
| Extended fixed-income securities | 3% | 3% | -% | -% | -% | -% |
| Fixed-income securities | 57% | 47% | 50% | 60% | 50% | 50% |
| **Total** | **100%** | **100%** | **100%** | **100%** | **100%** | **100%** |

**Fair Value Measurements**

The following tables present the fair value of plan assets for pension and other benefits plans by major asset category at December 31, 2012 and 2011.

| | Fair Value Measurements At December 31, | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | 2012 | | | | 2011 | | | |
| **(in millions)** | **Level 1** | **Level 2** | **Level 3** | **Total** | **Level 1** | **Level 2** | **Level 3** | **Total** |
| **Pension Benefits:** | | | | | | | | |
| Money market investments | $ 112 | $ - | $ - | **$ 112** | $ 51 | $ - | $ - | **$ 51** |
| U.S. equity securities | - | - | - | **-** | 273 | 2,161 | - | **2,434** |
| Non-U.S. equity securities | - | - | - | **-** | 131 | 1,363 | - | **1,494** |
| Global equity securities | 402 | 3,017 | - | **3,419** | - | 197 | - | **197** |

| Fixed-income securities: | | | | | | | | |
| U.S. government | 1,576 | 139 | - | **1,715** | 1,224 | 172 | - | **1,396** |
| Corporate | 3 | 4,275 | 611 | **4,889** | 2 | 3,083 | 585 | **3,670** |
| Other | - | 576 | - | **576** | 1 | 688 | - | **689** |
| **Total** | **$ 2,618** | **$ 8,007** | **$ 1,409** | **$ 12,034** | **$ 2,204** | **$ 7,664** | **$ 1,137** | **$ 11,005** |
| **Other Benefits:** | | | | | | | | |
| Money market investments | $ 77 | $ - | $ - | **$ 77** | $ 48 | $ - | $ - | **$ 48** |
| U.S. equity securities | - | - | - | **-** | 86 | 222 | - | **308** |
| Non-U.S. equity securities | - | - | - | **-** | 79 | 108 | - | **187** |
| Global equity securities | 118 | 397 | - | **515** | - | 19 | - | **19** |
| Absolute return | - | - | 49 | **49** | - | - | 47 | **47** |
| Real assets | 68 | - | 28 | **96** | 31 | - | 6 | **37** |
| Fixed-income securities: | | | | | | | | |
| U.S. government | 148 | 5 | - | **153** | 151 | - | - | **151** |
| Corporate | 9 | 795 | 1 | **805** | - | 681 | 1 | **682** |
| Other | - | 38 | - | **38** | 1 | 44 | - | **45** |
| **Total** | **$ 420** | **$ 1,235** | **$ 78** | **$ 1,733** | **$ 396** | **$ 1,074** | **$ 54** | **$ 1,524** |
| **Total plan assets at fair value** | | | | **$ 13,767** | | | | **$ 12,529** |

In addition to the total plan assets disclosed at fair value in the table above, the trusts had other net assets of $132 million and other net liabilities of $45 million at December 31, 2012 and 2011, respectively. These net assets and net liabilities were comprised primarily of cash, accounts receivable, accounts payable, and deferred taxes.

**Valuation Techniques**

The following describes the valuation techniques used to measure the fair value of the assets and liabilities shown in the table above. All investments that are valued using a net asset value per share can be redeemed quarterly with a notice not to exceed 90 days.

***Money Market Investments***

Money market investments consist primarily of commingled funds of U.S. government short-term securities that are considered Level 1 assets and valued at the net asset value of $1 per unit. The number of units held by the plan fluctuates based on the unadjusted price changes in active markets for the funds’ underlying assets.

***Equity Securities***

The global equity categories include equity investments in common stock and equity-index futures, and commingled funds comprised of equity across multiple industries and regions of the world. Equity investments in common stock are actively traded on public exchanges and are therefore considered Level 1 assets. These equity investments are generally valued based on unadjusted prices in active markets for identical securities. Equity-index futures are valued based on unadjusted prices in active markets and are Level 1 assets. Collateral posted related to these futures consist of money market investments that are considered Level 1 assets. Commingled funds are valued using a net asset value per share and are maintained by investment companies for large institutional investors and are not publicly traded. Commingled funds are comprised primarily of underlying equity securities that are publicly traded on exchanges, and price quotes for the assets held by these funds are readily observable and available. Commingled funds are categorized as Level 2 assets.

***Absolute Return***

The absolute return category includes portfolios of hedge funds that are valued using a net asset value per share based on a variety of proprietary and non-proprietary valuation methods, including unadjusted prices for publicly-traded securities in active markets. Hedge funds are considered Level 3 assets.

***Real Assets***

The real asset category includes portfolios of commodities, commodities futures, global REITS, global listed infrastructure equities, and private real estate funds. The commodities, commodities futures, global REITS, and global listed infrastructure equities are actively traded on a public exchange and are therefore considered Level 1 assets. Collateral posted related to the commodities futures consist of money market investments that are considered Level 1 assets. Private real estate funds are valued using a net asset value per share derived using appraisals, pricing models, and valuation inputs that are unobservable and are considered Level 3 assets.

***Fixed-Income***

The fixed-income category includes U.S. government securities, corporate securities, and other fixed-income securities.

U.S. government fixed-income primarily consists of U.S. Treasury notes and U.S. government bonds that are valued based on quoted market prices or evaluated pricing data for similar securities adjusted for observable differences. These securities are categorized as Level 1 or Level 2 assets.

Corporate fixed-income primarily includes investment grade bonds of U.S. issuers across multiple industries that are valued based on a compilation of primarily observable information or broker quotes in non-active markets. The fair value of corporate bonds is determined using recently executed transactions, market price quotations (where observable), bond spreads or credit default swap spreads obtained from independent external parties such as vendors and brokers adjusted for any basis difference between cash and derivative instruments. These securities are classified as Level 2 assets. Corporate fixed-income also includes commingled funds that are valued using a net asset value per share and are comprised of corporate debt instruments. Commingled funds are considered Level 2 assets. Corporate fixed income also includes insurance contracts for deferred annuities. These investments are valued using a net asset value per share using pricing models and valuation inputs that are unobservable and are considered Level 3 assets.

Other fixed-income primarily includes pass-through and asset-backed securities. Pass-through securities are valued based on benchmark yields created using observable market inputs and are Level 2 assets. Asset-backed securities are primarily valued based on broker quotes and are considered Level 2 assets. Other fixed-income also includes municipal bonds and index futures. Collateral posted related to the index futures consist of money market investments that are considered Level 1 assets. Municipal bonds are valued based on a compilation of primarily observable information or broker quotes in non-active markets and are considered Level 2 assets. Futures are valued based on unadjusted prices in active markets and are Level 1 assets.

**Transfers Between Levels**

PG&E Corporation and the Utility recognize any transfers between levels in the fair value hierarchy as of the end of the reporting period. As shown in the table below, transfers out of Level 3 represent assets that were previously classified as Level 3 for which the lowest significant input became observable during the period. No significant transfers between Levels 1 and 2 occurred in the years ended December 31, 2012 and 2011.

**Level 3 Reconciliation**

The following table is a reconciliation of changes in the fair value of instruments for pension and other benefit plans that have been classified as Level 3 for the years ended December 31, 2012 and 2011:

| (in millions) | Pension Benefits | | | | |
|---|---|---|---|---|---|
| | Absolute Return | Corporate Fixed-Income | Other Fixed-Income | Real Assets | Total |
| Balance as of January 1, 2011 | $ 494 | $ 549 | $ 120 | $ - | **$ 1,163** |
| Actual return on plan assets: | | | | | |
| Relating to assets still held at the reporting date | 5 | 57 | (2) | - | **60** |
| Relating to assets sold during the period | 2 | - | 1 | - | **3** |
| Purchases, issuances, sales, and settlements | | | | | |
| Purchases | - | 14 | 2 | 65 | **81** |
| Settlements | (14) | (35) | (58) | - | **(107)** |
| Transfers out of Level 3 | - | - | (63) | - | **(63)** |
| **Balance as of December 31, 2011** | **$ 487** | **$ 585** | **$ -** | **$ 65** | **$ 1,137** |
| Actual return on plan assets: | | | | | |
| Relating to assets still held at the reporting date | 26 | 28 | - | 12 | **66** |
| Relating to assets sold during the period | - | (1) | - | **-** | **(1)** |
| Purchases, issuances, sales, and settlements | | | | | |
| Purchases | - | 12 | - | 208 | **220** |
| Settlements | - | (13) | - | **-** | **(13)** |
| **Balance as of December 31, 2012** | **$ 513** | **$ 611** | **$ -** | **$ 285** | **$ 1,409** |

| (in millions) | Other Benefits | | | | |
|---|---|---|---|---|---|
| | Absolute Return | Corporate Fixed-Income | Other Fixed-Income | Real Assets | Total |
| Balance as of January 1, 2011 | $ 47 | $ 129 | $ 10 | - | **$ 186** |
| Actual return on plan assets: | | | | | |
| Relating to assets still held at the reporting date | 1 | 16 | - | - | **17** |
| Relating to assets sold during the period | - | (2) | - | - | **(2)** |
| Purchases, issuances, sales, and settlements | | | | | |
| Purchases | - | 34 | - | 6 | **40** |
| Settlements | (1) | (30) | (5) | - | **(36)** |
| Transfers out of Level 3 | - | (146) | (5) | - | **(151)** |
| **Balance as of December 31, 2011** | **$ 47** | **$ 1** | **$ -** | **$ 6** | **$ 54** |
| Actual return on plan assets: | | | | | |
| Relating to assets still held at the reporting date | 2 | - | - | 1 | **3** |
| Relating to assets sold during the period | - | - | - | - | **-** |
| Purchases, issuances, sales, and settlements | | | | | |
| Purchases | - | 1 | - | 21 | **22** |
| Settlements | - | (1) | - | - | **(1)** |
| **Balance as of December 31, 2012** | **$ 49** | **$ 1** | **$ -** | **$ 28** | **$ 78** |

There were no transfers out of Level 3 in 2012.

**Cash Flow Information**

***Employer Contributions***

PG&E Corporation and the Utility contributed $282 million to the pension benefit plans and $149 million to the other benefit plans in 2012. These contributions are consistent with PG&E Corporation's and the Utility's funding policy, which is to contribute amounts that are tax-deductible and consistent with applicable regulatory decisions and federal minimum funding requirements. None of these pension or other benefits were subject to a minimum funding requirement requiring a cash contribution in 2012. The Utility's pension benefits met all the funding requirements under ERISA. PG&E Corporation and the Utility expect to make total contributions of approximately $327 million and $109 million to the pension plan and other postretirement benefit plans, respectively, for 2013.

***Benefits Payments and Receipts***

As of December 31, 2012, the estimated benefits PG&E Corporation is expected to pay and federal subsidies it is estimated to receive in each of the next five fiscal years, and in aggregate for the five fiscal years thereafter for PG&E Corporation, are as follows:

| **(in millions)** | **Pension** | **Other** | **Federal Subsidy** |
|---|---|---|---|
| 2013 | $ 581 | $ 108 | $ (6) |
| 2014 | 618 | 112 | (7) |
| 2015 | 656 | 115 | (7) |
| 2016 | 695 | 119 | (8) |
| 2017 | 732 | 124 | (8) |
| 2018 - 2022 | 4,172 | 662 | (42) |

There were no material differences between the estimated benefits expected to be paid by PG&E Corporation and paid by the Utility for the years presented above. There were no material differences between the estimated subsidies expected to be received by PG&E Corporation and received by the Utility for the years presented above.

**Defined Contribution Benefit Plans**

PG&E Corporation sponsors employee retirement savings plans, including a 401(k) defined contribution savings plan. These plans are qualified under applicable sections of the Code and provide for tax-deferred salary deductions, after-tax employee contributions, and employer contributions. Employer contribution expense reflected in PG&E Corporation's Consolidated Statements of Income was as follows:

| **(in millions)**<br>**Year ended December 31,** | |
|---|---|
| 2012 | $ 67 |
| 2011 | 65 |
| 2010 | 56 |

There were no material differences between the employer contribution expense for PG&E Corporation and the Utility for the years presented above.

**NOTE 13: RESOLUTION OF REMAINING CHAPTER 11 DISPUTED CLAIMS**

Various electricity suppliers filed claims in the Utility's Chapter 11 proceeding seeking payment for energy supplied to the Utility's customers through the wholesale electricity markets operated by the CAISO and the California Power Exchange ("PX") between May 2000 and June 2001. These claims, which the Utility disputes, are being addressed in various FERC and judicial proceedings in which the State of California, the Utility, and other electricity purchasers are seeking refunds from electricity suppliers, including governmental entities, for overcharges incurred in the CAISO and the PX wholesale electricity markets during this period. It is uncertain when all these FERC and judicial proceedings will be finally resolved.

While the FERC and judicial proceedings are pending, the Utility has pursued, and continues to pursue, settlements with electricity suppliers. The Utility entered into a number of settlement agreements with various electricity suppliers to resolve some of these disputed claims and to resolve the Utility's refund claims against these electricity suppliers. These settlement agreements provide that the amounts payable by the parties are, in some instances, subject to adjustment based on the outcome of the various refund offset and interest issues being considered by the FERC. Additional settlement discussions with other electricity suppliers are ongoing. Any net refunds, claim offsets, or other credits that the Utility receives from electricity suppliers through resolution of the remaining disputed claims, either through settlement or through the conclusion of the various FERC and judicial proceedings, are refunded to customers through rates in future periods.

On April 10, 2012, the Utility received from the PX a letter stating the mutual intent of the CAISO and the PX to offset the Utility's remaining disputed claims with its accounts receivable from the CAISO and the PX. Accordingly, the Utility has presented the net amount of remaining disputed claims and accounts receivable on the Consolidated Balance Sheets at December 31, 2012, reflecting its intent and right to offset these amounts. At December 31, 2011, $494 million was included within accounts receivable – other on the Consolidated Balance Sheets.

The following table presents the changes in the remaining net disputed claims liability, which includes interest:

| **(in millions)** | | |
|---|---|---|
| Balance at December 31, 2011 | $ | 848 |
| Interest accrued | | 27 |
| Less: supplier settlements | | (33) |
| **Balance at December 31, 2012** | **$** | **842** |

At December 31, 2012, the remaining net disputed claims liability consisted of $157 million of remaining net disputed claims (classified on the Consolidated Balance Sheets within accounts payable – disputed claims and customer refunds) and $685 million of accrued interest (classified on the Consolidated Balance Sheets within interest payable).

At December 31, 2012 and December 31, 2011, the Utility held $291 million and $320 million, respectively, in escrow, including earned interest, for payment of the remaining net disputed claims liability. These amounts are included within restricted cash on the Consolidated Balance Sheets.

Interest accrues on the remaining net disputed claims at the FERC-ordered rate, which is higher than the rate earned by the Utility on the escrow balance. Although the Utility has been collecting the difference between the accrued interest and the earned interest from customers in rates, these collections are not held in escrow. If the amount of accrued interest is greater than the amount of interest ultimately determined to be owed on the remaining net disputed claims, the Utility would refund to customers any excess interest collected. The amount of any interest that the Utility may be required to pay will depend on the final determined amount of the remaining net disputed claims and when such interest is paid.

## NOTE 14: RELATED PARTY AGREEMENTS AND TRANSACTIONS

The Utility and other subsidiaries provide and receive various services to and from their parent, PG&E Corporation, and among themselves. The Utility and PG&E Corporation exchange administrative and professional services in support of operations. Services provided directly to PG&E Corporation by the Utility are priced at the higher of fully loaded cost (i.e., direct cost of good or service and allocation of overhead costs) or fair market value, depending on the nature of the services. Services provided directly to the Utility by PG&E Corporation are generally priced at the lower of fully loaded cost or fair market value, depending on the nature and value of the services. PG&E Corporation also allocates various corporate administrative and general costs to the Utility and other subsidiaries using agreed-upon allocation factors, including the number of employees, operating and maintenance expenses, total assets, and other cost allocation methodologies. Management believes that the methods used to allocate expenses are reasonable and meet the reporting and accounting requirements of its regulatory agencies.

The Utility's significant related party transactions were as follows:

| | **Year Ended December 31,** | | |
|---|---|---|---|
| **(in millions)** | **2012** | **2011** | **2010** |
| **Utility revenues from:** | | | |
| Administrative services provided to PG&E Corporation | $ 7 | $ 6 | $ 7 |
| **Utility expenses from:** | | | |
| Administrative services received from PG&E Corporation | $ 50 | $ 49 | $ 55 |
| Utility employee benefit due to PG&E Corporation | 51 | 33 | 27 |

At December 31, 2012 and 2011, the Utility had receivables of $19 million and $21 million, respectively, from PG&E Corporation included in accounts receivable – other and other noncurrent assets – other on the Utility's Consolidated Balance Sheets, and payables of $17 million and $13 million, respectively, to PG&E Corporation included in accounts payable – other on the Utility's Consolidated Balance Sheets.

**NOTE 15: COMMITMENTS AND CONTINGENCIES**

PG&E Corporation and the Utility have substantial financial commitments in connection with agreements entered into to support the Utility's operating activities. PG&E Corporation and the Utility also have significant contingencies arising from their operations, including contingencies related to regulatory proceedings, nuclear operations, legal matters, environmental remediation, and guarantees.

**Commitments**

***Third-Party Power Purchase Agreements***

As part of the ordinary course of business, the Utility enters into various agreements to purchase power and electric capacity. The price of purchased power may be fixed or variable. Variable pricing is generally based on the current market price of either natural gas or electricity at the date of delivery.

The costs incurred for all power purchases were as follows:

| (in millions) | 2012 | 2011 | 2010 |
|---|---|---|---|
| Qualifying facilities [1] | $ 779 | $ 1,069 | $ 1,164 |
| Renewable energy contracts | 815 | 622 | 573 |
| Other power purchase agreements | 661 | 690 | 657 |

[1] Costs incurred include $ 286 , $297, and $321 attributable to renewable energy contracts with qualifying facilities at December 31, 2012 , 2011 and 2010 , respectively.

*Qualifying Facility Power Purchase Agreements* – Under the Public Utility Regulatory Policies Act of 1978 ("PURPA"), electric utilities are required to purchase energy and capacity from independent power producers with generation facilities that meet the statutory definition of a qualifying facility ("QF"). QFs include small power production facilities whose primary energy sources are co-generation facilities that produce combined heat and power and renewable generation facilities. To implement the purchase requirements of PURPA, the CPUC required California investor-owned electric utilities to enter into long-term power purchase agreements with QFs and approved the applicable terms and conditions, prices, and eligibility requirements. These agreements require the Utility to pay for energy and capacity. Energy payments are based on the QF's electrical output and CPUC-approved energy prices. Capacity payments are based on the QF's total available capacity and contractual capacity commitment. Capacity payments may be adjusted if the QF exceeds or fails to meet performance requirements specified in the applicable power purchase agreement.

As of December 31, 2012, the Utility had agreements with 180 QFs that are in operation, which expire at various dates between 2013 and 2028.

*Renewable Energy Power Purchase Agreements* – The Utility has entered into various contracts to purchase renewable energy to help the Utility meet California's current renewable portfolio standard ("RPS") requirement. California's RPS program gradually increases the amount of renewable energy that load-serving entities, such as the Utility, must deliver to their customers from an average of at least 20% of their total retail sales in the years 2011-2013 to 33% of their total retail sales in 2021 and thereafter. Generally these agreements include an energy payment based on the electrical output and a fixed price per Megawatt-hour. The Utility's obligations under a significant portion of these agreements are contingent on the third party's construction of new generation facilities. The table below includes arrangements that have been approved by the CPUC and have completed major milestones with respect to construction. The Utility's commitments for energy payments under these renewable energy agreements are expected to grow significantly, assuming that the facilities are developed timely.

*Other Power Purchase Agreements* – The Utility has entered into several power purchase agreements for conventional generation resources, which include tolling agreements and resource adequacy agreements. The Utility's obligation under a portion of these agreements is contingent on the third parties' development of new generation facilities to provide capacity and energy products to the Utility under tolling agreements. The Utility also has agreements with various irrigation districts and water agencies to purchase hydroelectric power.

At December 31, 2012, the undiscounted future expected obligations under power purchase agreements were as follows:

| (in millions) | Qualifying Facility | Renewable (Other than QF) | Other | Total Payments |
|---|---|---|---|---|
| 2013 | $ 892 | $ 1,356 | $ 846 | $ 3,094 |
| 2014 | 914 | 1,843 | 677 | 3,434 |
| 2015 | 727 | 2,038 | 649 | 3,414 |
| 2016 | 618 | 2,054 | 626 | 3,298 |
| 2017 | 490 | 2,053 | 597 | 3,140 |
| Thereafter | 2,238 | 30,958 | 3,322 | 36,518 |
| **Total** | **$ 5,879** | **$ 40,302** | **$ 6,717** | **$ 52,898** |

Some of the power purchase agreements that the Utility entered into with independent power producers that are QFs are treated as capital leases. The following table shows the future fixed capacity payments due under the QF agreements that are treated as capital leases. (These amounts are also included in the table above.) The fixed capacity payments are discounted to their present value in the table below using the Utility's incremental borrowing rate at the inception of the leases. The amount of this discount is shown in the table below as the amount representing interest.

| (in millions) | |
|---|---|
| 2013 | $ 35 |
| 2014 | 27 |
| 2015 | 24 |
| 2016 | 22 |
| 2017 | 18 |
| Thereafter | 20 |
| **Total fixed capacity payments** | **146** |
| Less: amount representing interest | 21 |
| **Present value of fixed capacity payments** | **$ 125** |

Minimum lease payments associated with the lease obligations are included in cost of electricity on PG&E Corporation's and the Utility's Consolidated Statements of Income. The timing of the recognition of the lease expense conforms to the ratemaking treatment for the Utility's recovery of the cost of electricity. The QF agreements that are treated as capital leases expire between April 2014 and September 2021.

The present value of the fixed capacity payments due under these agreements is recorded on PG&E Corporation's and the Utility's Consolidated Balance Sheets. At December 31, 2012 and 2011, current liabilities – other included $29 million and $36 million, respectively, and noncurrent liabilities – other included $96 million and $212 million, respectively. The corresponding assets at December 31, 2012 and 2011 of $125 million and $248 million including accumulated amortization of $148 million and $160 million, respectively are included in property, plant, and equipment on PG&E Corporation's and the Utility's Consolidated Balance Sheets.

***Natural Gas Supply, Transportation, and Storage Commitments***

The Utility purchases natural gas directly from producers and marketers in both Canada and the United States to serve its core customers and to fuel its owned-generation facilities. The Utility also contracts for natural gas transportation from the points at which the Utility takes delivery (typically in Canada, the US Rocky Mountain supply area, and the southwestern United States) to the points at which the Utility's natural gas transportation system begins. In addition, the Utility has contracted for natural gas storage services in northern California in order to more reliably meet customers' loads.

At December 31, 2012, the Utility's undiscounted future expected payment obligations for natural gas supplies, transportation and storage were as follows:

| (in millions) | | |
|---|---|---|
| 2013 | $ | 707 |
| 2014 | | 208 |
| 2015 | | 192 |
| 2016 | | 152 |
| 2017 | | 108 |
| Thereafter | | 865 |
| **Total** | **$** | **2,232** |

Costs incurred for natural gas purchases, natural gas transportation services, and natural gas storage, which include contracts less than 1 year, amounted to $1.3 billion in 2012, $1.8 billion in 2011, and $1.6 billion in 2010.

***Nuclear Fuel Agreements***

The Utility has entered into several purchase agreements for nuclear fuel. These agreements have terms ranging from one to 13 years and are intended to ensure long-term nuclear fuel supply. The contracts for uranium and for conversion and enrichment services provide for 100% coverage of reactor requirements through 2020, while contracts for fuel fabrication services provide for 100% coverage of reactor requirements through 2017. The Utility relies on a number of international producers of nuclear fuel in order to diversify its sources and provide security of supply. Pricing terms are also diversified, ranging from market-based prices to base prices that are escalated using published indices.

At December 31, 2012, the undiscounted future expected payment obligations for nuclear fuel were as follows:

| (in millions) | | |
|---|---|---|
| 2013 | $ | 113 |
| 2014 | | 128 |
| 2015 | | 194 |
| 2016 | | 147 |
| 2017 | | 148 |
| Thereafter | | 878 |
| **Total** | **$** | **1,608** |

Payments for nuclear fuel amounted to $118 million in 2012, $77 million in 2011, and $144 million in 2010.

***Other Commitments***

The Utility has other commitments relating to operating leases. At December 31, 2012, the future minimum payments related to these commitments were as follows:

| (in millions) | | |
|---|---|---|
| 2013 | $ | 42 |
| 2014 | | 37 |
| 2015 | | 32 |
| 2016 | | 31 |
| 2017 | | 24 |
| Thereafter | | 206 |
| **Total** | **$** | **372** |

Payments for other commitments relating to operating leases amounted to $32 million in 2012, $27 million in 2011, and $25 million in 2010. PG&E Corporation and the Utility had operating leases on office facilities expiring at various dates from 2013 to 2023. Certain leases on office facilities contain escalation clauses requiring annual increases in rent ranging from 2% to 5%. The rentals payable under these leases may increase by a fixed amount each year, a percentage of increase over base year, or the consumer price index. Most leases contain extension options ranging between one and five years.

***Underground Electric Facilities***

At December 31, 2012, the Utility was committed to spending approximately $277 million for the conversion of existing overhead electric facilities to underground electric facilities. These funds are conditionally committed depending on the timing of the work, including the schedules of the respective cities, counties, and communications utilities involved. The Utility expects to spend $86 million each year in connection with these projects. Consistent with past practice, the Utility expects that these capital expenditures will be included in rate base as each individual project is completed and that the amount of the capital expenditures will be recoverable from customers through rates.

**Contingencies**

**Legal and Regulatory Contingencies**

PG&E Corporation and the Utility are subject to various laws and regulations and, in the normal course of business, PG&E Corporation and the Utility are named as parties in a number of claims and lawsuits. In addition, the Utility can incur penalties for failure to comply with federal, state, or local laws and regulations.

PG&E Corporation and the Utility record a provision for a loss when it is both probable that a loss has been incurred and the amount of the loss can be reasonably estimated. PG&E Corporation and the Utility evaluate the range of reasonably estimated losses and record a provision based on the lower end of the range, unless an amount within the range is a better estimate than any other amount. These accruals, and the estimates of any additional reasonably possible losses (or reasonably possible losses in excess of the amounts accrued), are reviewed quarterly and are adjusted to reflect the impacts of negotiations, discovery, settlements and payments, rulings, advice of legal counsel, and other information and events pertaining to a particular matter. In assessing the amounts related to such contingencies, PG&E Corporation's and the Utility's policy is to exclude anticipated legal costs.

The accrued liability associated with claims and litigation, regulatory proceedings, penalties, and other legal matters (other than the third-party claims, litigation, and investigations related to natural gas matters that are discussed below) totaled $34 million at December 31, 2012 and $52 million at December 31, 2011 and are included in PG&E Corporation's and the Utility's current liabilities – other in the Consolidated Balance Sheets. Except as discussed below, PG&E Corporation and the Utility do not believe that losses associated with legal and regulatory contingencies would have a material impact on their financial condition, results of operations, or cash flows.

**Natural Gas Matters**

On September 9, 2010, an underground 30-inch natural gas transmission pipeline ("Line 132") owned and operated by the Utility, ruptured in a residential area located in the City of San Bruno, California (the "San Bruno accident"). The ensuing explosion and fire resulted in the deaths of eight people, numerous personal injuries, and extensive property damage. Following the San Bruno accident, various regulatory proceedings, investigations, and lawsuits were commenced. The Natural Transportation Safety Board, an independent review panel appointed by the CPUC, and the CPUC's Safety and Enforcement Division ("SED") completed investigations into the causes of the accident, placing the blame primarily on the Utility.

***Pending CPUC Investigations and Enforcement Matters***

The CPUC is conducting three investigations pertaining to the Utility's natural gas operations, which are described below. In 2012, the SED issued reports in each of these investigations alleging that the Utility committed numerous violations of applicable laws and regulations and recommending that the CPUC impose penalties on the Utility. (See "Penalties Conclusion" below.) Although the Utility, the SED, and other parties have engaged in settlement discussions in an effort to reach a stipulated outcome to resolve the investigations, the parties have not reached an agreement. PG&E Corporation and the Utility are uncertain whether or when any stipulated outcome might be reached. Any agreement regarding a stipulated outcome would be subject to CPUC approval.

The CPUC has concluded evidentiary hearings in each investigation. The CPUC administrative law judges ("ALJs") who oversee the investigations have adopted a revised procedural schedule, including the dates by which the parties' briefs must be submitted. The ALJs have also permitted the other parties (the City of San Bruno, The Utility Reform Network, and the City and County of San Francisco) to separately address in their opening briefs their allegations against the Utility, if any, in addition to the allegations made by the SED. The ALJs have ordered the SED and other parties to file single coordinated briefs to address potential monetary penalties and remedies (which could include remedial operational or policy measures) for all three investigations by April 26, 2013. After briefing has been completed, the ALJs will issue one or more presiding officer's decisions listing the violations determined to have been committed, the amount of penalties, and any required remedial actions. Based on the revised procedural schedule, one or more presiding officer's decisions will be issued by July 23, 2013. The decisions would become the final decisions of the CPUC thirty days after issuance unless the Utility or another party filed an appeal, or a CPUC commissioner requested review of the decision, within such time.

*CPUC Investigation Regarding the Utility's Facilities Records for its Natural Gas Pipelines*

In February 2011, the CPUC commenced an investigation pertaining to safety recordkeeping for Line 132, as well as for the Utility's entire gas transmission system. Among other matters, the investigation will determine whether the San Bruno accident would have been preventable by the exercise of safe procedures and /or accurate and technical recordkeeping in compliance with the law. In March 2012, the SED submitted testimony alleging that the Utility committed numerous violations of applicable laws and regulations based on the findings of the SED's records management consultant and an engineering consultant. Among other findings, the consultants' reports concluded that: the Utility's recordkeeping practices have been deficient and have diminished pipeline safety; the San Bruno accident may have been prevented had the Utility managed its records properly over the years; and that the Utility has been operating, and continues to operate, without a functional integrity management program. The Utility submitted testimony to the CPUC that acknowledged that improvements are needed to its asset management system and recordkeeping practices, but disputed many of the SED's findings and allegations. The CPUC concluded evidentiary hearings in this investigation in January 2013. Briefing on the issue of alleged violations is scheduled to be completed on April 19, 2013.

*CPUC Investigation Regarding the Utility's Class Location Designations for Pipelines*

In November 2011, the CPUC commenced an investigation pertaining to the Utility's operation of its natural gas transmission pipeline system in or near locations of higher population density. Under federal and state regulations, the class location designation of a pipeline is based on the types of buildings, population density, or level of human activity near the segment of pipeline, and is used to determine the maximum allowable operating pressure up to which a pipeline can be operated. In its May 2012 investigative report, the SED cited the Utility's admissions in previous reports to the CPUC that it had failed to classify pipeline segments properly and to document past patrols of transmission lines and concluded that these failures resulted in over three thousand violations of state and federal standards. On July 23, 2012, the Utility submitted testimony in response to the SED's report that acknowledged deficiencies in the Utility's past class location and patrol processes and described the efforts to improve those processes. The CPUC concluded evidentiary hearings in this investigation in September 2012 and briefing on the issue of alleged violations has been completed.

*CPUC Investigation Regarding the San Bruno Accident*

In January 2012, the CPUC commenced an investigation to determine whether the Utility violated applicable laws and requirements in connection with the San Bruno accident, as alleged by the SED. In its January investigative report, the SED alleged that the San Bruno accident was caused by the Utility's failure to follow accepted industry practice when installing the section of pipe that failed, the Utility's failure to comply with federal pipeline integrity management requirements, the Utility's inadequate record keeping practices, deficiencies in the Utility's data collection and reporting system, the Utility's inadequate procedures to handle emergencies and abnormal conditions, the Utility's deficient emergency response actions after the incident, and a systemic failure of the Utility's corporate culture that emphasized profits over safety. The CPUC stated that the scope of the investigation will include all past operations, practices and other events or courses of conduct that could have led to or contributed to the San Bruno accident, as well as, the Utility's compliance with CPUC orders and resolutions issued since the date of the San Bruno accident.

The Utility submitted testimony to the CPUC that acknowledged its liability for the San Bruno accident and, based on testimony from an expert witness, stated that the likely root cause of the pipeline rupture was: (1) a missing interior weld on the pipe; (2) a ductile tear on the pipe likely caused by a hydrostatic test performed in 1956 at too low a pressure to cause the defective weld to fail; and (3) a fatigue crack on the pipe that grew over time. However, the Utility stated that many of the findings identified in the SED's reports are not deficiencies, or are much less severe than alleged, and do not constitute violations of applicable laws and regulations. The CPUC concluded evidentiary hearings in this investigation in January 2013. Briefing on the issue of alleged violations is scheduled to be completed on April 12, 2013.

*Other Potential Enforcement Matters*

California gas corporations are required to provide notice to the CPUC of any self-identified or self-corrected violations of certain state and federal regulations related to the safety of natural gas facilities and the corporations' natural gas operating practices. The CPUC has authorized the SED to issue citations and impose penalties based on self-reported violations. In April 2012, the CPUC affirmed a $17 million penalty that had been imposed by the SED based on the Utility's self-report that it failed to conduct periodic leak surveys because it had not included 16 gas distribution maps in its leak survey schedule. (The Utility has paid the penalty and completed all of the missed leak surveys.) As of December 31, 2012, the Utility has submitted 34 self-reports with the CPUC, plus additional follow-up reports. The SED has not yet taken formal action with respect to the Utility's other self-reports. The SED may issue additional citations and impose penalties on the Utility associated with these or future reports that the Utility may file. (See "Penalties Conclusion" below.)

In addition, in July 2012, the Utility reported to the CPUC that it had discovered that its access to some pipelines has been limited by vegetation overgrowth or building structures that encroach upon some of the Utility's gas pipeline rights-of-way. The Utility is undertaking a system-wide effort to identify and remove encroachments from its pipeline rights-of-way over a multi-year period. PG&E Corporation and the Utility are uncertain how this matter will affect the above investigative proceedings related to natural gas operations, or whether additional proceedings or investigations will be commenced that could result in regulatory orders or the imposition of penalties on the Utility.

*Penalties Conclusion*

The CPUC can impose penalties of up to $20,000 per day, per violation. (For violations that are considered to have occurred on or after January 1, 2012, the statutory penalty has increased to a maximum of $50,000 per day, per violation.) The CPUC has wide discretion to determine the amount of penalties based on the totality of the circumstances, including such factors as the gravity of the violations; the type of harm caused by the violations and the number of persons affected; and the good faith of the entity charged in attempting to achieve compliance, after notification of a violation. The CPUC is also required to consider the appropriateness of the amount of the penalty to the size of the entity charged. The CPUC has historically exercised this wide discretion in determining penalties. The CPUC's delegation of enforcement authority to the SED allows the SED to use these factors in exercising discretion to determine the number of violations, but the SED is required to impose the maximum statutory penalty for each separate violation that the SED finds.

The CPUC has stated that it is prepared to impose significant penalties on the Utility if the CPUC determines that the Utility violated applicable laws, rules, and orders. In determining the amount of penalties the ALJs may consider the testimony of financial consultants engaged by the SED and the Utility. The SED's financial consultant prepared a report concluding that PG&E Corporation could raise approximately $2.25 billion through equity issuances, in addition to equity PG&E Corporation had already forecasted it would issue in 2012, to fund CPUC-imposed penalties on the Utility. The Utility's financial consultant disagreed with this financial analysis and asserted that a fine in excess of financial analysts' expectations, which the consultant's report cited as a mean of $477 million, would make financing more difficult and expensive. The ALJs have scheduled a hearing to be held on March 4 and March 5, 2013 to consider the SED's and Utility's testimony. The SED and other parties are scheduled to file briefs to address potential monetary penalties and remedies in all three investigations by April 26, 2013.

PG&E Corporation and the Utility believe it is probable that the Utility will incur penalties of at least $200 million in connection with these pending investigations and potential enforcement matters and have accrued this amount in their consolidated financial statements. PG&E Corporation and the Utility are unable to make a better estimate of probable losses or estimate the range of reasonably possible losses in excess of the amount accrued due to the many variables that could affect the final outcome of these matters and the ultimate amount of penalties imposed on the Utility could be materially higher than the amount accrued. These variables include how the CPUC and the SED will exercise their discretion in calculating the amount of penalties, including how the total number of violations will be counted; how the duration of the violations will be determined; whether the amount of penalties in each investigation will be determined separately or in the aggregate; how the financial resources testimony submitted by the SED and the Utility will be considered; whether the Utility's costs to perform any required remedial actions will be considered; and whether and how the financial impact of non-recoverable costs the Utility has already incurred, and will continue to incur, to improve the safety and reliability of its pipeline system, will be considered. (See "CPUC Gas Safety Rulemaking Proceeding" below.)

These estimates, and the assumptions on which they are based, are subject to change based on many factors, including rulings, orders, or decisions that may be issued by the ALJs; whether the outcome of the investigations is resolved through a fully litigated process or a stipulated outcome that is approved by the CPUC; whether the SED will take additional action with respect to the Utility's self-reports; and whether the CPUC or the SED takes any action with respect to the encroachment matter described above. Future changes in these estimates or the assumptions on which they are based could have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

***CPUC Gas Safety Rulemaking Proceeding***

The CPUC is conducting a rulemaking proceeding to adopt new safety and reliability regulations for natural gas transmission and distribution pipelines in California and the related ratemaking mechanisms. On December 20, 2012, the CPUC approved the Utility's proposed pipeline safety enhancement plan (filed in August 2011) to modernize and upgrade its natural gas transmission system but disallowed the Utility's request for rate recovery of a significant portion of plan-related costs the Utility forecasted it would incur over the first phase of the plan (2011 through 2014). The CPUC decision limited the Utility's recovery of capital expenditures to $1.0 billion of the total $1.4 billion requested. Various parties have asked the CPUC to reconsider its decision, arguing that the Utility's cost recovery should be more limited. For 2012, the Utility recorded a $353 million charge to net income for plan-related capital expenditures incurred that are forecasted to exceed the CPUC's authorized levels or that were specifically disallowed. Future disallowed amounts will be charged to net income in the period incurred and could have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

***Criminal Investigation***

In June 2011, the Utility was notified that representatives from the U.S. Department of Justice, the California Attorney General's Office, and the San Mateo County District Attorney's Office are conducting an investigation of the San Bruno accident. Federal and state authorities have indicated that the Utility is a target of the investigation. The Utility is cooperating with the investigation. PG&E Corporation and the Utility are uncertain whether any criminal charges will be brought against either company or any of their current or former employees. PG&E Corporation and the Utility are unable to estimate the amount (or range of amounts) of reasonably possible losses associated with any civil or criminal penalties that could be imposed on the Utility as a consequence of this investigation.

***Third-Party Claims***

In addition to the investigations and proceedings discussed above, at December 31, 2012, approximately 140 lawsuits involving third-party claims for personal injury and property damage, including two class action lawsuits, had been filed against PG&E Corporation and the Utility in connection with the San Bruno accident on behalf of approximately 450 plaintiffs. The lawsuits seek compensation for personal injury and property damage, and other relief, including punitive damages. These cases were coordinated and assigned to one judge in the San Mateo County Superior Court. Many of the plaintiffs' claims have been resolved through settlements. The trial of the first group of remaining cases began on January 2, 2013 with pretrial motions and hearings. On January 14, 2013, the court vacated the trial and all pending hearings due to the significant number of cases that have been settled outside of court. The court has urged the parties to settle the remaining cases. As of February 8, 2013, the Utility has entered into settlement agreements to resolve the claims of approximately 140 plaintiffs. It is uncertain whether or when the Utility will be able to resolve the remaining claims through settlement.

At December 31, 2012, the Utility had recorded cumulative charges of $455 million for estimated third-party claims related to the San Bruno accident, including an $80 million charge made during 2012, primarily to reflect settlements and information exchanged by the parties during the settlement and discovery process. The Utility estimates it is reasonably possible that it may incur as much as an additional $145 million for third-party claims, for a total possible loss of $600 million. PG&E Corporation and the Utility are unable to estimate the amount (or range of amounts) of reasonably possible losses associated with punitive damages, if any, related to these matters. The Utility has publicly stated that it is liable for the San Bruno accident and will take financial responsibility to compensate all of the victims for the injuries they suffered as a result of the accident.

The following table presents changes in third-party claims activity since the San Bruno accident in 2010; the balance is included in other current liabilities in PG&E Corporation's and the Utility's Consolidated Balance Sheets:

| **(in millions)** | |
|---|---|
| Balance at January 1, 2010 | $ - |
| Loss accrued | 220 |
| Less: Payments | (6) |
| Balance at December 31, 2010 | 214 |
| Additional loss accrued | 155 |
| Less: Payments | (92) |
| Balance at December 31, 2011 | 277 |
| Additional loss accrued | 80 |
| Less: Payments | (211) |
| **Balance at December 31, 2012** | **$ 146** |

Additionally, the Utility has liability insurance from various insurers who provide coverage at different policy limits that are triggered in sequential order or "layers." Generally, as the policy limit for a layer is exhausted the next layer of insurance becomes available. The aggregate amount of insurance coverage for third-party liability attributable to the San Bruno accident is approximately $992 million in excess of a $10 million deductible. The Utility has recognized cumulative insurance recoveries for third-party claims of $284 million, which included $185 million for 2012 and $99 million for 2011. Although the Utility believes that a significant portion of costs incurred for third-party claims relating to the San Bruno accident will ultimately be recovered through its insurance, it is unable to predict the amount and timing of additional insurance recoveries.

***Class Action Complaint***

On August 23, 2012, a complaint was filed in the San Francisco Superior Court against PG&E Corporation and the Utility (and other unnamed defendants) by individuals who seek certification of a class consisting of all California residents who were customers of the Utility between 1997 and 2010, with certain exceptions. The plaintiffs allege that the Utility collected more than $100 million in customer rates from 1997 through 2010 for the purpose of various safety measures and operations projects but instead used the funds for general corporate purposes such as executive compensation and bonuses. To state their claims, the plaintiffs cited the SED's January 2012 investigative report of the San Bruno accident that alleged, from 1996 to 2010, the Utility spent less on capital expenditures and operations and maintenance expense for its natural gas transmission operations than it recovered in rates, by $95 million and $39 million, respectively. The SED recommended in that report that the Utility should use such amounts to fund future gas transmission expenditures and operations. Plaintiffs allege that PG&E Corporation and the Utility engaged in unfair business practices in violation of Section 17200 of the California Business and Professions Code ("Section 17200") and claim that this violation also constitutes a violation of California Public Utilities Code Section 2106 ("Section 2106"), which provides a private right of action for violations of the California constitution or state laws by public utilities. Plaintiffs seek restitution and disgorgement under Section 17200 and compensatory and punitive damages under Section 2106.

PG&E Corporation and the Utility contest the plaintiffs' allegations. In January 2013, PG&E Corporation and the Utility requested that the court dismiss the complaint on the grounds that the CPUC has exclusive jurisdiction to adjudicate the issues raised by the plaintiffs' allegations. In the alternative, PG&E Corporation and the Utility requested that the court stay the proceeding until the CPUC investigations described above are concluded. The court has set a hearing on the motion for April 26, 2013. Due to the early stage of this proceeding, PG&E Corporation and the Utility are unable to estimate the amount (or range of amounts) of reasonably possible losses that may be incurred in connection with this matter.

***Spent Nuclear Fuel Storage Proceedings***

Under the Nuclear Waste Policy Act of 1982, the DOE and electric utilities with commercial nuclear power plants were authorized to enter into contracts under which the DOE would be required to dispose of the utilities' spent nuclear fuel and high-level radioactive waste by January 1998, in exchange for fees paid by the utilities. The DOE has been unable to meet its contractual obligation to the Utility to dispose of nuclear waste from the Utility's two nuclear generating units at Diablo Canyon and its retired nuclear facility at Humboldt Bay ("Humboldt Bay Unit 3"). As a result, the Utility constructed an interim dry cask storage facility to store spent fuel at Diablo Canyon through at least 2024, and a separate facility at Humboldt Bay. The Utility and other nuclear power plant owners sued the DOE to recover the costs that they incurred to construct interim storage facilities for spent nuclear fuel.

On September 5, 2012, the U.S. Department of Justice and the Utility executed a settlement agreement that awarded the Utility $266 million for spent fuel storage costs incurred through December 31, 2010. As of December 31, 2012, the Utility has collected the settlement proceeds from the U.S. Treasury and recorded the amount as a regulatory balancing account. The proceeds will be refunded to customers through rates in future periods. The agreement also allows the Utility to submit annual claims to re cover costs incurred in 2011, 2012 and 2013, which the Utility estimates to be approximately $25 million per year . These amounts will also be refunded to customers in future periods. At December 31, 2012, PG&E Corporation and the Utility have not recorded any receivables for annual claims in their Consolidated Balance Sheets. The agreement does not address costs incurred for spent fuel storage after 2013 and such costs could be the subject of future litigation. Considerable uncertainty continues to exist regarding when and whether the DOE will meet its contractual obligation to the Utility and other nuclear power plant owners to dispose of spent nuclear fuel.

***Nuclear Insurance***

The Utility is a member of Nuclear Electric Insurance Limited ("NEIL") which is a mutual insurer owned by utilities with nuclear facilities. NEIL provides insurance coverage for property damages and business interruption losses incurred by the Utility due to a nuclear event (meaning that nuclear material is released) that occurs at the Utility's two nuclear generating units at Diablo Canyon and the retired Humboldt Bay Unit 3. NEIL provides property damage and business interruption coverage of up to $3.2 billion per nuclear incident ($2.7 billion for property damage and $490 million for business interruption) for Diablo Canyon. In addition, NEIL provides $131 million of coverage for nuclear and non-nuclear property damages at Humboldt Bay Unit 3. (NEIL also provides insurance coverage to the Utility for non-nuclear property damages and business interruption losses at Diablo Canyon, though with significantly lower limits beginning in April 2013.) Under this insurance, if any nuclear generating facility insured by NEIL suffers a catastrophic loss, the Utility may be required to pay an additional premium of up to $44 million per one-year policy term. NRC regulations require that the Utility's property damage insurance policies provide that all proceeds from such insurance be applied, first, to place the plant in a safe and stable condition after an accident and, second, to decontaminate the plant before any proceeds can be used for decommissioning or plant repair.

NEIL policies also provide coverage for damages caused by acts of terrorism at nuclear power plants. Certain acts of terrorism may be "certified" by the Secretary of the Treasury. If damages are caused by certified acts of terrorism, NEIL can obtain compensation from the federal government and will provide up to its full policy limit of $3.2 billion for each insured loss. In contrast, NEIL would treat all non-certified terrorist acts occurring within a 12-month period against one or more commercial nuclear power plants insured by NEIL as one event and the owners of the affected plants would share the $3.2 billion policy limit amount.

Under the Price-Anderson Act, public liability claims that arise from nuclear incidents that occur at Diablo Canyon, and that occur during the transportation of material to and from Diablo Canyon are limited to $12.6 billion. As required by the Price-Anderson Act, the Utility purchased the maximum available public liability insurance of $375 million for Diablo Canyon. The balance of the $12.6 billion of liability protection is provided under a loss-sharing program among utilities owning nuclear reactors. The Utility may be assessed up to $235 million per nuclear incident under this program, with payments in each year limited to a maximum of $35 million per incident. Both the maximum assessment and the maximum yearly assessment are adjusted for inflation at least every five years. The next scheduled adjustment is due on or before October 29, 2013.

The Price-Anderson Act does not apply to public liability claims that arise from nuclear incidents that occur during shipping of nuclear material from the nuclear fuel enricher to a fuel fabricator or that occur at the fuel fabricator's facility. Such claims are covered by nuclear liability policies purchased by the enricher and the fuel fabricator, as well as by separate supplier's and transporter's insurance policies. The Utility has a separate supplier's and transporter's policy that provides coverage for claims arising from some of these incidents up to a maximum of $375 million per incident.

In addition, the Utility has $53 million of liability insurance for Humboldt Bay Unit 3 and has a $500 million indemnification from the NRC for public liability arising from nuclear incidents, covering liabilities in excess of the $53 million of liability insurance.

If the Utility incurs losses in connection with any of its nuclear generation facilities that are either not covered by insurance or exceed the amount of insurance available, such losses could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

**Environmental Remediation Contingencies**

The Utility has been, and may be required to pay for environmental remediation at sites where it has been, or may be, a potentially responsible party under federal and state environmental laws. These sites include former manufactured gas plant sites, power plant sites, gas gathering sites, sites where natural gas compressor stations are located, and sites used by the Utility for the storage, recycling, or disposal of potentially hazardous substances. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site.

Given the complexities of the legal and regulatory environment and the inherent uncertainties involved in the early stages of a remediation project, the process for estimating remediation liabilities is subjective and requires significant judgment. The Utility records an environmental remediation liability when site assessments indicate that remediation is probable and the Utility can reasonably estimate the loss or a range of probable amounts. The Utility records an environmental remediation liability based on the lower end of the range of estimated probable costs, unless an amount within the range is a better estimate than any other amount. Amounts recorded are not discounted to their present value.

The following table presents the changes in the environmental remediation liability:

| **(in millions)** | | |
|---|---|---|
| Balance at December 31, 2011 | $ | 785 |
| Additional remediation costs accrued: | | |
| Transfer to regulatory account for recovery | | 150 |
| Amounts not recoverable from customers | | 150 |
| Less: Payments | | (175) |
| **Balance at December 31, 2012** | **$** | **910** |

The environmental remediation liability is composed of the following:

| | **Balance at December 31,** | | | |
|---|---|---|---|---|
| **(in millions)** | **2012** | | **2011** | |
| Utility-owned natural gas compressor site near Hinkley, California [(1)] | $ | 226 | $ | 149 |
| Utility-owned natural gas compressor site near Topock, Arizona [(1)] | | 239 | | 218 |
| Utility-owned generation facilities (other than for fossil fuel-fired), other facilities, and third-party disposal sites | | 158 | | 133 |
| Former manufatured gas plant sites owned by the Utility or third parties | | 181 | | 154 |
| Fossil fuel-fired generation facilities formerly owned by the Utility | | 87 | | 81 |
| Decommissioning fossil fuel-fired generation facilities and sites | | 19 | | 50 |
| **Total environmental remediation liability** | **$** | **910** | **$** | **785** |

[(1)] See "Natural Gas Compressor Site" below.

The CPUC has authorized the Utility to recover most of its environmental remediation costs through various ratemaking mechanisms, subject to exclusions for certain sites, such as the Hinkley natural gas compressor site, and subject to limitations for certain liabilities such as amounts associated with fossil fuel-fired generation facilities formerly owned by the Utility. At December 31, 2012, the Utility expected to recover $548 million through these ratemaking mechanisms. The Utility also recovers environmental remediation costs from insurance carriers and from other third parties whenever possible. Amounts collected in excess of the Utility's ultimate obligations may be subject to refund to customers through rates.

***Natural Gas Compressor Sites***

The Utility is legally responsible for remediating groundwater contamination caused by hexavalent chromium used in the past at the Utility's natural gas compressor sites near Hinkley, California ("Hinkley site") and Topock, Arizona ("Topock site"). The Utility is also required to take measures to abate the effects of the contamination on the environment.

***Hinkley Site***

The Utility's remediation and abatement efforts at the Hinkley site are subject to the regulatory authority of the California Regional Water Quality Control Board, Lahontan Region ("Regional Board"). The Regional Board has issued several orders directing the Utility to implement interim remedial measures to reduce the mass of the underground plume of hexavalent chromium, monitor and control movement of the plume, and provide replacement water to affected residents.

The Utility submitted its proposed final remediation plan to the Regional Board in September 2011 recommending a combination of remedial methods to clean up groundwater contamination, including using pumped groundwater from extraction wells to irrigate agricultural land and in-situ treatment of the contaminated water. In August 2012, the Regional Board issued a draft environmental impact report ("EIR") that evaluated the Utility's proposed methods and the potential environmental impacts. The Utility expects that the Regional Board will consider certification of the final EIR in the second quarter of 2013. Upon certification of the EIR, the Regional Board is expected to issue the final cleanup standards in late 2013.

The Regional Board ordered the Utility in October 2011 to provide an interim and permanent replacement water system for resident households located near the chromium plume that have domestic wells containing hexavalent chromium in concentrations greater than 0.02 parts per billion. The Utility filed a petition with the California State Water Resources Control Board to contest certain provisions of the order. In June 2012, the Regional Board issued an amended order to allow the Utility to implement a whole house water replacement program for resident households located near the chromium plume boundary. Eligible residents may decide whether to accept a replacement water supply or have the Utility purchase their properties, or alternatively not participate in the program. As of January 31, 2013, approximately 350 residential households are covered by the program and the majority have opted to accept the Utility's offer to purchase their properties. The Utility is required to complete implementation of the whole house water replacement systems by August 31, 2013. The Utility will maintain and operate the whole house replacement systems for five years or until the State of California has adopted a drinking water standard specifically for hexavalent chromium at which time the program will be evaluated.

At December 31, 2012 and 2011, $226 million and $149 million, respectively, were accrued in PG&E Corporation's and the Utility's Consolidated Balance Sheets for estimated undiscounted future remediation costs associated with the Hinkley site. The increase primarily reflects the Utility's best estimate of costs associated with the developments described above. Remediation costs for the Hinkley natural gas compressor site are not recovered from customers through rates. Future costs will depend on many factors, including the Regional Board's certification of the final EIR, the levels of hexavalent chromium the Utility is required to use as the standard for remediation, the Utility's required time frame for remediation, and adoption of a final drinking water standard currently under development by the State of California, as mentioned above. As more information becomes known regarding these factors, these estimates and the assumptions on which they are based regarding the amount of liability incurred may be subject to further changes. Future changes in estimates or assumptions may have a material impact on PG&E Corporation's and the Utility's future financial condition, results of operations, and cash flows.

***Topock Site***

The Utility's remediation and abatement efforts are subject to the regulatory authority of the Department of Toxic Substances Control ("DTSC") and the U.S. Department of the Interior ("DOI"). As directed by the DTSC, the Utility has implemented interim remediation measures, including a system of extraction wells and a treatment plant designed to prevent movement of a hexavalent chromium plume toward the Colorado River. The DTSC has certified the final EIR and approved the Utility's final remediation plan for the groundwater plume, under which the Utility will implement an in-situ groundwater treatment system to convert hexavalent chromium into a non-toxic and non-soluble form of chromium. The Utility has completed the preliminary design stage for implementing the final groundwater remedy and is required to submit its intermediate design plan to the DTSC and DOI by April 5, 2013 and a final plan for approval in 2014. In developing its intermediate plan, the Utility is currently evaluating input received from regulatory agencies and other stakeholders, exploring potential sources of fresh water to be used as part of the remedy, and performing other engineering activities necessary to complete the remedial design.

At December 31, 2012 and 2011, $239 million and $218 million, respectively, were accrued in PG&E Corporation's and the Utility's Consolidated Balance Sheets for estimated undiscounted future remediation costs associated with the Topock site. The CPUC has authorized the Utility to recover 90% of its remediation costs for the Topock site from customers through rates without a reasonableness review. As the Utility completes its remedial design plan and more information becomes known regarding the extent of work to be performed to implement the final groundwater remedy, these estimates and the assumptions on which they are based regarding the amount of liability incurred may be subject to change. Future changes in estimates or assumptions could have a material impact on PG&E Corporation's and the Utility's future financial condition.

***Reasonably Possible Environmental Contingencies***

Although the Utility has provided for known environmental obligations that are probable and reasonably estimable, the Utility's undiscounted future costs could increase to as much as $1.6 billion (including amounts related to the Hinkley and Topock sites described above) if the extent of contamination or necessary remediation is greater than anticipated or if the other potentially responsible parties are not financially able to contribute to these costs, and could increase further if the Utility chooses to remediate beyond regulatory requirements. The Utility may incur actual costs in the future that are materially different than this estimate and such costs could have a material impact on PG&E Corporation's and the Utility's results of operations during the period in which they are recorded.

## QUARTERLY CONSOLIDATED FINANCIAL DATA (UNAUDITED)

| (in millions, except per share amounts) | Quarter ended December 31 | September 30 | June 30 | March 31 |
|---|---|---|---|---|
| **2012** | | | | |

| Operating income | 359 | 402 | 699 | 484 |
| Net income | 89 | 196 | 359 | 201 |
| Income available for common stock | 85 | 193 | 355 | 198 |

During the fourth quarter 2012, the Utility recorded a charge to net income of $353 million for disallowed capital expenditures associated with the Utility's pipeline safety enhancement plan. See Note 15 of the Notes to the Consolidated Financial Statements.

During the second quarter 2012 the Utility recorded a provision of $80 million for estimated third-party claims related to the San Bruno accident. During the first quarter 2012, second quarter of 2012, third quarter of 2012, and fourth quarter 2012, the Utility submitted insurance claims to certain insurers for the lower layers and recognized $11 million, $25 million, $99 million, and $50 million, respectively, for insurance recoveries. See Note 15 of the Notes to the Consolidated Financial Statements.

**MANAGEMENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING**

Management of PG&E Corporation and Pacific Gas and Electric Company ("Utility") is responsible for establishing and maintaining adequate internal control over financial reporting. PG&E Corporation's and the Utility's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles, or GAAP. Internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of PG&E Corporation and the Utility, (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP and that receipts and expenditures are being made only in accordance with authorizations of management and directors of PG&E Corporation and the Utility, and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

Management assessed the effectiveness of internal control over financial reporting as of December 31, 2012, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on its assessment and those criteria, management has concluded that PG&E Corporation and the Utility maintained effective internal control over financial reporting as of December 31, 2012.

Deloitte & Touche LLP, an independent registered public accounting firm, has audited PG&E Corporation's and the Utility's internal control over financial reporting as of December 31, 2012, based on criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

**REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Shareholders of
PG&E Corporation and Pacific Gas and Electric Company
San Francisco, California

We have audited the accompanying consolidated balance sheets of PG&E Corporation and subsidiaries (the "Company") and of Pacific Gas and Electric Company and subsidiaries (the “Utility”) as of December 31, 2012 and 2011, and the Company’s related consolidated statements of income, comprehensive income, equity, and cash flows and the Utility’s related consolidated statements of income, comprehensive income, shareholders’ equity, and cash flows for each of the three years in the period ended December 31, 2012. These financial statements are the responsibility of the Company's and the Utility’s management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of PG&E Corporation and subsidiaries and of Pacific Gas and Electric Company and subsidiaries as of December 31, 2012 and 2011, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2012, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 15 to the consolidated financial statements, several investigations and enforcement matters are pending with the California Public Utilities Commission and may result in material amounts of penalties.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's and the Utility’s internal control over financial reporting as of December 31, 2012, based on the criteria established in *Internal Control—Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 21, 2013 expressed an unqualified opinion on the Company's and the Utility’s internal control over financial reporting.

/s/ DELOITTE & TOUCHE LLP

San Francisco, California
February 21, 2013

**REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Shareholders of
PG&E Corporation and Pacific Gas and Electric Company
San Francisco, California

We have audited the internal control over financial reporting of PG&E Corporation and subsidiaries (the "Company") and of Pacific Gas and Electric Company and subsidiaries (the "Utility") as of December 31, 2012, based on criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's and the Utility's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying *Management's Report on Internal Control Over Financial Reporting.* Our responsibility is to express an opinion on the Company's and the Utility's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audits included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company and the Utility maintained, in all material respects, effective internal control over financial reporting as of December 31, 2012, based on the criteria established in *Internal Control — Integrated Framework* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements as of and for the year ended December 31, 2012 of the Company and the Utility and our report dated February 21, 2013 expressed an unqualified opinion on those financial statements and includes an explanatory paragraph relating to several investigations and enforcement matters pending with the California Public Utilities Commission that may result in material amounts of penalties.

CERTIFICATION OF PRINCIPAL EXECUTIVE OFFICER
PURSUANT TO SECURITIES AND EXCHANGE COMMISSION RULE 13a-14(a)

I, Anthony F. Earley, Jr., certify that:

1. I have reviewed this Annual Report on Form 10-K for the year ended December 31, 2012 of PG&E Corporation;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   c. Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

   d. Disclosed in this report any change in the registrant’s internal control over financial reporting that occurred during the registrant’s most recent fiscal quarter (the registrant’s fourth quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant’s internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of registrant's board of directors (or persons performing the equivalent functions):

   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

   b. Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

| 1 Megawatt-Hour (MWh) | = | One megawatt continuously for one hour |
| 1 Gigawatt (GW) | = | One million kilowatts |
| 1 Gigawatt-Hour (GWh) | = | One gigawatt continuously for one hour |
| 1 Kilovolt (kV) | = | One thousand volts |
| 1 MVA | = | One megavolt ampere |
| 1 Mcf | = | One thousand cubic feet |
| 1 MMcf | = | One million cubic feet |
| 1 Bcf | = | One billion cubic feet |
| 1 MDth | = | One thousand decatherms |

## GLOSSARY

The following terms and abbreviations appearing in the text of this report have the meanings indicated below.

| | |
|---|---|
| 2013 Annual Report | PG&E Corporation's and Pacific Gas and Electric Company's combined Annual Report on Form 10-K for the year ended December 31, 2013, including the information incorporated by reference into the report |
| AB 32 | California Global Warming Solutions Act of 2006 |
| CAISO | California Independent System Operator |
| CARB | California Air Resources Board |
| CCA | Community choice aggregator |
| CEC | California Energy Commission |
| Central Coast Board | Central Coast Regional Water Quality Control Board |
| CERCLA | Comprehensive Environmental Response, Compensation and Liability Act of 1980, as amended |
| CO2 | carbon dioxide |
| CO2-e | CO2-equivalent |
| CPUC | California Public Utilities Commission |
| CSI | California Solar Initiative |
| DOE | U.S. Department of Energy |
| EPA | Environmental Protection Agency |
| ERRA | Energy Resource Recovery Account |
| ESC | Engineers and Scientists of California |
| Exchange Act | Securities Exchange Act of 1934, as amended |
| FERC | Federal Energy Regulatory Commission |
| GHG | greenhouse gas |
| GRC | general rate case |
| GTN | Gas Transmission Northwest Corporation |
| GT&S | gas transmission and storage |
| IBEW | International Brotherhood of Electrical Workers |
| LTIP | PG&E Corporation long-term incentive plan |
| MD&A | Management’s Discussion and Analysis of Financial Condition and Results of Operations |
| MGP | manufactured gas plant |
| NERC | North American Electric Reliability Corporation |
| NOx | nitrogen oxide |
| NRC | Nuclear Regulatory Commission |
| NTSB | National Transportation Safety Board |
| ORA | Office of Ratepayer Advocates |
| OSC | CPUC Order to Show Cause |
| PHMSA | Pipeline and Hazardous Materials Safety Administration |
| PSEP | pipeline safety enhancement plan |
| PV | photovoltaic |
| QF(s) | qualified facilities |
| ROE | return on equity |
| RPS | renewable portfolio standard |
| SEC | U.S. Securities and Exchange Commission |
| SED | Safety and Enforcement Division of the CPUC, formerly known as the Consumer Protection and Safety Division or the CPSD |
| SEIU | Service Employees International Union, United Service Workers West |
| SO2 | sulfur dioxide |
| TO | transmission owner |
| TURN | The Utility Reform Network |
| Utility | Pacific Gas and Electric Company |
| WECC | Western Interconnection to the Western Electricity Coordinating Council |

PART I

***ITEM 1. Bus iness***

**General**

PG&E Corporation, incorporated in California in 1995, is a holding company whose primary operating subsidiary is Pacific Gas and Electric Company, a public utility operating in northern and central California. The Utility was incorporated in California in 1905. PG&E Corporation became the holding company of the Utility and its subsidiaries on January 1, 1997. The Utility's revenues are generated mainly through the sale and delivery of electricity and natural gas to customers.

The principal executive offices of PG&E Corporation and the Utility are located at 77 Beale Street, P.O. Box 770000, San Francisco, California 94177. PG&E Corporation's telephone number is (415) 973-1000 and the Utility's telephone number is (415) 973-7000. PG&E Corporation and the Utility file or furnish various reports with the SEC. These reports, including Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and any amendments to those reports filed or furnished pursuant to Sections 13(a) or 15(d) of the Exchange Act, are available free of charge on both PG&E Corporation's website, www.pgecorp.com , and the Utility's website, www.pge.com , as promptly as practicable after they are filed with, or furnished to, the SEC. The information contained on these websites is not incorporated by reference into this Annual Report on Form 10-K and should not be considered part of this report.

This is a combined Annual Report on Form 10-K of PG&E Corporation and the Utility and includes information incorporated by reference from the joint Annual Report to Shareholders for the year ended December 31, 2013, which is attached to this report as Exhibit 13 and the Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders. The 2013 Annual Report contains forward-looking statements that are necessarily subject to various risks and uncertainties. For a discussion of the significant risks that could affect the outcome of these forward-looking statements and PG&E Corporation's and the Utility's future financial condition and results of operations, see the information in the 2013 Annual Report under the headings "Cautionary Language Regarding Forward-Looking Statements" and "Risk Factors" which appear under the heading "Management's Discussion and Analysis of Financial Condition and Results of Operations."

***Natural Gas Operations***

During 2013, the Utility continued to make significant progress on efforts to improve the safety and reliability of its natural gas operations, including performing extensive pipeline testing and monitoring, and replacing and upgrading equipment. Much of this work is part of the Utility's PSEP, approved by the CPUC in December 2012, to modernize and upgrade its natural gas transmission system to meet new, industry-wide safety standards. In July 2013, the Utility completed its search and review of records relating to pipeline pressure validation for all approximately 6,750 miles of its natural gas transmission system. Many of these improvement efforts satisfy recommendations made to the Utility by the NTSB and the CPUC in 2010 and 2011 following their investigations into the rupture of one of the Utility's natural gas transmission pipelines in San Bruno, California on September 9, 2010 (the "San Bruno accident"). (For more information, see "Natural Gas Utility Operations" below.)

During 2013, the Utility settled the majority of the civil lawsuits that were filed after the San Bruno accident. The CPUC investigations and the criminal investigation that were commenced after the San Bruno accident are still unresolved. The CPUC's SED also may take enforcement action with respect to numerous reports the Utility has filed to report noncompliance with various natural gas regulations. See information under the headings within MD&A entitled "Natural Gas Matters" and Note 14: Commitments and Contingencies of the Notes to the Consolidated Financial Statements in the 2013 Annual Report which information is incorporated herein by reference.

***Electricity Operations***

During 2013, the Utility made significant capital investments to improve and modernize its electricity operations by repairing, replacing, or upgrading equipment to improve safety and reliability. The Utility has substantially completed the installation of advanced electric and gas meters throughout its service territory and continued taking steps to lay the foundation for the development of a "smart grid" to enable customers to have better control over their energy usage and costs, to integrate new sources of energy, and to enable the continued safe and reliable operation of the grid. In 2013, the Utility received regulatory approval to pilot and test new "smart grid" technologies that have the potential to support the provision of safe, reliable and affordable electric service. (For more information, see "Electric Utility Operations" below.)

***Employees***

At December 31, 2013, PG&E Corporation and its subsidiaries had 21,166 regular employees, including 21,159 regular employees of the Utility. Of the Utility's regular employees, 13,150 are covered by collective bargaining agreements with three labor unions: the IBEW; the ESC; and the SEIU. There are two collective bargaining agreements with IBEW. Both bargaining agreements expire on December 31, 2014. The ESC collective bargaining agreement also expires on December 31, 2014. The SEIU collective bargaining agreement expires on July 31, 2015.

**Regu latory Environment**

The Utility's business is subject to a complex set of energy, environmental and other laws, regulations, and regulatory proceedings at the federal, state, and local levels. This section and the "Ratemaking Mechanisms" section below summarize some of the more significant laws, regulations, and regulatory proceedings affecting the Utility. For discussion of specific pending regulatory matters that are expected to affect the Utility, see the information under the headings within MD&A entitled "Regulatory Matters" and "Natural Gas Matters" in the 2013 Annual Report, which information is incorporated herein by reference.

PG&E Corporation is a "public utility holding company" as defined under the Public Utility Holding Company Act of 2005 and is subject to regulatory oversight of the FERC. PG&E Corporation and its subsidiaries are exempt from all requirements of the Public Utility Holding Company Act of 2005 other than the obligation to provide access to their books and records to the FERC and the CPUC for ratemaking purposes.

***Federal Regulation***

*The Federal Energy Regulatory Commission*

The FERC regulates the transmission of electricity and wholesale sales of electricity in interstate commerce and the transmission and sale of natural gas for resale in interstate commerce. The FERC also regulates interconnections of transmission systems with other electric systems and generation facilities, tariffs and conditions of service of regional transmission organizations, including the CAISO, and the terms and rates of wholesale electricity sales. The FERC has authority to impose fines of up to $1 million per day for violation of certain federal statutes and regulations. The FERC has jurisdiction over the Utility's electricity transmission revenue requirements and rates, the licensing of substantially all of the Utility's hydroelectric generation facilities, and the interstate sale and transportation of natural gas.

The FERC has the responsibility to approve and enforce mandatory standards governing the reliability of the nation's electricity transmission grid, including standards to protect the nation's bulk power system against potential disruptions from cyber and physical security breaches, to prevent market manipulation, and to supplement state transmission siting efforts in certain electric transmission corridors that are determined to be of national interest. The FERC certified the NERC as the nation's Electric Reliability Organization. The NERC is responsible for developing and enforcing electric reliability standards, subject to FERC approval. The FERC also has approved a delegation agreement under which the NERC has delegated enforcement authority for the geographic area known as the Western Interconnection to the Western Electricity Coordinating Council. The Utility must self-certify compliance to the WECC on an annual basis and the compliance program encourages self-reporting of violations. WECC staff, with participation by the NERC and the FERC, also performs a compliance audit of the Utility every three years. The FERC also has authorized the WECC and the NERC to impose fines up to $1 million per day, per violation.

The FERC also has adopted policies and rules to promote investment in energy infrastructure and lower costs for consumers through incentive ratemaking for transmission projects. In addition, the FERC's Order No. 1000 establishes electric transmission planning and cost allocation requirements for public utility transmission providers. Order No. 1000 requires public utility transmission providers to improve transmission planning processes and allocate costs for new transmission facilities to the beneficiaries of those facilities.

The CAISO is responsible for providing open access electricity transmission service on a non-discriminatory basis, planning transmission system additions, and ensuring the maintenance of adequate reserves of generation capacity.

***The Nuclear Regulatory Commission***

The NRC oversees the licensing, construction, operation and decommissioning of nuclear facilities, including the Utility's two nuclear generating units at Diablo Canyon and the Utility's retired nuclear generating unit at Humboldt Bay. NRC regulations require extensive monitoring and review of the safety, radiological, seismic, environmental, and security aspects of these facilities. In the event of non-compliance, the NRC has the authority to impose fines or to force a shutdown of a nuclear plant, or both. NRC safety and security requirements have, in the past, necessitated substantial capital expenditures at Diablo Canyon, and additional significant capital expenditures could be required in the future. For information about NRC matters affecting Diablo Canyon, including the status of the Utility's relicensing application see the information under the heading within MD&A entitled "Regulatory Matters−Diablo Canyon Nuclear Power Plant" in the 2013 Annual Report, which information is incorporated herein by reference.

***The Pipeline and Hazardous Materials Safety Administration***

The Utility also is subject to regulations adopted by the federal PHMSA that is within the United States Department of Transportation. The PHMSA develops and enforces regulations for the safe, reliable, and environmentally sound operation of the nation's pipeline transportation system and the shipment of hazardous materials. The PHMSA also has authorized the CPUC to enforce the federal pipeline safety standards over intrastate natural gas pipelines, as well as any state pipeline safety requirements that do not conflict with the federal requirements, through fines and/or injunctive relief.

***The National Transportation Safety Board***

The NTSB is an independent federal agency that is authorized to investigate pipeline accidents and certain transportation accidents that involve fatalities, substantial property damage, or significant environmental damage. The NTSB investigated the San Bruno accident and in August 2011 announced that it had determined the probable cause of the San Bruno accident placing the blame primarily on the Utility. The NTSB report recommended that the Utility take certain actions to improve the safety of its gas transmission system. The status of the Utility's implementation of the NTSB's recommendations is discussed under "Natural Gas Utility Operations" below.

***State Regulation***

*The California Public Utilities Commission*

The CPUC consists of five members appointed by the Governor of California and confirmed by the California State Senate for staggered six-year terms. The CPUC has jurisdiction over the rates and terms and conditions of service for the Utility's electricity and natural gas distribution operations, electricity generation, and natural gas transportation and storage services. The CPUC also has jurisdiction over the Utility's issuances of securities, dispositions of utility assets and facilities, energy purchases on behalf of the Utility's electricity and natural gas retail customers, rates of return, rates of depreciation, oversight of nuclear decommissioning, and aspects of the siting of facilities used in providing electric and natural gas utility service.

The CPUC enforces state laws that set forth safety requirements pertaining to the design, construction, testing, operation, and maintenance of utility gas gathering, transmission, and distribution pipeline systems, and for the safe operation of such pipelines and equipment. The CPUC has adopted many rules and regulations to implement state laws and policies, such as the laws relating to the development of renewable energy resources, demand response and public purpose programs, reduction of GHG emissions, and development of energy storage capacity. As discussed above, the CPUC also has been delegated authority to enforce compliance with certain federal regulations related to the safety of natural gas facilities. The CPUC has authority to impose fines for violating these state and federal laws, orders, or regulations of up to $50,000 per violation, per day. (See the discussion under the heading within MD&A entitled "Natural Gas Matters" in the 2013 Annual Report for information about the CPUC's pending enforcement proceedings against the Utility relating to the Utility's gas operations, which discussion is incorporated herein by reference.)

In addition, California law enacted in 2013 requires the CPUC to develop a safety enforcement program that authorizes CPUC staff to issue citations for safety violations and assess fines subject to a CPUC-approved limit. The CPUC is required to implement the safety enforcement program for gas corporations by July 1, 2014 and for electric corporations by January 1, 2015. (See the discussion under the heading within MD&A entitled "Natural Gas Matters" in the 2013 Annual Report for information about the reports the Utility has filed to notify the CPUC staff of noncompliance with certain gas safety regulations.)

Ratemaking for retail sales from the Utility's generation facilities is under the jurisdiction of the CPUC. To the extent that this electricity is sold for resale into wholesale markets, however, it is under the ratemaking jurisdiction of the FERC. In addition, the CPUC has general jurisdiction over most of the Utility’s operations, and regularly reviews the Utility’s performance, using measures such as the frequency and duration of outages. The CPUC also conducts investigations into various matters, such as deregulation, competition, and the environment, in order to determine its future policies.

The CPUC has imposed conditions that govern the relationship between the Utility and PG&E Corporation and other affiliates. These conditions relate to finance, human resources, records and bookkeeping, and the transfer of customer information. Among other conditions, the financial conditions provide that the capital requirements of the Utility, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner, must be given first priority by PG&E Corporation’s Board of Directors (known as the “first priority” condition). In addition, the Utility must maintain on average its CPUC-authorized utility capital structure, although it can request a waiver of this condition if an adverse financial event reduces the Utility’s common equity component by 1% or more. The CPUC also has adopted rules governing transactions between California's CPUC-regulated electricity and gas utilities and certain of their affiliates that are not regulated by the CPUC primarily to prevent these affiliates from gaining an unfair advantage over their unaffiliated competitors.

*The California Energy Resources Conservation and Development Commission*

The California Energy Resources Conservation and Development Commission, commonly called the CEC, is the state's primary energy policy and planning agency. The CEC is responsible for licensing all thermal power plants over 50 MW, overseeing funding programs that support public interest energy research, advancing energy science and technology through research, development and demonstration, and providing market support to existing, new, and emerging renewable technologies. The CEC also is responsible for forecasts of future energy needs used by the CPUC in determining the adequacy of the utilities' electricity procurement plans.

*The California Air Resources Board*

The CARB is the state agency charged with setting and monitoring GHG and other emission limits. The CARB also is responsible for adopting and enforcing regulations to meet the AB 32, which requires the gradual reduction of GHG emissions in California to 1990 levels by 2020 on a schedule beginning in 2013. (For more information, see “Environmental Matters — Air Quality and Climate Change” below.)

***Other Regulation***

The Utility obtains permits, authorizations, and licenses in connection with the construction and operation of the Utility's generation facilities, electricity transmission lines, natural gas transportation pipelines, and gas compressor station facilities. These permits include discharge permits, various Air Pollution Control District permits, U.S. Department of Agriculture-Forest Service permits, FERC hydroelectric generation facility and transmission line licenses, and NRC licenses. (For more information, see “Environmental Matters — Water Quality” below.)

The Utility has franchise agreements with approximately 300 cities and counties that permit the Utility to install, operate, and maintain the Utility's electric and natural gas facilities in the public streets and roads. In exchange for the right to use public streets and roads, the Utility pays annual fees to the cities and counties. In most cases, the Utility’s franchise agreements are for an indeterminate term, with no expiration date. The Utility has several franchise agreements that have a specified term of years, including an agreement with a large charter city.

The Utility also periodically obtains permits, authorizations, and licenses in connection with distribution of electricity and natural gas that grant the Utility rights to occupy and/or use public property for the operation of the Utility's business and to conduct certain related operations.

***Competition in the Electricity Industry***

At the federal level, the FERC is charged with developing rules to encourage fair and efficient competitive wholesale electric markets by employing best practices in market rules and reducing barriers to trade between markets and among regions. (See “Regulatory Environment−Federal Regulation” above for a description of some of these rules.) The FERC also has authority to prevent accumulation and exercise of market power by assuring that proposed mergers and acquisitions of public utility companies and their holding companies are in the public interest and by addressing market power in jurisdictional wholesale markets through its new powers to establish and enforce rules prohibiting market manipulation. The FERC also has issued rules on the interconnection of generators to require regulated transmission providers, such as the Utility or the CAISO, to use standard interconnection procedures and a standard agreement for generator interconnections. These rules are intended to limit opportunities for electric transmission providers to favor their own generation, facilitate market entry for generation competitors by streamlining and standardizing interconnection procedures, and encourage investment in generation and transmission.

In 1998, California became one of the first states to (1) allow customers of the California investor-owned electric utilities to purchase electricity from energy service providers other than the regulated utilities (referred to as "direct access") and (2) establish a competitive market for electricity generation in which generators and other electricity providers were permitted to charge market-based prices for wholesale electricity. The wholesale electricity market failed to function as anticipated leading to the 2000-2001 California energy crisis, the suspension of direct access, and the Utility's reorganization under Chapter 11 of the U.S. Bankruptcy Code. (For information about the unresolved disputed claims made by power suppliers in the Utility's Chapter 11 proceeding, see Note 12: Resolution of Remaining Chapter 11 Disputed Claims, of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.)

Current California law allows for the gradual phase-in of direct access subject to annual and overall limits (measured in GWh) that have been specified for each utility based roughly on each utility's highest level of direct access before the CPUC suspended direct access. A four-year phase-in period began in April 2010 to allow qualifying non-residential customers of the three California investor-owned electric utilities to purchase electricity from alternate service providers, subject to the limits. The Utility's maximum, 9,520 GWh, was reached in November 2013. Although the Utility's total amount of direct access load may increase due to natural load growth for existing direct access customers, further legislative action is required before new customers can be enrolled in excess of these limits.

In addition, the Utility's customers may, under certain circumstances, obtain power from a CCA instead of from the Utility. California law permits cities and counties and certain other public agencies to purchase and sell electricity for their local residents and businesses after they have registered as CCAs. Under these arrangements, the Utility continues to provide distribution, metering, and billing services to the customers of the CCAs and remains the electricity provider of last resort for those customers. The law provides that a CCA can procure electricity for all of its residents who do not affirmatively elect to continue to receive electricity from the Utility. Under the CPUC's rules, a surcharge is imposed on retail end-users of the CCA to prevent a shifting of costs to customers who continue to receive electricity from a utility. The law also authorizes the Utility to recover from each CCA any costs of implementing the program that are reasonably attributable to the CCA, and to recover from all customers any costs of implementing the program not reasonably attributable to a CCA. Approximately 125,000 customers are now receiving commodity service from the Marin Energy Authority, a CCA. Sonoma Clean Power, another CCA, is expected to begin service to a subset of customers in Sonoma County in May 2014.

In some circumstances, governmental entities such as cities and irrigation districts, which have authority under the state constitution or state statute to provide retail electric service, seek to acquire the Utility's distribution facilities. For example, South San Joaquin Irrigation District has indicated that, if it receives the requested authority to provide electric distribution service in and around certain cities (Manteca, Ripon, and Escalon), it will seek to acquire the Utility's distribution facilities, either under a consensual transaction, or via eminent domain.

It is also possible that technological developments could pose challenges for traditional utilities. In particular, technology-related cost declines and sustained federal or state subsidies could make the combination of "distributed generation" and storage a viable, cost-effective alternative to the Utility's bundled electric service. In addition, the levels of self-generation of electricity by customers (primarily solar installations) and the use of customer net energy metering, which allows self-generating customers to receive bill credits at the full retail rate, are increasing.

Although the CPUC has established ratemaking mechanisms that allow the Utility to collect some non-bypassable or fixed charges from those who procure electricity from alternate sources, rates for the Utility's remaining customers could increase as alternative energy providers (CCAs or local government agencies) and alternative energy sources (self-generation and storage, distributed generation, electric vehicles) become more prevalent. Increasing rate pressure on remaining customers could, in turn, cause more customers to seek alternative energy providers or sources, further exacerbating the Utility's rate challenges. New state legislation that became effective on January 1, 2014 (Assembly Bill 327) gave the CPUC new authority to reduce the cost shift associated with customers installing renewable distributed generation under the net energy metering rules.

In addition, the Utility competes with third parties to make various capital investments such as new utility-owned generation facilities, electric transmission projects, SmartGrid electric reliability projects, and distributed generation technologies. The Utility generally participates through a competitive requests-for-offers process that is subject to the oversight of the CPUC or the FERC. If the Utility is selected as the winning bidder, the Utility submits the executed contract for regulatory approval and cost recovery authorization.

***Competition in the Natural Gas Industry***

Under the FERC's rules, interstate natural gas pipeline companies are required to divide their services into separate gas commodity sales, transportation, and storage services and must provide transportation service whether or not the customer (often a local gas distribution company) buys the natural gas from these companies. The Utility's natural gas pipelines are located within the State of California and are exempt from most of the FERC's rules and regulations applicable to interstate pipelines; the Utility's pipeline operations are instead subject to the jurisdiction of the CPUC.

The Utility's gas transmission and storage system has operated under the CPUC-approved "Gas Accord" market structure since 1998 which largely mimics the regulatory framework required by the FERC for interstate gas pipelines. (See "Ratemaking Mechanisms" below.) The CPUC divides the Utility's natural gas customers into two categories: "core" customers, who are primarily small commercial and residential customers, and "non-core" customers, who are primarily industrial, large commercial, and electric generation customers. Although most of the Utility's core customers purchase natural gas directly from the Utility (along with transportation and distribution services as bundled services), core customers have the option to purchase natural gas from independent, unregulated natural gas marketers. Most of the Utility's noncore customers make natural gas supply arrangements directly with producers or purchase natural gas from marketers.

Non-core customers have access to capacity rights for firm service on the Utility's natural gas pipeline, as well as interruptible (or "as-available") services. All services are offered on a nondiscriminatory basis to any creditworthy customer. This market structure has resulted in a robust wholesale gas commodity market at the Utility's "Citygate," which refers to the non-physical interconnection between the big "backbone" gas transmission system and the smaller downstream local transmission systems.

The Utility competes with other natural gas pipeline companies for customers transporting natural gas into the southern California market on the basis of transportation rates, access to competitively priced supplies of natural gas, and the quality and reliability of transportation services. The most important competitive factor affecting the Utility's market share for transportation of natural gas to the southern California market is the total delivered cost of western Canadian and U.S. Rocky Mountains natural gas delivered to northern California, relative to the total delivered cost of natural gas from the southwestern United States. In general, when the total cost of western Canadian and U.S. Rocky Mountains natural gas delivered to northern California increases relative to other competing natural gas sources, the Utility's market share of transportation services into southern California decreases. The Utility also competes for storage services with other third-party storage providers, primarily in northern California.

In addition, the Utility competes with third parties to make various capital investments – such as new natural gas storage facilities. The Utility generally participates through a competitive requests-for-offers process that is subject to the oversight of the CPUC or the FERC. If the Utility is selected as the winning bidder, the Utility submits the executed contract for regulatory approval and cost recovery authorization.

**Ra temaking Mechanisms**

The Utility's rates for electricity and natural gas utility services are based on its costs of providing service ("cost-of-service ratemaking"). Before setting rates, the CPUC and the FERC conduct proceedings to determine the annual amount of revenue ("revenue requirements") that the Utility is authorized to collect from its customers to recover its reasonable operating and capital costs (depreciation, tax, and financing expenses) of providing utility services. The Utility's revenue requirements are set based on forecasted costs. Differences in the amount or timing between forecast costs and actual costs could negatively affect the Utility's ability to earn its authorized return.

To develop retail rates, the revenue requirements are allocated among customer classes which are mainly residential, commercial, industrial, and agricultural. Rate changes become effective prospectively on or after the date of CPUC or FERC decisions. Most rate changes approved by the CPUC throughout the year are consolidated to take effect on the first day of the following year.

California Assembly Bill 327, effective on January 1, 2014, repealed prior law that restricted the CPUC's ability to change residential electric rates and to reduce the level of rate assistance for certain low-income customers. AB 327 also authorized the CPUC to approve fixed charges to be collected from residential customers. The CPUC has ordered the California investor-owned utilities, including the Utility, to file proposals for changing residential rates that are consistent with the new law. The current procedural schedule calls for a final decision in the first half of 2014 to approve changes to the Utility's residential electric rates for summer 2014, and a final decision by year-end 2014 to approve broader changes in residential electric rates.

While the CPUC generally uses cost-of-service ratemaking to develop revenue requirements and rates, it selectively uses incentive ratemaking, which bases rates on the extent to which the utilities meet objective or fixed standards or goals, such as energy efficiency goals, instead of on the cost of providing service. See "Public Purpose and Customer Programs" below.

***Electricity and Natural Gas Distribution and Electricity Generation Operations***

*General Rate Cases*

The GRC is the primary proceeding in which the CPUC determines the amount of revenue requirements that the Utility is authorized to collect from customers to recover the Utility's anticipated costs related to its electricity and natural gas distribution and electricity generation operations and to provide the Utility an opportunity to earn its authorized rate of return. The CPUC generally conducts a GRC every three years. The CPUC approves the annual revenue requirements for the first year (or "test year") of the GRC period and typically authorizes the Utility to receive annual increases (known as "attrition adjustments") in revenue requirements for the subsequent years of the GRC period. Attrition rate adjustments are provided to avoid a reduction in earnings due to, among other things, inflation and increases in invested capital. Intervenors in the Utility's GRC include the CPUC's ORA and TURN, who generally represent the overall interests of customers, as well as a myriad of other intervenors who represent more limited interests.

In November 2012, the Utility filed its 2014 GRC application with the CPUC for rates effective from 2014 through 2016. The CPUC has concluded evidentiary hearings and briefing in the 2014 GRC and the Utility is now waiting for the CPUC to issue a proposed decision. For more information see the heading within MD&A entitled "Regulatory Matters – 2014 General Rate Case" in the 2013 Annual Report, which information is incorporated herein by reference.

In November 2013, the CPUC opened a proceeding to consider modifications to the processing and content of GRCs (and for the Utility's GT&S rate cases) to better integrate and prioritize safety, reliability, and security issues by developing a risk-based decision-making framework for the CPUC to use in evaluating the utilities' requested revenue requirements. The CPUC also will consider whether to change the current three-year rate case cycle and whether to retain the requirement that the ORA review a draft of the utilities' GRC applications prior to filing. A decision is expected to be issued in late 2014.

*Cost of Capital Proceedings*

The CPUC authorizes the Utility's capital structure (i.e., the relative weightings of common equity, preferred equity, and debt) and the authorized rates of return on each component that the Utility may earn on its electric generation, electric and natural gas distribution, and natural gas transmission and storage rate base. The CPUC has authorized the Utility's capital structure through 2015, consisting of 52% common equity, 47% long-term debt, and 1% preferred stock. The CPUC also authorized the Utility to earn a ROE of 10.40% effective January 1, 2013, compared to the 11.35% previously authorized. The Utility's ROE can be automatically adjusted if the 12-month October-through-September average of the Moody's Investors Service long-term Baa utility bond index increases or decreases by more than 1.00% as compared to the applicable benchmark. If the adjustment mechanism is triggered, the Utility's authorized ROE, beginning January 1 of the following year, would be adjusted by one-half of the difference between the index and the benchmark. Additionally, the Utility's authorized costs of long-term debt and preferred stock would be updated to reflect actual August month-end embedded costs and forecasted interest rates for variable long-term debt, as well as new long-term debt and preferred stock scheduled to be issued. In any year where the 12-month average yield triggers an automatic ROE adjustment, that average would become the new benchmark.

The Utility will file its next full cost of capital application in April 2015 for the 2016 test year.

***Rate Recovery of Costs of Electricity Generation Resources***

California investor-owned electric utilities are required to use the principles of “least-cost dispatch” in managing electric generation resources to meet customer demand for electricity. The utilities are also responsible for procuring electricity required to meet customer demand, plus applicable reserve margins, that are not satisfied from their own generation facilities and existing electricity contracts. To accomplish this, each utility must submit a ten-year procurement plan to the CPUC for approval. Each procurement plan must be designed to use the State of California’s preferred loading order to meet the forecasted demand (i.e., increases in future demand will be offset through energy efficiency programs, demand response programs, renewable generation resources, distributed generation resources, and new conventional generation). The CPUC approved the Utility’s electricity procurement plan in January 2012 covering 2011 through 2020 and approved the Utility’s GHG compliance instrument procurement plan in April 2012.

California law allows electric utilities to recover the costs incurred in compliance with their CPUC-approved electricity procurement plans without further after-the-fact reasonableness review. To the extent the Utility’s electricity purchases are not in compliance with the CPUC-approved plan, costs associated with those purchases may be disallowed. The Utility recovers its electricity procurement costs through the ERRA, a balancing account authorized by the CPUC, that tracks the difference between (1) billed and unbilled ERRA revenues and (2) electric procurement costs incurred under the Utility's authorized procurement plans. Each year, to determine the rates used to collect ERRA revenues, the CPUC reviews the Utility’s forecasted procurement costs related to power purchase agreements, hedging, and generation fuel expense and approves a forecasted revenue requirement.

On December 19, 2013, the CPUC approved the Utility’s forecast of 2014 procurement costs and associated revenue requirement. Changes in rates to reflect the approved revenue requirement became effective on January 1, 2014. (The CPUC may adjust a utility’s retail electricity rates at any time when the forecasted aggregate over-collections or under-collections in the ERRA exceed five percent of its prior year electricity procurement revenues.) The CPUC also performs an annual compliance review to ensure that (1) the Utility prudently administered the contracts that were entered into in accordance with its CPUC-approved procurement plans, (2) utilized the principles of least-cost dispatch in managing its electric generation resources, and (3) prudently operated its own generation facilities.

*Costs Incurred Under New Power Purchase Agreements*

The CPUC has approved various power purchase agreements that the Utility has entered into with third parties in accordance with the Utility’s CPUC-approved procurement plan, the renewable energy mandate, and resource adequacy requirements and has authorized the Utility to recover costs associated with these contracts through the ERRA.

For new non-renewable generation purchased from third parties under power purchase agreements, the Utility may also recover any above-market costs through either (1) a non-bypassable customer charge or (2) the allocation of the “net capacity costs” (i.e., contract price less energy revenues) to all “benefiting customers” in the Utility’s service territory, including direct access customers and CCA customers under certain circumstances. The non-bypassable charge can be imposed from the date of signing a power purchase agreement and can last for ten years from the date the new generation unit comes on line or for the term of the contract, whichever is less. Utilities are allowed to justify a cost recovery period longer than ten years on a case-by-case basis. If a utility uses the net capacity cost allocation method, the net capacity costs are allocated for the term of the contract. To use the net capacity allocation method, the CPUC must determine that a resource was needed to meet system or local area reliability needs for the benefit of all distribution customers. The CPUC can decide whether to require an energy auction for resources subject to the net capacity cost allocation.

For renewable generation purchased from third parties under power purchase agreements, the Utility may also recover any above-market costs through the imposition of a non-bypassable charge on customers.

*Costs of Utility-Owned Generation Resource Projects*

The Utility's recovery of its capital costs and non-fuel operating and maintenance costs for Utility-owned generation facilities is addressed in the Utility's GRC. From time to time, the Utility may also request the CPUC to authorize additional revenue requirements to recover capital investments and operating costs associated with new Utility-owned generation facilities in a separate ratemaking proceeding. The Utility may recover any above-market costs associated with new utility-owned generation resources in a manner similar to the recovery of above-market costs for non-renewable generation purchases described above. The recovery of above-market costs is typically addressed in the CPUC order approving a specific utility-owned generation project.

***Electricity Transmission***

The Utility's electricity transmission revenue requirements and its wholesale and retail transmission rates are subject to authorization by the FERC. The Utility has two main sources of transmission revenues: (1) charges under the Utility's TO tariff and (2) charges under specific contracts with wholesale transmission customers that the Utility entered into before the CAISO began its operations in 1998. These wholesale customers are referred to as existing transmission contract customers and are charged individualized rates based on the terms of their contracts. Other customers pay transmission rates that are established by the FERC in the Utility's TO tariff rate cases. These FERC-approved rates are included by the CPUC in the Utility's retail electric rates and are collected from retail electric customers receiving bundled service.

*TO Rate Cases*

The primary FERC ratemaking proceeding to determine the amount of revenue requirements that the Utility is authorized to recover for its electric transmission costs and to earn its return on equity is the TO rate case. The Utility generally files a TO rate case every year. The Utility is typically able to charge new rates, subject to refund, before the outcome of the FERC ratemaking review process. See the information within MD&A entitled "Electric Transmission Owner Rate Cases" in the 2013 Annual Report, which information is incorporated herein by reference.

The Utility's TO tariff includes several rate components. The primary component consists of base transmission rates intended to recover the Utility's operating and maintenance expenses, depreciation and amortization expenses, interest expense, tax expense, and return on equity. The Utility derives the majority of the Utility's transmission revenue from base transmission rates. Another component consists of rates that reflect credits and charges from the CAISO for transmission revenues received by the CAISO for providing wholesale wheeling service (i.e., the transfer of electricity that is being sold in the wholesale market) to third parties using the Utility's transmission facilities and charges related to the cost of providing service to existing transmission contract customers under specific contracts. The CAISO also imposes a transmission access charge on the Utility for use of the CAISO-controlled electric transmission grid in serving its customers, which are recovered from the Utility's retail customers as part of transmission rates.

***Natural Gas Transmission***

*Costs Incurred Under the Pipeline Safety Enhancement Plan*

Following the San Bruno accident, the CPUC began a rulemaking proceeding in 2011 to adopt new safety and reliability regulations for natural gas transmission and distribution pipelines in California and the related ratemaking mechanisms. As part of this proceeding, the CPUC ordered the California natural gas utilities to submit proposed plans to modernize and upgrade their natural gas transmission systems, including cost forecasts and ratemaking proposals. In December 2012, the CPUC approved most of the projects proposed in the Utility's PSEP but disallowed the Utility's request for rate recovery of a significant portion of PSEP-related costs that the Utility forecasted it would incur through 2014. The CPUC authorized the Utility to recover costs, subject to the adopted capital and expense amounts, for activities including pipeline strength testing, pipeline replacement, in-line inspection, and the installation of automated valves. The CPUC prohibited the Utility from recovering the costs of pressure testing pipeline placed into service after January 1, 1956 for which the Utility is unable to produce pressure test records. The CPUC ordered the Utility to file an update PSEP application after the Utility completes its search and review of records relating to pipeline pressure validation for all 6,750 miles of the Utility's natural gas transmission pipelines. On October 29, 2013, the Utility submitted its update application to present the results of its completed records search and review and to request approval of adjusted revenue requirements for 2014. Based on the information obtained through the records search and review, the Utility has proposed to change the scope and prioritization of PSEP work, including deferring some projects to after 2014 and accelerating other projects. See the information under the headings within MD&A entitled "Natural Gas Matters" in the 2013 Annual Report, which information is incorporated herein by reference.

*Natural Gas Transmission and Storage Rate Cases*

The CPUC determines the Utility's authorized revenue requirements and rates for its natural gas transmission and storage services in a separate rate case called the GT&S rate case. The CPUC's decision in the most recent GT&S rate case approved a settlement agreement, known as the Gas Accord V, which set the Utility's rates and associated revenue requirements for natural gas transmission and storage services from January 1, 2011 through December 31, 2014. In December 2013, the Utility filed its 2015 GT&S rate case application with the CPUC covering 2015 through 2017. The Utility's forecasts for the 2015 GT&S rate case period are consistent with state law, which requires gas corporations to develop a plan to identify and minimize hazards and systemic risk for public and employee safety. The forecasts include the continuation of work begun in the Utility's PSEP, such as testing pipelines to verify safe operating pressures, replacing older pipelines, installing more valves, and inspecting the interior of more pipelines. The Utility forecasts that it will incur certain costs that it will not seek to recover from customers. See the information under the heading within MD&A entitled "2015 Gas Transmission and Storage Rate Case" in the 2013 Annual Report, which information is incorporated herein by reference.

Under the current ratemaking mechanisms (which have been in existence since 1998 when the first Gas Accord settlement agreement became effective), the Utility's ability to recover a portion of its revenue requirements depends on throughput volumes, gas prices, and the extent to which large industrial customers, large commercial customers, and other shippers contract for firm transmission services. In its 2015 GT&S rate case application, the Utility has proposed eliminating these current mechanisms and that the CPUC establish new two-way balancing accounts to allow the Utility to record differences between actual customer billings and the Utility's authorized revenue requirements for natural gas transmission and storage revenues. Any over-collections would be returned to customers and any under-collections would be paid by customers.

Under the current ratemaking mechanisms, revenue requirements allocated to core customers are decoupled and recovered through balancing accounts that ensure the Utility recovers only its adopted amounts, no more or less. Revenue requirements allocated to non-core customers are subject to a sharing mechanism. Annually, differences between the authorized revenue requirements and actual customer billings are shared between customers and the Utility's shareholders to varying degrees, depending on the type of service. The Utility is currently at risk for approximately 25% of its total authorized GT&S revenue requirements. In its 2015 GT&S rate case application, the Utility has proposed to discontinue the sharing mechanism and to, instead, recover its non-core revenue requirements in the same decoupled manner as its core revenue requirements though existing balancing accounts. Non-core customers are typically large commercial, industrial, electric generation or wholesale customers who meet required usage requirements. These customers must obtain their own gas procurement and are subject to curtailment.

*Biennial Cost Allocation Proceeding*

Certain of the Utility's natural gas distribution costs and balancing account balances are allocated to customers in the CPUC's Biennial Cost Allocation Proceeding. This proceeding normally occurs every two years and is updated in the interim year for purposes of adjusting natural gas rates to recover from customers any under-collection, or refund to customers any over-collection, in the balancing accounts. Balancing accounts for gas distribution and other authorized expenses accumulate differences between authorized amounts and actual revenues.

*Natural Gas Procurement*

The Utility recovers the cost of gas purchased on behalf of core customers, as well as some core hedging costs, through its retail gas rates subject to a limited incentive mechanism based on a market-priced benchmark. The Utility recovers the cost of gas used in generation facilities as a cost of electricity that is recovered through retail electricity rates. (For more information, see Note 9: Derivatives, of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference).

*Interstate and Canadian Natural Gas Transportation*

The Utility has a number of agreements with interstate and Canadian third-party transportation service providers to transport natural gas from the points at which the Utility takes delivery of natural gas (typically in Canada, the U.S. Rocky Mountains, and the southwestern United States) to the points at which the Utility's natural gas transportation system begins. These are governed by tariffs that detail rates, rules, and terms of service for the provision of natural gas transportation services to the Utility on interstate and Canadian pipelines. United States tariffs are approved for each pipeline for service to all of its shippers, including the Utility, by the FERC in a FERC ratemaking review process, and the applicable Canadian tariffs are approved by the Alberta Utilities Commission and the National Energy Board. The transportation costs the Utility incurs under these agreements are recovered through CPUC-approved rates as core natural gas procurement costs or as electricity procurement costs. For more information, see the discussion below under "Natural Gas Utility Operations — Interstate and Canadian Natural Gas Transportation Services Agreements" below.

**Electr ic Utility Operations**

During 2013, the Utility made significant capital investments to modernize and upgrade its electric transmission and distribution infrastructure to extend the life of or replace existing infrastructure; to maintain and improve system reliability, safety, and customer service; to integrate more renewable energy resources; to increase capacity; and add new infrastructure to meet customer demand growth. The Utility improved the reliability of its system by adding emergency capacity at substations, increasing distribution system automation, upgrading poor performing circuits, performing targeted asset replacement, and improving service outage restoration processes. The Utility also has been working to accelerate pole replacement and maintenance of its overhead and underground electric facilities and to increase the use of wireless devices that allow the Utility to monitor the performance of the electric system and respond more quickly to power disruptions.

The Utility's advanced metering infrastructure supports the development of a "smart grid" in California, part of a nationwide effort to improve and modernize the nation's electric system by combining advanced communications and controls to create a responsive and resilient energy delivery network. The Utility has substantially completed the installation of an advanced metering infrastructure throughout its service territory in 2012. (As permitted by CPUC rules, customers may choose not to have an advanced meter installed.) The new infrastructure uses SmartMeter ™ technology that can measure energy use in hourly or quarter-hourly increments, allow customers to track energy usage throughout the billing month and thus enable greater customer control over electricity costs. Usage data is collected through a wireless communications network and transmitted to

the Utility's information system where the data is stored and used for billing and other Utility business purposes.

The Utility is also incorporating the latest "smart grid" technology in parts of its service territory by installing automated switches that reduce outage duration and the number of customers affected by outages. The Utility also received regulatory approval to pilot and test new "smart grid" technologies that have the potential to support the provision of safe, reliable and affordable electric service. Over the next several years, the Utility plans to undertake various "smart grid" projects and invest in "smart grid" technologies.

***Electricity Resources***

The Utility is required to maintain physical generating capacity adequate to meet its customers' load, including peak demand and planning and operating reserves, deliverable to the locations and at times as may be necessary to provide reliable electric service. The Utility is required to dispatch, or schedule, all of the electricity resources within its portfolio in the most cost-effective way. The following table shows the percentage of the Utility's total actual deliveries of electricity to customers in 2013 represented by each major electricity resource, and further discussed below.

Total 2013 Actual Electricity Delivered – 75,705 GWh:

| | Percent of Bundled Retail Sales | |
|---|---|---|
| Owned Generation Facilities | | |
| Nuclear | 23.8% | |
| Small Hydroelectric | 1.2% | |
| Large Hydroelectric | 9.4% | |
| Fossil fuel-fired | 8.1% | |
| Solar | 0.4% | |
| Total | | 42.9% |
| Qualifying Facilities | | |
| Renewable | 4.1% | |
| Non-Renewable | 8.9% | |
| Total | | 13.0% |
| Irrigation Districts and Water Agencies | | |
| Small Hydroelectric | 0.2% | |
| Large Hydroelectric | 1.9% | |
| Total | | 2.1% |
| Other Third-Party Purchase Agreements | | |
| Renewable | 16.6% | |
| Large Hydroelectric | 0.6% | |
| Non-Renewable | 13.0% | |
| Total | | 30.2% |
| Others, Net [1] | | 11.8% |
| **Total** | | 100% |

[1] Mainly comprised of net CAISO open market purchases, offset by transmission and distribution related system losses.

*Owned Generation Facilities*

At December 31, 2013, the Utility owned the following generation facilities, all located in California, listed by energy source and further described below:

| Generation Type | County Location | Number of Units | Net Operating Capacity (MW) |
|---|---|---|---|
| Nuclear: | | | |
| Diablo Canyon | San Luis Obispo | 2 | 2,240 |
| Hydroelectric: | | | |
| Conventional | 16 counties in northern and central California | 104 | 2,670 |
| Helms pumped storage | Fresno | 3 | 1,212 |
| Hydroelectric subtotal: | | 107 | 3,882 |
| Fossil fuel-fired: | | | |
| Colusa Generating Station | Colusa | 1 | 657 |
| Gateway Generating Station | Contra Costa | 1 | 580 |
| Humboldt Bay Generating Station | Humboldt | 10 | 163 |
| CSU East Bay Fuel Cell | Alameda | 1 | 1.4 |
| SF State Fuel Cell | San Francisco | 2 | 1.6 |
| Fossil fuel-fired subtotal: | | 15 | 1,403 |
| Photovoltaic: | Various | 13 | 152 |
| **Total** | | 137 | 7,677 |

*Diablo Canyon Power Plant.* The Utility's Diablo Canyon power plant consists of two nuclear power reactor units, Units 1 and 2. For the year ended December 31, 2013, the Utility's Diablo Canyon power plant achieved an average overall capacity factor of approximately 92%. The NRC operating license for Unit 1 expires in November 2024, and the NRC operating license for Unit 2 expires in August 2025. For more information on matters affecting Diablo Canyon, see the section of MD&A entitled "Regulatory Matters–Diablo Canyon Nuclear Power Plant" in the 2013 Annual

Report, which information is incorporated herein by reference. The ability of the Utility to produce nuclear generation depends on the availability of nuclear fuel. The Utility has entered into various purchase agreements for nuclear fuel that are intended to ensure long-term fuel supply. For more information about these agreements, see Note 14: Commitments and Contingencies — Nuclear Fuel Agreements, of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.

The following table outlines the Diablo Canyon power plant's refueling schedule for the next five years. The Diablo Canyon power plant refueling outages are typically scheduled every 20 months. The average length of a refueling outage over the last five years has been approximately 49.5 days. The actual refueling schedule and outage duration will depend on the scope of the work required for a particular outage and other factors.

| | **2014** | **2015** | **2016** | **2017** | **2018** |
|---|---|---|---|---|---|
| Unit 1 | | | | | |
| Refueling | February | September | - | April | - |
| Startup | March | November | - | May | - |
| Unit 2 | | | | | |
| Refueling | October | - | May | - | February |
| Startup | November | - | June | - | March |

*Hydroelectric Generation Facilities.* The Utility's hydroelectric system consists of 107 generating units at 67 powerhouses, including the Helms pumped storage facility. Most of the Utility's hydroelectric generation units are classified as "large" hydro facilities, as their powerhouse capacity exceeds 30 MW. The system includes 98 reservoirs, 73 diversions, 169 dams, 173 miles of canals, 43 miles of flumes, 132 miles of tunnels, 65 miles of pipe (penstocks, siphons and low head pipes), and 4 miles of natural waterways, and approximately 140,000 acres of fee-owned land. The system also includes water rights as specified in 89 permits or licenses and 160 statements of water diversion and use. The Helms pumped storage facility consists of three motor/generator units.

All of the Utility's powerhouses are licensed by the FERC (except for three small powerhouses not subject to FERC licensing requirements), with license terms between 30 and 50 years. The Utility is in the process of renewing hydroelectric licenses associated with capacity of approximately 1,138 MW and surrendering the hydroelectric license associated with the Kilarc-Cow Creek Project which has a capacity of 5 MW. Although the original licenses associated with 1,070 MW of the 1,138 MW have expired, the licenses are automatically renewed each year until completion of the relicensing process. Licenses associated with approximately 2,812 MW of hydroelectric power will expire between 2014 and 2047.

*Fossil Fuel-fired Generation Facilities.* The Utility's natural gas-fired generation facilities include the Colusa Generating Station, the Gateway Generating Station, and the Humboldt Bay generating station. In addition, the Utility owns and operates three fuel cell sites in the Bay Area.

*Photovoltaic Facilities.* The Utility's operational PV facilities include the Five Points solar station (15 MW), the Westside solar station (15 MW), the Stroud solar station (20 MW), the Huron solar station (20 MW), the Cantua solar station (20 MW), the Giffen solar station (10 MW), the Gates solar station (20 MW), the West Gates solar station (10 MW) and the Guernsey solar station (20 MW). All of these facilities are located in Fresno County, except for the Guernsey solar station, which is located in Kings County.

*Generation Resources from Third Parties*

*Qualifying Facility Power Purchase Agreements.* In accordance with the Public Utility Regulatory Policies Act of 1978, the CPUC required electric utilities to purchase energy and capacity from independent power producers with generation facilities that meet the statutory definition of a qualifying facility. QFs primarily include small production facilities whose primary energy sources are co-generation facilities that produce combined heat and power and renewable generation facilities. As of December 31, 2013, the Utility had agreements with 170 QFs that are in operation, which expire at various dates between 2014 and 2028.

*Irrigation Districts and Water Agencies.* The Utility also has entered into agreements with various irrigation districts and water agencies to purchase hydroelectric power. These agreements require the Utility to make semi-annual fixed minimum payments as well as variable payments based on the operating and maintenance costs incurred by the irrigation districts and water agencies. These contracts will expire on various dates between 2014 and 2030.

*Other Third-Party Power Purchase Agreements* . The Utility has entered into several power purchase agreements for renewable and conventional generation resources, including tolling agreements and resource adequacy agreements.

For more information regarding the Utility's power purchase agreements, see Note 14: Commitments and Contingencies — Third-Party Power Purchase Agreements, of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.

*Renewable Generation Resources*

California law requires load-serving entities, such as the Utility, to gradually increase the amount of renewable energy they deliver to their customers to at least 33% of their total annual retail sales. The RPS program, which became effective in December 2011, established three multi-year compliance periods that have gradually increasing RPS targets: 2011 through 2013, 2014 through 2016, and 2017 through 2020. After 2020, the RPS compliance periods will be annual. In 2013, the California law that established the RPS program was amended to allow the CPUC to set higher RPS targets. The CPUC is conducting a rulemaking proceeding to consider, among other issues, whether and how to increase the RPS targets. Renewable generation resources, for purposes of the RPS program, include bioenergy such as biogas and biomass, certain (primarily small) hydroelectric facilities and efficiency improvements, wind, solar, and geothermal energy. The Utility has made substantial financial commitments under third-party renewable energy contracts to meet its RPS requirements. The Utility forecasts that it will comply with its RPS requirements for the first and second compliance periods based on its current portfolio of executed contracts. The costs incurred by the Utility under third-party contracts to meet RPS requirements are expected to be recovered with other procurement costs through rates. The costs of Utility-owned renewable generation projects will be recoverable through traditional cost-of-service ratemaking mechanisms provided that costs do not exceed the maximum amounts authorized by the CPUC for the respective project.

During 2013, most renewable energy deliveries resulted from third party power purchase agreements and QF agreements. Additional renewable resources included the Utility's small hydroelectric and solar facilities and certain irrigation district contracts (small hydroelectric facilities). (Under California law, generally only small hydroelectric generation resources (30 MW or less) can qualify as a renewable resource for purposes of meeting the RPS mandate, with some exceptions. Most of the Utility's hydroelectric generating units have a capacity in excess of the 30-MW threshold and do not qualify as RPS-eligible resources.)

Total 2013 renewable deliveries are stated in the table below.

| Type | GWh | Percent of Bundled Retail Sales |
|---|---|---|
| Biopower | 3,239 | 4.3% |
| Geothermal | 3,693 | 4.9% |
| Wind | 4,904 | 6.5% |
| RPS-Eligible Hydroelectric | 1,581 | 2.1% |
| Solar | 3,613 | 4.7% |
| Total | 17,030 | 22.5% |

For more information regarding the Utility's renewable energy contracts, see Note 14: Commitments and Contingencies — Third-Party Power Purchase Agreements, of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.

***Electricity Transmission***

At December 31, 2013, the Utility owned approximately 18,115 circuit miles of interconnected transmission lines operated at voltages of 500 kV to 60 kV. The Utility also operated 91 electric transmission substations with a capacity of approximately 62,289 MVA. The Utility's electric transmission system is interconnected with electric power systems in the WECC, which includes many western states, Alberta and British Columbia, Canada, and parts of Mexico.

The CAISO, which is regulated by the FERC, controls the operation of the transmission system and provides open access transmission service on a nondiscriminatory basis. The CAISO also is responsible for ensuring that the reliability of the transmission system is maintained. The Utility acts as its own scheduling coordinator to schedule electricity deliveries to the transmission grid. The Utility also acts as a scheduling coordinator to deliver electricity produced by several governmental entities to the transmission grid under contracts the Utility entered into with these entities before the CAISO commenced operation in 1998. In addition, under the mandatory reliability standards implemented by the FERC, all users, owners, and operators of the transmission system, including the Utility, are also responsible for maintaining reliability through compliance with the reliability standards. See the discussion of reliability standards under "The Utility's Regulatory Environment — Federal Regulation" above.

In November 2013, the Utility, MidAmerican Transmission LLC, and Citizens Energy Corporation were selected by CAISO to develop a new 70-mile transmission line to address the growing power demand in the greater Fresno area. The 230-kV line will span across Fresno, Madera and Kings counties, running from the Gates to Gregg substations, which are owned and operated by the Utility. In addition to increased power, the new line will help reduce the number and duration of power outages, create jobs and support economic development, and bolster efforts to integrate clean, renewable energy onto the grid. The transmission line would be operational no later than 2022 and could come on line earlier.

During 2013, the Utility upgraded several critical substations and re-conductored some transmission lines to improve maintenance and operating flexibility, reliability and safety, including the installation or replacement of 8 transmission substation transformers. The Utility expects to undertake various additional transmission projects over the next few years to upgrade and expand the Utility's transmission system and increase capacity in order to accommodate system load growth, to secure access to renewable generation resources, to replace aging or obsolete equipment, and to improve system reliability. The Utility also has taken steps to improve the physical security of its transmission substations and equipment following the attack on one of its transmission substations in April 2013 which caused significant damage.

*Electricity Distribution*

The Utility's electricity distribution network consists of approximately 141,000 circuit miles of distribution lines (of which approximately 20% are underground and approximately 80% are overhead), 58 transmission-switching substations, and 603 distribution substations. The Utility's distribution network interconnects with the Utility's transmission system primarily at transmission switching substations and distribution substations where transformers and switching equipment reduce the high-voltage transmission levels at which the electricity transmission system transmits electricity, ranging from 500 kV to 60 kV, to lower voltages, ranging from 44 kV to 2.4 kV, suitable for distribution to the Utility's customers.

The distribution substations serve as the central hubs of the Utility's electricity distribution network and consist of transformers, voltage regulation equipment, protective devices, and structural equipment. Emanating from each substation are primary and secondary distribution lines connected to local transformers and switching equipment that link distribution lines and provide delivery to end-users. In some cases, the Utility sells electricity from its distribution lines or other facilities to entities, such as municipal and other utilities, that then resell the electricity. In April 2013, the Utility began construction on the first of three new electric distribution control centers that will house new smart grid technology, enhancing electric reliability for customers. Located in Concord, California, the 37,000-square-foot facility is expected to be completed in 2014.

In 2013, the Utility replaced more than nearly 100,000 feet of underground cable, primarily in San Francisco and East Bay, replaced 100,686 feet of overhead wire, and installed or replaced 19 distribution substation transformer banks to improve reliability and provide capacity to accommodate growing demand. The Utility plans to continue performing work to improve the reliability and safety of its electricity distribution operations in 2014.

*Electricity Operating Statistics*

The following table shows certain of the Utility's operating statistics from 2009 to 2013 for electricity sold or delivered, including the classification of revenues by type of service.

| | 2013 | 2012 | 2011 | 2010 | 2009 |
|---|---|---|---|---|---|
| Customers (average for the year) | 5,243,216 | 5,214,170 | 5,188,638 | 5,155,724 | 5,137,240 |
| Deliveries (in GWh) (1) | 86,513 | 86,113 | 81,255 | 79,634 | 72,385 |
| Revenues (in millions): | | | | | |
| Residential | $ 5,091 | $ 4,953 | $ 4,778 | $ 4,795 | $ 4,759 |
| Commercial | 4,905 | 4,735 | 4,732 | 4,823 | 4,538 |
| Industrial | 1,388 | 1,408 | 1,379 | 1,424 | 1,392 |
| Agricultural | 1,021 | 901 | 692 | 736 | 770 |
| Public street and highway lighting | 75 | 79 | 77 | 79 | 74 |
| Other | (128) | (11) | 94 | (1,178) | (1,700) |
| Subtotal | 12,352 | 12,065 | 11,752 | 10,679 | 9,833 |
| | | | | | |
| Regulatory balancing accounts | 137 | (51) | (151) | (35) | 424 |
| **Total electricity operating revenues** | $ 12,489 | $ 12,014 | $ 11,601 | $ 10,644 | $ 10,257 |
| Other Data: | | | | | |
| Average annual residential usage (kWh) | 6,752 | 5,961 | 6,799 | 6,843 | 6,953 |
| Average billed revenues (per kWh): | | | | | |
| Residential | $ 0.1643 | $ 0.1594 | $ 0.1548 | $ 0.1560 | $ 0.1524 |
| Commercial | 0.1499 | 0.1449 | 0.1441 | 0.1468 | 0.1377 |
| Industrial | 0.0928 | 0.917 | 0.951 | 0.988 | 0.940 |
| Agricultural | 0.1454 | 0.1458 | 0.1475 | 0.1451 | 0.1327 |
| Net plant investment per customer | $ 6,002 | $ 4,919 | $ 5,045 | $ 4,728 | $ 4,336 |

(1) These amounts include electricity provided to direct access customers who procure their own supplies of electricity.

**Natural Gas Utility Operations**

During 2013, the Utility continued to make significant progress on efforts to improve the safety and reliability of its natural gas operations, including performing extensive pipeline testing and monitoring, and replacing and upgrading equipment. Much of this work is part of the Utility's pipeline safety enhancement plan, approved by the CPUC in December 2012, to modernize and upgrade its natural gas transmission system to meet new, industry-wide safety standards. Many of these improvement efforts satisfy recommendations made to the Utility by the NTSB and the CPUC in 2010 and 2011 following their investigations into the San Bruno accident. The Utility has satisfied nine of the twelve NTSB recommendations. The Utility continues to make progress on the remaining three longer-term recommendations.

Since work began on the PSEP and other gas transmission work in 2011, the Utility has verified 657 miles of transmission pipeline through hydrostatic pressure tests or records verification, replaced 127 miles of transmission pipeline, installed 134 automated valves, and collected and digitized more than 3.5 million pipeline records. In July 2013, the Utility completed its search and review of records relating to pipeline pressure validation for all approximately 6,750 miles of its natural gas transmission system. (See the information within MD&A under the heading "Natural Gas Matters" in the 2013 Annual Report, which information is incorporated herein by reference.) In 2013, as part of the Utility's multi-year effort to identify and remove encroachments (e.g. building structures and vegetation overgrowth) from transmission pipeline rights-of-way, the Utility completed a "centerline" mapping survey of its entire gas transmission system to locate, mark, and map the center of all transmission pipelines. The Utility also continued to improve the integrity of transmission pipelines, which included retrofitting approximately 190 miles of pipeline in 2013 to accommodate in-line inspection tools.

The Utility has also implemented a new distribution integrity management program designed to enhance operations and improve the overall safety of the gas distribution system. The Utility has analyzed and replaced a total of 53 miles of Aldyl-A plastic pipeline in 2012 and 2013 and plans to replace 33 additional miles by the end of 2014. It also updated the geographic information system with information on approximately 5,600 miles of Aldyl-A pipeline, including additional pipeline and service attribute information. The Utility completed additional distribution leak surveys in 2013 (in addition to complying with regular distribution leak survey requirements) and repaired approximately 41,000 leaks of all grades.

In August 2013, the Utility opened its new 42,000-square-foot control center in San Ramon, California to monitor and control all aspects of its natural gas system across its service area. The Utility has continued to improve operations by utilizing modern tools and technologies to inspect pipelines, detect gas leaks, and provide real-time access to detailed maps of the Utility's underground gas system. The Utility has improved its supervisory controls and data acquisition system to better detect pipeline leaks and breaks and improve its integrity management program, including incorporating new analysis tools to identify and assess risks to pipeline integrity. The Utility has also implemented a system to enable employees and contractors to report potential pipeline integrity issues and track corrective actions taken. Finally, the Utility has significantly improved the speed at which it responds to gas odor calls.

***Natural Gas System Assets***

The Utility owns and operates an integrated natural gas transportation, storage, and distribution system that includes most of northern and central California. At December 31, 2013, the Utility's natural gas system consisted of approximately 42,559 miles of distribution pipelines, over 6,000 miles of backbone and local transmission pipelines, and various storage facilities. The Utility owns and operates eight natural gas compressor stations which receive, store and move natural gas through the Utility's pipelines. The Utility's backbone transmission system, composed primarily of Lines 300, 400, and 401, is used to transport gas from the Utility's interconnection with interstate pipelines, other local distribution companies, and California gas fields to the Utility's local transmission and distribution systems. Line 300 interconnects with pipeline systems located in the U.S. Southwest and the Rocky Mountains that are owned by third parties (Transwestern Pipeline Company, El Paso Natural Gas Company, Questar Southern Trails Pipeline Company, and Kern River Pipeline Company). Line 300 has a receipt capacity of approximately 1.1 Bcf per day. Line 400 and 401 interconnect at the California-Oregon border with the pipeline systems owned by GTN and Ruby Pipeline, LLC. This line has a receipt capacity at the border of approximately 2.2 Bcf per day. Through interconnections with other interstate pipelines, the Utility can receive natural gas from all the major natural gas basins in western North America, including basins in western Canada, the Rocky Mountains, and the southwestern United States. The Utility also is supplied by natural gas fields in California.

The Utility owns and operates three underground natural gas storage fields connected to the Utility's transmission and storage system and has a 25% interest in the new Gill Ranch Storage Field. These storage fields and the Utility's Gill Ranch share have a combined firm capacity of approximately 48.7 Bcf. In addition, three independent storage operators are interconnected to the Utility's northern California transportation system.

***Natural Gas Services***

The CPUC divides the Utility's on-system natural gas customers into two categories for the purpose of determining service reliability: core and non-core customers. This classification is based largely on a customer's annual natural gas usage. The core customer class is comprised mainly of residential and small commercial natural gas customers. The non-core customer class is comprised of industrial, large commercial, and electric generation natural gas customers. In 2013, core customers represented more than 99% of the Utility's total natural gas customers and 37% of its total natural gas deliveries, while non-core customers comprised less than 1% of the Utility's total natural gas customers and 63% of its total natural gas deliveries. In addition to deliveries discussed above, the Utility delivers gas to off-system customers ( *i.e* ., outside of the Utility's service territory) and to third-party natural gas storage customers.

The Utility provides natural gas transportation services to all core and non-core customers connected to the Utility's system in its service territory. Core customers can purchase natural gas procurement service (i.e. , natural gas supply) from either the Utility or alternate energy service providers. When the Utility provides both transportation and procurement services, the Utility refers to the combined service as "bundled" natural gas service. Currently, more than 91% of core customers, representing nearly 80% of the annual core market demand, receive bundled natural gas service from the Utility.

The Utility does not provide procurement service to large non-core customers such as electricity generators, QF co-generators, enhanced oil recovery customers, refiners, and other large non-core customers. However, some smaller non-core customers are permitted to elect to receive core service, including procurement service, from the Utility if they agree to receive such service for a minimum of five years. Core service to non-core customers is subject to these restrictions to protect core procurement customers from price increases that could otherwise result if the Utility incurred costs to reinforce its pipeline system and take other measures to provide core service reliability on a short-term basis to serve new load from non-core customers.

The Utility offers backbone gas transmission, gas delivery (local transmission and distribution), and gas storage services as separate and distinct services to its non-core customers. Access to the Utility's backbone gas transmission system is available for all natural gas marketers and shippers, as well as non-core customers.

*Natural Gas Supplies*

The Utility purchases natural gas to serve its core customers directly from producers and marketers in both Canada and the United States. The contract lengths and natural gas sources of the Utility's portfolio of natural gas purchase contracts have fluctuated generally based on market conditions. During 2013, the Utility purchased approximately 240,414 MMcf of natural gas (net of the sale of excess supply of gas). Substantially all this natural gas was purchased under contracts with a term of one year or less. The Utility's largest individual supplier represented approximately 13% of the total natural gas volume the Utility purchased during 2013.

*Interstate and Canadian Natural Gas Transportation Services Agreements*

The Utility has a number of arrangements with interstate and Canadian third-party transportation service providers to serve core customers' service demands. The Utility has firm transportation agreements for delivery of natural gas from western Canada to the United States-Canada border with TransCanada NOVA Gas Transmission, Ltd. and TransCanada Foothills Pipe Lines Ltd., B.C. System. These companies' pipeline systems connect at the border to the pipeline system owned by GTN, which provides natural gas transportation services to a point of interconnection with the Utility's natural gas transportation system on the Oregon-California border near Malin, Oregon. The Utility also has firm transportation agreements with Ruby Pipeline, LLC to transport this gas from the U.S Rocky Mountains to the interconnection point with the Utility's natural gas transportation system in the area of Malin, Oregon, at the California border, and firm transportation agreements with Transwestern Pipeline Company, LLC and El Paso Natural Gas Company to transport this natural gas from supply points in the U.S. Southwest to interconnection points with the Utility's natural gas transportation system in the area of California near Topock, Arizona. The Utility also has a transportation agreement with Kern River Gas Transmission Company to transport gas from the U.S. Rocky Mountains to the interconnect point with the Utility's natural gas system in the area of Daggett, CA.

*Natural Gas Operating Statistics*

The following table shows the Utility's operating statistics from 2009 through 2013 (excluding subsidiaries) for natural gas, including the classification of revenues by type of service.

| | 2013 | 2012 | 2011 | 2010 | 2009 |
|---|---|---|---|---|---|
| Customers (average for the year) | 4,378,797 | 4,353,278 | 4,327,407 | 4,295,741 | 4,271,007 |
| Gas purchased (MMcf) | 240,414 | 247,792 | 279,157 | 270,228 | 264,314 |
| Average price of natural gas purchased | $ 3.29 | $ 2.45 | $ 3.69 | $ 4.07 | $ 3.57 |
| Bundled gas sales (MMcf): | | | | | |
| Residential | 181,775 | 185,376 | 201,109 | 195,195 | 195,217 |
| Commercial | 46,668 | 47,341 | 52,230 | 53,921 | 57,550 |
| **Total** | 228,443 | 232,717 | 253,339 | 249,116 | 252,767 |
| Revenues (in millions): | | | | | |
| Bundled gas sales: | | | | | |
| Residential | $ 1,870 | $ 1,852 | $ 2,089 | $ 1,991 | $ 1,953 |
| Commercial | 395 | 383 | 464 | 474 | 496 |
| Regulatory balancing accounts | 240 | 221 | 295 | 305 | 289 |
| Other | 44 | 66 | 102 | 49 | 55 |
| Bundled gas revenues | 2,549 | 2,522 | 2,950 | 2,819 | 2,793 |
| Transportation service only revenue | 555 | 499 | 400 | 377 | 349 |
| **Operating revenues** | $ 3,104 | $ 3,021 | $ 3,350 | $ 3,196 | $ 3,142 |
| Selected Statistics: | | | | | |
| Average annual residential usage (Mcf) | 44 | 45 | 49 | 48 | 48 |
| Average billed bundled gas sales revenues per Mcf: | | | | | |
| Residential | $ 10.29 | $ 9.99 | $ 10.39 | $ 10.20 | $ 10.00 |
| Commercial | 8.47 | 8.09 | 8.89 | 8.79 | 8.62 |
| Net plant investment per customer | $ 2,234 | $ 1,696 | $ 1,721 | $ 1,637 | $ 1,557 |

**Public Purpose and Customer Programs**

California law has established various public purpose programs related to energy efficiency, energy research and development, and renewable energy resources. These programs include the CSI and other self-generation programs, as discussed under "Self-Generation Incentive Program and California Solar Initiative," below. California law requires the CPUC to authorize funding for these programs through the collection of rate surcharges and other rate components. Additionally, the CPUC has authorized funding for energy savings assistance and demand response programs. For 2013, the Utility was authorized revenue requirements of $724 million from electric customers and $160 million from gas customers to fund public purpose and other programs.

*Energy Efficiency Programs*

The Utility's energy efficiency programs are designed to encourage the manufacture, design, distribution, and customer use of energy efficient appliances, other energy-using equipment and energy management products to meet energy savings goals in California. The CPUC has authorized a total of $823 million to fund the Utility's 2013 and 2014 energy efficiency programs, including programs administered by the Marin Energy Authority, a CCA, and a regional network of San Francisco Bay area cities and counties.

On December 20, 2012, the CPUC approved an energy efficiency incentive mechanism to reward the Utility and other California energy utilities for the successful implementation of their 2010-2012 energy efficiency programs. The mechanism provides each utility with an earnings rate composed of a 5% management fee based on qualified program expenditures and an additional performance bonus of up to 1%. The Utility's earnings rate for the 2010-2012 energy efficiency program cycle is 5.68%. The CPUC has awarded the Utility $21 million and $22 million for program years 2010 and 2011, respectively. The utilities will file their incentive claims based on the CPUC-audited 2012 program expenditures in the third quarter of 2014 for approval by the CPUC in the fourth quarter of 2014.

On September 5, 2013, the CPUC approved a new energy efficiency incentive mechanism designed to reward the Utility and the other California investor-owned utilities for the successful implementation of their energy efficiency portfolios for 2013 and beyond. The mechanism provides each utility with an ability to earn shareholder incentives through four separate earnings categories. The mechanism includes a cap on earnings for the Utility of approximately $41 million annually for 2013 and 2014.

*Demand Response Programs*

Demand response programs provide financial incentives and other benefits to participating customers to curtail on-peak energy use. In April 2012, the CPUC authorized the Utility to collect $192 million to fund its 2012-2014 demand response programs. On January 16, 2014, the CPUC approved a 2015 and 2016 bridge extension of the existing programs while it determines the enhanced role of demand response in meeting California's resource planning needs and operational requirements, with the exact amount of funding to be determined in a future CPUC decision. Pending a decision, funding will remain capped at the same level as the current 2013-2014 demand response budget.

*Self-Generation Incentive Program and California Solar Initiative*

The Utility administers the self-generation incentive program authorized by the CPUC to provide incentives to electricity and gas customers who install certain types of clean or renewable distributed generation and energy storage resources that meet all or a portion of their onsite energy usage. The CPUC approved annual funding for the self-generation incentive program of $36 million through 2014, with any carryover funds to be administered through 2015. The Utility also administers the CSI in its service territory. The CPUC has authorized the Utility to collect approximately $1.1 billion from 2007 through 2016 to fund customer incentives for the installation of retail solar energy projects to serve onsite load, as well as to fund research, development, and demonstration activities, and administration expenses. The current overall objective of this initiative is to install 3,000 MW (through both California investor-owned electric utilities and municipal electric utilities) through 2016. The California legislature approved additional funding of $108 million for the low income CSI program and the CPUC will provide direction on this extension in 2014.

*Low-Income Energy Efficiency Programs and California Alternate Rates for Energy*

The CPUC has authorized the Utility to collect approximately $469 million to support the Utility's energy efficiency programs for low-income and fixed-income customers over 2012 through 2014. The Utility also provides a discount rate called the California Alternate Rates for Energy for low-income customers. This rate subsidy is paid for by the Utility's other customers. During any given year, the extent of the subsidy for customers collectively depends upon the number of customers participating in the program and their actual energy usage. In 2013, the amount of this subsidy was approximately $833 million. The CPUC also authorized the Utility to recover approximately $45 million in administrative costs relating to the California Alternate Rates for Energy subsidy through 2014.

**Enviro nmental Regulation**

The Utility's operations are subject to extensive federal, state and local laws and requirements relating to the protection of the environment and the safety and health of the Utility's personnel and the public. These laws and requirements relate to a broad range of activities, including the discharge of pollutants into the air, water, and soil; the reporting and reduction of CO2 and other GHG emissions; the remediation of hazardous and radioactive substances; the transportation, handling, storage and disposal of spent nuclear fuel; and the environmental impacts of land use, including endangered species and habitat protection.

The penalties for violation of these laws and requirements can be severe and may include significant fines, damages, and criminal or civil sanctions. These laws and requirements also may require the Utility, under certain circumstances, to interrupt or curtail operations. To comply with these laws and requirements, the Utility may need to spend substantial amounts from time to time to construct, acquire, modify, or replace equipment, acquire permits and/or emission allowances or other emission credits for facility operations and clean-up, or decommission waste disposal areas at the Utility's current or former facilities and at third-party sites where the Utility's wastes may have been discharged. The actual amount of costs that the Utility will incur is subject to many factors, including changing laws and regulations, the ultimate outcome of complex factual investigations, evolving technologies, selection of compliance alternatives, the nature and extent of required remediation, the extent of the facility owner's responsibility, the availability of recoveries or contributions from third parties, and the development of market-based strategies to address climate change. Generally, the Utility has recovered the costs of complying with environmental laws and regulations in the Utility's rates, subject to reasonableness review. Environmental costs associated with the clean-up of most sites that contain hazardous substances are subject to a special ratemaking mechanism described in Note 14: Commitments and Contingencies—Environmental Remediation Contingencies, of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated by reference.

***Air Quality and Climate Change***

The Utility's electricity generation plants, natural gas pipeline operations, fleet, and fuel storage tanks are subject to numerous air pollution control laws, including the federal Clean Air Act, as well as state and local statutes. These laws and regulations cover, among other pollutants, those contributing to the formation of ground-level ozone, carbon monoxide, SO2, NOx, GHGs, and particulate matter.

*Federal Regulation* . At the federal level, the EPA is charged with implementation and enforcement of the Clean Air Act. Although there have been several legislative attempts to address climate change through imposition of nationwide regulatory limits on GHG emissions, comprehensive federal legislation has not yet been enacted.. In the absence of federal legislative action, the EPA has used its existing authority under the Clean Air Act to address GHG emissions, including establishing an annual GHG reporting requirement. The Utility files annual GHG emission reports with the EPA covering its electric and gas operations in compliance with the EPA's reporting requirement. In addition, in January 2014, the EPA published draft regulations under section 111(b) of the Clean Air Act to control GHG emissions from new fossil fuel-fired power plants. While these draft regulations as presently written do not apply to the Utility's power plants currently in operation or under construction, it is possible that the final regulations may affect the design, construction, operation and cost of future fossil fuel-fired power plants. The EPA has also announced that it intends to issue draft regulations applicable to GHG emissions from existing power plants under section 111(d) of the Clean Air Act in June of 2014.

*State Regulation.* AB 32 requires the gradual reduction of state-wide GHG emissions to the 1990 level by 2020. The CARB is the state agency charged with monitoring GHG levels and adopting regulations to implement and enforce AB 32. The CARB established a state-wide GHG 1990 emissions baseline of 427 million metric tons of CO2 (or its equivalent) to serve as the 2020 emissions limit for the state of California. The CARB has approved various regulations to implement AB 32, including GHG emissions reporting and a state-wide, comprehensive "cap and trade" program that sets gradually declining limits (or "caps") on the amount of GHGs that may be emitted by the major sources of GHG emissions.

The cap and trade program's first two-year compliance period, which began January 1, 2013, applies to the electricity generation and large industrial sectors. The next three-year compliance period, from January 1, 2015 through December 31, 2017, will expand to include the natural gas supply and transportation sectors, effectively covering all the capped sectors until 2020. During each year of the program, the CARB will issue emission allowances (i.e., the rights to emit GHGs) equal to the amount of GHGs emissions allowed for that year. Emitters can obtain allowances from the CARB at quarterly auctions held by the CARB or from third parties or exchanges in the market for trading GHG allowances. The CARB is allocating a fixed number of allowances (which will decrease each year) for free to regulated electric distribution utilities, including the Utility, for the benefit of their electricity customers. The utilities are required to consign their electricity-related allowances for auction by the CARB. The CPUC has ordered the utilities to allocate their electricity-related auction revenues among certain classes of their customers. Although the CPUC has previously authorized the utilities to recover their electricity related GHG compliance costs through rates, the recovery of these costs has been temporarily deferred until May 2014. In addition, the CARB may allocate a number of allowances for free to natural gas suppliers, including the Utility, for the benefit of the Utility's natural gas customers. In anticipation of the Utility's expanded compliance obligations for natural gas suppliers beginning January 1, 2015, the Utility has filed requests at the CPUC for authority to recover the natural gas supplier-related compliance costs from natural gas customers on an annual basis effective January 1, 2015. The Utility expects all costs and revenues associated with GHG cap-and-trade to be passed through to customers.

Increasing use of renewable energy supplies also is expected to help reduce GHG emissions in California. (For more information, see "Renewable Generation Resources" above.)

*Climate Change Mitigation and Adaptation Strategies.* During 2013, the Utility continued its programs to develop strategies to mitigate the impact of the Utility's operations (including customer energy usage) on the environment and to develop its strategy to plan for the actions that it will need to take to adapt to the likely impacts that climate change will have on the Utility's future operations. With respect to electric operations, climate scientists project that, sometime in the next several decades, climate change will lead to increased electricity demand due to more extreme and frequent hot weather events. Climate scientists also predict that climate change will result in significant reductions in snowpack in parts of the Sierra Nevada Mountains. This impact could, in turn, affect the Utility's hydroelectric generation. At this time, the Utility does not anticipate that reductions in Sierra Nevada snowpack will have a significant impact on its hydroelectric generation, due in large part to its adaptation strategies. For example, one adaptation strategy the Utility is developing is a combination of operating changes that may include, but are not limited to, higher winter carryover reservoir storage levels, reduced conveyance flows in canals and flumes in response to an increased portion of precipitation falling as rain rather than snow, and reduced discretionary reservoir water releases during the late spring and summer. If the Utility is not successful in fully adapting to projected reductions in snowpack over the coming decades, it may become necessary to replace some of its hydroelectric generation with electricity from other sources, including GHG-emitting natural gas-fired power plants.

With respect to natural gas operations, both safety-related pipeline hydrotesting/strength testing and normal pipeline maintenance and operations, releases the GHG methane to the atmosphere. The Utility has taken proactive steps to reduce the release of methane by implementing techniques including drafting and cross-compression which reduces the pressures and volumes of natural gas within pipelines prior to venting. In addition, the Utility continues to replace a substantial portion of its older cast iron, steel and plastic distribution pipelines and steel gas transmission mains with new pipe, which reduces leakage. In 2013, the Utility implemented a proactive natural gas leak repair program, 40,676 gas leaks were identified, graded, prioritized and repaired. The primary reason for this effort was public safety, however, eliminating gas leaks results in a positive impact to the environment.

The Utility believes its strategies to reduce GHG emissions—such as energy efficiency and demand response programs, infrastructure improvements, and the support of renewable energy development—are also effective strategies for adapting to the expected increased demand for electricity in extreme hot weather events likely to result from climate change. PG&E Corporation and the Utility are also assessing the benefits and challenges associated with various climate change policies and identifying how a comprehensive program can be structured to mitigate overall costs to customers and the economy as a whole while ensuring that the environmental objectives of the program are met.

***Emissions Data***

PG&E Corporation and the Utility track and report their annual environmental performance results across a broad spectrum of areas. As a result of the time necessary for a thorough, third-party verification of the Utility's GHG emissions, emissions data for 2012 are the most recent data available. The Utility reports its GHG emissions to the CARB. The Utility also voluntarily reports its GHG emissions to The Climate Registry, a non-profit organization that has a reporting and measurement standard applicable to most industry sectors across North America, which enables the Utility to publicly report GHG emissions not covered by mandatory reporting requirements. The Utility's third-party verified voluntary GHG inventory for 2012 totaled more than 57 million metric tonnes of CO2-e, which includes approximately 38 million metric tonnes CO2-e from customer natural gas use.

Beginning with its 2010 emissions, the Utility reports the GHG emissions from its facilities and operations to the EPA under its mandatory reporting requirements. PG&E Corporation and the Utility also publish third-party-verified GHG emissions data in their annual Corporate Responsibility and Sustainability Report.

***2012 Emissions Reported to the California Air Resources Board***

The following table shows the GHG emissions data the Utility reported to the CARB under AB 32.

| **Source** | **Amount (metric tonnes CO2 – equivalent)** |
|---|---|
| Fossil Fuel-Fired Plants (1) | 2,466,851 |
| Natural Gas Compressor Stations (2) | 351,878 |
| Distribution Fugitive Natural Gas Emissions | 222,995 |
| Customer Natural Gas Use (3) | 42,434,940 |
| Total | 45,476,664 |

(1) Includes nitrous oxide and methane emissions from the Utility's generating stations; does not include de minimis emissions.

(2) Includes compressor stations emitting more than 25,000 metric tonnes of CO2-e annually; does not include de minimis emissions.

(3) Includes emissions from the combustion of natural gas delivered to all entities on the Utility's distribution system, with the exception of gas delivered to other nat local distribution companies. This figure does not represent the Utility's compliance obligation under AB 32, which will be equivalent to the above reported value fuel that is delivered to covered entities as calculated by the CARB.

***Benchmarking GHG Emissions for Delivered Electricity***

The Utility's third-party-verified CO2 emissions rate associated with the electricity delivered to customers in 2012 was 445 pounds of CO2 per MWh. The Utility's 2012 emissions rate as compared to the national and California averages for electric utilities is shown in the following table:

| | **Amount (Pounds of CO2 per MWh)** |
|---|---|
| U.S. Average (1) | 1,216 |
| California's Average (1) | 659 |
| Pacific Gas and Electric Company (2) | 445 |

(1) Source: Environmental Protection Agency eGRID 2012 Version 1.0, which contains year 2009 information configured to reflect the electric power industry's curr structure as of May 10, 2012. This is the most up-to-date information available from EPA.

(2) Since the Utility purchases a portion of its electricity from the wholesale market, the Utility is not able to track some of its delivered electricity back to a specific generator. Therefore, there is some unavoidable uncertainty in the Utility's total emissions and the Utility's emission rate for delivered electricity.

***Emissions Data for Utility-Owned Generation***

In addition to GHG emissions data provided above, the table below sets forth information about the GHG and other emissions from the Utility's owned generation facilities. The Utility's owned generation (primarily nuclear and hydroelectric facilities) comprised more than 40% of the Utility's delivered electricity in 2012. The Utility's fossil fuel-fired generation comprised approximately 8% of the Utility's delivered electricity in 2012.

| | **2012** | **2011** |
|---|---|---|
| Total NOx Emissions (tons) | 158 | 144 |
| NOx Emissions Rates (pounds/MWh) | | |
| Fossil Fuel-Fired Plants | 0.05 | 0.06 |
| All Plants | 0.01 | 0.008 |
| Total SO2 Emissions (tons) | 15 | 12 |
| SO2 Emissions Rates (pounds/MWh) | | |
| Fossil Fuel-Fired Plants | 0.005 | 0.005 |
| All Plants | 0.0009 | 0.0007 |
| Total CO2 Emissions (metric tons) | 2,464,464 | 2,024,206 |
| CO2 Emissions Rates (pounds/MWh) | | |
| Fossil Fuel-Fired Plants | 864 | 875 |
| All Plants | 172 | 126 |
| Other Emissions Statistics | | |
| Sulfur Hexafluoride Emissions | | |
| Total Sulfur Hexafluoride Emissions (metric tons CO2-e) | 63,127 | 70,052 |
| Sulfur Hexafluoride Emissions Leak Rate | 1.5% | 1.7% |

***Water Quality***

The EPA published draft regulations in April 2011 to implement the requirements of the federal Clean Water Act that requires cooling water intake structures at electric power plants, such as the nuclear generation facilities at Diablo Canyon, reflect the best technology available to minimize adverse environmental impacts. In June 2012, the EPA proposed changes to these draft regulations which, if adopted, would provide more flexibility in complying with some of the requirements. It is currently uncertain when the EPA will issue final regulations.

At the state level, the California Water Board has adopted a policy on once-through cooling that generally requires the installation of cooling towers or other significant measures to reduce the impact on marine life from existing power generation facilities in California by at least 85%. The California Water Board has appointed a committee to evaluate the feasibility and cost of using alternative technologies to achieve compliance at nuclear power plants, including Diablo Canyon. The committee's consultant is expected to submit a final report to the California Water Board in 2014. If the California Water Board requires the installation of cooling towers that the Utility believes are not technically or economically feasible, the Utility may be forced to cease operations at Diablo Canyon and may incur a material charge. Even if the Utility is not required to install cooling towers, it could incur significant costs to comply with alternative compliances measures or to make payments to support various environmental mitigation projects. The Utility would seek to recover such costs in rates. The Utility's Diablo Canyon operations must be in compliance with the California Water Board's policy by December 31, 2024.

***Hazardous Waste Compliance and Remediation***

The Utility's facilities are subject to the requirements issued by the EPA under the federal Resource Conservation and Recovery Act and the CERCLA, as well as other state hazardous waste laws and other environmental requirements. CERCLA and similar state laws impose liability, without regard to fault or the legality of the original conduct, on certain classes of persons that contributed to the release of a hazardous substance into the environment. These persons include the owner or operator of the site where the release occurred and companies that disposed or arranged for the disposal of the hazardous substances found at the site, and in some cases corporate successors to the operators or arrangers. Under CERCLA, these persons may be subject to joint and several liability for the costs of cleaning up the hazardous substances that have been released into the environment, damages to natural resources, and the costs of required health studies. In the ordinary course of the Utility's operations, the Utility generates waste that falls within CERCLA's definition of hazardous substances and, as a result, has been and may be jointly and severally liable under CERCLA for all or part of the costs required to clean up sites at which these hazardous substances have been released into the environment.

The Utility has a comprehensive program in place to comply with federal, state, and local laws and regulations related to hazardous materials and hazardous waste compliance, remediation activities, and other environmental requirements. The Utility assesses and monitors, on an ongoing basis, measures that may be necessary to comply with these laws and regulations and implements changes to its program as deemed appropriate. The Utility’s remediation activities are overseen by the California Department of Toxic Substances Control, several California regional water quality control boards, and various other federal, state, and local agencies.

The Utility has been, and may be, required to pay for environmental remediation at sites where the Utility has been, or may be, a potentially responsible party under CERCLA and similar state environmental laws. These sites include former manufactured gas plant sites, power plant sites, gas gathering sites, sites where natural gas compressor stations are located, and sites used by the Utility for the storage, recycling, or disposal of potentially hazardous substances. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site. Although the Utility has provided for known environmental obligations that are probable and reasonably estimable, estimated costs may vary significantly from actual costs, and the amount of additional future costs may be material to results of operations in the period in which they are recognized. For more information about environmental remediation liabilities, see the sections within MD&A entitled “Environmental Matters,” “Critical Accounting Polices,” and Note 14: Commitments and Contingencies−Environmental Remediation Contingencies, of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.

*Generation Facilities*

Operations at the Utility's current and former generation facilities may have resulted in contaminated soil or groundwater. Although the Utility sold most of its geothermal and fossil fuel-fired plants, in many cases the Utility retained pre-closing environmental liability under various environmental laws. The Utility currently is investigating or remediating several such sites with the oversight of various governmental agencies. Fossil fuel-fired Units 1 and 2 of the Utility’s Humboldt Bay power plant shut down in September 2010, and are now in the decommissioning process along with the nuclear Unit 3, which was shut down in 1976. The Utility has entered into a voluntary cleanup agreement with the California Department of Toxic Substances Control and is currently completing a soil and groundwater investigation to determine what soil and groundwater remediation may be necessary.

*Former Manufactured Gas Plant Sites*

The Utility is assessing whether and to what extent remedial action may be necessary to mitigate potential hazards posed by certain retired MGP sites. During their operation, from the mid-1800s through the early 1900s, MGPs produced lampblack and coal tar residues. The residues from these operations, which may remain at some sites, contain chemical compounds that now are classified as hazardous. The Utility has been coordinating with environmental agencies and third-party owners to evaluate and take appropriate action to mitigate any potential environmental concerns at 41 MGP sites that the Utility owned or operated in the past.

*Natural Gas Compressor Stations*

Groundwater at the Utility’s Hinkley and Topock natural gas compressor stations contains hexavalent chromium as a result of the Utility’s past operating practices. The Utility is responsible for remediating this groundwater contamination and for abating the effects of the contamination on the environment. The Utility has incurred significant environmental liabilities associated with these sites. For more information about the Utility’s remediation and abatement efforts and related liabilities, see Note 14: Commitments and Contingencies−Environmental Remediation Contingencies of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.

***Nuclear Fuel Disposal***

Under the Nuclear Waste Policy Act of 1982, the DOE and electric utilities with commercial nuclear power plants were authorized to enter into contracts under which the DOE would be required to dispose of the utilities' spent nuclear fuel and high-level radioactive waste by January 1998, in exchange for fees paid by the utilities. The DOE has been unable to meet its contractual obligation with the Utility to dispose of nuclear waste from the Utility's two nuclear generating units at Diablo Canyon and the retired nuclear facility at Humboldt Bay Unit 3. As a result, the Utility constructed an interim dry cask storage facility to store spent fuel at Diablo Canyon through at least 2024, and a separate facility at Humboldt Bay. The Utility and other nuclear power plant owners sued the DOE to recover the costs that they incurred to construct interim storage facilities for spent nuclear fuel.

On September 5, 2012, the U.S. Department of Justice and the Utility executed a settlement agreement that awarded the Utility $266 million for spent fuel storage costs incurred through December 31, 2010. In 2013, the Utility was awarded an additional $29 million for costs incurred between January 2011 and May 2012. These proceeds were recorded in a regulatory balancing account and are being refunded to customers through rates. On January 31, 2014, the U.S. Department of Justice and the Utility executed an addendum extending the term of the settlement agreement for an additional three years, through 2016. The amended settlement agreement does not address costs incurred for spent fuel storage after 2016 and such costs could be the subject to future litigation. Considerable uncertainty continues to exist regarding when and whether the DOE will meet its contractual obligation to the Utility and other nuclear power plant owners to dispose of spent fuel.

***Nuclear Decommissioning***

The Utility's nuclear power facilities consist of two units at Diablo Canyon and the retired facility at Humboldt Bay Unit 3. Nuclear decommissioning requires the safe removal of nuclear facilities from service and the reduction of residual radioactivity to a level that permits termination of the NRC license and release of the property for unrestricted use. The Utility files an application with the CPUC every three years requesting approval of the Utility's estimated decommissioning costs and authorization to recover the estimated costs through rates. Nuclear decommissioning charges collected through rates are held in nuclear decommissioning trusts to be used for the eventual decommissioning of each nuclear unit. (See the discussion of the 2012 Nuclear Decommissioning Cost Triennal Proceeding in the section of MD&A entitled "Regulatory Matters−Diablo Canyon Nuclear Power Plant" and Note 2: Summary of Significant Accounting Policies of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.)

***Endangered Species***

Many of the Utility's facilities and operations are located in, or pass through, areas that are designated as critical habitats for federal, or state-listed endangered, threatened, or sensitive species. The Utility may be required to incur additional costs or be subjected to additional restrictions on operations if additional threatened or endangered species are listed or additional critical habitats are designated at or near the Utility's facilities or operations. The Utility is seeking to secure "habitat conservation plans" to ensure long-term compliance with state and federal endangered species acts. The Utility expects that it will be able to recover costs of complying with state and federal endangered species acts through rates.

## ITEM 1A. Risk Factors

A discussion of the significant risks associated with investments in the securities of PG&E Corporation and the Utility appears within MD&A under the heading "Risk Factors" in the 2013 Annual Report, which information is incorporated herein by reference.

## ITEM 1B. Unresolved Staff Comments

None.

## ITEM 2. Properties

The Utility owns or has obtained the right to occupy and/or use real property comprising the Utility's electricity and natural gas distribution facilities, natural gas gathering facilities and generation facilities, and natural gas and electricity transmission facilities, which are described above under "Electric Utility Operations" and "Natural Gas Utility Operations" which information is incorporated herein by reference. The Utility occupies or uses real property that it does not own primarily through various leases, easements, rights-of-way, permits, or licenses from private landowners or governmental authorities. In total, the Utility occupies 11.0 million square feet of real property, including 8.6 million square feet that the Utility owns. The Utility's corporate headquarters comprises approximately 1.7 million square feet located in several Utility-owned buildings in San Francisco, California. PG&E Corporation also has entered into leases for approximately 87,000 square feet of office space in San Francisco, California. Leases for 40,000 square feet will expire in 2014 and the remaining leases will expire in 2022.

The Utility currently owns approximately 170,000 acres of land, including approximately 140,000 acres of watershed lands. Pursuant to its 2002 Settlement Agreement with the CPUC, the Utility agreed to permanently preserve six “beneficial public values” on all its watershed lands through conservation easements or equivalent protections, and to make up to 44,000 acres of its watershed lands available for donation to public entities or qualified non-profit conservation organizations through its Land Conservation Commitment. The Utility will not donate watershed lands that contain the Utility's or a joint licensee's hydroelectric generation facilities, but this land will be encumbered with conservation easements. Pursuant to the 2002 Settlement Agreement, the Pacific Forest Watershed Lands Stewardship Council was formed to oversee the development and implementation of a Land Conservation Plan that articulates the long-term management objectives for these watershed lands. The Council is governed by an 18-member board of directors, one of whom is appointed by the Utility. The other members represent a range of diverse stakeholders in the watershed lands. The Utility’s goal is to implement all the Land Conservation Commitment transactions by the end of 2017, subject to securing all required regulatory approvals.

**ITEM 3. Legal Proceedings**

In addition to the following legal proceedings, PG&E Corporation and the Utility are involved in various legal proceedings in the ordinary course of their business. For more information regarding PG&E Corporation’s and the Utility’s liability for legal matters, see Note 14: Commitments and Contingencies of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.

***Diablo Canyon Power Plant***

The Utility's Diablo Canyon power plant employs a “once-through” cooling water system that is regulated under a Clean Water Act permit issued by the Central Coast Board. This permit allows the Diablo Canyon power plant to discharge the cooling water at a temperature no more than 22 degrees above the temperature of the ambient receiving water, and requires that the beneficial uses of the water be protected. The beneficial uses of water in this region include industrial water supply, marine and wildlife habitat, shellfish harvesting, and preservation of rare and endangered species. In January 2000, the Central Coast Board issued a proposed draft cease and desist order alleging that, although the temperature limit has never been exceeded, the Utility's Diablo Canyon power plant's discharge was not protective of beneficial uses.

In October 2000, the Utility and the Central Coast Board reached a tentative settlement under which the Central Coast Board agreed to find that the Utility's discharge of cooling water from the Diablo Canyon power plant protects beneficial uses and that the intake technology reflects the best technology available, as defined in the federal Clean Water Act. As part of the tentative settlement, the Utility agreed to take measures to preserve certain acreage north of the plant and to fund approximately $6 million in environmental projects and future environmental monitoring related to coastal resources. On March 21, 2003, the Central Coast Board voted to accept the settlement agreement. On June 17, 2003, the settlement agreement was executed by the Utility, the Central Coast Board and the California Attorney General's Office. A condition to the effectiveness of the settlement agreement is that the Central Coast Board renew Diablo Canyon's permit.

At its July 10, 2003 meeting, the Central Coast Board did not renew the permit and continued the permit renewal hearing indefinitely. Several Central Coast Board members indicated that they no longer supported the settlement agreement, and the Central Coast Board requested a team of independent scientists, as part of a technical working group, to develop additional information on possible mitigation measures for Central Coast Board staff. In January 2005, the Central Coast Board published the scientists' draft report recommending several such mitigation measures. If the Central Coast Board adopts the scientists' recommendations, and if the Utility ultimately is required to implement the projects proposed in the draft report, it could incur costs of up to approximately $30 million. The Utility would seek to recover these costs through rates charged to customers.

The EPA published draft regulations in April 2011 to implement the requirements of SECTION 316(b) of the federal Clean Water Act that requires cooling water intake structures at electric power plants, such as the nuclear generation facilities at Diablo Canyon, to reflect the best technology available to minimize adverse environmental impacts. In June 2012, the EPA proposed changes to these draft regulations which, if adopted, would provide more flexibility in complying with some of the requirements. It is currently uncertain when the EPA will issue final regulations. As part of the implementation process for the California Water Resources Control Board’s once-through cooling policy, the California Water Board’s nuclear review committee is overseeing development of an alternative technology assessment for Diablo Canyon. The committee’s consultant is expected to submit its final report to the California Water Board in 2014. The California Water Board’s policy on once-through cooling and the EPA’s final regulations could affect future negotiations between the Central Coast Board and the Utility regarding the status of the 2003 settlement agreement. (See “Item 1. Business−Environmental Matters−Water Quality” above.) PG&E Corporation and the Utility believe that the ultimate outcome of this matter will not have a material impact on their Utility's financial condition or results of operations.

*Litigation Related to the San Bruno Accident and Natural Gas Spending*

Following the San Bruno accident various lawsuits were filed in San Mateo County Superior Court against PG&E Corporation and the Utility to seek compensation for personal injury and property damage, and other relief, including punitive damages. In 2011 and 2012 , the Utility entered into settlement agreements to resolve many of the claims and In September 2013, the Utility agreed to settle the claims of substantially all of the remaining plaintiffs who sought compensation. At December 31, 2013, the Utility has recorded cumulative charges of $565 million as its best estimate of probable loss for third-party claims related to the San Bruno accident and has made cumulative payments of $520 million to third-party claimants.

At December 31, 2013, there were also four purported shareholder derivative lawsuits outstanding against PG&E Corporation and the Utility seeking recovery on behalf of PG&E Corporation and the Utility for alleged breaches of fiduciary duty by officers and directors, among other claims. The plaintiffs for three of these lawsuits have filed a consolidated complaint with the San Mateo County Superior Court. The court has lifted the stay on these proceedings for the limited purpose of allowing the parties to exchange information and discuss possible resolution. A case management conference is scheduled for April 18, 2014. The remaining purported shareholder derivative lawsuit, filed in the U.S. District Court for the Northern District of California, remains stayed. PG&E Corporation and the Utility are uncertain when and how these derivative lawsuits will be resolved.

In addition, on August 23, 2012, a complaint was filed in the San Francisco Superior Court against PG&E Corporation and the Utility (and other unnamed defendants) by individuals who seek certification of a class consisting of all California residents who were customers of the Utility between 1997 and 2010, with certain exceptions. The plaintiffs allege that the Utility collected more than $100 million in customer rates from 1997 through 2010 for the purpose of various safety measures and operations projects but instead used the funds for general corporate purposes such as executive compensation and bonuses. PG&E Corporation and the Utility contest the allegations.

For additional information, see the discussion within MD&A under the heading, "Natural Gas Matters" and in Note 14: Commitments and Contingencies of the Notes to the Consolidated Financial Statements contained in the 2013 Annual Report, which discussions are incorporated herein by reference.

*Pending CPUC Investigations*

There are three CPUC investigative enforcement proceedings pending against the Utility related to the Utility's natural gas operations and the San Bruno accident. Evidentiary hearings and briefing on the issue of alleged violations have been completed in each of these investigations. The CPUC has stated that it is prepared to impose significant penalties on the Utility if the CPUC determines that the Utility violated applicable laws, rules, and orders. The SED has recommended that the CPUC impose what the SED characterizes as a penalty of $2.25 billion on the Utility, consisting of a $300 million fine payable to the State General Fund and $1.950 billion of non-recoverable costs to perform work under the Utility's pipeline safety enhancement plan and to implement the operational remedies. Several other parties have also submitted penalty recommendations. The administrative law judges who oversee the investigation are expected to issue one or more presiding officers' decisions to address the violations that they have determined the Utility committed and to impose penalties. It is uncertain when the decisions will be issued.

For more information, see discussions within MD&A under the heading, "Natural Gas Matters," and Note 14: Commitments and Contingencies of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which discussions are incorporated herein by reference.

*Other CPUC Enforcement Matters*

The Utility and other California gas corporations are required to provide notice to the SED of any self-identified or self-corrected violations of certain state and federal regulations that relate to the safety of natural gas facilities and operating practices. The SED is authorized to issue citations and impose fines for self-identified or self-corrected violations and for violations that the SED identifies through its periodic audits of the Utility's operations or otherwise. In January 2012, the SED imposed fines of $16.8 million on the Utility for self-reported failure to perform certain leak surveys and in 2013 the SED imposed fines ranging from $50,000 to $8.1 million for self-reported violations. The Utility has filed over 50 self-reports with the SED, plus additional follow-up reports, that the SED has not yet addressed. The SED is expected to impose fines or take enforcement action with respect to some of these self-reports.

In August 2013, the CPUC issued two OSCs related to a document submitted by the Utility on July 3, 2013 as "errata" to correct information about some segments in Lines 101 and 147 (two of the Utility's natural gas transmission pipelines that serve the San Francisco peninsula) that had been previously provided to the CPUC in October 2011 to allow the Utility to restore operating pressure on these pipelines. On December 19, 2013, the CPUC issued a decision to impose fines of approximately $14 million on the Utility in connection with the errata submission, finding that the Utility violated CPUC rules that prohibit any person from misleading the CPUC. On January 23, 2014, the Utility filed an application for rehearing of this decision, arguing that it is erroneous in several respects. It is uncertain when the CPUC will issue a decision on the other OSC that directed the Utility to show cause why all orders issued by the CPUC to authorize increased operating pressure on the Utility's gas transmission pipelines should not be immediately suspended pending competent demonstration that the Utility's natural gas system records are reliable.

In addition, the Utility has notified the CPUC and the SED that the Utility is undertaking a system-wide effort to survey its transmission pipelines and identify and remove encroachments from pipeline rights-of-way over a multi-year period. The SED could impose penalties on the Utility or take other enforcement action in connection with this matter.

***Criminal Investigation***

In June 2011, the U.S. Department of Justice, the California Attorney General's Office, and the San Mateo County District Attorney's Office began an investigation of the San Bruno accident and indicated that the Utility is a target of the investigation. Although the San Mateo County District Attorney's Office has publicly indicated that it will not pursue state criminal charges, the U.S. Department of Justice may still bring criminal charges, including charges based on claims that the Utility violated the federal Pipeline Safety Act, against PG&E Corporation or the Utility. It is uncertain whether any criminal charges will be brought against any of PG&E Corporation's or the Utility's current or former employees. The Utility is continuing to cooperate with federal investigators. A criminal charge or finding would further harm the Utility's reputation. PG&E Corporation and the Utility are unable to estimate the amount or range of reasonably possible losses associated with any civil or criminal penalties that could be imposed and such penalties could have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. In addition, the Utility's business or operations could be negatively affected by any remedial measures that the Utility may undertake, such as operating its natural gas transmission business subject to the supervision and oversight of an independent monitor.

See the discussions within MD&A under the heading "Natural Gas Matters – Criminal Investigation," and in Note 14: Commitments and Contingencies of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which discussions are incorporated herein by reference.

**ITEM 4. Mine Safety Disclosures**

Not applicable.

## EXECUTIVE OFFICERS OF THE REGISTRANTS

The names, ages and positions of PG&E Corporation "executive officers," as defined by Rule 3b-7 of the General Rules and Regulations under the Exchange Act at February 3, 2014 were as follows.

| Name | Age | Position |
|---|---|---|
| Anthony F. Earley, Jr. | 64 | Chairman of the Board, Chief Executive Officer, and President |
| Kent M. Harvey | 55 | Senior Vice President and Chief Financial Officer |
| Christopher P. Johns | 53 | President, Pacific Gas and Electric Company |
| Hyun Park | 52 | Senior Vice President and General Counsel |
| Greg S. Pruett | 56 | Senior Vice President, Corporate Affairs |
| John R. Simon | 49 | Senior Vice President, Human Resources |

All officers of PG&E Corporation serve at the pleasure of the Board of Directors of PG&E Corporation. During at least the past five years through February 3, 2014, the executive officers of PG&E Corporation had the following business experience. Except as otherwise noted, all positions have been held at PG&E Corporation.

| Name | Position | Period Held Office |
|---|---|---|
| Anthony F. Earley, Jr. | Chairman of the Board, Chief Executive Officer, and President | September 13, 2011 to present |
| | Executive Chairman of the Board, DTE Energy Company | October 1, 2010 to September 12, 2011 |
| | Chairman of the Board and Chief Executive Officer, DTE Energy Company | August 1998 to September 30, 2010 |
| Kent M. Harvey | Senior Vice President and Chief Financial Officer | August 1, 2009 to present |
| | Senior Vice President, Financial Services, Pacific Gas and Electric Company | August 1, 2009 to present |
| | Senior Vice President and Chief Risk and Audit Officer | October 1, 2005 to July 31, 2009 |
| Christopher P. Johns | President, Pacific Gas and Electric Company | August 1, 2009 to present |
| | Senior Vice President and Chief Financial Officer | May 1, 2009 to July 31, 2009 |
| | Senior Vice President, Financial Services, Pacific Gas and Electric Company | May 1, 2009 to July 31, 2009 |
| | Senior Vice President, Chief Financial Officer, and Treasurer | October 4, 2005 to April 30, 2009 |
| | Senior Vice President and Treasurer, Pacific Gas and Electric Company | June 1, 2007 to April 30, 2009 |
| Hyun Park | Senior Vice President and General Counsel | November 13, 2006 to present |
| Greg S. Pruett | Senior Vice President, Corporate Affairs | November 1, 2009 to present |
| | Senior Vice President, Corporate Affairs, Pacific Gas and Electric Company | November 1, 2009 to present |
| | Senior Vice President, Corporate Relations | November 1, 2007 to October 31, 2009 |
| | Senior Vice President, Corporate Relations, Pacific Gas and Electric Company | March 1, 2009 to October 31, 2009 |
| John R. Simon | Senior Vice President, Human Resources | April 16, 2007 to present |
| | Senior Vice President, Human Resources, Pacific Gas and Electric Company | April 16, 2007 to present |

The names, ages and positions of the Utility's "executive officers," as defined by Rule 3b-7 of the General Rules and Regulations under the Exchange Act at February 3, 2014 were as follows:

| Name | Age | Position |
|---|---|---|
| Anthony F. Earley, Jr. | 64 | Chairman of the Board, Chief Executive Officer, and President, PG&E Corporation |
| Christopher P. Johns | 53 | President |
| Nickolas Stavropoulos | 55 | Executive Vice President, Gas Operations |
| Geisha J. Williams | 52 | Executive Vice President, Electric Operations |
| Karen A. Austin | 52 | Senior Vice President and Chief Information Officer |
| Desmond A. Bell | 51 | Senior Vice President, Safety and Shared Services |
| Thomas E. Bottorff | 60 | Senior Vice President, Regulatory Affairs |
| Helen A. Burt | 57 | Senior Vice President and Chief Customer Officer |
| John T. Conway | 56 | Senior Vice President, Energy Supply |
| Edward D. Halpin | 52 | Senior Vice President and Chief Nuclear Officer |
| Kent M. Harvey | 55 | Senior Vice President, Financial Services |
| Gregory K. Kiraly | 49 | Senior Vice President, Electric Distribution Operations |
| Hyun Park | 52 | Senior Vice President and General Counsel, PG&E Corporation |
| Greg S. Pruett | 56 | Senior Vice President, Corporate Affairs |
| John R. Simon | 49 | Senior Vice President, Human Resources |
| Jesus Soto, Jr. | 46 | Senior Vice President, Engineering, Construction & Operations |
| Fong Wan | 52 | Senior Vice President, Energy Procurement |
| Dinyar B. Mistry | 51 | VVice President, Chief Financial Officer, and Controller |

All officers of the Utility serve at the pleasure of the Board of Directors of the Utility. During at least the past five years through February 3, 2014, the executive officers of the Utility had the following business experience. Except as otherwise noted, all positions have been held at Pacific Gas and Electric Company.

| Name | Position | Period Held Office |
|---|---|---|
| Anthony F. Earley, Jr. | Chairman of the Board, Chief Executive Officer, and President, PG&E Corporation | September 13, 2011 to present |
| | Executive Chairman of the Board, DTE Energy Company | October 1, 2010 to September 12, 2011 |

## PART II

### ITEM 5. Market for Registrant's Common Equity, Related Stockholder Matters and Issuer Purchases of Equity Securities

As of February 3, 2014, there were 64,972 holders of record of PG&E Corporation common stock. PG&E Corporation common stock is listed on the New York Stock Exchange and the Swiss stock exchange. The high and low sales prices of PG&E Corporation common stock for each quarter of the two most recent fiscal years are set forth under the heading "Quarterly Consolidated Financial Data (Unaudited)" in the 2013 Annual Report, which information is incorporated herein by reference. Shares of common stock of the Utility are solely owned by PG&E Corporation. Information about the frequency, amount, and restrictions upon the payment of, dividends on common stock declared by PG&E Corporation and the Utility is set forth in PG&E Corporation's Consolidated Statements of Equity, the Utility's Consolidated Statements of Shareholders' Equity, Note 5: Common Stock and Share-Based Compensation−Dividends of the Notes to the Consolidated Financial Statements, and within MD&A under the heading "Liquidity and Financial Resources—Dividends," in the 2013 Annual Report, which information is incorporated herein by reference.

***Sales of Unregistered Equity Securities***

During the quarter ended December 31, 2013, PG&E Corporation made equity contributions totaling $305 million to the Utility in order to maintain the Utility's 52% common equity target authorized by the CPUC and to ensure that the Utility has adequate capital to fund its capital expenditures. PG&E Corporation did not make any sales of unregistered equity securities during 2013.

***Issuer Purchases of Equity Securities***

During the quarter ended December 31, 2013, PG&E Corporation did not redeem or repurchase any shares of common stock outstanding. Also, during the quarter ended December 31, 2013, the Utility did not redeem or repurchase any shares of its various series of preferred stock outstanding.

### ITEM 6. Selected Financial Data

Selected financial information, for each of PG&E Corporation and the Utility for each of the last five fiscal years, is set forth under the heading "Selected Financial Data" in the 2013 Annual Report, which information is incorporated herein by reference.

### ITEM 7. Management's Discussion and Analysis of Financial Condition and Results of Operations

A discussion of PG&E Corporation's and the Utility's consolidated financial condition and results of operations is set forth under the heading "Management's Discussion and Analysis of Financial Condition and Results of Operations" as well as the "Glossary" in the 2013 Annual Report, which discussion is incorporated herein by reference.

### ITEM 7A. Quantitative and Qualitative Disclosures About Market Risk

Information responding to Item 7A is set forth within MD&A under the heading "Risk Management Activities," and in Note 9: Derivatives and Note 10: Fair Value Measurements of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which information is incorporated herein by reference.

### ITE M 8. Financial Statements and Supplementary Data

Information responding to Item 8 is set forth under the following headings for PG&E Corporation: "Consolidated Statements of Income," "Consolidated Statements of Comprehensive Income," "Consolidated Balance Sheets," "Consolidated Statements of Cash Flows," and "Consolidated Statements of Equity;" under the following headings for Pacific Gas and Electric Company: "Consolidated Statements of Income," "Consolidated Statements of Comprehensive Income," "Consolidated Balance Sheets," "Consolidated Statements of Cash Flows," and "Consolidated Statements of Shareholders' Equity" in the 2013 Annual Report and under the following headings for PG&E Corporation and Pacific Gas and Electric Company jointly: "Notes to the Consolidated Financial Statements," "Quarterly Consolidated Financial Data (Unaudited)," and "Reports of Independent Registered Public Accounting Firm" in the 2013 Annual Report, which information is incorporated herein by reference.

**ITEM 9. Changes in and Disagreements With Accountants on Accounting and Financial Disclosure**

Not applicable.

**ITEM 9A. Controls and Procedures**

Based on an evaluation of PG&E Corporation's and the Utility's disclosure controls and procedures as of December 31, 2013, PG&E Corporation's and the Utility's respective principal executive officers and principal financial officers have concluded that such controls and procedures are effective to ensure that information required to be disclosed by PG&E Corporation and the Utility in reports that the companies file or submit under the 1934 Act is recorded, processed, summarized, and reported within the time periods specified in the SEC rules and forms. In addition, PG&E Corporation's and the Utility's respective principal executive officers and principal financial officers have concluded that such controls and procedures were effective in ensuring that information required to be disclosed by PG&E Corporation and the Utility in the reports that PG&E Corporation and the Utility file or submit under the 1934 Act is accumulated and communicated to PG&E Corporation's and the Utility's management, including PG&E Corporation's and the Utility's respective principal executive officers and principal financial officers, or persons performing similar functions, as appropriate to allow timely decisions regarding required disclosure.

There were no changes in internal control over financial reporting that occurred during the quarter ended December 31, 2013 that have materially affected, or are reasonably likely to materially affect, PG&E Corporation's or the Utility's internal control over financial reporting.

Management of PG&E Corporation and the Utility have prepared an annual report on internal control over financial reporting. Management's report, together with the report of the independent registered public accounting firm, appears in the 2013 Annual Report under the heading "Management's Report on Internal Control Over Financial Reporting" and "Report of Independent Registered Public Accounting Firm," which information is incorporated by reference and included in Exhibit 13 to this report.

**ITE M 9B. Other Information**

Not applicable.

## PART III

### ITEM 10 . Directors, Executive Officers and Corporate Governance

Information regarding executive officers of PG&E Corporation and the Utility is set forth under "Executive Officers of the Registrants" at the end of Part I of this report. Other information regarding directors is set forth under the heading "Nominees for Directors of PG&E Corporation and Pacific Gas and Electric Company" in the Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders, which information is incorporated herein by reference. Information regarding compliance with Section 16 of the Exchange Act is included under the heading "Section 16(a) Beneficial Ownership Reporting Compliance" in the Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders, which information is incorporated herein by reference.

***Website Availability of Code of Ethics, Corporate Governance and Other Documents***

The following documents are available both on PG&E Corporation's website *www.pgecorp.com* , and the Utility's website, *www.pge.com* : (1) the codes of conduct and ethics adopted by PG&E Corporation and the Utility applicable to their respective directors and employees, including their respective Chief Executive Officers, Chief Financial Officers, Controllers and other executive officers, (2) PG&E Corporation's and the Utility's corporate governance guidelines, and (3) key Board Committee charters, including charters for the companies' Audit Committees and the PG&E Corporation Nominating and Governance Committee and Compensation Committee.

If any amendments are made to, or any waivers are granted with respect to, provisions of the codes of conduct and ethics adopted by PG&E Corporation and the Utility that apply to their respective Chief Executive Officers, Chief Financial Officers, or Controllers, the company whose code is so affected will disclose the nature of such amendment or waiver on its respective website and any waivers to the code will be disclosed in a Current Report on Form 8-K filed within four business days of the waiver.

***Procedures for Shareholder Recommendations of Nominees to the Boards of Directors***

During 2013 there were no material changes to the procedures described in PG&E Corporation's and the Utility's Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders by which security holders may recommend nominees to PG&E Corporation's or Pacific Gas and Electric Company's Boards of Directors.

***Audit Committees and Audit Committee Financial Expert***

Information regarding the Audit Committees of PG&E Corporation and the Utility and the "audit committee financial expert" as defined by the SEC is set forth under the headings "Corporate Governance – Board Committee Duties – Audit Committees" and "Corporate Governance – Committee Membership" in the Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders, which information is incorporated herein by reference.

### ITEM 11 . Executive Compensation

Information responding to Item 11, for each of PG&E Corporation and the Utility, is set forth under the headings "Compensation Discussion and Analysis," "Compensation Committee Report," "Summary Compensation Table - 2013," "Grants of Plan-Based Awards in 2013," "Outstanding Equity Awards at Fiscal Year End - 2013," "Option Exercises and Stock Vested During 2013," "Pension Benefits – 2013," "Non-Qualified Deferred Compensation – 2013," "Potential Payments Upon Resignation, Retirement, Termination, Change in Control, Death, or Disability" and "Compensation of Non-Employee Directors – 2013 Director Compensation" in the Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders, which information is incorporated herein by reference.

**ITEM 12. Security Ownership of Certain Beneficial Owners and Management and Related Stockholder Matters**

Information regarding the beneficial ownership of securities for each of PG&E Corporation and the Utility is set forth under the headings "Share Ownership Information – Security Ownership of Management" and "Share Ownership Information – Principal Shareholders" in the Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders, which information is incorporated herein by reference.

***Equity Compensation Plan Information***

The following table provides information as of December 31, 2013 concerning shares of PG&E Corporation common stock authorized for issuance under PG&E Corporation's existing equity compensation plans.

| Plan Category | (a) Number of Securities to be Issued Upon Exercise of Outstanding Options, Warrants and Rights | (b) Weighted Average Exercise Price of Outstanding Options, Warrants and Rights | (c) Number of Securities Remaining Available for Future Issuance Under Equity Compensation Plans (Excluding Securities Reflected in Column(a)) |
|---|---|---|---|
| Equity compensation plans approved by shareholders | 6,194,819(1) | $ 32.98 | 3,310,474(2) |
| Equity compensation plans not approved by shareholders | - | - | - |
| Total equity compensation plans | 6,194,819(1) | $ 32.98 | 3,310,474(2) |

(1) Includes 46,185 phantom stock units, 2,329,256 restricted stock units and 3,566,966 performance shares. The weighted average exercise price reported in column (b) does not take these awards into account. For a description of these performance shares, see Note 5: Common Stock and Share-Based Compensation of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which description is incorporated herein by reference. For performance shares, amounts reflected in this table assume payout in shares at 200% of target. The actual number of shares issued can range from 0% to 200% of target depending on achievement of total shareholder return objectives. Also, restricted stock units and performance shares are generally settled in net shares. Upon vesting, shares with a value equal to required tax withholding will be withheld and, in lieu of issuing the shares, taxes will be paid on behalf of employees. Shares not issued due to share withholding or performance achievement below maximum will be available again for issuance.

(2) Represents the total number of shares available for issuance under the LTIP and the 2006 LTIP as of December 31, 2013. Outstanding stock-based awards granted under the LTIP include stock options, and phantom stock. The LTIP expired on December 31, 2005. The 2006 LTIP, which became effective on January 1, 2006, authorizes up to 12 million shares to be issued pursuant to awards granted under the 2006 LTIP. Outstanding stock-based awards granted under the 2006 LTIP include stock options, restricted stock, restricted stock units, phantom stock and performance shares. For a description of the 2006 LTIP, see Note 5: Common Stock and Share-Based Compensation of the Notes to the Consolidated Financial Statements in the 2013 Annual Report, which description is incorporated herein by reference.

**ITE M 13. Certain Relationships and Related Transactions, and Director Independence**

Information responding to Item 13, for each of PG&E Corporation and the Utility, is included under the headings "Related Party Transactions" and "Corporate Governance – Board and Director Independence and Qualifications" and "Corporate Governance – Committee Membership" in the Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders, which information is incorporated herein by reference.

**ITEM 14. Principal Accountant Fees and Services**

Information responding to Item 14, for each of PG&E Corporation and the Utility, is set forth under the heading "Information Regarding the Independent Registered Public Accounting Firm for PG&E Corporation and Pacific Gas and Electric Company" in the Joint Proxy Statement relating to the 2014 Annual Meetings of Shareholders, which information is incorporated herein by reference.

## PART IV

### ITEM 15. Exhibits and Financial Statement Schedules

**(a) The following documents are filed as a part of this report:**

1. The following consolidated financial statements, supplemental information and reports of independent registered public accounting firm are contained in the 2013 Annual Report and are incorporated by reference in this report:

Consolidated Statements of Income for the Years Ended December 31, 2013, 2012, and 2011 for each of PG&E Corporation and Pacific Gas and Electric Company.

Consolidated Statements of Comprehensive Income for the Years Ended December 31, 2013, 2012, and 2011 for each of PG&E Corporation and Pacific Gas and Electric Company.

Consolidated Balance Sheets at December 31, 2013 and 2012 for each of PG&E Corporation and Pacific Gas and Electric Company.

Consolidated Statements of Cash Flows for the Years Ended December 31, 2013, 2012, and 2011 for each of PG&E Corporation and Pacific Gas and Electric Company.

Consolidated Statements of Equity for the Years Ended December 31, 2013, 2012, and 2011 for PG&E Corporation.

Consolidated Statements of Shareholders' Equity for the Years Ended December 31, 2013, 2012, and 2011 for Pacific Gas and Electric Company.

Notes to the Consolidated Financial Statements.

Quarterly Consolidated Financial Data (Unaudited).

Reports of Independent Registered Public Accounting Firm (Deloitte & Touche LLP).

2. The following financial statement schedules and report of independent registered public accounting firm are filed as part of this report:

Reports of Independent Registered Public Accounting Firm (Deloitte & Touche LLP).

I—Condensed Financial Information of Parent as of December 31, 2013 and 2012 and for the Years Ended December 31, 2013, 2012, and 2011.

II—Consolidated Valuation and Qualifying Accounts for each of PG&E Corporation and Pacific Gas and Electric Company for the Years Ended December 31, 2013, 2012, and 2011.

Schedules not included are omitted because of the absence of conditions under which they are required or because the required information is provided in the consolidated financial statements, including the notes thereto.

3. Exhibits required by Item 601 of Regulation S-K

| Exhibit Number | Exhibit Description |
|---|---|
| 2.1 | Order of the U.S. Bankruptcy Court for the Northern District of California dated December 22, 2003, Confirming Plan of Reorganization of Pacific Gas and Electric Company, including Plan of Reorganization, dated July 31, 2003 as modified by modifications dated November 6, 2003 and December 19, 2003 (Exhibit B to Confirmation Order and Exhibits B and C to the Plan of Reorganization omitted) (incorporated by reference to Pacific Gas and Electric Company's Registration Statement on Form S-3 No. 333-109994, Exhibit 2.1) |

**REPO RT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Shareholders of
PG&E Corporation and Pacific Gas and Electric Company
San Francisco, California

We have audited the consolidated financial statements of PG&E Corporation and subsidiaries (the "Company") and Pacific Gas and Electric Company and subsidiaries (the "Utility") as of December 31, 2013 and 2012, and for each of the three years in the period ended December 31, 2013, and the Company's and the Utility's internal control over financial reporting as of December 31, 2013, and have issued our reports thereon dated February 11, 2014 (which report on the consolidated financial statements expresses an unqualified opinion and includes an explanatory paragraph relating to three investigative enforcement proceedings pending with the California Public Utilities Commission that may result in material amounts of penalties); such consolidated financial statements and reports are included in your 2013 Annual Report to Shareholders of the Company and the Utility and are incorporated herein by reference. Our audits also included the consolidated financial statement schedules of the Company and Utility listed in Item 15. These consolidated financial statement schedules are the responsibility of the Company's and the Utility's management. Our responsibility is to express an opinion based on our audits. In our opinion, such consolidated financial statement schedules, when considered in relation to the basic consolidated financial statements taken as a whole, present fairly, in all material respects, the information set forth therein.

**PACIFIC GAS AND ELECTRIC COMPANY**
**COMPUTATION OF RATIOS OF EARNINGS TO FIXED CHARGES**

| | Year Ended December 31, | | | | |
|---|---|---|---|---|---|
| | **2013** | **2012** | **2011** | **2010** | **2009** |
| **Earnings:** | | | | | |
| Net income | $ 866 | $ 811 | $ 845 | $ 1,121 | $ 1,250 |
| Income tax provision | 326 | 298 | 480 | 574 | 482 |
| Fixed charges | 971 | 891 | 880 | 799 | 817 |
| **Total earnings** | **$ 2,163** | **$ 2,000** | **$ 2,205** | **$ 2,494** | **$ 2,549** |
| **Fixed charges:** | | | | | |
| Interest on short-term borrowings and long-term debt, net | $ 917 | $ 834 | $ 824 | $ 731 | $ 754 |
| Interest on capital leases | 7 | 9 | 16 | 18 | 19 |
| AFUDC debt | 47 | 48 | 40 | 50 | 44 |
| **Total fixed charges** | **$ 971** | **$ 891** | **$ 880** | **$ 799** | **$ 817** |
| **Ratios of earnings to fixed charges** | **2.23** | **2.24** | **2.51** | **3.12** | **3.12** |

Note:
For the purpose of computing Pacific Gas and Electric Company's ratios of earnings to fixed charges, "earnings" represent net income adjusted for the income or loss from equity investees of less than 100% owned affiliates, equity in undistributed income or losses of less than 50% owned affiliates, income taxes and fixed charges (excluding capitalized interest). "Fixed charges" include interest on long-term debt and short-term borrowings (including a representative portion of rental expense), amortization of bond premium, discount and expense, interest on capital leases, AFUDC debt, and earnings required to cover the preferred stock dividend requirements. Fixed charges exclude interest on tax liabilities.

## MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS

### OVERVIEW

PG&E Corporation is a holding company whose primary operating subsidiary is Pacific Gas and Electric Company, a public utility operating in northern and central California. The Utility generates revenues mainly through the sale and delivery of electricity and natural gas to customers. The Utility is regulated primarily by the CPUC and the FERC. The CPUC has jurisdiction over the rates and terms and conditions of service for the Utility's electricity and natural gas distribution operations, electric generation, and natural gas transportation and storage. The FERC has jurisdiction over the rates and terms and conditions of service governing the Utility's electric transmission operations and interstate natural gas transportation contracts. The NRC oversees the licensing, construction, operation, and decommissioning of the Utility's nuclear generation facilities. The Utility also is subject to the jurisdiction of other federal, state, and local governmental agencies.

Before setting rates, the CPUC and the FERC conduct proceedings to determine the annual amount of revenue that the Utility is authorized to collect from its customers to recover its reasonable operating and capital costs (depreciation, tax, and financing expenses) of providing utility services. The primary CPUC proceedings are the GRC and the GT&S rate case which generally occur every few years and result in revenue requirements that are set for multi-year periods. The CPUC also periodically conducts a cost of capital proceeding, where it determines the capital structure the Utility must maintain (i.e., the relative weightings of common equity, long-term debt, and preferred equity) and authorizes the Utility to earn a specific rate of return on each capital component, including equity. The authorized revenue requirements the CPUC sets in the GRC and GT&S rate cases are set at levels to provide the Utility an opportunity to earn its authorized rates of return on its "rate base" – the Utility's net investment in facilities, equipment, and other property used or useful in providing utility service to its customers. The primary FERC proceeding is the electric TO rate case which generally occurs on an annual basis. The rate of return for the Utility's FERC jurisdictional assets is embedded in revenues authorized in the TO rate cases.

The Utility's ability to recover its GRC revenue requirements does not depend on the volume of the Utility's sales of electricity and natural gas services. This decoupling of revenues and sales eliminates volatility in the revenues earned by the Utility due to fluctuations in customer demand. The Utility's ability to recover a portion of its GT&S revenue requirements depends on the volume of natural gas transported as well as the use of its storage facilities. The Utility's ability to recover its electric transmission-related revenue requirements depends on the volume of electricity sales.

The Utility's revenue requirements are set based on forecast costs. Differences in the amount or timing between forecast costs and actual costs can occur for numerous reasons, including unanticipated costs related to storms, outages, catastrophic events, or to comply with new legislation, regulations, or orders; or third-party claims that are not recoverable through insurance. Generally, differences between actual costs and forecast costs could affect the Utility's ability to earn its authorized return (referred to as "activities impacting earnings" below). However, for certain core operating costs, such as costs associated with pension and other employee benefits, the Utility is authorized to track the difference between actual amounts and forecast amounts and recover or refund the difference through rates (referred to as "cost recovery activities" below). The Utility also collects additional revenue requirements to recover certain costs that the CPUC has authorized the Utility to pass on to customers, including costs to purchase electricity and natural gas; and to fund public purpose programs, such as demand response and customer energy efficiency. Therefore, although the timing and amount of these costs can impact the Utility's revenue, these costs generally do not impact net income (included in "cost recovery activities" below).

There may be some types of costs that the CPUC has determined will not be recoverable through rates or for which the Utility does not seek recovery, such as certain pipeline-related costs and fines associated with the Utility's natural gas transmission system. The CPUC could also disallow recovery of costs that it finds were not prudently or reasonably incurred. The timing and amount of the unrecoverable or disallowed costs can materially impact the Utility's revenue and net income, as described more fully below.

This is a combined annual report of PG&E Corporation and the Utility, and includes separate Consolidated Financial Statements for each of these two entities. PG&E Corporation's Consolidated Financial Statements include the accounts of PG&E Corporation, the Utility, and other wholly owned and controlled subsidiaries. The Utility's Consolidated Financial Statements include the accounts of the Utility and its wholly owned and controlled subsidiaries. This combined Management's Discussion and Analysis of Financial Condition and Results of Operations of PG&E Corporation and the Utility should be read in conjunction with the Consolidated Financial Statements and the Notes to the Consolidated Financial Statements included in this annual report.

**Sum mary of Changes in Net Income and Earnings per Share**

PG&E Corporation's net income available for common shareholders for 2013 was $814 million, or $1.83 per share, as compared to $816 million, or $1.92 per share, for 2012. Operating results have continued to be materially affected by costs the Utility has incurred to improve the safety and reliability of its natural gas operations that are not recoverable through rates. These unrecovered costs have increased the Utility's equity needs which PG&E Corporation has funded through equity issuances that have materially diluted PG&E Corporation's EPS.

The following table is a summary reconciliation of the key changes, after-tax, in PG&E Corporation's income available for common shareholders and EPS for the year ended December 31, 2013 compared to the prior year. (See "Results of Operations" and "Natural Gas Matters" below for additional information.)

| **(in millions, except per share amounts)** | **Earnings** | **EPS (Diluted)** |
|---|---|---|
| **Income Available for Common Shareholders - 2012** | $ 816 | $ 1.92 |
| Natural gas matters [1] | 96 | 0.27 |
| Growth in rate base earnings [2] | 87 | 0.19 |
| Environmental-related costs [3] | 59 | 0.14 |
| Reduction in authorized cost of capital [4] | (166) | (0.37) |
| Impact of capital spending over authorized [5] | (24) | (0.06) |
| Uneconomic project and lease termination [6] | (11) | (0.03) |
| Gas transmission revenues | (9) | (0.02) |
| Increase in shares outstanding [7] | - | (0.15) |
| Other | (34) | (0.06) |
| **Income Available for Common Shareholders - 2013** | **$ 814** | **$ 1.83** |

[1] The Utility incurred net costs and capital charges related to natural gas matters of $645 million and $812 million, pre-tax, during 2013 and 2012, respectively. These amounts are not recoverable through rates. See "Operating and Maintenance" below.

[2] Represents the impact of the increase in rate base as authorized in various rate cases during 2013 as compared to 2012 .

[3] Environmental-related costs were lower in 2013 compared to 2012 when the Utility incurred a significant charge for environmental remediation associated with the Hinkley natural gas compressor site.

[4] Reflects the lower cost of capital authorized in the 2013 Cost of Capital proceeding. The CPUC authorized the Utility to earn a ROE of 10.40% (compared to 11.35% previously authorized) and adjusted its cost of debt beginning on January 1, 2013.

[5] Represents the incremental interest and depreciation expense associated with capital expenditures that exceed the current authorized levels.

[6] Represents the expenses incurred in 2013 for terminated projects and leases, compared to 2012.

[7] Represents the impact of a higher number of weighted average shares outstanding during 2013, compared to 2012. PG&E Corporation issues shares to fund its equity contributions to the Utility to maintain the Utility's capital structure and fund operations, including expenses related to natural gas matters. This has no dollar impact on earnings.

**Key Factors Affecting Results of Operations, Financial Condition, and Cash Flows**

PG&E Corporation and the Utility believe that their future results of operations, financial condition, and cash flows will be materially affected by several factors, including the timing and outcome of CPUC ratemaking proceedings, the ultimate amount of costs the Utility will continue to incur to improve the safety and reliability of its natural gas operations, the outcome of the pending investigations that commenced following the San Bruno accident including the ultimate amount of fines the Utility will be required to pay, and the timing and amount of the Utility's financing needs.

- *The Timing and Outcome of Ratemaking Proceedings* . The majority of the Utility's revenue requirements for the next several years will be determined by the outcomes of the 2014 GRC and the 2015 GT&S rate case. In the 2014 GRC, the Utility is seeking an increase in its 2014 revenue requirements of $1.16 billion over the comparable revenues for 2013 that were previously authorized, as well as attrition increases for 2015 and 2016. The CPUC's ORA has recommended that the CPUC approve a 2014 revenue requirement that is lower than the amount authorized for 2013. A proposed decision is anticipated in the first quarter of 2014. (See "2014 General Rate Case" below.) In the 2015 GT&S rate case, the Utility is seeking an increase in its 2015 revenue requirements of $555 million over the comparable revenues for 2014 that were previously authorized, as well as attrition increases for 2016 and 2017. The Utility has requested that the CPUC issue a final decision by the end of 2014. (See "2015 Gas Transmission and Storage Rate Case" below.) The outcome of these ratemaking proceedings can be affected by many factors, including general economic conditions, the level of customer rates, regulatory policies, and political considerations.

- *The Ability of the Utility to Control Operating Costs and Capital Expenditures.* Net income is negatively affected when the authorized revenues are not sufficient for the Utility to recover the costs it actually incurs to provide utility services. The Utility forecasts that it will incur total pipeline-related expenses ranging from $350 million to $450 million in 2014 that will not be recoverable through rates. These amounts include costs to perform work under the Utility's PSEP that were disallowed by the CPUC, as well as costs related to the Utility's multi-year effort to identify and remove encroachments from transmission pipeline rights-of-way and other gas-related work, and legal and other expenses. The Utility could record additional charges for PSEP capital to the extent the Utility's costs are higher than expected or if additional costs are disallowed by the CPUC. (See "Disallowed Capital Costs" below.) The Utility's ability to recover pipeline-related expenses beginning in 2015 also will be affected by the outcome of the 2015 GT&S rate case. Differences between the amount or timing of the Utility's actual costs and forecasted or authorized amounts may affect the Utility's ability to earn its authorized ROE.

- *The Outcome of Pending Investigations and Enforcement Matters.* Three CPUC investigations are still pending against the Utility related to its natural gas operations and the San Bruno accident. The SED has recommended that the CPUC impose what the SED characterizes as a penalty of $2.25 billion on the Utility, consisting of a $300 million fine payable to the State General Fund and $1.95 billion of non-recoverable costs. If the SED's penalty recommendation is adopted, the Utility estimates that its total unrecovered costs and fines related to natural gas transmission operations would be about $4.5 billion. (See "Pending CPUC Investigations" below.) In addition, the CPUC and the SED may impose fines or take enforcement action with respect to the Utility's self-reports of noncompliance with certain natural gas safety regulations. (See "CPUC Enforcement Matters" below.) The Utility may be required to pay additional civil or criminal penalties or incur other costs, depending on the outcome of the pending federal criminal investigation of the San Bruno accident. (See "Criminal Investigation" below.)

- *The Amount and Timing of the Utility's Financing Needs* . PG&E Corporation contributes equity to the Utility as needed to maintain the Utility's CPUC-authorized capital structure. Future financing needs will be affected by various factors, including the timing and amount of capital expenditures and operating expenses, the amount of costs related to natural gas matters that are not recoverable through rates, and other factors described in "Liquidity and Financial Resources" below. PG&E Corporation forecasts that it will issue a material amount of equity in 2014, primarily to support the Utility's 2014 capital expenditures (which are forecasted to range from $5 billion to $6 billion) and to fund unrecovered costs. Depending on the outcome of the pending investigations, PG&E Corporation may be required to issue additional common stock to fund its equity contributions as the Utility pays fines and incurs additional unrecoverable gas safety-related costs. These additional issuances could have a material dilutive effect on PG&E Corporation's EPS. PG&E Corporation's and the Utility's ability to access the capital markets and the terms and rates of future financings could be affected by changes in their respective credit ratings, the outcome of natural gas matters, general economic and market conditions, and other factors.

For more information about the factors and risks that could affect PG&E Corporation's and the Utility's future results of operations, financial condition, and cash flows, or that could cause future results to differ from historical results, see the section entitled "Risk Factors" below. In addition, this 2013 Annual Report contains forward-looking statements that are necessarily subject to various risks and uncertainties. These statements reflect management's judgment and opinions which are based on current estimates, expectations, and projections about future events and assumptions regarding these events and management's knowledge of facts as of the date of this report. See the section entitled "Cautionary Language Regarding Forward Looking Statements" below for a list of some of the factors that may cause actual results to differ materially. PG&E Corporation and the Utility are not able to predict all the factors that may affect future results. PG&E Corporation and the Utility do not undertake an obligation to update forward-looking statements, whether in response to new information, future events, or otherwise.

## RE SULTS OF OPERATIONS

### PG&E Corporation

The consolidated results of operations consist primarily of balances related to the Utility, which are discussed below. The table below provides a summary of consolidated net income (loss) for 2013, 2012 and 2011:

| (in millions) | 2013 | 2012 | 2011 |
|---|---|---|---|
| Consolidated Total | $ 814 | $ 816 | $ 844 |
| PG&E Corporation | (38) | 19 | 13 |
| Utility | 852 | 797 | 831 |

PG&E Corporation's net income consists primarily of operating and maintenance expense, interest expense on long-term debt, other income from investments, and income taxes. In 2013, PG&E Corporation's operating results were primarily impacted by an impairment loss resulting from investments unrelated to PG&E Corporation's core operations with no similar activity in 2012 and by an increase in charitable contributions. There were no material changes to PG&E Corporation's operating results in 2012 compared to 2011.

### Utility

The table below details certain items from the Utility's accompanying Consolidated Statements of Income for 2013, 2012, and 2011. The presentation below separately identifies activities that impact earnings and cost recovery activities that do not impact earnings.

Activities that impact earnings (net income) primarily include revenues authorized by the CPUC and FERC in the various rate cases that are designed to recover the Utility's costs to own and operate its assets and provide it with an opportunity to earn its authorized rate of return on its rate base. Expenses that impact earnings include costs in excess of amounts authorized and costs for which the Utility does not seek recovery. (See "Utility Activities Impacting Earnings" below.) Activities that do not impact earnings include revenues collected to recover certain costs that the Utility is authorized to pass on to customers, including costs to purchase electricity and natural gas, as well as costs to fund public purpose programs. They also include revenues authorized in various rate cases that are designated for a specific purpose such as the payment of pension costs. (See "Utility Cost Recovery Activities" below.)

| | 2013 | | | 2012 | | | 2011 | | |
|---|---|---|---|---|---|---|---|---|---|
| (in millions) | Earning Activities | Cost Recovery Activities | Total Utility | Earning Activities | Cost Recovery Activities | Total Utility | Earning Activities | Cost Recovery Activities | Total Utility |
| Electric operating revenues | $ 6,465 | $ 6,024 | $ 12,489 | $ 6,414 | $ 5,600 | $ 12,014 | $ 6,150 | $ 5,451 | $ 11,601 |
| Natural gas operating revenues | 1,776 | 1,328 | 3,104 | 1,772 | 1,249 | 3,021 | 1,696 | 1,654 | 3,350 |
| **Total operating revenues** | **8,241** | **7,352** | **15,593** | **8,186** | **6,849** | **15,035** | **7,846** | **7,105** | **14,951** |

| Preferred stock dividend requirement | 14 | 14 | 14 |
| **Income Available for Common Stock** | **$ 852** | **$ 797** | **$ 831** |

(1) Items represent activities that impact earnings for 2013, 2012, and 2011.

**Utility Activities Impacting Earnings**

The following discussion presents the Utility's operating results for activities impacting earnings for 2013, 2012, and 2011.

*Operating Revenues*

The Utility's electric and natural gas operating revenues increased by $55 million, or 1%, in 2013 compared to 2012, primarily due to an increase of $294 million as authorized in various rate cases, partially offset by a decrease in revenues of $196 million as a result of the lower return authorized in the 2013 Cost of Capital proceeding.

The Utility's electric and natural gas operating revenues increased by $340 million, or 4%, in 2012 compared to 2011 primarily due to an increase in revenues authorized in various rate cases and increases in natural gas storage revenues.

*Operating and Maintenance*

The Utility's operating and maintenance expenses decreased by $189 million, or 4%, in 2013 compared to 2012, primarily due to decreases of $167 million for net costs incurred in connection with natural gas matters (see table below) and $88 million for environmental remediation costs associated with a significant charge in 2012 for the Hinkley natural gas compressor station site. These costs were partially offset by increases in other expenses that were not material. In each of 2013 and 2012, the Utility incurred expenses that were approximately $250 million higher than the level of authorized revenue requirements to improve the safety and reliability of its operations that will not be recovered in rates.

The Utility's operating and maintenance expenses increased by $476 million, or 12%, in 2012 compared to 2011, primarily due to costs incurred to improve the safety and reliability of electric and natural gas operations that were approximately $250 million higher than amounts assumed under the 2011 rate cases. The remaining increase was primarily attributable to an increase of $73 million for net costs incurred in connection with natural gas matters (see table below), and a $56 million charge related to employee operational performance incentives.

The following table provides a summary of the Utility's costs associated with natural gas matters that are not recoverable through rates:

| **(in millions)** | **2013** | **2012** | **2011** |
|---|---|---|---|
| Pipeline-related expenses [1] [2] | $ 387 | $ 477 | $ 483 |
| Disallowed capital | 196 | 353 | - |
| Accrued fines | 22 | 17 | 200 |
| Third-party liability claims | 110 | 80 | 155 |
| Insurance recoveries | (70) | (185) | (99) |
| Contribution to City of San Bruno | - | 70 | - |
| **Total natural gas matters** | **$ 645** | **$ 812** | **$ 739** |

(1) Includes $137 million, $268 million, and $331 million for work performed under the Utility's PSEP in 2013, 2012, and 2011, respectively.

(2) The decrease for 2013 reflects amounts that were authorized for recovery in the CPUC's PSEP December 2012 decision as well as lower legal and other expenses in 2013.

Pipeline-related expenses include costs to validate safe operating pressures, conduct strength testing, and perform other work associated with the Utility's PSEP; costs related to the Utility's multi-year effort to identify and remove encroachments (e.g. building structures and vegetation overgrowth) from transmission pipeline rights-of-way, and costs to improve the integrity of transmission pipelines and to perform other gas-related work; and legal and other expenses. In 2013, the Utility completed its "centerline" mapping survey of its entire gas transmission system to locate, mark, and map the center of all transmission pipelines. The Utility recorded charges of $196 million and $353 million in 2013 and 2012, respectively, for PSEP capital costs that are expected to exceed the amount to be recovered. The additional charge in 2013 primarily reflects a change in project portfolio involving higher unit costs to replace pipelines than originally forecast. (See "Natural Gas Matters – Disallowed Capital Costs" below.)

The Utility recorded charges of $22 million and $17 million in 2013 and 2012, respectively, for fines imposed on the Utility by the CPUC and SED in connection with various self-reported violations and other enforcement matters. The Utility accrued $200 million in 2011 as the minimum amount of fines deemed probable that the Utility will pay to the State General Fund in connection with the three pending CPUC investigations. (See "Natural Gas Matters – Pending CPUC Investigations" below.)

The Utility has settled the claims of substantially all of the remaining plaintiffs who sought compensation for personal injury, property damage, and other relief, following the San Bruno accident. The Utility has recorded cumulative charges of $565 million for third-party claims related to the San Bruno accident, reflecting its best estimate of probable loss. These costs were partially offset by cumulative insurance recoveries of $354 million. Although the Utility believes that a significant portion of costs incurred for third-party claims (and associated legal expenses of $86 million) will ultimately be recovered through its insurance, it is unable to predict the amount and timing of additional insurance recoveries.

*Depreciation, Amortization, and Decommissioning*

The Utility's depreciation, amortization, and decommissioning expenses increased by $149 million, or 8%, in 2013 compared to 2012, and by $113 million, or 6%, in 2012 compared to 2011, primarily due to the impact of capital additions.

*Interest Income, Interest Expense, and Other Income, Net*

There were no material changes to interest income, interest expense, and other income, net for the periods presented.

*Income Tax Provision*

The Utility's income tax provision increased by $28 million, or 9%, in 2013 compared to 2012. The effective tax rates were 27% in both 2013 and 2012.

The Utility's income tax provision decreased by $182 million, or 38%, in 2012 compared to 2011. The effective tax rates were 27% and 36% for 2012 and 2011, respectively. The effective tax rate decreased primarily due to lower state and federal taxes for non-tax deductible penalties related to natural gas matters.

The differences between the Utility's income taxes and amounts calculated by applying the federal statutory rate to income before income tax expense for continuing operations for 2013, 2012, and 2011 were as follows:

| | 2013 | 2012 | 2011 |
|---|---|---|---|
| Federal statutory income tax rate | 35.0% | 35.0% | 35.0% |
| Increase (decrease) in income tax rate resulting from: | | | |
| State income tax (net of federal benefit) | (2.2) | (3.0) | 1.6 |
| Effect of regulatory treatment of fixed asset differences | (3.8) | (3.9) | (4.2) |
| Tax credits | (0.4) | (0.6) | (0.5) |
| Benefit of loss carryback | (1.0) | (0.4) | (2.1) |
| Non deductible penalties | 0.7 | 0.5 | 6.3 |
| Other, net | (0.9) | (0.8) | 0.1 |
| **Effective tax rate** | **27.4%** | **26.8%** | **36.2%** |

**Utility Cost Recovery Activities**

*Cost of Electricity*

The Utility's cost of electricity includes the costs of power purchased from third parties, transmission, fuel used in its own generation facilities, fuel supplied to other facilities under power purchase agreements, and realized gains and losses on price risk management activities. (See Note 9 of the Notes to the Consolidated Financial Statements.) The volume of power purchased by the Utility is driven by customer demand, the availability of the Utility's own generation facilities, and the cost effectiveness of each source of electricity. Additionally, the cost of electricity is impacted by the higher cost of procuring renewable energy as the Utility increases the amount of its renewable energy deliveries to comply with California legislative and regulatory requirements, and by costs associated with complying with California's GHG laws.

| (in millions) | 2013 | 2012 | 2011 |
|---|---|---|---|
| Cost of purchased power | $ 4,696 | $ 3,873 | $ 3,719 |
| Fuel used in own generation facilities | 320 | 289 | 297 |
| **Total cost of electricity** | **$ 5,016** | **$ 4,162** | **$ 4,016** |
| Average cost of purchased power per kWh | $ 0.094 | $ 0.079 | $ 0.089 |
| Total purchased power (in millions of kWh) | **49,941** | **48,933** | **41,958** |

*Cost of Gas*

The Utility's cost of natural gas includes the costs of procurement, storage, transportation of natural gas and realized gains and losses on price risk management activities. (See Note 9 of the Notes to the Consolidated Financial Statements.) The Utility's future cost of natural gas will be affected by the market price of natural gas, changes in the cost of storage and transportation, changes in customer demand, and by costs associated with complying with California's GHG laws.

| (in millions) | 2013 | 2012 | 2011 |
|---|---|---|---|
| Cost of natural gas sold | $ 807 | $ 676 | $ 1,136 |
| Transportation cost of natural gas sold | 161 | 185 | 181 |
| **Total cost of natural gas** | **$ 968** | **$ 861** | **$ 1,317** |
| Average cost per Mcf of natural gas sold | $ 3.54 | $ 2.91 | $ 4.49 |
| Total natural gas sold (in millions of Mcf) (1) | 228 | 232 | 253 |

(1) One thousand cubic feet

*Operating Expenses*

The Utility's operating expenses also include certain recoverable costs that the Utility is required to incur as part of its operations and include public purpose programs, pension, and other continuous business expenses. Additionally, operating expenses in 2012 and 2011 include the amortization of energy recovery bonds regulatory asset which fully amortized in 2012. If the Utility were to spend over authorized amounts, these expenses could have an impact to earnings.

## LI QUIDITY AND FINANCIAL RESOURCES

### Overview

The Utility's ability to fund operations and make distributions to PG&E Corporation depends on the levels of its operating cash flows and access to the capital and credit markets. The levels of the Utility's operating cash and short-term debt fluctuate as a result of seasonal load, volatility in energy commodity costs, collateral requirements related to price risk management activities, the timing and amount of tax payments or refunds, and the timing and effect of regulatory decisions and long-term financings, among other factors. The Utility generally utilizes equity contributions from PG&E Corporation and long-term senior unsecured debt issuances to maintain its CPUC-authorized capital structure. The Utility relies on short-term debt, including commercial paper, to fund temporary financing needs. The CPUC authorizes the aggregate amount of long-term debt and short-term debt that the Utility may issue and authorizes the Utility to recover its related debt financing costs. The Utility has short-term borrowing authority of $4.0 billion, including $500 million that is restricted to certain contingencies.

PG&E Corporation's ability to fund operations, make scheduled principal and interest payments, fund Utility equity contributions as needed for the Utility to maintain its CPUC-authorized capital structure, and pay dividends primarily depends on PG&E Corporation's access to the capital and credit markets and the level of cash distributions received from the Utility. PG&E Corporation's equity contributions to the Utility are funded primarily through common stock issuances. PG&E Corporation's stock issuances used to fund Utility equity needs attributable to unrecoverable costs and penalties have had and will continue to have a dilutive effective on PG&E Corporation's EPS. PG&E Corporation also may use draws under its revolving credit facility or issuances under its commercial paper program to occasionally fund equity contributions on an interim basis.

PG&E Corporation and the Utility have $889 million of long-term debt maturing within the next 6 months. PG&E Corporation and the Utility plan to repay this debt with capital market financings.

Further, given the Utility's significant ongoing capital expenditures, the Utility will continue to need equity contributions from PG&E Corporation to maintain its authorized capital structure. The Utility's future equity needs will continue to be affected by costs that are not recoverable through rates, including costs related to natural gas matters, incremental work to improve safety and reliability of electric and gas operations in excess of authorized revenue requirements, and environmental remediation costs. The Utility's equity needs would also increase to the extent it is required to pay fines or penalties in connection with pending investigations. (See "Natural Gas Matters" below.)

PG&E Corporation's and the Utility's credit ratings may be affected by the ultimate outcome of the pending investigations related to natural gas matters and the San Bruno accident. PG&E Corporation's and the Utility's credit ratings may affect their access to the credit and capital markets and their respective financing costs in those markets. Credit rating downgrades may increase the cost of short-term borrowing, including PG&E Corporation's and the Utility's commercial paper, as well as the costs associated with their respective credit facilities, and long-term debt.

PG&E Corporation and the Utility maintain separate bank accounts and primarily invest their cash in money market funds. The following table summarizes PG&E Corporation's and the Utility's cash positions:

| | **December 31,** | |
|---|---|---|
| **(in millions)** | **2013** | **2012** |
| PG&E Corporation | $ 231 | $ 207 |
| Utility | 65 | 194 |
| **Total consolidated cash and cash equivalents** | **$ 296** | **$ 401** |

In addition to these cash and cash equivalents, PG&E Corporation and the Utility hold restricted cash that primarily consists of cash held in escrow pending the resolution of the remaining disputed claims that were filed in the Utility's reorganization proceeding under Chapter 11 of the U.S. Bankruptcy Code. (See Note 12 of the Notes to the Consolidated Financial Statements.)

**Revolving Credit Facilities and Commercial Paper Programs**

In April 2013, PG&E Corporation and the Utility amended and restated their revolving credit facilities to extend their termination dates from May 31, 2016 to April 1, 2018. These agreements contain substantially similar terms as the original 2011 credit agreements.

In January 2014, PG&E Corporation established a new commercial paper program, the borrowings of which will be used primarily to cover fluctuations in cash flow requirements. PG&E Corporation will treat the amount of its outstanding commercial paper as a reduction to the amount available under its revolving credit facility.

The following table summarizes PG&E Corporation's and the Utility's outstanding borrowings under their revolving credit facilities and the Utility's commercial paper program at December 31, 2013:

| (in millions) | Termination Date | Facility Limit | Letters of Credit Outstanding | Borrowings | Commercial Paper | Facility Availability |
|---|---|---|---|---|---|---|
| PG&E Corporation | April 2018 | $ 300[1] | $ - | $ 260 | $ - | $ 40 |
| Utility | April 2018 | 3,000[2] | 79 | - | 914[3] | 2,007[3] |
| **Total revolving credit facilities** | | **$ 3,300** | **$ 79** | **$ 260** | **$ 914** | **$ 2,047** |

[1] Includes a $100 million sublimit for letters of credit and a $100 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.
[2] Includes a $1.0 billion sublimit for letters of credit and a $300 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.
[3] The Utility treats the amount of its outstanding commercial paper as a reduction to the amount available under its revolving credit facility.

For 2013, the average outstanding borrowings under PG&E Corporation's revolving credit facility were $214 million and the maximum outstanding balance during the year was $260 million. For 2013, the Utility's average outstanding commercial paper balance was $542 million and the maximum outstanding balance during the year was $1.1 billion. The Utility did not borrow under its credit facility in 2013.

The revolving credit facilities include usual and customary provisions for revolving credit facilities of this type, including those regarding events of default and covenants limiting liens to those permitted under PG&E Corporation's and the Utility's senior note indentures, mergers, sales of all or substantially all of PG&E Corporation's and the Utility's assets, and other fundamental changes. In addition, the revolving credit facilities require that PG&E Corporation and the Utility maintain a ratio of total consolidated debt to total consolidated capitalization of at most 65% as of the end of each fiscal quarter. PG&E Corporation's revolving credit facility agreement also requires that PG&E Corporation own, directly or indirectly, at least 80% of the common stock and at least 70% of the voting capital stock of the Utility. At December 31, 2013, PG&E Corporation and the Utility were in compliance with all covenants under their respective revolving credit facilities.

**2013 Financings**

***Utility***

The following table summarizes long-term debt issuances in 2013:

| (in millions) | Issue Date | Amount |
|---|---|---|
| **Senior Notes** | | |
| 3.25%, due 2023 | June 14 | $ 375 |
| 4.60%, due 2043 | June 14 | 375 |
| 3.85%, due 2023 | November 12 | 300 |
| 5.125%, due 2043 | November 12 | 500 |
| **Total debt issuances in 2013** | | **$ 1,550** |

The net proceeds from the issuance of Utility senior notes in 2013 were used to fund maturing debt, to repurchase and extinguish $461 million principal amount, net of $15 million of premiums and $6 million of accrued interest, of the Utility's outstanding 4.80% Senior Notes due March 1, 2014, fund capital expenditures, and for general corporate purposes.

The Utility also received cash contributions of $1.1 billion from PG&E Corporation during 2013 to ensure that the Utility had adequate capital to maintain the 52% common equity ratio authorized by the CPUC.

***PG&E Corporation***

In May 2013, PG&E Corporation entered into a new equity distribution agreement providing for the sale of PG&E Corporation common stock having an aggregate gross sales price of up to $400 million. As of December 31, 2013, PG&E Corporation had sold common stock having an aggregate gross sales price of $395 million and had the ability to issue an additional $5 million of its common stock under this agreement. During 2013, PG&E Corporation paid commissions of $3 million under this agreement. PG&E Corporation terminated this agreement in January 2014 and intends to enter into a new equity distribution agreement providing for the sale of PG&E Corporation's common stock having an aggregate gross sales price of $500 million.

During 2013, PG&E Corporation issued 26 million shares of its common stock for aggregate net cash proceeds of $1,045 million in the following transactions:

- 7 million shares were sold in an underwritten public offering for cash proceeds of $300 million, net of fees and commissions;
- 8 million shares that were issued for cash proceeds of $290 million under the PG&E Corporation 401(k) plan, the Dividend Reinvestment and Stock Purchase Plan, and share-based compensation plans; and
- 11 million shares were sold for cash proceeds of $455 million, net of commissions paid of $4 million, under equity distribution agreements.

The proceeds from these sales were used for general corporate purposes, including the infusion of equity into the Utility. For the year ended December 31, 2013, PG&E Corporation made equity contributions to the Utility of $1.1 billion. PG&E Corporation forecasts that it will need to continue to issue additional common stock to fund the Utility's equity needs.

**Dividends**

The Board of Directors of PG&E Corporation and the Utility have each adopted a common stock dividend policy that is designed to meet the following three objectives:

- *Comparability* : Pay a dividend competitive with the securities of comparable companies based on payout ratio (the proportion of earnings paid out as dividends) and, with respect to PG&E Corporation, yield (i.e., dividend per share divided by share price);
- *Flexibility:* Allow sufficient cash to pay a dividend and to fund investments while avoiding having to issue new equity unless PG&E Corporation's or the Utility's capital expenditure requirements are growing rapidly and PG&E Corporation or the Utility can issue equity at reasonable cost and terms; and
- *Sustainability:* Avoid reduction or suspension of the dividend despite fluctuations in financial performance except in extreme and unforeseen circumstances.

Each Board of Directors retains authority to change the common stock dividend rate at any time, especially if unexpected events occur that would change its view as to the prudent level of cash conservation. No dividend is payable unless and until declared by the applicable Board of Directors. In addition, before declaring a dividend, the CPUC requires that the PG&E Corporation Board of Directors give first priority to the Utility's capital requirements, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner. The Boards of Directors must also consider the CPUC requirement that the Utility maintain, on average, its CPUC-authorized capital structure including a 52% equity component.

The Board of Directors of PG&E Corporation declared dividends of $0.455 per share for each of the quarters of 2013, 2012, and 2011, for annual dividends of $1.82 per share.

The following table summarizes PG&E Corporation's and the Utility's dividends paid:

| (in millions) | 2013 | 2012 | 2011 |
|---|---|---|---|
| **PG&E Corporation:** | | | |
| Common stock dividends paid | $ 782 | $ 746 | $ 704 |
| Common stock dividends reinvested in Dividend Reinvestment and Stock Purchase Plan | 22 | 22 | 24 |
| **Utility:** | | | |
| Common stock dividends paid | $ 716 | $ 716 | $ 716 |
| Preferred stock dividends paid | 14 | 14 | 14 |

In December 2013, the Board of Directors of PG&E Corporation declared quarterly dividends of $0.455 per share, totaling $208 million, of which $202 million was paid in January 2014 to shareholders of record on December 31, 2013.

In December 2013, the Board of Directors of the Utility declared dividends on its outstanding series of preferred stock, payable in February 2014, to shareholders of record on January 31, 2014.

As the Utility focuses on improving the safety and reliability of its natural gas and electric operations, and subject to the outcome of the matters described under "Natural Gas Matters" below, PG&E Corporation expects that its Board will continue to maintain the current quarterly common stock dividend.

**Utility**

***Operating Activities***

The Utility's cash flows from operating activities primarily consist of receipts from customers less payments of operating expenses, other than expenses such as depreciation that do not require the use of cash.

The Utility's cash flows from operating activities for 2013, 2012, and 2011 were as follows:

| **(in millions)** | **2013** | **2012** | **2011** |
|---|---|---|---|
| Net income | $ 866 | $ 811 | $ 845 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | | |
| Depreciation, amortization, and decommissioning | 2,077 | 2,272 | 2,215 |
| Allowance for equity funds used during construction | (101) | (107) | (87) |
| Deferred income taxes and tax credits, net | 1,103 | 684 | 582 |
| PSEP disallowed capital expenditures | 196 | 353 | - |
| Other | 299 | 236 | 289 |
| Effect of changes in operating assets and liabilities: | | | |
| Accounts receivable | (152) | (40) | (227) |
| Inventories | (10) | (24) | (63) |
| Accounts payable | 99 | (26) | 51 |
| Income taxes receivable/payable | (377) | (50) | (192) |
| Other current assets and liabilities | (404) | 272 | 36 |
| Regulatory assets, liabilities, and balancing accounts, net | (202) | 291 | (100) |
| Other noncurrent assets and liabilities | 22 | 256 | 414 |
| **Net cash provided by operating activities** | **$ 3,416** | **$ 4,928** | **$ 3,763** |

During 2013, net cash provided by operating activities decreased by $1.5 billion as compared to 2012 when the Utility collected $460 million from customers related to the energy recovery bonds which matured at the end of 2012. In addition, in 2013, the amount of cash collateral returned to the Utility by third parties was $243 million lower than in 2012, the settlement payments the Utility received from the U.S Treasury related to the Utility's spent nuclear fuel disposal costs was $221 million lower, net of legal fees, than the Utility received in 2012, and the Utility's tax payments were $236 million higher than in 2012. The remaining changes in cash flows from operating activities consisted of fluctuations in activities within the normal course of business such as the timing and amount of customer billings and collections.

During 2012, net cash provided by operating activities increased by $1.2 billion compared to 2011 when the Utility's net collateral payments were $352 million higher. Also, in 2012, the Utility received settlement payments of $250 million, net of legal fees, from the U.S. Treasury related to the Utility's spent nuclear fuel disposal costs and made tax payments that were $224 million lower than in 2011. The remaining changes in cash flows from operating activities consisted of fluctuations in activities within the normal course of business such as the timing and amount of customer billings and collections.

Future cash flow from operating activities will be affected by various factors, including:

- the timing and outcome of ratemaking proceedings, including the 2014 GRC and 2015 GT&S rate cases;
- the timing and amount of tax payments, tax refunds, net collateral payments, and interest payments;
- the timing and amount of insurance recoveries related to third party claims;
- the timing and amount of fines or penalties that may be imposed, as well as any costs associated with remedial actions the Utility may be required to implement;
- the timing and amount of costs the Utility incurs, but does not recover, to improve the safety and reliability of its natural gas system (see "Operating and Maintenance" above and "Natural Gas Matters" below); and
- the timing of the resolution of the Chapter 11 disputed claims and the amount of interest on these claims that the Utility will be required to pay (see Note 12 of the Notes to the Consolidated Financial Statements).

***Investing Activities***

The Utility's investing activities primarily consist of construction of new and replacement facilities necessary to deliver safe and reliable electricity and natural gas services to its customers. The amount and timing of the Utility's capital expenditures is affected by many factors such as the occurrence of storms and other events causing outages or damages to the Utility's infrastructure. Cash used in investing activities also includes the proceeds from sales of nuclear decommissioning trust investments which are largely offset by the amount of cash used to purchase new nuclear decommissioning trust investments. The funds in the decommissioning trusts, along with accumulated earnings, are used exclusively for decommissioning and dismantling the Utility's nuclear generation facilities.

The Utility's cash flows from investing activities for 2013, 2012, and 2011 were as follows:

| (in millions) | 2013 | 2012 | 2011 |
|---|---|---|---|
| Capital expenditures | $ (5,207) | $ (4,624) | $ (4,038) |
| Decrease in restricted cash | 29 | 50 | 200 |
| Proceeds from sales and maturities of nuclear decommissioning trust investments | 1,619 | 1,133 | 1,928 |
| Purchases of nuclear decommissioning trust investments | (1,604) | (1,189) | (1,963) |
| Other | 21 | 16 | 14 |
| **Net cash used in investing activities** | **$ (5,142)** | **$ (4,614)** | **$ (3,859)** |

Net cash used in investing activities increased by $528 million in 2013 compared to 2012. This increase was due to an increase of $583 million in capital expenditures, partially offset by net proceeds associated with sales of nuclear decommissioning trust investments in 2013 as compared to net purchases of nuclear decommissioning trust investments in 2012.

Net cash used in investing activities increased by $755 million in 2012 compared to 2011. This increase was primarily due to an increase of $586 million in capital expenditures and a reduction in restricted cash released for resolved Chapter 11 disputed claims of $150 million.

Future cash flows used in investing activities are largely dependent on the timing and amount of capital expenditures. The Utility forecasts that it will incur between $5 billion and $6 billion in capital expenditures for 2014. Most of the Utility's revenue requirements to recover forecasted capital expenditures are authorized in the GRC, TO, and GT&S rate cases. The Utility's ability to invest in its electric and natural gas systems and develop new generation facilities is subject to many risks, including risks related to securing adequate and reasonably priced financing, obtaining and complying with terms of permits, meeting construction budgets and schedules, and satisfying operating and environmental performance standards.

***Financing Activities***

The Utility's cash flows from financing activities for 2013, 2012, and 2011 were as follows:

| **(in millions)** | **2013** | **2012** | **2011** |
|---|---|---|---|
| Borrowings under revolving credit facilities | $ - | $ - | $ 208 |
| Repayments under revolving credit facilities | - | - | (208) |
| Net issuances (repayments) of commercial paper, net of discount of $2 in 2013, $3 in 2012, and $4 in 2011 | 542 | (1,021) | 782 |
| Proceeds from issuance of short-term debt | - | - | 250 |
| Proceeds from issuance of long-term debt, net of premium, discount, and issuance costs of $18 in 2013, $13 in 2012, and $8 in 2011 | 1,532 | 1,137 | 792 |
| Short-term debt matured | - | (250) | (250) |
| Long-term debt matured or repurchased | (861) | (50) | (700) |
| Energy recovery bonds matured | - | (423) | (404) |
| Preferred stock dividends paid | (14) | (14) | (14) |
| Common stock dividends paid | (716) | (716) | (716) |
| Equity contribution | 1,140 | 885 | 555 |
| Other | (26) | 28 | 54 |
| **Net cash provided by (used in) financing activities** | **$ 1,597** | **$ (424)** | **$ 349** |

In 2013, net cash provided by financing activities increased by $2.0 billion compared to the same period in 2012. In 2012, net cash provided by financing activities decreased by $773 million compared to 2011. Cash provided by or used in financing activities is driven by the Utility's financing needs, which depend on the level of cash provided by or used in operating activities, the level of cash provided by or used in investing activities, the conditions in the capital markets, and the maturity date of existing debt instruments. The Utility generally utilizes long-term senior unsecured debt issuances and equity contributions from PG&E Corporation to maintain its CPUC-authorized capital structure, and relies on short-term debt to fund temporary financing needs.

**PG&E Corporation**

PG&E Corporation affiliates hold four tax equity agreements to fund residential and commercial retail solar energy installations with four separate privately held funds that are considered VIEs. Under these agreements, PG&E Corporation has made cumulative lease payments and investment contributions of $362 million and received $275 million in benefits and customer payments from 2010 to 2013. PG&E Corporation has no material remaining commitment to fund these agreements. Lease payments, investment contributions, benefits, and customer payments received are included in cash flows from operating and investing activities within the Consolidated Statements of Cash Flows.

In addition to the investments above, PG&E Corporation had the following material cash flows on a stand-alone basis for the years ended December 31, 2013, 2012, and 2011: dividend payments, common stock issuances, borrowings and repayments under its revolving credit facility, and transactions between PG&E Corporation and the Utility.

**CO NTRACTUAL COMMITMENTS**

The following table provides information about PG&E Corporation's and the Utility's contractual commitments at December 31, 2013:

| | Payment due by period | | | | |
|---|---|---|---|---|---|
| **(in millions)** | **Less Than 1 Year** | **1-3 Years** | **3-5 Years** | **More Than 5 Years** | **Total** |
| **Contractual Commitments:** | | | | | |
| **Utility** | | | | | |
| Long-term debt [(1)] : | | | | | |
| Fixed rate obligations | $ 1,181 | $ 1,258 | $ 2,718 | $ 18,708 | $ 23,865 |
| Variable rate obligations | 2 | 326 | 651 | 211 | 1,190 |
| Purchase obligations [(2)] : | | | | | |
| Power purchase agreements: | | | | | |
| Qualifying facilities | 913 | 1,294 | 856 | 1,614 | 4,677 |
| Renewable energy (other than QF) | 1,906 | 4,211 | 4,066 | 30,242 | 40,425 |
| Other power purchase agreements | 829 | 1,492 | 1,324 | 2,984 | 6,629 |
| Natural gas supply, transportation, and storage | 727 | 348 | 216 | 756 | 2,047 |
| Nuclear fuel agreements | 145 | 308 | 280 | 647 | 1,380 |
| Pension and other benefits [(3)] | 398 | 796 | 796 | 398 | 2,388 |
| Capital lease obligations [(2)] | 27 | 46 | 30 | 8 | 111 |
| Operating leases [(2)] | 42 | 71 | 51 | 193 | 357 |
| Preferred dividends [(4)] | 14 | 28 | 28 | - | 70 |
| **PG&E Corporation** | | | | | |
| Long-term debt [(1)] : | | | | | |
| Fixed rate obligations | 355 | - | - | - | 355 |
| **Total** | **6,539** | **10,178** | **11,016** | **55,761** | **83,494** |

[(1)] Includes interest payments over the terms of the debt. Interest is calculated using the applicable interest rate at December 31, 2013 and outstanding principal for each instrument with the terms ending at each instrument's maturity. (See Note 4 of the Notes to the Consolidated Financial Statements.)

[(2)] See Note 14 of the Notes to the Consolidated Financial Statements.

[(3)] See Note 11 of the Notes to the Consolidated Financial Statements. Payments into the pension and other benefits plans are based on annual contribution requirements. As these annual requirements continue indefinitely into the future, the amount shown in the column entitled "more than 5 years" represents only 1 year of contributions for the Utility's pension and other benefit plans.

[(4)] Based on historical performance, it is assumed for purposes of the table above that dividends are payable within a fixed period of five years.

The contractual commitments table above excludes potential payments associated with unrecognized tax positions. Due to the uncertainty surrounding tax audits, PG&E Corporation and the Utility cannot make reliable estimates of the amounts and periods of future payments to major tax jurisdictions related to unrecognized tax benefits. Matters relating to tax years that remain subject to examination are discussed in Note 8 of the Notes to the Consolidated Financial Statements.

## NA TURAL GAS MATTERS

Since the San Bruno accident, PG&E Corporation and the Utility have incurred total cumulative charges of approximately $2.5 billion related to natural gas matters that are not recoverable through rates, as shown in the following table:

| (in millions) | 2013 | 2012 | 2011 | 2010 | Total |
|---|---|---|---|---|---|
| Pipeline-related expenses (1) | $ 387 | $ 477 | $ 483 | $ 63 | $ 1,410 |
| Disallowed capital (2) | 196 | 353 | - | - | 549 |
| Accrued fines (3) | 22 | 17 | 200 | - | 239 |
| Third-party liability claims (4) | 110 | 80 | 155 | 220 | 565 |
| Insurance recoveries (4) | (70) | (185) | (99) | - | (354) |
| Contribution (5) | - | 70 | - | - | 70 |
| **Total natural gas matters** | **$ 645** | **$ 812** | **$ 739** | **$ 283** | **$ 2,479** |

(1) Cumulative expenses through December 31, 2013 include PSEP-related expenses of $736 million and other gas safety-related work of $348 million.

(2) See "Disallowed Capital Costs" below.

(3) See "Pending CPUC Investigations" and "Other Enforcement Matters" below.

(4) The Utility has settled substantially all of the third-party liability claims related to the San Bruno accident. See "Operating and Maintenance" above and "Note 14 of the Consolidated Financial Statements" below.

(5) On March 12, 2012, the Utility and the City of San Bruno entered into an agreement under which the Utility contributed $70 million to support the city and the community's recovery efforts.

### Pending CPUC Investigations

There are three CPUC investigative enforcement proceedings pending against the Utility that relate to (1) the Utility's safety recordkeeping for its natural gas transmission system, (2) the Utility's operation of its natural gas transmission pipeline system in or near locations of higher population density, and (3) the Utility's pipeline installation, integrity management, recordkeeping and other operational practices, and other events or courses of conduct, that could have led to or contributed to the San Bruno accident.

The SED has issued investigative reports and briefs in each of these investigations alleging that the Utility committed numerous violations of applicable laws and regulations. In July 2013, the SED recommended that the CPUC impose what the SED characterizes as a penalty of $2.25 billion on the Utility, allocated as follows: (1) $300 million as a fine to the State General Fund, (2) $435 million for a portion of costs related to the Utility's PSEP that were previously disallowed by the CPUC and funded by shareholders, and (3) $1.515 billion to perform PSEP work that was previously approved by the CPUC, implement operational remedies, and for future costs. (See "Disallowed Capital Costs" below.) If the SED's penalty recommendation is adopted, the Utility estimates that its total unrecovered costs and fines related to natural gas transmission operations would be about $4.5 billion. Other parties, including the City of San Bruno, TURN, the CPUC's ORA, and the City and County of San Francisco, have recommended total penalties of at least $2.25 billion, including fines payable to the State General Fund of differing amounts.

The ALJs who oversee the investigations are expected to issue one or more presiding officers' decisions to address the violations that they have determined the Utility committed and to impose penalties. It is uncertain when the decisions will be issued. Based on the CPUC's rules, the presiding officer's decisions would become the final decisions of the CPUC 30 days after issuance unless the Utility or another party filed an appeal with the CPUC, or a CPUC commissioner requested that the CPUC review the decision, within such time. If an appeal or review request is filed, other parties would have 15 days to provide comments but the CPUC could act before considering any comments.

At December 31, 2013, the Consolidated Balance Sheets included an accrual of $200 million in other current liabilities for the minimum amount of fines deemed probable that the Utility will pay to the State General Fund. The Utility is unable to make a better estimate due to the many variables that could affect the final outcome, including how the total number and duration of violations will be determined; how the various penalty recommendations made by the SED and other parties will be considered; how the financial and tax impact of unrecoverable costs the Utility has incurred, and will continue to incur, to improve the safety and reliability of its pipeline system will be considered; whether the Utility's costs to perform any required remedial actions will be considered; and how the CPUC will respond to public pressure. Future changes in these estimates or the assumptions on which they are based could have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. The CPUC may impose fines on the Utility that are materially higher than the amount accrued and may disallow PSEP costs that were previously authorized for recovery or other future costs. Disallowed capital investments would be charged to net income in the period in which the CPUC orders such a disallowance. See "Disallowed Capital Costs" below. Future disallowed expense and capital costs would be charged to net income in the period incurred.

**Other CPUC Enforcement Matters**

PG&E Corporation and the Utility are unable to estimate the amount or range of reasonably possible losses that may be incurred in connection with the following matters.

*Gas Safety Citation Program.* The Utility and other California gas corporations are required to provide notice to the SED of any self-identified or self-corrected violations of certain state and federal regulations that relate to the safety of their natural gas facilities and operating practices. The SED is authorized to issue citations and impose fines for self-identified or self-corrected violations and for violations that the SED identifies through its periodic audits of the Utility's operations or otherwise. The SED can exercise its discretion in determining whether to impose fines and the amount of such fines, or whether to take other enforcement action, based on the totality of the circumstances. The SED can consider such factors as the severity of the safety risk associated with each violation; the number and duration of the violations; whether the violation was self-reported, and whether corrective actions were taken. In January 2012, the SED imposed fines of $16.8 million on the Utility for self-reported failure to perform certain leak surveys and in 2013 the SED imposed fines ranging from $50,000 to $8.1 million for self-reported violations. The Utility has filed over 50 self-reports with the SED, plus additional follow-up reports, that the SED has not yet addressed. The SED is expected to impose fines or take enforcement action with respect to some of these self-reports.

*Natural Gas Transmission Pipeline Rights-of-Way.* In 2012, the Utility notified the CPUC and the SED that it is undertaking a system-wide effort to survey its transmission pipelines and identify and remove encroachments (such as building structures and vegetation overgrowth) from pipeline rights-of-way over a multi-year period. The SED could impose fines on the Utility or take other enforcement action in connection with this matter.

*Orders to Show Cause.* In August 2013, the CPUC issued two OSCs related to a document submitted by the Utility on July 3, 2013 as "errata" to correct information about some segments in Lines 101 and 147 (two of the Utility's natural gas transmission pipelines that serve the San Francisco peninsula) that had been previously provided to the CPUC in October 2011 to allow the Utility to restore operating pressure on these pipelines. On December 19, 2013, the CPUC issued a decision to impose fines of approximately $14 million on the Utility in connection with the errata submission, finding that the Utility violated CPUC rules that prohibit any person from misleading the CPUC. The Utility recorded this amount as an expense for 2013. On January 23, 2014, the Utility filed an application for the rehearing of this decision, arguing that it is erroneous in several respects. It is uncertain when the CPUC will issue a decision on the other OSC that directed the Utility to show cause why all orders issued by the CPUC to authorize increased operating pressure on the Utility's gas transmission pipelines should not be immediately suspended pending competent demonstration that the Utility's natural gas system records are reliable. Briefing on this OSC was completed on January 31, 2014.

**Disallowed Capital Costs**

In 2011, the CPUC ordered all natural gas operators in California to submit proposed plans to modernize and upgrade their natural gas transmission systems as well as associated cost forecasts and ratemaking proposals. In December 2012, the CPUC approved most of the projects proposed in the Utility's PSEP application that was filed in August 2011, but disallowed the Utility's request for rate recovery of a significant portion of costs the Utility forecasted it would incur through 2014. In October 2013, the Utility updated its PSEP application to present the results of its completed search and review of records relating to validation of operating pressure for all of the approximately 6,750 miles of the Utility's natural gas transmission pipelines. The Utility requested that the CPUC approve changes to the scope and prioritization of PSEP work, including deferring some projects to after 2014 and accelerating other projects, and that the CPUC adjust authorized revenue requirements to reflect these changes. The Utility has requested that the CPUC issue a final decision by August 2014.

As of December 31, 2013, the Utility has recorded cumulative charges of $549 million for PSEP capital costs that are expected to exceed the amount to be recovered. The Utility has requested that the CPUC authorize capital costs of $766 million under the PSEP, reflecting the proposed changes in the PSEP update application. Of this amount, approximately $280 million is recorded in Property, Plant, and Equipment on the Consolidated Balance Sheets at December 31, 2013. The Utility could record additional charges to the extent PSEP capital costs are higher than currently expected, or if additional capital costs are disallowed by the CPUC. The Utility's ability to recover PSEP capital costs also could be affected by the final decisions to be issued in the CPUC's pending investigations discussed above.

**Criminal Investigation**

In June 2011, the U.S. Department of Justice, the California Attorney General's Office, and the San Mateo County District Attorney's Office began an investigation of the San Bruno accident and indicated that the Utility is a target of the investigation. Although the San Mateo County District Attorney's Office has publicly indicated that it will not pursue state criminal charges, the U.S. Department of Justice may still bring criminal charges, including charges based on claims that the Utility violated the federal Pipeline Safety Act, against PG&E Corporation or the Utility. It is uncertain whether any criminal charges will be brought against any of PG&E Corporation's or the Utility's current or former employees. The Utility is continuing to cooperate with federal investigators. A criminal charge or finding would further harm the Utility's reputation. PG&E Corporation and the Utility are unable to estimate the amount or range of reasonably possible losses associated with any civil or criminal penalties that could be imposed and such penalties could have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. In addition, the Utility's business or operations could be negatively affected by any remedial measures that the Utility may undertake, such as operating its natural gas transmission business subject to the supervision and oversight of an independent monitor.

**Third-party Liability Claims**

See Note 14 of the Notes to the Consolidated Financial Statements.

**Class Action Complaint**

On August 23, 2012, a complaint was filed in the San Francisco Superior Court against PG&E Corporation and the Utility (and other unnamed defendants) by individuals who seek certification of a class consisting of all California residents who were customers of the Utility between 1997 and 2010, with certain exceptions. The plaintiffs allege that the Utility collected more than $100 million in customer rates from 1997 through 2010 for the purpose of various safety measures and operations projects but instead used the funds for general corporate purposes such as executive compensation and bonuses. The plaintiffs allege that PG&E Corporation and the Utility engaged in unfair business practices in violation of California state law. The plaintiffs seek restitution and disgorgement, as well as compensatory and punitive damages.

PG&E Corporation and the Utility contest the plaintiffs' allegations. On May 23, 2013, the court granted PG&E Corporation's and the Utility's request to dismiss the complaint on the grounds that the CPUC has exclusive jurisdiction to adjudicate the issues raised by the plaintiffs' allegations. The plaintiffs have appealed the court's ruling to the California Court of Appeal. PG&E Corporation and the Utility are unable to estimate the amount or range of reasonably possible losses, if any, that may be incurred in connection with this matter if the lower court's ruling is reversed.

**Other Pending Lawsuits and Claims**

At December 31, 2013, there were also four purported shareholder derivative lawsuits outstanding against PG&E Corporation and the Utility seeking recovery on behalf of PG&E Corporation and the Utility for alleged breaches of fiduciary duty by officers and directors, among other claims. The plaintiffs for three of these lawsuits have filed a consolidated complaint with the San Mateo County Superior Court. The court has lifted the stay on these proceedings for the limited purpose of allowing the parties to exchange information and discuss possible resolution. A case management conference is scheduled for April 18, 2014. The remaining purported shareholder derivative lawsuit, filed in the U.S. District Court for the Northern District of California, remains stayed.

In February 2011, the Board of Directors of PG&E Corporation authorized PG&E Corporation to reject a demand made by another shareholder that the Board of Directors (1) institute an independent investigation of the San Bruno accident and related alleged safety issues; (2) seek recovery of all costs associated with such issues through legal proceedings against those determined to be responsible, including Board of Directors members, officers, other employees, and third parties; and (3) adopt corporate governance initiatives and safety programs. The Board of Directors also reserved the right to commence further investigation or litigation regarding the San Bruno accident if the Board of Directors deems such investigation or litigation appropriate.

PG&E Corporation and the Utility are uncertain when and how the above lawsuits will be resolved.

**RE GULATORY MATTERS**

The Utility is subject to substantial regulation by the CPUC, the FERC, the NRC and other federal and state regulatory agencies. The resolutions of these and other proceedings may affect PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

**2014 General Rate Case**

On November 15, 2012, the Utility filed its 2014 GRC application with the CPUC. In the Utility's GRC, the CPUC will determine the revenue requirements that the Utility is authorized to collect through rates from 2014 through 2016 to recover anticipated costs associated with electric generation operations and electric and natural gas distribution operations. The Utility has requested that the CPUC authorize a total revenue requirement of $7.8 billion for 2014, representing an increase of approximately $1.16 billion over the comparable authorized revenues for 2013. The Utility also has requested that the CPUC authorize attrition increases in 2015 and 2016 of $436 million and $486 million, respectively. The requested increase is intended to allow the Utility to recover the costs it forecasts it will incur to continue making improvements to the safety and reliability of its operations.

The CPUC's ORA recommended that the Utility's 2014 revenue requirements be reduced by $125 million from amounts authorized in 2013, approximately $1.29 billion lower than the Utility's current forecast. The ORA also has recommended attrition increases of $169 million for 2015 and $160 million for 2016. The ORA's recommendations reflected reductions across all operations represented in the GRC. Twelve other parties, including TURN, also submitted recommendations in the 2014 GRC.

A proposed decision is anticipated in the first quarter of 2014. Although it is uncertain when the CPUC will issue a final decision, any approved revenue requirement changes will be effective as of January 1, 2014.

**2015 Gas Transmission and Storage Rate Case**

On December 19, 2013, the Utility filed its 2015 GT&S rate case application (covering 2015 through 2017) requesting the CPUC approve a total annual revenue requirement of $1.29 billion for anticipated costs of providing natural gas transmission and storage services beginning on January 1, 2015. This is an increase of $555 million over the Utility's authorized revenue requirements of $731 million for 2014, which includes revenue requirements approved by the CPUC for both GT&S and PSEP. The Utility's forecasts for the 2015 GT&S rate case period are consistent with state law, which requires gas corporations to develop a plan to identify and minimize hazards and systemic risk for public and employee safety. The forecasts include the continuation of work begun in the Utility's PSEP, such as testing pipelines to verify safe operating pressures, replacing older pipelines, installing more valves, and inspecting the interior of more pipelines.

The Utility requested that the CPUC authorize the Utility's forecast of its 2015 weighted average rate base for its gas transmission and storage business of $3.56 billion, which includes the capital spend above authorized levels for the prior rate case period. The Utility also requested additional revenue requirement increases of $61 million in 2016 and $168 million in 2017 for increasing capital expenditures and the associated growth in rate base, as well as increasing costs of labor, materials, and other expenses. The Utility also has proposed eliminating the current mechanism that subjects a portion of the Utility's transportation-only revenue requirement to market risk, replacing it with two-way balancing accounts to allow the Utility to record differences between billed revenues and the Utility's authorized revenue requirements. Any over-collections would be returned to customers and any under-collections would be paid by customers, with no additional risk or benefit for shareholders.

The Utility has not requested rate recovery for certain costs it forecasts it will incur during 2015 through 2017. These forecast costs include costs related to the Utility's multi-year effort to identify and remove encroachments from gas transmission pipeline rights-of-way, approximately $75 million over the three year period to pressure test pipelines placed into service after 1961, and approximately $75 million of remedial costs associated with the Utility's pipeline corrosion control program over the three year period.

The Utility has requested that the CPUC issue a final decision by the end of 2014 so that any authorized revenue requirement adjustments can become effective on January 1, 2015. If the CPUC has not yet issued a final decision, then, in accordance with the CPUC's decision in the Utility's last GT&S rate case, there will be an automatic 2% increase in rates on January 1, 2015 that will remain in effect until the CPUC issues a final decision in the 2015 GT&S rate case. Given the significant revenue requirement increase the Utility has requested, the Utility plans to ask the CPUC for an order to make any authorized revenue requirement changes effective on January 1, 2015, in the event that the CPUC issues its final decision after that date.

The Utility's continued use of regulatory accounting under GAAP (which enables it to account for the effects of regulation, including recording regulatory assets and liabilities) for gas transmission and storage service depends on its ability to recover its cost of service. If the Utility were unable to continue using regulatory accounting under GAAP, there would be –differences in the timing of expense (or gain) recognition that could materially affect the Utility's future financial results.

**Electric Transmission Owner Rate Cases**

On January 17, 2014, the FERC approved the settlement of the Utility's TO rate case that was filed in September 2012. Under the settlement the Utility's annual retail revenue requirement was increased from $934 million to $1,017 million effective as of May 1, 2013. The Utility has collected revenues between May 1 and September 30, 2013 at the higher as-filed rates requested in the Utility's application. The Utility will refund to customers the difference between revenues collected at the higher as-filed rates and the rates set in the FERC-approved settlement agreement.

On September 24, 2013, the FERC accepted the Utility's TO rate case that the Utility filed on July 24, 2013, making the proposed rates effective October 1, 2013, subject to refund, pending a final decision by the FERC. The Utility requested a retail revenue requirement of $1,072 million and an ROE of 10.9%. The proposed rates represent a $55 million increase to the annual revenue requirement set in the FERC-approved settlement agreement described in the preceding paragraph. Hearings are currently being held in abeyance while settlement discussions are held.

**Oakley Generation Facility**

In December 2012, the CPUC approved an amended purchase and sale agreement between the Utility and a third-party developer that provides for the construction of a 586-megawatt natural gas-fired facility in Oakley, California. The CPUC authorized the Utility to recover the purchase price through rates. The CPUC's denial of various applications for rehearing that had been filed with respect to its December 2012 decision was appealed to the California Court of Appeal. On February 5, 2014, the California Court of Appeal issued a ruling that annulled the CPUC's decision after the court determined that the evidence presented did not support a finding of need for the Oakley facility. The Utility is reviewing the court's decision.

**Diablo Canyon Nuclear Power Plant**

In 2009, the Utility filed an application with the NRC to renew the operating licenses for the two operating units at Diablo Canyon. (The current licenses expire in 2024 and 2025.) In May 2011, after an earthquake and resulting tsunami that caused significant damage to the Fukushima-Dai-ichi nuclear facilities in Japan, the NRC granted the Utility's request to delay processing the Utility's application while certain advanced seismic studies were completed by the Utility. The Utility is currently assessing the data from recently completed advanced seismic studies along with other available seismic data. The Utility will not make any decisions about whether to request that the NRC resume processing the license renewal application until this assessment is completed and provided to the NRC. The Utility anticipates that it will complete its assessment by June 2014. In order for the NRC to issue renewed operating licenses, the California Coastal Commission must determine that license renewal is consistent with federal and state coastal laws. The disposition of the Utility's relicensing application also will be affected by the terms and timing of the NRC's "waste confidence" decision regarding the environmental impacts of the storage of spent nuclear fuel. The NRC has stated that it will not take action in licensing or re-licensing proceedings until it issues a new "waste confidence decision." (See "Risk Factors" below.)

The CPUC is considering the Utility's December 2012 application to recover estimated costs to decommission the Utility's nuclear facilities at Diablo Canyon and the retired nuclear facility Humboldt Bay Power Plant Unit 3. The Utility files an application with the CPUC every three years requesting approval of the Utility's estimated decommissioning costs and authorization to recover those costs through rates. The CPUC bifurcated the proceeding to allow for the decommissioning cost estimate associated with Humboldt Bay to be addressed first and all other matters (including the Diablo Canyon decommissioning cost estimate and all rate-related issues) to be addressed in a second phase. On January 28, 2014, the assigned ALJ issued a proposed decision in the first phase that would authorize $679 million to complete the decommissioning at Humboldt Bay, approximately $48 million lower than the amount requested by the Utility. The Utility anticipates that the CPUC will issue a final decision in the first quarter of 2014. In the second phase, TURN has recommended that the CPUC adopt a decommissioning cost estimate for Diablo Canyon that is approximately $1.1 billion lower than the Utility's estimate of approximately $2.8 billion. The Utility anticipates the CPUC will issue a proposed decision in the second phase during the second quarter of 2014. (See the discussion of the 2012 Nuclear Decommissioning Cost Triennial Proceeding in Note 2 of the Notes to the Consolidated Financial Statements.)

**ENV IRONMENTAL MATTERS**

The Utility's operations are subject to extensive federal, state, and local laws and permits relating to the protection of the environment and the safety and health of the Utility's personnel and the public. These laws and requirements relate to a broad range of the Utility's activities, including the remediation of hazardous wastes; the reporting and reduction of carbon dioxide and other GHG emissions; the discharge of pollutants into the air, water, and soil; and the transportation, handling, storage, and disposal of spent nuclear fuel. (See "Risk Factors" below.)

**Remediation**

The Utility is required to pay for environmental remediation at sites where it has been, or may be, a potentially responsible party under federal and state environmental laws. These sites include former manufactured gas plant sites, power plant sites, gas gathering sites, sites where natural gas compressor stations are located, and sites used by the Utility for the storage, recycling, or disposal of potentially hazardous substances. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site. (See Note 14 of the Notes to the Consolidated Financial Statements.)

***Hinkley Site***

The Utility's remediation and abatement efforts at the Hinkley natural gas compressor site are subject to the regulatory authority of the California Regional Water Quality Control Board, Lahontan Region. The Regional Board has certified a final environmental report evaluating the Utility's proposed remedial methods to contain and remediate the underground plume of hexavalent chromium and the potential environmental impacts. The Regional Board is expected to issue the final project permits and a final clean-up order in phases through 2014 and into 2015. As the permits and order are issued, the Utility will obtain additional clarity on the total costs associated with the final remedy and related activities. The Utility has implemented interim remediation measures to reduce the mass of the chromium plume, monitor and control movement of the plume, and provided replacement water to affected residents. (See Note 14 of the Notes to the Consolidated Financial Statements for additional information.) At December 31, 2013, $190 million was accrued in the Consolidated Balance Sheets for estimated undiscounted future remediation costs associated with the Hinkley site. Future costs will depend on many factors, including the levels of hexavalent chromium the Utility is required to use as the standard for remediation, the required time period by which those standards must be met, the extent of the chromium plume boundary, and adoption of a final drinking water standard by the State of California. Future changes in cost estimates and the assumptions on which they are based may have a material impact on future financial condition, results of operations, and cash flows.

***Topock Site***

The Utility's remediation and abatement efforts at the Topock site are subject to the regulatory authority of the California Department of Toxic Substances Control and the U.S. Department of the Interior. The Utility expects to submit its final remedial design plan in 2014 for approval to begin construction of an in-situ groundwater treatment system to convert hexavalent chromium into a non-toxic and non-soluble form of chromium. The Utility has implemented interim remediation measures, including a system of extraction wells and a treatment plant designed to prevent movement of the chromium plume toward the Colorado River. At December 31, 2013, $264 million was accrued in the Consolidated Balance Sheets for estimated undiscounted future remediation costs associated with the Topock site. Future costs will depend on many factors, including the extent of work to be performed to implement the final groundwater remedy and the Utility's required time frame for remediation. Future changes in cost estimates and the assumptions on which they are based may have a material impact on future financial condition, results of operations, and cash flows.

**Climate Change**

A report issued in 2012 by the U.S. EPA entitled, "Climate Change Indicators in the United States, 2012" states that the increase of GHG emissions in the atmosphere is changing the fundamental measures of climate in the United States, including rising temperatures, shifting snow and rainfall patterns, and more extreme climate events. (See "Risk Factors" below.) Although no comprehensive federal legislation has been enacted to address the reduction of GHG emissions, the California legislature has taken action to address climate change.

California Assembly Bill 32 requires the gradual reduction of state-wide GHG emissions to the 1990 level by 2020. The CARB is the state agency charged with monitoring GHG levels and adopting regulations to implement and enforce AB 32. The CARB has approved various regulations to implement AB 32, including a state-wide, comprehensive "cap and trade" program that sets gradually declining limits (or "caps") on the amount of GHGs that may be emitted by the major sources of GHG emissions. During each year of the program, the CARB will issue emission allowances (i.e., the rights to emit GHGs) equal to the amount of GHGs emissions allowed for that year. The cap and trade program's first two-year compliance period, which began January 1, 2013, applies to the electricity generation and large industrial sectors. The next three-year compliance period, from January 1, 2015 through December 31, 2017, will expand to include the natural gas supply and transportation sectors, effectively covering all the capped sectors until 2020. During each year of the program, the CARB will issue emission allowances (i.e., the rights to emit GHGs) equal to the amount of GHGs emissions allowed for that year. Emitters can obtain allowances from the CARB at quarterly auctions held by the CARB or from third parties or exchanges in the market for trading GHG allowances. The CARB is allocating a fixed number of allowances (which will decrease each year) for free to regulated electric distribution utilities, including the Utility, for the benefit of their electricity customers. The utilities are required to consign their electricity-related allowances for auction by the CARB. The CPUC has ordered the utilities to allocate their electricity-related auction revenues among certain classes of their customers. Although the CPUC has previously authorized the utilities to recover their electricity-related GHG compliance costs through rates, the recovery of these costs has been temporarily deferred until May 2014. In addition, the CARB may allocate a number of allowances for free to natural gas suppliers, including the Utility, for the benefit of the Utility's natural gas customers. The Utility has filed requests at the CPUC for authority to recover the natural gas supplier-related compliance costs from natural gas customers on an annual basis effective January 1, 2015.

The Utility expects all costs and revenues associated with GHG cap-and-trade to be passed through to customers.

**Clean Water Act**

The EPA published draft regulations in April 2011 to implement the requirements of the federal Clean Water Act that requires cooling water intake structures at electric power plants, such as the nuclear generation facilities at Diablo Canyon, to reflect the best technology available to minimize adverse environmental impacts. In June 2012, the EPA proposed changes to these draft regulations which, if adopted, would provide more flexibility in complying with some of the requirements. It is currently uncertain when the EPA will issue final regulations.

At the state level, the California Water Board has adopted a policy on once-through cooling that generally requires the installation of cooling towers or other significant measures to reduce the impact on marine life from existing power generation facilities in California by at least 85%. The California Water Board has appointed a committee to evaluate the feasibility and cost of using alternative technologies to achieve compliance at nuclear power plants, including Diablo Canyon. The committee's consultant is expected to submit a final report to the California Water Board in 2014. If the California Water Board requires the installation of cooling towers that the Utility believes are not technically or economically feasible, the Utility may be forced to cease operations at Diablo Canyon and may incur a material charge. Even if the Utility is not required to install cooling towers, it could incur significant costs to comply with alternative compliance measures or to make payments to support various environmental mitigation projects. The Utility would seek to recover such costs in rates. The Utility's Diablo Canyon operations must be in compliance with the California Water Board's policy by December 31, 2024.

**OFF-BALANCE SHEET ARRANGEMENTS**

PG&E Corporation and the Utility do not have any off-balance sheet arrangements that have had, or are reasonably likely to have, a current or future material effect on their financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures, or capital resources, other than those discussed in Note 2 (PG&E Corporation's tax equity financing agreements) and Note 14 of the Notes to the Consolidated Financial Statements (the Utility's commodity purchase agreements).

**RISK MANAGEMENT ACTIVITIES**

The Utility and PG&E Corporation, mainly through its ownership of the Utility, are exposed to market risk, which is the risk that changes in market conditions will adversely affect net income or cash flows. PG&E Corporation and the Utility face market risk associated with their operations; their financing arrangements; the marketplace for electricity, natural gas, electric transmission, natural gas transportation, and storage; emissions allowances, other goods and services; and other aspects of their businesses. PG&E Corporation and the Utility categorize market risks as "price risk" and "interest rate risk." The Utility is also exposed to "credit risk," the risk that counterparties fail to perform their contractual obligations.

The Utility actively manages market risk through risk management programs designed to support business objectives, discourage unauthorized risk-taking, reduce commodity cost volatility, and manage cash flows. The Utility uses derivative instruments only for non-trading purposes (i.e., risk mitigation) and not for speculative purposes. The Utility's risk management activities include the use of energy and financial instruments such as forward contracts, futures, swaps, options, and other instruments and agreements, most of which are accounted for as derivative instruments. Some contracts are accounted for as leases.

**Commodity Price Risk**

The Utility is exposed to commodity price risk as a result of its electricity and natural gas procurement activities, including the procurement of natural gas and nuclear fuel necessary for electricity generation and natural gas procurement for core customers. As long as the Utility can conclude that it is probable that its reasonably incurred wholesale electricity procurement costs and natural gas costs are recoverable, fluctuations in electricity and natural gas prices will not affect earnings. Such fluctuations, however, may impact cash flows. The Utility's natural gas transportation and storage costs for core customers are also fully recoverable through a ratemaking mechanism.

The Utility's natural gas transportation and storage costs for non-core customers may not be fully recoverable. The Utility is subject to price and volumetric risk for the portion of intrastate natural gas transportation and storage capacity that has not been sold under long-term contracts providing for the recovery of all fixed costs through the collection of fixed reservation charges. The Utility sells most of its capacity based on the volume of gas that the Utility's customers actually ship, which exposes the Utility to volumetric risk.

The Utility uses value-at-risk to measure its shareholders' exposure to price and volumetric risks resulting from variability in the price of, and demand for, natural gas transportation and storage services that could impact revenues due to changes in market prices and customer demand. The Utility's value-at-risk calculated under the methodology described above was approximately $14 million and $13 million at December 31, 2013 and 2012, respectively. During the 12 months ended December 31, 2013, the Utility's approximate high, low, and average values-at-risk were $14 million, $9 million and $12 million, respectively. During 2012, the value-at-risk amounts were $13 million, $10 million and $12 million, respectively. (See Note 9 of the Notes to the Consolidated Financial Statements for further discussion of price risk management activities.)

**Interest Rate Risk**

Interest rate risk sensitivity analysis is used to measure interest rate risk by computing estimated changes in cash flows as a result of assumed changes in market interest rates. At December 31, 2013 and December 31, 2012, if interest rates changed by 1% for all PG&E Corporation and Utility variable rate long-term debt, short-term debt, and cash investments, the impact on net income over the next 12 months would be $11 million and $7 million, respectively, based on net variable rate debt and other interest rate-sensitive instruments outstanding.

**Energy Procurement Credit Risk**

The Utility conducts business with counterparties mainly in the energy industry, including the CAISO market, other California investor-owned electric utilities, municipal utilities, energy trading companies, financial institutions, electricity generation companies, and oil and natural gas production companies located in the United States and Canada. If a counterparty fails to perform on its contractual obligation to deliver electricity or gas, then the Utility may find it necessary to procure electricity or gas at current market prices, which may be higher than the contract prices.

The Utility manages credit risk associated with its counterparties by assigning credit limits based on evaluations of their financial conditions, net worth, credit ratings, and other credit criteria as deemed appropriate. Credit limits and credit quality are monitored periodically. The Utility ties many energy contracts to master commodity enabling agreements that may require security (referred to as "Credit Collateral" in the table below). Credit collateral may be in the form of cash or letters of credit. The Utility may accept other forms of performance assurance in the form of corporate guarantees of acceptable credit quality or other eligible securities (as deemed appropriate by the Utility). Credit collateral or performance assurance may be required from counterparties when current net receivables and replacement cost exposure exceed contractually specified limits.

The following table summarizes the Utility's credit risk exposure to its counterparties as of December 31, 2013 and December 31, 2012:

| (in millions) | Gross Credit Exposure Before Credit Collateral [1] | Credit Collateral | Net Credit Exposure [2] | Number of Wholesale Customers or Counterparties >10% | Net Credit Exposure to Wholesale Customers or Counterparties >10% |
|---|---|---|---|---|---|
| December 31, 2013 | $ 87 | $ (9) | $ 78 | 2 | 34 |
| December 31, 2012 | 94 | $ (9) | $ 85 | 2 | 62 |

(1) Gross credit exposure equals mark-to-market value on physically and financially settled contracts, and net receivables (payables) where netting is contractually allowed. Gross and net credit exposure amounts reported above do not include adjustments for time value or liquidity.

(2) Net credit exposure is the Gross Credit Exposure Before Credit Collateral minus Credit Collateral (cash deposits and letters of credit posted by counterparties and held by the Utility). For purposes of this table, parental guarantees are not included as part of the calculation.

## CRI TICAL ACCOUNTING POLICIES

The preparation of Consolidated Financial Statements in accordance with GAAP involves the use of estimates and assumptions that affect the recorded amounts of assets and liabilities as of the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. The accounting policies described below are considered to be critical accounting policies due, in part, to their complexity and because their application is relevant and material to the financial position and results of operations of PG&E Corporation and the Utility, and because these policies require the use of material judgments and estimates. Actual results may differ substantially from these estimates. These policies and their key characteristics are outlined below.

**Regulatory Accounting**

The Utility's rates are primarily set by the CPUC and the FERC and are designed to recover the cost of providing service. The Utility capitalizes and records, as regulatory assets, costs that would otherwise be charged to expense if it is probable that the incurred costs will be recovered in future rates. Regulatory assets are amortized over the future periods that the costs are expected to be recovered. If costs expected to be incurred in the future are currently being recovered through rates, the Utility records those expected future costs as regulatory liabilities. In addition, the Utility records regulatory liabilities when the CPUC or the FERC requires a refund to be made to customers or has required that a gain or other reduction of net allowable costs be given to customers over future periods.

Determining probability requires significant judgment by management and includes, but is not limited to, consideration of testimony presented in regulatory hearings, proposed regulatory decisions, final regulatory orders, and the strength or status of applications for rehearing or state court appeals. For some of the Utility's regulatory assets, including utility retained generation, the Utility has determined that the costs are recoverable based on specific approval from the CPUC. The Utility also records a regulatory asset when a mechanism is in place to recover current expenditures and historical experience indicates that recovery of incurred costs is probable, such as the regulatory assets for pension benefits; deferred income tax; price risk management; and unamortized loss, net of gain, on reacquired debt. The CPUC has not denied the recovery of any material costs previously recognized by the Utility as regulatory assets for the periods 2011 through 2013.

If the Utility determined that it is no longer probable that regulatory assets would be recovered or reflected in future rates, or if the Utility ceased to be subject to rate regulation, the regulatory assets would be charged against income in the period in which that determination was made. At December 31, 2013, PG&E Corporation and the Utility reported regulatory assets (including current regulatory balancing accounts receivable) of $6.5 billion and regulatory liabilities (including current balancing accounts payable) of $6.8 billion.

In addition, regulatory accounting standards require recognition of a loss if it becomes probable that capital expenditures under construction (or recently completed expenditures) will be disallowed for ratemaking purposes and if a reasonable estimate of the amount of the disallowance can be made. Such assessments require significant judgment by management regarding probability of recovery, as described above, and the ultimate cost of construction of capital assets. The Utility records a loss to the extent capital costs are expected to exceed the amount to be recovered. The Utility records a provision based on the lower end of the range of possible losses to the extent there is a high degree of uncertainty in the Utility's forecast of capital project costs. The Utility's capital forecasts involve a series of complex judgments regarding detailed project plans, estimates included in third-party contracts, historical cost experience for similar projects, permitting requirements, environmental compliance standards, and a variety of other factors. As discussed above in "Natural Gas Matters – Disallowed Capital Costs" and Note 14 of the Notes to the Consolidated Financial Statements, the Utility recorded charges of $196 million and $353 million in 2013 and 2012, respectively, for PSEP capital costs that are expected to exceed the amount to be recovered. The additional charge in 2013 primarily reflects changes in the project portfolio involving higher costs to replace pipelines than originally forecast. Management will continue to periodically assess its PSEP capital costs and the related CPUC regulatory proceedings, and further charges could be required in future periods.

**Loss Contingencies**

***Environmental Remediation Liabilities***

The Utility is subject to loss contingencies pursuant to federal and California environmental laws and regulations that in the future may require the Utility to pay for environmental remediation at sites where it has been, or may be, a potentially responsible party. Such contingencies may exist for the remediation of hazardous substances at various potential sites, including former MGP sites, power plant sites, gas compressor stations, and sites used by the Utility for the storage, recycling, or disposal of potentially hazardous materials, even if the Utility did not deposit those substances on the site.

The Utility generally commences the environmental remediation assessment process upon notification from federal or state agencies, or other parties, of a potential site requiring remedial action. (In some instances, the Utility may initiate action to determine its remediation liability for sites that it no longer owns in cooperation with regulatory agencies. For example, the Utility has begun a program related to certain former MGP sites.) Based on such notification, the Utility completes an assessment of the potential site and evaluates whether it is probable that a remediation liability has been incurred. The Utility records an environmental remediation liability when site assessments indicate remediation is probable and it can reasonably estimate the loss or a range of possible losses. Given the complexities of the legal and regulatory environment and the inherent uncertainties involved in the early stages of a remediation project, the process for estimating remediation liabilities is subjective and requires significant judgment. Key factors evaluated in developing cost estimates include the extent and types of hazardous substances at a potential site, the range of technologies that can be used for remediation, the determination of the Utility's liability in proportion to other responsible parties, and the extent to which such costs are recoverable from third parties.

When possible, the Utility estimates costs using site-specific information, but also considers historical experience for costs incurred at similar sites depending on the level of information available. Estimated costs are composed of the direct costs of the remediation effort and the costs of compensation for employees who are expected to devote a significant amount of time directly to the remediation effort. These estimated costs include remedial site investigations, remediation actions, operations and maintenance activities, post remediation monitoring, and the costs of technologies that are expected to be approved to remediate the site. Remediation efforts for a particular site generally extend over a period of several years. During this period, the laws governing the remediation process may change, as well as site conditions, thereby possibly affecting the cost of the remediation effort.

At December 31, 2013 and 2012, the Utility's accruals for undiscounted gross environmental liabilities were $900 million and $910 million, respectively. The Utility's undiscounted future costs could increase to as much as $1.7 billion if the extent of contamination or necessary remediation is greater than anticipated or if the other potentially responsible parties are not financially able to contribute to these costs, and could increase further if the Utility chooses to remediate beyond regulatory requirements. Although the Utility has provided for known environmental obligations that are probable and reasonably estimable, estimated costs may vary significantly from actual costs, and the amount of additional future costs may be material to results of operations in the period in which they are recognized.

***Legal and Regulatory Matters***

PG&E Corporation and the Utility are subject to various laws and regulations and, in the normal course of business, PG&E Corporation and the Utility are subject to claims or named as parties in lawsuits. In addition, the Utility can incur penalties for failure to comply with federal, state, or local laws and regulations. PG&E Corporation and the Utility record a provision for a loss when it is both probable that a loss has been incurred and the amount of the loss can be reasonably estimated. PG&E Corporation and the Utility evaluate the range of reasonably estimated losses and record a provision based on the minimum amount, unless an amount within the range is a better estimate than any other amount. These accruals, and the estimates of any additional reasonably possible losses (or reasonably possible losses in excess of the amounts accrued), are reviewed quarterly and are adjusted to reflect the impacts of negotiations, discovery, settlements and payments, rulings, advice of legal counsel, and other information and events pertaining to a particular matter. In assessing the amount of such losses, PG&E Corporation's and the Utility's policy is to exclude anticipated legal costs. (See "Natural Gas Matters" and "Legal and Regulatory Contingencies" in Note 14 of the Notes to the Consolidated Financial Statements.)

**Asset Retirement Obligations**

PG&E Corporation and the Utility account for an ARO at fair value in the period during which the legal obligation is incurred if a reasonable estimate of fair value and its settlement date can be made. A legal obligation can arise from an existing or enacted law, statute, or ordinance; a written or oral contract; or under the legal doctrine of promissory estoppel.

At the time of recording an ARO, the associated asset retirement costs are capitalized as part of the carrying amount of the related long-lived asset. The Utility recognizes a regulatory asset or liability for the timing differences between the recognition of expenses and costs recovered through the ratemaking process.

Most of PG&E Corporation's and the Utility's AROs relate to the Utility's obligation to decommission its nuclear generation facilities, certain fossil fuel-fired generation facilities, and gas transmission assets. The Utility estimates its obligation for the future decommissioning of its nuclear generation facilities and certain fossil fuel-fired generation facilities. In December 2012, the Utility submitted an updated estimate of the cost to decommission its nuclear facilities to the CPUC. The estimated undiscounted cost to decommission the Utility's nuclear power plants increased by $1.4 billion in 2012 due to higher spent nuclear fuel disposal costs and an increase in the scope of work. To estimate the liability, the Utility uses a discounted cash flow model based upon significant estimates and assumptions about future decommissioning costs, inflation rates, and the estimated date of decommissioning. The estimated future cash flows are discounted using a credit-adjusted risk-free rate that reflects the risk associated with the decommissioning obligation. (See Note 2 of the Notes to the Consolidated Financial Statements.)

Changes in these estimates and assumptions could materially affect the amount of the recorded ARO for these assets. For example, a premature shutdown of the nuclear facilities at Diablo Canyon would increase the likelihood of an earlier start to decommissioning and cause an increase in the ARO. Additionally, if the inflation adjustment increased 25 basis points, the amount of the ARO would increase by approximately 4.21%. Similarly, an increase in the discount rate by 25 basis points would decrease the amount of the ARO by 5.24%. At December 31, 2013, the Utility's recorded ARO for the estimated cost of retiring these long-lived assets was $3.5 billion.

**Pension and Other Postretirement Benefit Plans**

PG&E Corporation and the Utility provide a non-contributory defined benefit pension plan for eligible employees as well as contributory postretirement health care and medical plans for eligible retirees and their eligible dependents, and non-contributory postretirement life insurance plans for eligible employees and retirees.

The pension and other postretirement benefit obligations are calculated using actuarial models as of the December 31 measurement date. The significant a ctuarial assumptions used in determining pension and other benefit obligations include the discount rate, the average rate of future compensation increases, the health care cost trend rate and the expected return on plan assets. PG&E Corporation and the Utility review these assumptions on an annual basis and adjust them as necessary. While PG&E Corporation and the Utility believe that the assumptions used are appropriate, significant differences in actual experience, plan changes or amendments, or significant changes in assumptions may materially affect the recorded pension and other postretirement benefit obligations and future plan expenses.

PG&E Corporation and the Utility recognize the funded status of their respective plans on their respective Consolidated Balance Sheets with an offsetting entry to accumulated other comprehensive income (loss); or, to the extent that the cost of the plans are recoverable in utility rates, to regulatory assets and liabilities, resulting in no impact to their respective Consolidated Statements of Income.

Pension and other benefit expense is based on the differences between actuarial assumptions and actual plan results and is deferred in accumulated other comprehensive income (loss) and amortized into income on a gradual basis. The differences between pension benefit expense recognized in accordance with GAAP and amounts recognized for ratemaking purposes are recorded as regulatory assets or liabilities as amounts are probable of recovery from customers. To the extent the other benefits are in an overfunded position, the Utility records a regulatory liability for a portion of the credit balance in accumulated other comprehensive income. (See Note 3 of the Notes to the Consolidated Financial Statements.)

PG&E Corporation and the Utility review recent cost trends and projected future trends in establishing health care cost trend rates. This evaluation suggests that current rates of inflation are expected to continue in the near term. In recognition of continued high inflation in health care costs and given the design of PG&E Corporation's plans, the assumed health care cost trend rate for 2013 is 8%, gradually decreasing to the ultimate trend rate of 5% in 2020 and beyond.

Expected rates of return on plan assets were developed by determining projected stock and bond returns and then applying these returns to the target asset allocations of the employee benefit trusts, resulting in a weighted average rate of return on plan assets. Fixed-income returns were projected based on real maturity and credit spreads added to a long-term inflation rate. Equity returns were estimated based on estimates of dividend yield and real earnings growth added to a long-term rate of inflation. For the Utility's defined benefit pension plan, the assumed return of 6.5% compares to a ten-year actual return of 8.7%.

The rate used to discount pension benefits and other benefits was based on a yield curve developed from market data of approximately 494 Aa-grade non-callable bonds at December 31, 2013. This yield curve has discount rates that vary based on the duration of the obligations. The estimated future cash flows for the pension and other postretirement benefit obligations were matched to the corresponding rates on the yield curve to derive a weighted average discount rate.

The following reflects the sensitivity of pension costs and projected benefit obligation to changes in certain actuarial assumptions:

| (in millions) | Increase (Decrease) in Assumption | Increase in 2013 Pension Costs | Increase in Projected Benefit Obligation at December 31, 2013 |
|---|---|---|---|
| Discount rate | (0.50) % | $ 122 | $ 1,041 |
| Rate of return on plan assets | (0.50) % | 60 | - |
| Rate of increase in compensation | 0.50% | 60 | 246 |

The following reflects the sensitivity of other postretirement benefit costs and accumulated benefit obligation to changes in certain actuarial assumptions:

| (in millions) | Increase (Decrease) in Assumption | Increase in 2013 Other Postretirement Benefit Costs | Increase in Accumulated Benefit Obligation at December 31, 2013 |
|---|---|---|---|
| Health care cost trend rate | 0.50% | $ 7 | $ 43 |
| Discount rate | (0.50) % | 7 | 104 |
| Rate of return on plan assets | (0.50) % | 9 | - |

**CAUTIONARY LANGUAGE REGARDING FORWARD-LOOKING STATEMENTS**

This 2013 Annual Report contains forward-looking statements that are necessarily subject to various risks and uncertainties. These statements reflect management's judgment and opinions which are based on current estimates, expectations, and projections about future events and assumptions regarding these events and management's knowledge of facts as of the date of this report. These forward-looking statements relate to, among other matters, estimated losses, including penalties and fines, associated with various investigations; forecasts of costs the Utility will incur to make safety and reliability improvements, including natural gas transmission costs that the Utility will not recover through rates; forecasts of capital expenditures; estimates and assumptions used in critical accounting policies, including those relating to regulatory assets and liabilities, environmental remediation, litigation, third-party claims, and other liabilities; and the level of future equity or debt issuances. These statements are also identified by words such as "assume," "expect," "intend," "forecast," "plan," "project," "believe," "estimate," "predict," "anticipate," "may," "should," "would," "could," "potential" and similar expressions. PG&E Corporation and the Utility are not able to predict all the factors that may affect future results. Some of the factors that could cause future results to differ materially from those expressed or implied by the forward-looking statements, or from historical results, include, but are not limited to:

- when and how the pending CPUC investigations and enforcement matters related to the Utility's natural gas system operating practices and the San Bruno accident are concluded, including the ultimate amount of fines the Utility will be required to pay to the State General Fund, the amount of natural gas transmission costs the Utility will be prohibited from recovering, and the cost of any remedial actions the Utility may be ordered to perform;

- the outcome of the pending federal criminal investigation related to the San Bruno accident, including the ultimate amount of civil or criminal fines or penalties, if any, the Utility may be required to pay, and the impact of remedial measures the Utility is required to take such as the appointment of an independent monitor;

- whether PG&E Corporation and the Utility are able to repair the reputational harm that they have suffered, and may suffer in the future, due to the negative publicity surrounding the San Bruno accident and the decisions to be issued in the pending investigations, including any charge or finding of criminal liability;

- the outcomes of ratemaking proceedings, such as the 2014 GRC, the 2015 GT&S rate case, and the TO rate cases;

- the amount and timing of additional common stock issuances by PG&E Corporation, the proceeds of which are contributed as equity to maintain the Utility's authorized capital structure as the Utility incurs charges and costs that it cannot recover through rates, including costs and fines associated with natural gas matters and the pending investigations;

- the outcome of future regulatory investigations, citations, or other proceedings, that may be commenced relating to the Utility's compliance with laws, rules, regulations, or orders applicable to the operation, inspection, and maintenance of its electric and gas facilities;

- the impact of environmental remediation laws, regulations, and orders; the ultimate amount of costs incurred to discharge the Utility's known and unknown remediation obligations; the extent to which the Utility is able to recover environmental compliance and remediation costs in rates or from other sources; and the ultimate amount of environmental remediation costs the Utility incurs but does not recover, such as the remediation costs associated with the Utility's natural gas compressor station site located near Hinkley, California;

- the impact of new legislation or NRC regulations, recommendations, policies, decisions, or orders relating to the nuclear industry, including operations, seismic design, security, safety, relicensing, the storage of spent nuclear fuel, decommissioning, cooling water intake, or other issues; and whether the Utility decides to request that the NRC resume processing the Utility's renewal application for the two Diablo Canyon operating licenses, and if so, whether the NRC grants the renewal;

- the impact of weather-related conditions or events, climate change, natural disasters, acts of terrorism, war, or vandalism (including cyber-attacks), and other events, that can cause unplanned outages, reduce generating output, disrupt the Utility's service to customers, or damage or disrupt the facilities, operations, or information technology and systems owned by the Utility, its customers, or third parties on which the Utility relies; and subject the Utility to third-party liability for property damage or personal injury, or result in the imposition of civil, criminal, or regulatory penalties on the Utility;

- the impact of environmental laws and regulations aimed at the reduction of carbon dioxide and GHGs, and whether the Utility is able to continue recovering associated compliance costs, such as the cost of emission allowances and offsets under cap-and-trade regulations and the cost of renewable energy procurement;

- changes in customer demand for electricity and natural gas resulting from unanticipated population growth or decline in the Utility's service area, general and regional economic and financial market conditions, the extent of municipalization of the Utility's electric or gas distribution facilities, changing levels of "direct access" customers who procure electricity from alternative energy providers, changing levels of customers who purchase electricity from governmental bodies that act as "community choice aggregators," and the development of alternative energy technologies including self-generation, storage and distributed generation technologies;

- the adequacy and price of electricity, natural gas, and nuclear fuel supplies; the extent to which the Utility can manage and respond to the volatility of energy commodity prices; the ability of the Utility and its counterparties to post or return collateral in connection with price risk management activities; and whether the Utility is able to recover timely its energy commodity costs through rates;

- whether the Utility's information technology, operating systems and networks, including the advanced metering system infrastructure, customer billing, financial, and other systems, can continue to function accurately while meeting regulatory requirements; whether the Utility is able to protect its operating systems and networks from damage, disruption, or failure caused by cyber-attacks, computer viruses, or other hazards; whether the Utility's security measures are sufficient to protect confidential customer, vendor, and financial data contained in such systems and networks; and whether the Utility can continue to rely on third-party vendors and contractors that maintain and support some of the Utility's operating systems;

- the extent to which costs incurred in connection with third-party claims or litigation can be recovered through insurance, rates, or from other third parties; including the timing and amount of insurance recoveries related to third party claims arising from the San Bruno accident;

- the ability of PG&E Corporation and the Utility to access capital markets and other sources of debt and equity financing in a timely manner on acceptable terms;

- changes in credit ratings which could result in increased borrowing costs especially if PG&E Corporation or the Utility were to lose its investment grade credit ratings;

- the impact of federal or state laws or regulations, or their interpretation, on energy policy and the regulation of utilities and their holding companies, including how the CPUC interprets and enforces the financial and other conditions imposed on PG&E Corporation when it became the Utility's holding company, and whether the ultimate outcome of the pending investigations relating to the Utility's natural gas operations affects the Utility's ability to make distributions to PG&E Corporation, and, in turn, PG&E Corporation's ability to pay dividends;

- the outcome of federal or state tax audits and the impact of any changes in federal or state tax laws, policies, or regulations; and

- the impact of changes in GAAP, standards, rules, or policies, including those related to regulatory accounting, and the impact of changes in their interpretation or application.

For more information about the significant risks that could affect the outcome of these forward-looking statements and PG&E Corporation's and the Utility's future financial condition, results of operations, and cash flows, see "Risk Factors" below. PG&E Corporation and the Utility do not undertake an obligation to update forward-looking statements, whether in response to new information, future events, or otherwise.

**RISK FACTORS**

***PG&E Corporation's and the Utility's reputations have been significantly affected by the negative publicity about the San Bruno accident, the related investigations and civil litigation, the Utility's noncompliance with certain natural gas regulations, and the fines imposed on the Utility for noncompliance with these regulations and for violation of certain CPUC rules. Their reputations may be further adversely affected by publicity regarding developments in the pending CPUC and criminal investigations, and by future investigations or other regulatory or governmental proceedings or action that may be commenced. In addition, the Utility's electricity and natural gas operations generally are subject to continuous public scrutiny and criticism that could lead to further reputational harm. Additional reputational harm or the inability of PG&E Corporation and the Utility to restore their reputations may further affect their financial conditions, results of operations and cash flows.***

The reputations of PG&E Corporation and the Utility have seriously suffered as a result of the extensive media coverage of the San Bruno accident, the investigative findings from the NTSB and the CPUC's independent review panel that placed the blame for the accident primarily on the Utility, the ensuing civil litigation, the criminal investigation, and the CPUC investigations that were commenced to determine whether the Utility violated any laws, rules, regulations or orders relating to safety recordkeeping, pipeline installation, integrity management, or other operational practices. (See "Natural Gas Matters" above.) PG&E Corporation and the Utility anticipate that there will be additional media coverage of future developments in the pending investigations, especially after the final outcomes are determined.

In addition, there could be additional negative publicity as the SED takes action with respect to numerous reports the Utility has submitted to notify the SED about the Utility's noncompliance with certain natural gas regulations. In January 2012, the SED imposed fines of $16.8 million on the Utility for self-reported failure to perform certain leak surveys and in 2013 the SED imposed fines ranging from $50,000 to $8.1 million for self-reported violations. The SED may impose additional fines based on other self-reported violations. The media also has published reports about two orders to show cause that were issued by the CPUC in August 2013 regarding a filing the Utility submitted in July 2013 to correct certain factual errors made in documents submitted in October 2011 that provided support for an order to restore operating pressure on certain pipelines. In December 2013, the Utility was fined $14.4 million for violating a CPUC rule prohibiting misleading disclosures to the CPUC.

The Utility's reputation can also be affected by media coverage of highly debated public policy issues such as those relating to the Utility's nuclear generation operations and nuclear decommissioning activities; environmental remediation or permitting activities; the accuracy, privacy, and safety of the Utility's information, operating, and billing systems; and the future development of the state-mandated California High Speed Rail project through the Utility's service territory. Media coverage of outages, vandalism, physical attacks on the Utility's facilities (such as the attack on the Metcalf electric substation), gas leaks, accidents causing injury or death, or other operational events, as well as concerns about the risks of terrorist acts, climate change, earthquakes, or a nuclear accident, can also negatively affect the Utility's reputation. These public policy debates and operational concerns have often led to additional adverse media coverage and could later result in investigations or other action by regulators, legislators and law enforcement officials or in lawsuits.

The outcome of pending ratemaking proceedings, such as the GRC and the GT&S rate case, also could affect PG&E Corporation's and the Utility's reputations, with unfavorable regulatory outcomes having a negative reputational effect. Alternatively, PG&E Corporation's or the Utility's unfavorable reputation could have a negative influence on the regulatory decision-making process.

Investors may question management's ability to repair the reputational harm that PG&E Corporation and the Utility have suffered, resulting in an adverse impact on the market price of PG&E Corporation common stock. The issuance of common stock by PG&E Corporation to fund the Utility's unrecovered costs has materially diluted PG&E Corporation's EPS. Additional share issuances following a declining stock price would cause further dilution. The extent to which PG&E Corporation's and the Utility's reputations can be restored will depend, in part, on the success of the Utility's efforts to improve the safety and reliability of the natural gas system as planned in the Utility's PSEP, whether they can implement the remaining recommendations made by the CPUC's independent review panel and the NTSB, and whether they are able to adequately show regulators, legislators, law enforcement officials, city officials, the media and the public that they have done so. If PG&E Corporation and the Utility are unable to repair their reputations, their financial conditions, results of operations and cash flows may continue to be negatively affected.

***PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected by the ultimate outcome of the CPUC investigations; the ultimate amount of gas transmission costs that the Utility does not recover through rates; and the ultimate outcome of the criminal investigation, including the amount of penalties imposed and the cost to implement any required action.***

As discussed above in the section entitled "Natural Gas Matters − Pending CPUC Investigations and Enforcement Matters," the SED has recommended that the CPUC impose what the SED characterizes as a penalty of $2.25 billion on the Utility, consisting of a $300 million fine payable to the State General Fund and $1.95 billion of non-recoverable costs. If the SED's penalty recommendation is adopted by the CPUC, the Utility estimates that its total unrecovered costs and fines related to natural gas transmission operations would be about $4.5 billion and the Utility would incur material charges in addition to the charges already incurred for the probable fines of $200 million and unrecoverable natural gas transmission costs. Such charges would materially affect PG&E Corporation's and the Utility's financial condition and results of operations and could negatively affect the availability, amount, and timing of future debt and equity issuances by PG&E Corporation and the Utility. Future developments in the criminal investigation arising from the San Bruno accident also could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. (See the sections entitled "Criminal Investigation" under the heading "Natural Gas Matters.")

***PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows have been materially affected by costs incurred by the Utility to perform work under the PSEP, to undertake other pipeline-related work, and to improve the safety and reliability of its natural gas and electricity operations. The Utility forecasts that it will incur a material amount of unrecoverable natural gas transmission costs in 2014. The Utility's ability to recover natural gas transmission costs in 2015 through 2017 primarily will be determined by the outcome of the Utility's 2015 GT&S rate case.***

In December 2012, the CPUC approved most of the Utility's proposed scope and timing of projects to be completed under the Utility's PSEP through 2014, but the CPUC disallowed the Utility's request for rate recovery of a significant portion of forecasted capital costs and expenses. In October 2013, the Utility filed an update application, as ordered by the CPUC, to reflect changes in the scope and priority of projects resulting from the Utility's completed search and review of records related to pipeline pressure validation and other information, including updated cost forecasts. At

December 31, 2013, the Utility had recorded cumulative charges of $549 million for PSEP capital costs that the Utility expects will exceed the adopted cost amounts. (See "Natural Gas Matters" above.) The Utility could record additional charges for disallowed costs if the CPUC does not approve the Utility's request to adjust revenue requirements or if cost forecasts increase. The Utility also forecasts it will incur costs during 2014 that it will not recover through rates, including costs to identify and remove encroachments from gas transmission pipeline rights-of-way, to pressure test pipelines placed into service after January 1, 1956, consistent with the CPUC's disallowance of such costs in the PSEP decision, and remedial costs associated with the Utility's pipeline corrosion control program.

The Utility's ability to recover its natural gas transmission and storage costs in 2015, 2016, and 2017, will be determined by whether the CPUC approves the Utility's GT&S rate case application. (See "Regulatory Matters" above.) PG&E Corporation's and the Utility's financial condition and results of operations could be materially affected if the CPUC does not approve the Utility's request or if actual costs exceed the capital and expense amounts that the CPUC may authorize. The Utility has not requested rate recovery for certain costs it forecasts it will incur during 2015 through 2017, including costs to identify and remove encroachments from gas transmission pipeline rights-of-way, to pressure test certain pipelines, and to take remedial measures to address pipeline corrosion. Actual costs to perform this work could materially exceed forecasts and negatively affect PG&E Corporation's and the Utility's results of operations. The Utility's ability to recover natural gas transmission costs also could be affected by the final decisions to be issued in the CPUC's pending investigations discussed above.

***PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows will be affected by their ability to continue accessing the capital markets and by the terms of debt and equity financings.***

The Utility relies on access to capital and credit markets as significant sources of liquidity to fund capital expenditures, pay principal and interest on its debt, provide collateral to support its natural gas and electricity procurement hedging contracts, and fund other operations requirements that are not satisfied by operating cash flows. See the discussion of the Utility's future financing needs above in "Liquidity and Financial Resources." The Utility's financing needs would increase if the Utility were required to incur unrecoverable costs and pay fines as a result of the outcome of the pending investigations discussed in "Natural Gas Matters" above. Such financing may become more difficult to obtain, especially if the ultimate outcome of the investigations affected the Utility's credit ratings. As the Utility has incurred costs it has been unable to recover through rates, it has relied on equity contributions from PG&E Corporation to maintain the 52% equity component of its CPUC-authorized capital structure. The Utility's equity needs could increase materially depending on the ultimate outcome of the pending investigations and the amount of natural gas and transmission costs it is unable to recover through rates.

PG&E Corporation relies on independent access to the capital and credit markets to fund its operations, make capital expenditures, and contribute equity to the Utility as needed to maintain the Utility's CPUC-authorized capital structure, if funds received from the Utility (in the form of dividends or share repurchases) are insufficient to meet such needs. Since the San Bruno accident, PG&E Corporation has issued a material amount of equity to fund its equity contributions to the Utility. PG&E Corporation forecasts that it will need to issue additional material amounts of equity in 2014 as the Utility continues to incur costs that it cannot recover through rates. If the Utility is required to pay penalties in an amount that exceeds the amount already accrued, the Utility may need further equity contributions that PG&E Corporation may need to fund through additional dilutive share issuances. PG&E Corporation also may be required to access the capital markets to fund equity contributions to the Utility following the Utility's issuance of long-term debt to maintain the Utility's capital structure. PG&E Corporation primarily has relied on the public sale of its common stock to raise the funds it contributes to meet the Utility's equity needs. The market price of PG&E Corporation common stock could decline materially depending on the outcome of the investigations and the amount and timing of future share issuances. Declines in the stock price could increase the dilutive effect of future stock issuances and make it more difficult or expensive for PG&E Corporation to complete future equity offerings.

PG&E Corporation's and the Utility's ability to access the capital and credit markets and the costs and terms of available financing depend on many factors, including the ultimate outcome of the pending investigations, the outcome of pending ratemaking proceedings, changes in their credit ratings, changes in the federal or state regulatory environment affecting energy companies generally or PG&E Corporation and the Utility in particular, the overall health of the energy industry, volatility in electricity or natural gas prices, and general economic and financial market conditions. If PG&E Corporation's or the Utility's credit ratings were downgraded to below investment grade, their ability to access the capital and credit markets would be negatively affected and could result in higher borrowing costs, fewer financing options, including reduced access to the commercial paper market, additional collateral posting requirements, which in turn could affect liquidity and lead to an increased financing need.

If the Utility were unable to access the capital markets, it could be required to decrease or suspend dividends to PG&E Corporation. PG&E Corporation also would need to consider its alternatives, such as contributing capital to the Utility, to enable the Utility to fulfill its obligation to serve. To maintain PG&E Corporation's dividend level in these circumstances, PG&E Corporation would be further required to access the capital or credit markets. PG&E Corporation may need to decrease or discontinue its common stock dividend if it is unable to access the capital or credit markets on reasonable terms.

***PG&E Corporation's and the Utility's financial condition depends upon the Utility's ability to recover its operating expenses and its electricity and natural gas procurement costs and to earn a reasonable rate of return on capital investments, in a timely manner from the Utility's customers through regulated rates.***

The Utility's ability to recover its costs and earn its authorized rate of return can be affected by many factors, including the time lag between when costs are incurred and when those costs are recovered in customers' rates and differences between the forecast or authorized costs embedded in rates (which are set on a prospective basis) and the amount of actual costs incurred. (See "Regulatory Matters – 2014 General Rate Case" above.) The CPUC or the FERC may not allow the Utility to recover costs on the basis that such costs were not reasonably or prudently incurred or for other reasons. For example, the CPUC has prohibited the Utility from recovering a material portion of costs that the Utility has already incurred, and will continue to incur, as it performs work under the PSEP, in part, because the CPUC found that such costs were incurred as a result of imprudent management. The CPUC may order the Utility to propose cost-sharing methods for certain costs or the Utility may decide for other reasons not to seek recovery of certain costs. In either case, the Utility would incur costs that are not recovered through rates. (See "Natural Gas Matters" above.)

Further, to serve its customers in a safe and reliable manner, the Utility may be required to incur expenses before the CPUC approves the recovery of such costs. The Utility is generally unable to recover costs incurred before CPUC authorization is obtained, unless the CPUC authorizes the Utility to track costs for potential future recovery. For example, the Utility requested that the CPUC allow the Utility to track costs incurred in 2012 under the PSEP before the CPUC approved the plan. The CPUC did not address the Utility's request and as a result the Utility was unable to recover costs incurred before the effective date of the decision, December 20, 2012. The Utility's failure to recover these and other pipeline-related costs has materially affected PG&E Corporation's and the Utility's financial condition, results of operations and cash flows.

Changes in laws and regulations or changes in the political and regulatory environment also may have an adverse effect on the Utility's ability to timely recover its costs and earn its authorized rate of return. In addition, the Utility may be required to incur substantial costs to comply with new state laws or to implement new state policies before the Utility is assured of cost recovery. For example, the state-mandated development of the

California High Speed Rail Project through the Utility's service territory will require the relocation of some of the Utility's electric and gas facilities, new electric facilities, and significant expansion and upgrade to the Utility's electric system. Although the CPUC has begun a proceeding to address cost allocation and cost recovery issues, the Utility may incur costs before the issues are settled, for example, to obtain environmental permits. Further, fluctuating commodity prices also could affect the Utility's ability to timely recover its costs and earn its authorized rate of return. Although current law and regulatory mechanisms permit the Utility to pass through its costs to procure electricity and natural gas to customers in rates, a significant and sustained rise in commodity prices, caused by costs associated with new renewable energy resources and California's new cap-and-trade program and other factors, could create overall rate pressures that make it more difficult for the Utility to recover its costs. This pressure could increase as the Utility continues to collect authorized rates to support public purpose programs, such as energy efficiency programs, and low-income rate subsidies, and to fund customer incentive programs.

The Utility's ability to recover its costs also may be affected by the economy and the economy's corresponding impact on the Utility's customers. For example, a sustained downturn or sluggishness in the economy could reduce the Utility's sales to industrial and commercial customers. Although the Utility generally recovers its costs through rates, regardless of sales volume, rate pressures increase when the costs are borne by a smaller sales base. A portion of the Utility's revenues depends on the level of customer demand for the Utility's natural gas transportation services which can fluctuate based on economic conditions, the price of natural gas, and other factors. In the GT&S rate case application, the Utility has proposed that this revenue mechanism be eliminated beginning on January 1, 2015 but it is uncertain whether the request will be granted.

The Utility's failure to recover its operating expenses, including electricity and natural gas procurement costs in a timely manner through rates could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

***The Utility's ability to procure electricity to meet customer demand at reasonable prices and recover procurement-related costs timely may be affected by increasing renewable energy requirements, the continuing functioning of the wholesale electricity market in California, and the expanded cap-and-trade market.***

The Utility meets customer demand for electricity from a variety of sources, including electricity generated from the Utility's own generation facilities, electricity provided by third parties under power purchase agreements, and purchases on the wholesale electricity market. The Utility must manage these sources using the commercial and CPUC regulatory principles of "least cost dispatch."

Following competitive requests for offers from third parties, the Utility enters into power purchase agreements, including contracts to purchase renewable energy, in compliance with a CPUC-approved long-term procurement plan. These agreements become binding obligations of the Utility after the CPUC approves the agreements and authorizes the Utility to recover contract costs through rates. There is a risk that the contractual prices the Utility is required to pay will become uneconomic in the future for a variety of reasons, including developments in alternative energy technology, increased self-generation by customers, an increase in distributed generation, and lower customer demand due to economic conditions or the loss of the Utility's customers to other generation providers. In particular, as the market for renewable energy develops in response to California's renewable energy requirements, there is a risk that the Utility's contractual commitments could result in procurement costs that are higher than the market price of renewable energy. This could create a further risk that, despite original CPUC approval of the contracts, the CPUC would disallow contract costs in the future if the CPUC determines that the costs are unreasonably above market. In addition, the CPUC could disallow procurement costs if the CPUC determined that the Utility incurred procurement costs that were not in compliance with its CPUC-approved procurement plan, or that the Utility did not prudently administer the power purchase agreements that were executed in compliance with the plan. The Utility also could incur liability under its contracts to procure electricity from conventional and renewable generation resources if such resources are physically curtailed by the CAISO during periods of over-generation when generation resources scheduled with the CAISO exceed customer load. The costs incurred by the Utility under these circumstances would be subject to reasonableness review by the CPUC and could be disallowed.

The Utility also purchases energy through the day-ahead and real-time wholesale electricity market operated by the CAISO. The amount of electricity the Utility purchases on the wholesale market fluctuates due to a variety of factors, including, the level of electricity generated by the Utility's own generation facilities, changes in customer demand, periodic expirations or terminations of power purchase contracts, the execution of new power purchase contracts, fluctuation in the output of hydroelectric and other renewable power facilities owned or under contract by the Utility, and the implementation of new energy efficiency and demand response programs. The market prices of electricity also fluctuate due to various factors, including the type of generation resources. Hydroelectric generation resources are generally the least expensive. As drought conditions in California and the Western U.S. persist, the market prices of electricity will generally reflect the higher cost of conventional and other resources. Although market mechanisms are designed to limit excessive prices, these market mechanisms could fail, or the related systems and software on which the market mechanisms rely may not perform as intended due to a cyber-attack or other reason, which could result in excessive market prices. For example, during the 2000 and 2001 energy crisis, the market mechanism flaws in California's newly established wholesale electricity market led to dramatically high market prices for electricity that the Utility was unable to recover through customer rates, ultimately causing the Utility to file a petition for reorganization under Chapter 11 of the U.S. Bankruptcy Code.

In addition, electricity costs include the costs to comply with California's cap-and-trade regulations. Although some of these costs can be offset by revenues from the sale of emission allowances by the Utility on behalf of some classes of electricity customers, it is uncertain how the cap-and-trade market will develop in the future especially as the cap-and-trade compliance periods expand to cover other sources of GHG emissions and as other regional or federal cap-and-trade programs are adopted.

PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected if the Utility is unable to recover a material portion of the costs it incurs to deliver electricity to customers.

***The completion of capital investment projects is subject to substantial risks, and the timing of the Utility's capital expenditures and recovery of capital-related costs through rates, if at all, will directly affect net income.***

The Utility's ability to invest capital in its electric and natural gas businesses is subject to many risks, including risks related to obtaining regulatory approval, securing adequate and reasonably priced financing, obtaining and complying with the terms of permits, meeting construction budgets and schedules, and satisfying operating and environmental performance standards. Third-party contractors on which the Utility depends to develop or construct these projects also face many of these risks. Changes in tax laws or policies, such as those relating to "bonus" depreciation, may also affect when or whether a potential project is developed. In addition, reduced forecasted demand for electricity and natural gas as a result of an economic slow-down, or other reasons, may also increase the risk that projects are deferred, abandoned, or cancelled. Some of the Utility's future capital investments may also be affected by evolving federal and state policies regarding the development of a "smart" electric transmission grid.

In addition, differences in the amount or timing of actual capital expenditures compared to the amount and timing of forecast capital expenditures authorized to be recovered through rates, can directly affect net income. Changes in regulatory policies concerning ongoing recovery of costs for existing projects may increase risks associated with capital investment. Further, if capital expenditures are disallowed, the Utility would be required to write-off such expenses which could have a material effect on PG&E Corporation's and the Utility's financial condition and results of operations. For example, at December 31, 2013, the Utility had recorded cumulative charges of $549 million for PSEP capital costs that the CPUC has

specifically disallowed and for increases in the amount of costs that the Utility forecasts will exceed the adopted cost amounts.

***PG&E Corporation's and the Utility's financial results could be affected by the loss of Utility customers and decreased new customer growth due to municipalization, an increase in the number of community choice aggregators, increasing levels of "direct access," and the development and integration of self-generation and distributed generation technologies, if the CPUC fails to adjust the Utility's rates to reflect such events.***

The Utility's customers could bypass its distribution and transmission system by obtaining such services from other providers. This may result in stranded investment capital, loss of customer growth, and additional barriers to cost recovery. Forms of bypass of the Utility's electricity distribution system include construction of duplicate distribution facilities to serve specific existing or new customers. In addition, local government agencies could exercise their power of eminent domain to acquire the Utility's facilities and use the facilities to provide utility service to their local residents and businesses. The Utility may be unable to fully recover its investment in the distribution assets that it no longer owns. The Utility's natural gas transmission facilities could be bypassed by interstate pipeline companies that construct facilities in the Utility's markets, by customers who build pipeline connections that bypass the Utility's natural gas transmission and distribution system, or by customers who use and transport liquefied natural gas.

Alternatively, the Utility's customers could become direct access customers who purchase electricity from alternative energy suppliers or they could become customers of governmental bodies registered as community choice aggregators to purchase and sell electricity for their residents and businesses. Although the Utility is permitted to collect a non-bypassable charge for generation-related costs incurred on behalf of these customers, or distribution, metering, or other services it continues to provide, the fee may not be sufficient for the Utility to fully recover the costs to provide these services. Furthermore, if the former customers return to receiving electricity supply from the Utility, the Utility could incur costs to meet their electricity needs that it may not be able to timely recover through rates or that it may not be able to recover at all.

In addition, increasing levels of self-generation of electricity by customers (primarily solar installations) and the use of customer net energy metering, which allows self-generating customers to receive bill credits for surplus power at the full retail rate, could put upward rate pressure on remaining customers. Also, a confluence of technology-related cost declines and sustained federal or state subsidies could make a combination of distributed generation and storage a viable, cost-effective alternative to the Utility's bundled electric service which could further threaten the Utility's ability to recover its generation, transmission, and distribution investments.

If the CPUC fails to adjust the Utility's rates to reflect the impact of changing loads, increasing self-generation and net energy metering, and the growth of distributed generation and storage, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially adversely affected.

***The operation of the Utility's electricity and natural gas generation, transmission, and distribution facilities involve significant risks which, if they materialize, can adversely affect PG&E Corporation's and the Utility's financial condition, results of operations and cash flows, and the Utility's insurance may not be sufficient to cover losses caused by an operating failure or catastrophic event.***

The Utility owns and operates extensive electricity and natural gas facilities, including two nuclear generation units and an extensive hydroelectric generating system. The Utility's service territory covers approximately 70,000 square miles in northern and central California and is composed of diverse geographic regions with varying climates, weather conditions, vegetation amounts, and population density levels, all of which create numerous operating challenges. The Utility's facilities are interconnected to the U.S. western electricity grid and numerous interstate and continental natural gas pipelines. These facilities are subject to physical attacks, including cyber-attacks that can cause local or widespread outages of electric or natural gas service, or otherwise disrupt operations, as well as cause property damage and personal injury. The Utility and other industry participants implement various security measures to monitor and protect their facilities but these security measures may not always be successful. The Utility's ability to earn its authorized rate of return depends on its ability to efficiently maintain, operate, and protect its facilities and provide electricity and natural gas services safely and reliably. The maintenance and operation of the Utility's facilities, and the facilities of third parties on which the Utility relies, involve numerous risks, including the risks discussed elsewhere in this section and those that arise from:

- the breakdown or failure of equipment, electric transmission or distribution lines, or natural gas transmission and distribution pipelines, that can cause explosions, fires, or other catastrophic events;
- the failure of generation facilities to perform at expected or at contracted levels of output or efficiency;
- the failure of a large dam or other major hydroelectric facility, or the failure of one or more levees that protect land on which the Utility's electric transmission assets are built;
- the failure to take expeditious or sufficient action to mitigate operating conditions, facilities, or equipment, that the Utility has identified, or reasonably should have identified, as unsafe, which failure then leads to a catastrophic event, and the failure to respond effectively to a catastrophic event;
- severe weather events such as storms, tornadoes, floods, drought, earthquakes, tsunamis, wildland and other fires, pandemics, solar events, electromagnetic events, or other natural disasters;
- operator or other human error;
- construction performed by third parties, such as ground excavation that damages the Utility's underground facilities;
- fuel supply interruptions or the lack of available fuel which reduces or eliminates the Utility's ability to provide electricity and/or natural gas service;
- the release of hazardous or toxic substances into the air or water;

- use of new or unproven technologies;
- attacks by third parties, including cyber-attacks; and
- acts of terrorism, vandalism, or war.

The occurrence of any of these events could affect demand for electricity or natural gas; cause unplanned outages or reduce generating output which may require the Utility to incur costs to purchase replacement power; cause damage to the Utility's assets or operations requiring the Utility to incur unplanned expenses to respond to emergencies and make repairs; damage the assets or operations of third parties on which the Utility relies; subject the Utility to claims by customers or third parties for damages to property, personal injury, or wrongful death, or subject the Utility to penalties. These costs may not be recoverable through rates or insurance. Further, although the Utility often enters into agreements for third-party contractors to perform work, such as patrolling and inspection of facilities, the Utility may retain liability for the quality and completion of the contractor's work and can be subject to penalties or other enforcement action if the contractor violates applicable laws, rules, regulations, or orders. Insurance, equipment warranties, or other contractual indemnification requirements may not be sufficient or effective to provide full or even partial recovery under all circumstances or against all hazards or liabilities to which the Utility may become subject. An uninsured loss could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. Future insurance coverage may not be available at rates and on terms as favorable as the rates and terms of the Utility's current insurance coverage or may not be available at all.

***The Utility's operational and information systems on which it relies to conduct its business and serve customers could fail to function properly due to technological problems, cyber-attacks, physical attacks on the Utility's assets, acts of terrorism, severe weather, solar events, electromagnetic events, natural disasters, the age and condition of information technology assets, human error, or other reasons, that could disrupt the Utility's operations and cause the Utility to incur unanticipated losses and expense.***

The operation of the Utility's extensive electricity and natural gas systems rely on evolving information and operational technology systems and network infrastructures that are becoming more complex as new technologies and systems are implemented to modernize capabilities to safely and reliably deliver gas and electric services. The Utility's business is highly dependent on its ability to process and monitor, on a daily basis, a very large number of tasks and transactions, many of which are highly complex. The failure of the Utility's information and operational systems and networks due to a physical attack, cyber-attack or other cause could significantly disrupt operations; cause harm to the public or employees; result in outages or reduced generating output; damage to the Utility's assets or operations or those of third parties; and subject the Utility to claims by customers or third parties, any of which could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

The Utility's systems, including its financial information, operational systems, advanced metering, and billing systems, require constant maintenance, modification, and updating, which can be costly and increase the risk of errors and malfunction. Any disruptions or deficiencies in existing systems, or disruptions, delays or deficiencies in the modification or implementation of new systems, could result in increased costs, the inability to track or collect revenues, the diversion of management's and employees' attention and resources, and could negatively affect the effectiveness of the companies' control environment, and/or the companies' ability to timely file required regulatory reports.

The Utility's ability to measure customer energy usage and generate bills depends on the successful functioning of the advanced metering system. The Utility relies on third party contractors and vendors to service, support, and maintain certain proprietary functional components of the advanced metering system. If such a vendor or contractor ceased operations, if there was a contractual dispute or a failure to renew or negotiate the terms of a contract so that the Utility becomes unable to continue relying on such a third-party vendor or contractor, then the Utility could experience costs associated with disruption of billing and measurement operations and would incur costs as it seeks to find other replacement contractors or vendors or hire and train personnel to perform such services.

Despite implementation of security and mitigation measures, all of the Utility's technology systems are vulnerable to disability or failures due to cyber-attacks, physical attacks on the facilities and equipment needed to operate the technology systems, viruses, human errors, acts of war or terrorism, and other events. If the Utility's information technology systems or network infrastructure were to fail, the Utility might be unable to fulfill critical business functions and serve its customers, which could have a material effect on PG&E Corporation's and the Utility's financial conditions, results of operations, and cash flows.

In addition, in the ordinary course of its business, the Utility collects and retains sensitive information including personal identification information about customers and employees, customer energy usage, and other confidential information. The theft, damage, or improper disclosure of sensitive electronic data can subject the Utility to penalties for violation of applicable privacy laws, subject the Utility to claims from third parties, and harm the Utility's reputation.

***The Utility's success depends on the availability of the services of a qualified workforce and its ability to maintain satisfactory collective bargaining agreements which cover a substantial number of employees. PG&E Corporation's and the Utility's results may suffer if the Utility is unable to attract and retain qualified personnel and senior management talent, or if prolonged labor disruptions occur.***

The Utility's workforce is aging and many employees will become eligible to retire within the next few years. Although the Utility has undertaken efforts to recruit and train new field service personnel, the Utility may not be successful. The Utility may be faced with a shortage of experienced and qualified personnel. The majority of the Utility's employees are covered by collective bargaining agreements with three unions. The terms of these agreements affect the Utility's labor costs. It is possible that labor disruptions could occur. In addition, it is possible that some of the remaining non-represented Utility employees will join one of these unions in the future. It is also possible that PG&E Corporation and the Utility may face challenges in attracting and retaining senior management talent especially if they are unable to restore the reputational harm generated by the negative publicity stemming from the San Bruno accident. Any such occurrences could negatively impact PG&E Corporation's and the Utility's financial condition and results of operations.

***The operation and decommissioning of the Utility's nuclear power plants expose it to potentially significant liabilities that it may not be able to recover from its insurance or other sources, and the Utility may incur significant capital expenditures and compliance costs that it may be unable to fully recover, adversely affecting PG&E Corporation's and the Utility's s financial conditions, results of operations, and cash flows.***

The operation of the Utility's nuclear generation facilities exposes it to potentially significant liabilities from environmental, health and financial risks, such as risks relating to the storage, handling and disposal of spent nuclear fuel, the release of radioactive materials caused by a nuclear accident, seismic activity, natural disaster, or terrorist act. There are also significant uncertainties related to the regulatory, technological, and financial aspects of decommissioning nuclear generation plants when their licenses expire. To reduce the Utility's financial exposure to these risks, the Utility maintains insurance and manages decommissioning trusts that hold nuclear decommissioning charges collected through customer rates. However, the costs or damages the Utility may incur in connection with the operation and decommissioning of its nuclear power plants could exceed the amount of the Utility's insurance coverage and nuclear decommissioning trust assets. The Utility has insurance coverage for property damages and business interruption losses, as well as coverage for acts of terrorism at its nuclear power plants as a member of NEIL, a mutual insurer owned by utilities with nuclear facilities. NEIL provides coverage for both nuclear (meaning that nuclear material is released) and non-nuclear losses. Due to multiple large non-nuclear losses in the industry, in 2013 NEIL significantly reduced its coverage for non-nuclear losses. While the Utility is seeking alternative insurance options, efforts to obtain additional coverage may not be successful. Even if the Utility is able to obtain additional coverage, this future insurance coverage may not be available at rates and terms as favorable as the rates and terms of the Utility's current NEIL insurance coverage. If the Utility incurs losses that are either not covered by insurance or exceed the amount of insurance available, such losses could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

In addition, as an operator of the two operating nuclear reactor units at Diablo Canyon, the Utility may be required under federal law to pay up to $255 million of liabilities arising out of each nuclear incident occurring not only at the Utility's Diablo Canyon facility but at any other nuclear power plant in the United States. (See Note 14 of the Notes to the Consolidated Financial Statements.) The Utility's ability to continue to operate its nuclear generation facilities also is subject to the availability of adequate nuclear fuel supplies on terms that the CPUC will find reasonable.

The NRC oversees the licensing, construction, and decommissioning of nuclear facilities and has broad authority to impose requirements relating to the maintenance and operation of nuclear facilities; the storage, handling and disposal of spent fuel; and the safety, radiological, environmental, and security aspects of nuclear facilities. The NRC has adopted regulations that are intended to protect nuclear facilities, nuclear facility employees, and the public from potential terrorist and other threats to the safety and security of nuclear operations, including threats posed by radiological sabotage or cyber-attack. The Utility incurs substantial costs to comply with these regulations. In addition, in March 2012, the NRC issued several orders to the owners of all U.S. operating nuclear reactors to implement the highest-priority recommendations issued by the NRC's task force to incorporate the lessons learned from the March 2011 earthquake and tsunami that caused significant damage to the Fukushima-Dai-ichi nuclear facilities in Japan. The NRC may issue further orders to implement the recommendations, including facility-specific orders, which could require the Utility to incur additional costs.

In 2009, the Utility filed an application with the NRC to renew the operating licenses for the two operating units at Diablo Canyon. (See "Regulatory Matters – Diablo Canyon Nuclear Power Plant" above.) In May 2011, after the Fukushima-Dai-ichi event, the NRC granted the Utility's request to delay processing the Utility's application while certain advanced seismic studies were completed. The Utility is currently assessing the data from recently completed advanced seismic studies along with other available seismic data. The Utility will not make any decision about whether to request that the NRC to resume processing the license renewal application until this assessment is completed and provided to the NRC. The Utility anticipates that it will complete this assessment by June 2014. If the Utility does not request that the NRC resume processing the application, the current operating licenses would expire in 2024 and 2025. In any event, the NRC has stated that it will not issue final decisions in licensing or re-licensing proceedings, including the Utility's re-licensing application, until it has issued a new "waste confidence decision," as described below. In addition, the NRC would not issue renewed operating licenses for Diablo Canyon unless the California Coastal Commission determined that license renewal is consistent with federal and state coastal laws.

In the NRC's original "waste confidence decision," the NRC found that spent nuclear fuel can be safely managed until a permanent off-site repository is established. The NRC's waste confidence decision was successfully challenged on the basis that the NRC's environmental review was deficient. The NRC has instructed its staff to develop and issue a new waste confidence decision and temporary storage rule by October 2014. It is uncertain how the new waste confidence decision and temporary storage rule would affect the Utility's decision to resume the renewal application process at the NRC or, if the application process were resumed, how the new waste confidence decision and temporary storage rule would affect the disposition of the renewal application. It is also uncertain how the new waste confidence decision and temporary storage rule would affect the Utility's nuclear generation operations during the current terms of the NRC licenses for Diablo Canyon.

The CPUC has authority to determine the rates the Utility can collect to recover its nuclear fuel, operating, maintenance, compliance, and decommissioning costs. The Utility also could incur significant expense to comply with regulations or orders the NRC may issue in the future to impose new safety requirements, to obtain license renewal, and to comply with federal and state policies and regulations applicable to the use of cooling water intake systems at generation facilities, such as Diablo Canyon. (See "Environmental Matters" above.) The Utility expects that it would seek rate recovery of these additional costs. The outcome of these rate proceedings at the CPUC can be influenced by public and political opposition to nuclear power.

If the Utility were unable to recover costs related to its nuclear facilities, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected. The Utility may determine that it cannot comply with the new regulations or orders, including a new waste confidence decision, in a feasible and economic manner and voluntarily cease operations at Diablo Canyon. Alternatively, the NRC may order the Utility to cease its nuclear operations until it can comply with new regulations, orders, or decisions. Further, the Utility could decide not to resume the license renewal process or the Utility could fail to obtain renewed operating licenses for Diablo Canyon requiring nuclear operations to cease when the current licenses expire in 2024 and 2025.

***The Utility's operations are subject to extensive environmental laws and changes in or liabilities under these laws could adversely affect PG&E Corporation's and the Utility's financial conditions, results of operations, and cash flows.***

The Utility's operations are subject to extensive federal, state, and local environmental laws, regulations, orders, relating to air quality, water quality and usage, remediation of hazardous wastes, and the protection and conservation of natural resources and wildlife. The Utility can incur significant capital, operating, and other costs associated with compliance with these environmental statutes, rules, and regulations. These costs can be difficult to forecast because the extent of contamination may be unknown. For example, the Utility's costs to perform hydrostatic pressure tests on natural gas pipelines were higher than anticipated because the water used to perform the tests became contaminated as it traveled through the pipe and the Utility had to incur additional costs to remediate the contaminated wastewater. Further, even if the extent of contamination is known, remediation costs can be difficult to estimate due to many factors, including which remediation alternatives will be used, the applicable remediation levels, and the financial ability of other potentially responsible parties. Environmental remediation costs could increase in the future as a result of new legislation, the current trend toward more stringent standards, and stricter and more expansive application of existing environmental regulations. Failure to comply with these laws and regulations, or failure to comply with the terms of licenses or permits issued by environmental or regulatory agencies, could expose the Utility to claims by third parties or the imposition of civil or criminal fines or other sanctions.

The Utility has been, and may be, required to pay for environmental remediation costs at sites where it is identified as a potentially responsible party under federal and state environmental laws. These sites, some of which the Utility no longer owns, include former manufactured gas plant sites, current and former power plant sites, former gas gathering and gas storage sites, sites where natural gas compressor stations are located, current and former substations, service center and general construction yard sites, and sites currently and formerly used by the Utility for the storage, recycling, or disposal of hazardous substances. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site. Although the Utility has liabilities for known environmental obligations that are probable and reasonably estimable, estimated costs may vary significantly from actual costs, and the amount of additional future costs may be material to results of operations in the period in which they are recognized. (See Note 14 to the Notes to the Consolidated Financial Statements for more information.)

The CPUC has authorized the Utility to recover its environmental remediation costs for certain sites through various ratemaking mechanisms. One of these mechanisms allows the Utility rate recovery for 90% of its hazardous substance remediation costs for certain approved sites without a reasonableness review. The CPUC may discontinue or change these ratemaking mechanisms in the future or the Utility may incur environmental costs that exceed amounts the CPUC has authorized the Utility to recover in rates.

Some of the Utility's environmental costs, such as the remediation costs associated with the Hinkley natural gas compressor site, are not recoverable through rates or insurance. The Utility's costs to remediate groundwater contamination near the Hinkley natural gas compressor site and to abate the effects of the contamination have had, and may continue to have, a material effect on PG&E Corporation's and the Utility's financial conditions, results of operations, and cash flows. (See "Environmental Matters" above.)

***The Utility's future operations may be affected by climate change that may have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.***

A report issued in 2012 by the EPA entitled, "Climate Change Indicators in the United States, 2012" states that the increase of GHG emissions in the atmosphere is changing the fundamental measures of climate in the United States, including rising temperatures, shifting snow and rainfall patterns, and more extreme climate events. In December 2009, the EPA issued a finding that GHG emissions cause or contribute to air pollution that endangers public health and welfare. The impact of events or conditions caused by climate change could range widely, from highly localized to worldwide, and the extent to which the Utility's operations may be affected is uncertain. For example, if reduced snowpack decreases the Utility's hydroelectric generation, the Utility will need to acquire additional generation from other sources at a greater cost. In addition, if lower hydroelectric generation due to dry conditions or prolonged drought increases reliance on conventional generation resources, it may be more costly for the Utility to comply with California's renewable portfolio standard program and GHG emissions limits.

Under certain circumstances, the events or conditions caused by climate change could result in a full or partial disruption of the ability of the Utility – or one or more of the entities on which it relies – to generate, transmit, transport, or distribute electricity or natural gas. The Utility has been studying the potential effects of climate change on the Utility's operations and is developing contingency plans to adapt to those events and conditions that the Utility believes are most significant. Events or conditions caused by climate change could have a greater impact on the Utility's operations than the Utility's studies suggest and could result in lower revenues or increased expenses, or both. If the CPUC fails to adjust the Utility's rates to reflect the impact of events or conditions caused by climate change, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected.

***The Utility is subject to fines and penalties for failure to comply with federal, state, or local statutes and regulations. Changes in the political and regulatory environment could cause federal and state statutes, regulations, rules, and orders to become more stringent and difficult to comply with, and required permits, authorizations, and licenses may be more difficult to obtain, increasing the Utility's expenses or making it more difficult for the Utility to execute its business strategy.***

The Utility must comply in good faith with all applicable statutes, regulations, rules, tariffs, and orders of the CPUC, the FERC, the NRC, and other regulatory agencies relating to the aspects of its electricity and natural gas utility operations that fall within the jurisdictional authority of such agencies. In addition to the NRC requirements described above, these include meeting new renewable energy delivery requirements, resource adequacy requirements, federal electric reliability standards, customer billing, customer service, affiliate transactions, vegetation management, operating and maintenance practices, and safety and inspection practices. The Utility is subject to penalties and sanctions for failure to comply with applicable statutes, regulations, rules, tariffs, and orders.

The CPUC can impose fines up to $50,000 per day, per violation. The CPUC has wide discretion to determine, based on the facts and circumstances, whether a single violation or multiple violations were committed and to determine the length of time a violation existed for purposes of calculating the amount of fines. The CPUC has delegated authority to the SED to levy citations and impose fines for violations of certain regulations related to the safety of natural gas facilities and utilities' natural gas operating practices. Like the CPUC, the SED has discretion to determine how to count the number of violations, but the delegated authority requires the SED to assess the maximum statutory fine per violation with discretion to adjust the amount of the fine based on the risk-level of the violation as determined by the SED. (For a discussion of pending investigations and potential enforcement proceedings, see MD&A "Natural Gas Matters" above.) A California law enacted in 2013 requires the CPUC to establish a safety enforcement program for gas facilities by July 1, 2014 and for electric facilities by January 1, 2015. The law requires the CPUC to delegate enforcement authority to the SED under these programs. The CPUC may make changes to its gas safety enforcement program to implement the new law. These programs may increase the risk that penalties will be imposed on the Utility.

In addition, the federal Pipeline and Hazardous Materials Safety Administration has independent authority to impose fines for violation of federal pipeline safety regulations in amounts that range from $100,000 to $200,000 for an individual violation and from $1 million to $2 million for a series of violations.

The Utility must comply with federal electric reliability standards that are set by the North American Electric Reliability Corporation and approved by the FERC. These standards relate to maintenance, training, operations, planning, vegetation management, facility ratings, and other subjects. These standards are designed to maintain the reliability of the nation's bulk power system and to protect the system against potential disruptions from cyber-attacks and physical security breaches. Regulatory authorities conduct frequent compliance audits of the Utility's operating practices. The FERC can impose fines (up to $1 million per day, per violation) for failure to comply with these mandatory electric reliability standards. As these and other standards and rules evolve, and as the wholesale electricity markets become more complex, the Utility's risk of noncompliance may increase.

In addition, statutes, regulations, rules, tariffs, and orders, or their interpretation and application, may become more stringent and difficult to comply with in the future. If this occurs, the Utility could be exposed to increased costs to comply with the more stringent requirements or new interpretations and to potential liability for customer refunds, penalties, or other amounts. If it is determined that the Utility did not comply with applicable statutes, regulations, rules, tariffs, or orders, and the Utility is ordered to pay a material amount in customer refunds, penalties, or other amounts, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows would be materially affected.

The Utility also must comply with the terms of various governmental permits, authorizations, and licenses. These permits, authorizations, and licenses may be revoked or modified by the agencies that granted them if facts develop that differ significantly from the facts assumed when they were issued. In addition, waste discharge permits and other approvals and licenses often have a term that is less than the expected life of the associated facility. Licenses and permits may require periodic renewal, which may result in additional requirements being imposed by the granting agency. In connection with a license renewal for one or more of the Utility's hydroelectric generation facilities or assets, the FERC may impose new license conditions that could, among other things, require increased expenditures or result in reduced electricity output and/or capacity at the facility.

If the Utility cannot obtain, renew, or comply with necessary governmental permits, authorizations, or licenses, or if the Utility cannot recover any increased costs of complying with additional license requirements or any other associated costs in its rates in a timely manner, PG&E Corporation's and the Utility's financial condition and results of operations could be materially affected.

***Market performance or changes in other assumptions could require PG&E Corporation and the Utility to make significant unplanned contributions to its pension plan, other postretirement benefits plans, and nuclear decommissioning trusts.***

PG&E Corporation and the Utility provide defined benefit pension plans and other postretirement benefits for eligible employees and retirees. The Utility also maintains three trusts for the purposes of providing funds to decommission its nuclear facilities. Up to approximately 60% of the plan assets and trust assets have generally been invested in equity securities, which are subject to market fluctuation. A decline in the market value may increase the funding requirements for these plans and trusts.

The cost of providing pension and other postretirement benefits is also affected by other factors, including the assumed rate of return on plan assets, employee demographics, discount rates used in determining future benefit obligations, rates of increase in health care costs, levels of assumed interest rates, future government regulation, and prior contributions to the plans. Similarly, funding requirements for the nuclear decommissioning trusts are affected by changes in the laws or regulations regarding nuclear decommissioning or decommissioning funding requirements as well as changes in assumptions or forecasts related to decommissioning dates, technology and the cost of labor, materials and equipment. Funding requirements also can be affected by the difference between the actual rate of return on plan assets and the assumed rate and by changes in the assumed rate of return. For example, changes in interest rates affect the liabilities under the plans: as interest rates decrease, the liabilities increase, potentially increasing the funding requirements.

The Utility has recorded an asset retirement obligation related to decommissioning its nuclear facilities based on various estimates and assumptions. Changes in these estimates and assumptions can materially affect the amount of the recorded asset retirement obligation. (See Note 2 of the Notes to the Consolidated Financial Statements for a discussion of the increase in the recorded asset retirement obligation to reflect increased estimated decommissioning costs.)

The CPUC has authorized the Utility to recover forecasted costs to fund pension and postretirement plan contributions and nuclear decommissioning through rates. If the Utility is required to make significant unplanned contributions to fund the pension and postretirement plans and nuclear decommissioning trusts and is unable to recover such contributions in rates, the contributions would negatively affect PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

Other Utility obligations, such as its workers' compensation obligations, are not separately earmarked for recovery through rates. Therefore, increases in the Utility's workers' compensation liabilities and other unfunded liabilities also can negatively affect net income.

***PG&E Corporation's and the Utility's financial statements reflect various estimates, assumptions, and values and are prepared in accordance with applicable accounting rules, standards, policies, guidance, and interpretations, including those related to regulatory assets and liabilities. Changes to these estimates, assumptions, values, and accounting rules, or changes in the application of these rules, could materially affect PG&E Corporation's and the Utility's financial condition or results of operations.***

The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions that affect the reported amounts of revenues, expenses, assets, and liabilities, and the disclosure of contingencies. (See the discussion under Notes 1 and 2 of the Notes to the Consolidated Financial Statements and "Critical Accounting Policies" above.) If the information on which the estimates and assumptions are based proves to be incorrect or incomplete, if future events do not occur as anticipated, or if there are changes in applicable accounting guidance, policies, or interpretation, management's estimates and assumptions will change as appropriate. A change in management's estimates or assumptions, or the recognition of actual losses that differ from the amount of estimated losses, could have a material impact on PG&E Corporation's and the Utility's financial condition or results of operations.

As a regulated entity, the Utility's rates are designed to recover the costs of providing service. The Utility's continued use of regulatory accounting (which enables it to account for the effects of regulation, including recording regulatory assets and liabilities) depends on its ability to recover its cost of service. (See Note 3 of the Notes to the Consolidated Financial Statements.) Since the San Bruno accident, the Utility has recorded cumulative charges of approximately $2.5 billion related to its natural gas operations that are not recoverable through rates. (See "Natural Gas Matters" above.) To the extent that rates, including rates in the 2015 GT&S rate case, are not set at a level that allows the Utility to recover the cost of providing service and a reasonable return on its investment in future periods, the Utility may be required to discontinue the application of regulatory accounting for portions of its operations. If that occurs, the related regulatory assets and liabilities would be charged against income in the period in which that determination was made and could have a material impact on PG&E Corporation's and the Utility's future financial condition and results of operations. In addition, if regulatory accounting did not apply, the Utility's future financial results could become more volatile under GAAP accounting as compared to historical financial results under regulatory accounting due to the differences in the timing of expense (or gain) recognition under GAAP accounting as compared to regulatory accounting.

***As a holding company, PG&E Corporation depends on cash distributions and reimbursements from the Utility to meet its debt service and other financial obligations and to pay dividends on its common stock.***

PG&E Corporation is a holding company with no revenue generating operations of its own. PG&E Corporation's ability to pay interest on its outstanding debt, the principal at maturity, and to pay dividends on its common stock, as well as satisfy its other financial obligations, primarily depends on the earnings and cash flows of the Utility and the ability of the Utility to distribute cash to PG&E Corporation (in the form of dividends and share repurchases) and reimburse PG&E Corporation for the Utility's share of applicable expenses. Before it can distribute cash to PG&E Corporation, the Utility must use its resources to satisfy its own obligations, including its obligation to serve customers, to pay principal and interest on outstanding debt, to pay preferred stock dividends, and meet its obligations to employees and creditors. The Utility's ability to pay common stock dividends is constrained by regulatory requirements, including that the Utility maintain its authorized capital structure with an average 52% equity component. PG&E Corporation's and the Utility's ability to pay dividends also could be affected by financial covenants contained in their respective credit agreements that require each company to maintain a ratio of consolidated total debt to consolidated capitalization of at most 65%. If the Utility is not able to make distributions to PG&E Corporation or to reimburse PG&E Corporation, PG&E Corporation's ability to meet its own obligations could be impaired and its ability to pay dividends could be restricted. (Also see the discussion of financing risks above.)

***PG&E Corporation could be required to contribute capital to the Utility or be denied distributions from the Utility to the extent required by the CPUC's determination of the Utility's financial condition.***

The CPUC imposed certain conditions when it approved the original formation of a holding company for the Utility, including an obligation by PG&E Corporation's Board of Directors to give "first priority" to the capital requirements of the Utility, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner. The CPUC later issued decisions adopting an expansive interpretation of PG&E Corporation's obligations under this condition, including the requirement that PG&E Corporation "infuse the Utility with all types of capital necessary for the Utility to fulfill its obligation to serve." The Utility's financial condition will be affected by the amount of costs the Utility incurs that it does not recover through rates (whether such non-recovery is because actual costs exceed authorized or forecast costs, the Utility did not seek authorization to recover certain costs, or the CPUC prohibited the Utility from recovering certain costs), the amount of third-party losses it is unable to recover through insurance, and the amount of penalties the Utility incurs in connection with the pending investigations and future citations for self-reported violations. After considering these impacts, the CPUC's interpretation of PG&E Corporation's obligation under the first priority condition could require PG&E Corporation to infuse the Utility with significant capital in the future or could prevent distributions from the Utility to PG&E Corporation, or both, any of which could materially restrict PG&E Corporation's ability to pay principal and interest on its outstanding debt or pay its common stock dividend, meet other obligations, or execute its business strategy. Further, laws or regulations could be enacted or adopted in the future that could impose additional financial or other restrictions or requirements pertaining to transactions between a holding company and its regulated subsidiaries.

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

### NOTE 1: ORGANIZATION AND BASIS OF PRESENTATION

PG&E Corporation is a holding company whose primary operating subsidiary is Pacific Gas and Electric Company, a public utility operating in northern and central California. The Utility generates revenues mainly through the sale and delivery of electricity and natural gas to customers. The Utility is primarily regulated by the CPUC and the FERC. In addition, the NRC oversees the licensing, construction, operation, and decommissioning of the Utility's nuclear generation facilities.

This is a combined annual report of PG&E Corporation and the Utility. PG&E Corporation's Consolidated Financial Statements include the accounts of PG&E Corporation, the Utility, and other wholly owned and controlled subsidiaries. The Utility's Consolidated Financial Statements include the accounts of the Utility and its wholly owned and controlled subsidiaries. All intercompany transactions have been eliminated from the Consolidated Financial Statements. The Notes to the Consolidated Financial Statements apply to both PG&E Corporation and the Utility. PG&E Corporation and the Utility operate in one segment.

The accompanying Consolidated Financial Statements have been prepared in accordance with GAAP and the instructions to Form 10-K and Regulation S-X promulgated by the SEC. The preparation of financial statements in conformity with GAAP requires management to make estimates and assumptions based on a wide range of factors, including future regulatory decisions and economic conditions, that are difficult to predict. Some of the more critical estimates and assumptions relate to the Utility's regulatory assets and liabilities, legal and regulatory contingencies, environmental remediation liabilities, asset retirement obligations, and pension and other postretirement benefit plans obligations. Management believes that its estimates and assumptions reflected in the Consolidated Financial Statements are appropriate and reasonable. Actual results could differ materially from those estimates.

### NOTE 2: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

#### Regulation and Regulated Operations

As a regulated entity, the Utility collects rates from customers to recover "revenue requirements" that have been authorized by the CPUC or the FERC based on the Utility's costs of service. The Utility's ability to recover a significant portion of its authorized revenue requirements through rates is independent, or "decoupled," from the volume of the Utility's electricity and natural gas sales. The Utility records assets and liabilities that result from the regulated ratemaking process that would not be recorded under GAAP for nonregulated entities. The Utility capitalizes and records, as regulatory assets, costs that would otherwise be charged to expense if it is probable that the incurred costs will be recovered in future rates. Regulatory assets are amortized over the future periods in which the costs are recovered. If costs expected to be incurred in the future are currently being recovered through rates, the Utility records those expected future costs as regulatory liabilities. Amounts that are probable of being credited or refunded to customers in the future are also recorded as regulatory liabilities.

The Utility also records a regulatory balancing account asset or liability for differences between actual customer billings and authorized revenue requirements that are probable of recovery or refund. These differences do not have an impact on net income. The Utility also records differences between incurred costs and customer billings or authorized revenue meant to recover those costs. To the extent these differences are probable of recovery or refund, the Utility records a regulatory balancing account asset or liability, respectively, and the differences do not have an impact on net income. See "Revenue Recognition" below.

To the extent that portions of the Utility's operations cease to be subject to cost-of-service rate regulation, or recovery is no longer probable as a result of changes in regulation or other reasons, the related regulatory assets and liabilities are written off.

Management continues to believe the use of regulatory accounting is applicable and that all regulatory assets and liabilities are recoverable or refundable.

#### Cash and Cash Equivalents

Cash and cash equivalents consist of cash and short-term, highly liquid investments with original maturities of three months or less. Cash equivalents are stated at fair value.

#### Restricted Cash

Restricted cash consists primarily of the Utility's cash held in escrow pending the resolution of the remaining disputed claims made by electricity suppliers in the Utility's proceeding under Chapter 11 of the U.S. Bankruptcy Code. (See Note 12 below.)

#### Allowance for Doubtful Accounts Receivable

Accounts receivable are primarily composed of trade receivables and unbilled revenue. PG&E Corporation and the Utility recognize an allowance for doubtful accounts to record accounts receivable at estimated net realizable value. The allowance is determined based upon a variety of factors, including historical write-off experience, aging of receivables, current economic conditions, and assessment of customer collectability.

#### Inventories

Inventories are carried at weighted-average cost and include natural gas stored underground as well as materials and supplies. Natural gas stored underground represents gas that is recorded to inventory when purchased and then expensed as the gas is withdrawn for distribution to customers or to be used as fuel for electric generation. Materials and supplies are recorded to inventory when purchased and then expensed or capitalized to plant, as appropriate, when consumed or installed.

The Utility also purchases greenhouse gas emission allowances that are recorded as inventory. They are carried at weighted average cost and included in Other Noncurrent Assets – Other in the Consolidated Balance Sheets. The costs of the greenhouse gas emissions are expensed and recoverable through rates.

**Property, Plant, and Equipment**

Property, plant, and equipment are reported at the lower of their historical cost less accumulated depreciation or fair value. Historical costs include labor and materials, construction overhead, and AFUDC. (See "AFUDC" below.) The Utility's total estimated useful lives and balances of its property, plant, and equipment were as follows:

| | Estimated Useful | Balance at December 31, | |
|---|---|---|---|
| **(in millions, except estimated useful lives)** | **Lives (years)** | **2013** | **2012** |
| Electricity generating facilities [1] | 20 to 100 | $ 9,116 | $ 8,253 |
| Electricity distribution facilities | 10 to 55 | 25,333 | 23,767 |
| Electricity transmission | 10 to 70 | 8,429 | 7,681 |
| Natural gas distribution facilities | 20 to 53 | 9,117 | 8,257 |
| Natural gas transportation and storage | 5 to 65 | 5,265 | 4,314 |
| Construction work in progress | | 1,834 | 1,894 |
| **Total property, plant, and equipment** | | **59,094** | **54,166** |
| Accumulated depreciation | | (17,843) | (16,643) |
| **Net property, plant, and equipment** | | **$ 41,251** | **$ 37,523** |

(1) Balance includes nuclear fuel inventories. Stored nuclear fuel inventory is stated at weighted average cost. Nuclear fuel in the reactor is expensed as it is used based on the amount of energy output. (See Note 14 below.)

The Utility depreciates property, plant, and equipment using the composite, or group, method of depreciation, in which a single depreciation rate is applied to the gross investment balance in a particular class of property. This method approximates the straight line method of depreciation over the useful lives of property, plant, and equipment. The Utility's composite depreciation rates were 3.51% in 2013, 3.63% in 2012, and 3.67% in 2011. The useful lives of the Utility's property, plant, and equipment are authorized by the CPUC and the FERC, and the depreciation expense is recovered through rates charged to customers. Depreciation expense includes a component for the original cost of assets and a component for estimated cost of future removal, net of any salvage value at retirement. Upon retirement, the original cost of the retired assets, net of salvage value, is charged against accumulated depreciation. The cost of repairs and maintenance, including planned major maintenance activities and minor replacements of property, is charged to operating and maintenance expense as incurred.

**AFUDC**

AFUDC represents the estimated costs of debt (i.e., interest) and equity funds used to finance regulated plant additions and is capitalized as part of the cost of construction. AFUDC is recoverable from customers through rates over the life of the related property once the property is placed in service. AFUDC related to the cost of debt is recorded as a reduction to interest expense. AFUDC related to the cost of equity is recorded in other income. The Utility recorded AFUDC related to debt and equity, respectively, of $47 million and $101 million during 2013, $49 million and $107 million during 2012, and $40 million and $87 million during 2011.

**Asset Retirement Obligations**

PG&E Corporation and the Utility record an ARO at discounted fair value in the period in which the obligation is incurred if the discounted fair value can be reasonably estimated. In the same period, the associated asset retirement costs are capitalized as part of the carrying amount of the related long-lived asset. In each subsequent period, the ARO is accreted to its present value. PG&E Corporation and the Utility also record an ARO if a legal obligation to perform an asset removal exists and can be reasonably estimated, but performance is conditional upon a future event. The Utility recognizes timing differences between the recognition of costs and the costs recovered through the ratemaking process as regulatory assets or liabilities. (See Note 3 below.) The Utility has an ARO primarily for its nuclear generation facilities, certain fossil fuel-fired generation facilities, and gas transmission system assets.

For the year ended December 31, 2013, the Utility recorded an increase of $596 million to its ARO. The increase primarily reflects a higher expected cost per unit of transmission pipeline replacements.

Detailed studies of the cost to decommission the Utility's nuclear generation facilities are conducted every three years in conjunction with the Nuclear Decommissioning Cost Triennial Proceeding conducted by the CPUC. In December 2012, the Utility submitted its updated decommissioning cost estimate with the CPUC. The estimated undiscounted cost to decommission the Utility's nuclear power plants increased by $1.4 billion in 2012 due to higher spent nuclear fuel disposal costs and an increase in the scope of work. A significant portion of the increase in decommissioning cost estimates is due to the need to develop on-site storage for spent nuclear fuel because the federal government has failed to meet its obligation to develop a permanent repository for the disposal of nuclear waste from nuclear facilities in the United States. The Utility expects that it will recover its future on-site storage costs from the federal government. Recovered amounts will be refunded to customers through rates.

The estimated undiscounted nuclear decommissioning cost for the Utility's nuclear generation facilities was approximately $3.5 billion at December 31, 2013 and 2012, as filed in the 2012 triennial proceeding. In future dollars, the estimated nuclear decommissioning cost is approximately $6.1 billion at December 31, 2013 and 2012. These estimates are based on the 2012 decommissioning cost studies and are prepared in accordance with CPUC requirements. The estimated nuclear decommissioning cost in future dollars is discounted for GAAP purposes and recognized as an ARO on the Consolidated Balance Sheets. The total nuclear decommissioning obligation accrued in accordance with GAAP was $2.5 billion at December 31,

2013 and 2012.

A reconciliation of the changes in the ARO liability is as follows:

| **(in millions)** | | |
|---|---|---|
| ARO liability at December 31, 2011 | $ | 1,609 |
| Revision in estimated cash flows | | 1,301 |
| Accretion | | 101 |
| Liabilities settled | | (92) |
| ARO liability at December 31, 2012 | | **2,919** |
| Revision in estimated cash flows | | 596 |
| Accretion | | 130 |
| Liabilities settled | | (107) |
| **ARO liability at December 31, 2013** | **$** | **3,538** |

The Utility has identified the following AROs for which a reasonable estimate of fair value could not be made. As a result, the Utility has not recorded a liability related to these AROs:

- *Restoration of land to its pre-use condition under the terms of certain land rights agreements.* Land rights will be maintained for the foreseeable future, and therefore, the Utility cannot reasonably estimate the settlement date(s) or range of settlement dates for the obligations associated with these assets;

- *Removal and proper disposal of lead-based paint contained in some Utility facilities.* The Utility does not have information available that specifies which facilities contain lead-based paint and, therefore, cannot reasonably estimate the settlement date(s) associated with the obligations; and

- *Removal of certain communications equipment from leased property, and retirement activities associated with substation and certain hydroelectric facilities.* The Utility will maintain and continue to operate its hydroelectric facilities until the operation of a facility becomes uneconomical. The operation of the majority of the Utility's hydroelectric facilities is currently, and for the foreseeable future, expected to be economically beneficial. Therefore, the settlement date(s) cannot be reasonably estimated at this time.

**Disallowance of Plant Costs**

PG&E Corporation and the Utility record a charge when it is both probable that costs incurred or projected to be incurred for recently completed plant will not be recoverable through rates charged to customers and the amount of disallowance can be reasonably estimated. During 2013 and 2012, the Utility recorded charges of $196 million and $353 million, respectively, for PSEP capital costs that are expected to exceed the CPUC's authorized levels or that are specifically disallowed. (See "Natural Gas Matters" in Note 14 below). No material disallowance losses were recorded in 2011.

**Gains and Losses on Debt Extinguishments**

Deferred gains and losses on debt extinguishments are recorded to current assets – regulatory assets and other noncurrent assets – regulatory assets in the Consolidated Balance Sheets. Gains and losses on debt extinguishments associated with regulated operations are deferred and amortized over a period consistent with the recovery of costs through regulated rates. PG&E Corporation and the Utility recorded unamortized loss on debt extinguishments, net of gain, of $157 million, $163 million, and $186 million at December 31, 2013, 2012, and 2011, respectively. The amortization expense related to this loss was $23 million in both 2013 and 2012, and $18 million in 2011.

**Revenue Recognition**

The Utility recognizes revenues as electricity and natural gas services are delivered, and includes amounts for services rendered but not yet billed at the end of the period.

The CPUC authorizes most of the Utility's revenues in the Utility's GRC and its GT&S rate cases, which generally occur every three years. In general, the Utility's ability to recover revenue requirements authorized by the CPUC in these rates cases is independent, or "decoupled" from the volume of the Utility's sales of electricity and natural gas services. The Utility recognizes revenues once they have been authorized for rate recovery, amounts are objectively determinable and probable of recovery, and amounts are expected to be collected within 24 months. Generally, the revenue is recognized ratably over the year.

The CPUC also has authorized the Utility to collect additional revenue requirements to recover costs that the Utility has been authorized to pass on to customers, including costs to purchase electricity and natural gas; and to fund public purpose, demand response, and customer energy efficiency programs. Generally, the revenue recognition criteria for pass-through costs billed to customers are met at the time the costs are incurred.

The FERC authorizes the Utility's revenue requirements in periodic (often annual) TO rate cases. The Utility's ability to recover revenue requirements authorized by the FERC is dependent on the volume of the Utility's electricity sales, and revenue is recognized only for amounts billed and unbilled.

The Utility's revenues and net income can be affected by incentive ratemaking mechanisms that adjust rates depending on the extent to which the Utility meets certain performance criteria.

**Income Taxes**

PG&E Corporation and the Utility use the liability method of accounting for income taxes. The income tax provision includes current and deferred income taxes resulting from operations during the year. PG&E Corporation and the Utility estimate current period tax expense in addition to calculating deferred tax assets and liabilities. Deferred tax assets and liabilities result from temporary tax and accounting timing differences, such as those arising from depreciation expense. (See Note 8 below.)

PG&E Corporation and the Utility recognize a tax benefit if it is more likely than not that a tax position taken or expected to be taken in a tax return will be sustained upon examination by taxing authorities based on the merits of the position. The tax benefit recognized in the financial statements is measured based on the largest amount of benefit that is greater than 50% likely of being realized upon settlement. As such, the difference between a tax position taken or expected to be taken in a tax return in future periods and the benefit recognized and measured pursuant to this guidance represents an unrecognized tax benefit.

Investment tax credits are deferred and amortized to income over time. The Utility amortizes its investment tax credits over the life of the related property in accordance with regulatory treatment. PG&E Corporation amortizes its investment tax credits over the projected investment recovery period.

PG&E Corporation files a consolidated U.S. federal income tax return that includes the Utility and domestic subsidiaries in which its ownership is 80% or more. PG&E Corporation files a combined state income tax return in California. PG&E Corporation and the Utility are parties to a tax-sharing agreement under which the Utility determines its income tax provision (benefit) on a stand-alone basis.

**Nuclear Decommissioning Trusts**

The Utility's nuclear generation facilities consist of two units at Diablo Canyon and the retired facility at Humboldt Bay. Nuclear decommissioning requires the safe removal of a nuclear generation facility from service and the reduction of residual radioactivity to a level that permits termination of the NRC license and release of the property for unrestricted use. The Utility's nuclear decommissioning costs are recovered from customers through rates and are held in trusts until authorized for release by the CPUC.

The Utility classifies its investments held in the nuclear decommissioning trusts as "available-for-sale." Since the Utility's nuclear decommissioning trust assets are managed by external investment managers, the Utility does not have the ability to sell its investments at its discretion. Therefore, all unrealized losses are considered other-than-temporary impairments. Gains or losses on the nuclear decommissioning trust investments are refundable or recoverable, respectively, from customers through rates. Therefore, trust earnings are deferred and included in the regulatory liability for recoveries in excess of the ARO. There is no impact on the Utility's earnings or accumulated other comprehensive income. The cost of debt and equity securities sold by the trust is determined by specific identification.

**Variable Interest Entities**

A VIE is an entity that does not have sufficient equity at risk to finance its activities without additional subordinated financial support from other parties, or whose equity investors lack any characteristics of a controlling financial interest. An enterprise that has a controlling financial interest in a VIE is known as the VIE's primary beneficiary and is required to consolidate the VIE. In determining whether consolidation of a particular entity is required, PG&E Corporation and the Utility first evaluate whether the entity is a VIE. If the entity is a VIE, PG&E Corporation and the Utility use a qualitative approach to determine if either is the primary beneficiary of the VIE.

Some of the counterparties to the Utility's power purchase agreements are considered VIEs. Each of these VIEs was designed to own a power plant that would generate electricity for sale to the Utility. To determine whether the Utility was the primary beneficiary of any of these VIEs at December 31, 2013, it assessed whether it absorbs any of the VIE's expected losses or receives any portion of the VIE's expected residual returns under the terms of the power purchase agreement, analyzed the variability in the VIE's gross margin, and considered whether it had any decision-making rights associated with the activities that are most significant to the VIE's performance, such as dispatch rights and operating and maintenance activities. The Utility's financial exposure is limited to the amount the Utility pays for delivered electricity and capacity. The Utility did not have any decision-making rights associated with any of the activities that are most significant to the economic performance of any of these VIEs. Since the Utility was not the primary beneficiary of any of these VIEs at December 31, 2013, it did not consolidate any of them.

PG&E Corporation affiliates have entered into four tax equity agreements to fund residential and commercial retail solar energy installations with four separate privately held funds that are considered VIEs. Under these agreements, PG&E Corporation has made cumulative lease payments and investment contributions of $362 million from 2010 to 2013 to these companies in exchange for the right to receive benefits from local rebates, federal grants, and a share of the customer payments made to these companies. At December 31, 2013 and 2012, the carrying amount of PG&E Corporation's investment in these agreements was $98 million and $166 million, respectively. PG&E Corporation has no material remaining commitment to fund these agreements. PG&E Corporation determined that it does not have control over the companies' significant economic activities, such as the design of the companies, vendor selection, construction, and the ongoing operations of the companies. Since PG&E Corporation was not the primary beneficiary of any of these VIEs at December 31, 2013, it did not consolidate any of them.

**Other Accounting Policies**

For other accounting policies impacting PG&E Corporation's and the Utility's consolidated financial statements, see "Derivatives" in Note 9, "Fair Value Measurements" in Note 10, and "Contingencies" in Note 14 of the Notes to the Consolidated Financial Statements.

**Adoption of New Accounting Pronouncements**

***Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income***

In February 2013, the Financial Accounting Standards Board issued an ASU that requires an entity to provide information about the amounts reclassified out of accumulated other comprehensive income. The ASU became effective for PG&E Corporation and the Utility on January 1, 2013.

The changes, net of income tax, in PG&E Corporation's accumulated other comprehensive income for the year ended December 31, 2013 consisted of the following:

| (in millions) | Pension Benefits | Other Benefits | Other Investments | Total |
|---|---|---|---|---|
| Beginning balance | $ (28) | $ (77) | $ 4 | $ (101) |
| Other comprehensive income before reclassifications: | | | | |
| Unrecognized net actuarial loss (net of taxes of $804, $35, and $0, respectively) | 1,169 | 45 | - | 1,214 |
| Transfer to regulatory account (net of taxes of $790, $22, and $0, respectively) | (1,150) | 31 | - | (1,119) |
| Gain on investments (net of taxes of $0, $0, and $26, respectively) | - | - | 38 | 38 |
| Amounts reclassified from other comprehensive income: (1) | | | | |
| Amortization of prior service cost (net of taxes of $8, $10, and $0, respectively) | 12 | 13 | - | 25 |
| Amortization of net actuarial loss (net of taxes of $45, $3, and $0, respectively) | 66 | 3 | - | 69 |
| Transfer to regulatory account (net of taxes of $54, $0, and $0, respectively) | (76) | - | - | (76) |
| **Net current period other comprehensive income** | **21** | **92** | **38** | **151** |
| **Ending balance** | **$ (7)** | **$ 15** | **$ 42** | **$ 50** |

(1) These components are included in the computation of net periodic pension and other postretirement benefit costs. (See Note 11 below for additional details.)

With the exception of other investments, there was no material difference between PG&E Corporation and the Utility for the information disclosed above.

***Disclosures about Offsetting Assets and Liabilities***

In January 2013, the Financial Accounting Standards Board issued an ASU that clarifies the scope of disclosures about offsetting assets and liabilities. The guidance requires an entity to disclose gross and net information about derivatives that are offset in the balance sheet or subject to an enforceable master-netting arrangement or similar agreement. The ASU became effective for PG&E Corporation and the Utility on January 1, 2013. (See Note 9 below.)

**NOTE 3: REGULATORY ASSETS, LIABILITIES, AND BALANCING ACCOUNTS**

**Regulatory Assets**

Long-term regulatory assets are composed of the following:

| | Balance at December 31, | | Recovery |
|---|---|---|---|
| **(in millions)** | **2013** | **2012** | **Period** |
| Pension benefits [1] | $ 1,444 | $ 3,275 | N/A [4] |
| Deferred income taxes [1] | 1,835 | 1,627 | 1 - 45 years |
| Utility retained generation [2] | 503 | 552 | 11 years |
| Environmental compliance costs [1] | 628 | 604 | 32 years |
| Price risk management [1] | 106 | 210 | 9 years |
| Electromechanical meters [3] | 135 | 194 | 4 years |
| Unamortized loss, net of gain, on reacquired debt [1] | 135 | 141 | 13 years |
| Other | 127 | 206 | Various |
| **Total long-term regulatory assets** | **$ 4,913** | **$ 6,809** | |

(1) Represents the cumulative differences between amounts recognized for ratemaking purposes and amounts recognized in accordance with GAAP and also includes amounts that otherwise would be recorded to accumulated other comprehensive loss in the Consolidated Balance Sheets. (See Note 11 below.)

(2) In connection with the settlement agreement entered into among PG&E Corporation, the Utility, and the CPUC in 2003 to resolve the Utility's proceeding under Chapter 11, the CPUC authorized the Utility to recover $1.2 billion of costs related to the Utility's retained generation assets. The individual components of these regulatory assets are being amortized over the respective lives of the underlying generation facilities, consistent with the period over which the related revenues are recognized.

(3) Represents the expected future recovery of the net book value of electromechanical meters that were replaced with SmartMeter™ devices.

(4) The Utility expects to continuously recover pension benefits.

In general, the Utility does not earn a return on regulatory assets if the related costs do not accrue interest. Accordingly, the Utility earns a return only on its regulatory assets for retained generation, regulatory assets for electromechanical meters, and regulatory assets for unamortized loss, net of gain, on reacquired debt.

**Regulatory Liabilities**

Long-term regulatory liabilities are composed of the following:

| | Balance at December 31, | |
|---|---|---|
| **(in millions)** | **2013** | **2012** |
| Cost of removal obligations [1] | $ 3,844 | $ 3,625 |
| Recoveries in excess of AROs [2] | 748 | 620 |
| Public purpose programs [3] | 587 | 590 |
| Other | 481 | 253 |
| **Total long-term regulatory liabilities** | **$ 5,660** | **$ 5,088** |

(1) Represents the cumulative differences between asset removal costs recorded and amounts collected in rates for expected asset removal costs.

(2) Represents the cumulative differences between ARO expenses and amounts collected in rates primarily for the decommissioning of the Utility's nuclear generation facilities. Decommissioning costs recovered through rates are primarily placed in nuclear decommissioning trusts. This regulatory liability also represents the deferral of realized and unrealized gains and losses on the nuclear decommissioning trust investments. (See Note 10 below.)

(3) Represents amounts received from customers designated for public purpose program costs expected to be incurred beyond the next 12 months, primarily related to energy efficiency programs.

**Regulatory Balancing Accounts**

The Utility's recovery of a significant portion of revenue requirements and costs is decoupled from the volume of sales. The Utility records (1) differences between the Utility's authorized revenue requirement and actual customer billings, and (2) differences between incurred costs and customer billings. To the extent these differences are probable of recovery or refund over the next 12 months, the Utility records a current regulatory balancing account receivable or payable. Regulatory balancing accounts that the Utility does not expect to collect or refund over the next 12 months are included in other noncurrent assets – regulatory assets or noncurrent liabilities – regulatory liabilities, respectively, in the Consolidated Balance Sheets.

The Utility sells and delivers electricity and natural gas, which includes procuring and generating electricity. The Utility also administers public purpose programs, primarily related to customer energy efficiency programs. The balancing accounts associated with these items will fluctuate during the year based on seasonal electric and gas usage and the timing of when costs are incurred and customer revenues are collected.

Current regulatory balancing accounts receivable and payable are composed of the following:

| | Receivable Balance at December 31, | |
|---|---|---|
| **(in millions)** | **2013** | **2012** |
| Electric distribution | $ 102 | $ 219 |
| Utility generation | 57 | 117 |
| Gas distribution | 70 | 44 |
| Energy procurement | 410 | 193 |
| Public purpose programs | 56 | 48 |
| Other | 429 | 315 |
| **Total regulatory balancing accounts receivable** | **$ 1,124** | **$ 936** |

| | Payable Balance at December 31, | |
|---|---|---|
| **(in millions)** | **2013** | **2012** |
| Energy procurement | $ 298 | $ 116 |
| Public purpose programs | 171 | 131 |
| Other | 539 | 387 |
| **Total regulatory balancing accounts payable** | **$ 1,008** | **$ 634** |

**NOTE 4: DEBT**

**Long-Term Debt**

The following table summarizes PG&E Corporation's and the Utility's long-term debt:

| | December 31, | |
|---|---|---|
| **(in millions)** | **2013** | **2012** |
| **PG&E Corporation** | | |
| Senior notes, 5.75%, due 2014 | 350 | 350 |
| Less: current portion | (350) | - |
| **Total senior notes** | **-** | **350** |
| **Total PG&E Corporation long-term debt** | **-** | **350** |
| **Utility** | | |
| Senior notes: | | |
| 6.25% due 2013 | - | 400 |
| 4.80% due 2014 | 539 | 1,000 |
| 5.625% due 2017 | 700 | 700 |
| 8.25% due 2018 | 800 | 800 |
| 3.50% due 2020 | 800 | 800 |
| 4.25% due 2021 | 300 | 300 |
| 3.25% due 2021 | 250 | 250 |
| 2.45% due 2022 | 400 | 400 |
| 3.25% due 2023 | 375 | - |
| 3.85% due 2023 | 300 | - |
| 6.05% due 2034 | 3,000 | 3,000 |
| 5.80% due 2037 | 950 | 950 |
| 6.35% due 2038 | 400 | 400 |
| 6.25% due 2039 | 550 | 550 |
| 5.40% due 2040 | 800 | 800 |
| 4.50% due 2041 | 250 | 250 |
| 4.45% due 2042 | 400 | 400 |
| 3.75% due 2042 | 350 | 350 |
| 4.60% due 2043 | 375 | - |
| 5.125% due 2043 | 500 | - |
| Less: current portion | (539) | (400) |
| Unamortized discount, net of premium | (51) | (51) |
| **Total senior notes, net of current portion** | **11,449** | **10,899** |
| Pollution control bonds: | | |
| Series 1996 C, E, F, 1997 B, variable rates (1), due 2026 (2) | 614 | 614 |
| Series 2004 A-D, 4.75%, due 2023 (3) | 345 | 345 |
| Series 2009 A-D, variable rates (4), due 2016 and 2026 (5) | 309 | 309 |
| **Total pollution control bonds** | **1,268** | **1,268** |
| **Total Utility long-term debt, net of current portion** | **12,717** | **12,167** |
| **Total consolidated long-term debt, net of current portion** | **$ 12,717** | **$ 12,517** |

(1) At December 31, 2013, interest rates on these bonds and the related loans ranged from 0.01% to 0.04%.

(2) Each series of these bonds is supported by a separate letter of credit. In April 2013, the letters of credit were extended to April 1, 2018. Although the stated maturity date is 2026, each series will remain outstanding only if the Utility extends or replaces the letter of credit related to the series or otherwise obtains consent from the issuer to the continuation of the series without a credit facility.

(3) The Utility has obtained credit support from an insurance company for these bonds.

(4) At December 31, 2013, interest rates on these bonds and the related loans ranged from 0.01% to 0.02%.

(5) Each series of these bonds is supported by a separate direct-pay letter of credit. Series A and B letters of credit expire on May 31, 2016. In October 2013, Series C and D letters of credit were extended to December 3, 2016 to coincide with the maturity of the underlying bonds. Subject to certain requirements, the Utility may choose not to provide a credit facility without issuer consent.

***Pollution Control Bonds***

The California Pollution Control Financing Authority and the California Infrastructure and Economic Development Bank have issued various series of fixed rate and multi-modal tax-exempt pollution control bonds for the benefit of the Utility. Substantially all of the net proceeds of the pollution control bonds were used to finance or refinance pollution control and sewage and solid waste disposal facilities at the Geysers geothermal power plant or at the Utility's Diablo Canyon nuclear power plant. In 1999, the Utility sold all bond-financed facilities at the non-retired units of the Geysers geothermal power plant to Geysers Power Company, LLC pursuant to purchase and sale agreements stating that Geysers Power Company, LLC will use the bond-financed facilities solely as pollution control facilities for so long as any tax-exempt pollution control bonds issued to finance the Geysers project are outstanding. The Utility has no knowledge that Geysers Power Company, LLC intends to cease using the bond-financed facilities solely as pollution control facilities.

**Repayment Schedule**

PG&E Corporation's and the Utility's combined short-term and long-term debt principal repayment amounts at December 31, 2013 are reflected in the table below:

| (in millions, except interest rates) | 2014 | 2015 | 2016 | 2017 | 2018 | Thereafter | Total |
|---|---|---|---|---|---|---|---|
| **PG&E Corporation** | | | | | | | |
| Average fixed interest rate | 5.75% | - | - | - | - | - | 5.75% |
| Fixed rate obligations | $ 350 | $ - | $ - | $ - | $ - | $ - | $ 350 |
| **Utility** | | | | | | | |
| Average fixed interest rate | 4.80% | - | - | 5.63% | 8.25% | 5.06% | 5.29% |
| Fixed rate obligations | $ 539 | $ - | $ - | $ 700 | $ 800 | $ 10,345 | $ 12,384 |
| Variable interest rate as of December 31, 2013 | - | - | 0.02% | - | 0.02% | - | 0.02% |
| Variable rate obligations (1) | $ - | $ - | $ 309 | $ - | $ 614 | $ - | $ 923 |
| **Total consolidated debt** | **$ 889** | **$ -** | **$ 309** | **$ 700** | **$ 1,414** | **$ 10,345** | **$ 13,657** |

(1) These bonds, due in 2016 and 2026, are backed by separate letters of credit that expire on May 31, 2016, December 3, 2016, or April 1, 2018.

**Short-term Borrowings**

The following table summarizes PG&E Corporation's and the Utility's outstanding borrowings under their revolving credit facilities and the Utility's commercial paper program at December 31, 2013:

| (in millions) | Termination Date | Facility Limit | Letters of Credit Outstanding | Borrowings | Commercial Paper | Facility Availability |
|---|---|---|---|---|---|---|
| PG&E Corporation | April 2018 | $ 300(1) | $ - | $ 260 | $ - | $ 40 |
| Utility | April 2018 | 3,000(2) | 79 | - | 914(3) | 2,007(3) |
| **Total revolving credit facilities** | | **$ 3,300** | **$ 79** | **$ 260** | **$ 914** | **$ 2,047** |

(1) Includes a $100 million sublimit for letters of credit and a $100 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.
(2) Includes a $1.0 billion sublimit for letters of credit and a $300 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.
(3) The Utility treats the amount of its outstanding commercial paper as a reduction to the amount available under its revolving credit facility.

For 2013, the average outstanding borrowings on PG&E Corporation's revolving credit facility was $214 million and the maximum outstanding balance during the year was $260 million. For 2013, the Utility's average outstanding commercial paper balance was $542 million and the maximum outstanding balance during the year was $1.1 billion. The Utility did not borrow under its credit facility in 2013.

***Revolving Credit Facilities***

In April 2013, PG&E Corporation and the Utility amended and restated their revolving credit facilities to extend their termination dates from May 31, 2016 to April 1, 2018. These agreements contain substantially similar terms as their original 2011 credit agreements. PG&E Corporation's and the Utility's revolving credit facilities may be used for working capital, the repayment of commercial paper, and other corporate purposes. At PG&E Corporation's and the Utility's request and at the sole discretion of each lender, the facilities may be extended for additional periods. Provided certain conditions are met, PG&E Corporation and the Utility have the right to increase, in one or more requests, given not more frequently than once a year, the aggregate lenders' commitments under the revolving credit facilities by up to $100 million and $500 million, respectively, in the aggregate for all such increases.

Borrowings under the revolving credit facilities (other than swingline loans) bear interest based, at PG&E Corporation's and the Utility's election, on (1) a London Interbank Offered Rate plus an applicable margin or (2) the base rate plus an applicable margin. The base rate will equal the higher of the following: the administrative agent's announced base rate, 0.5% above the federal funds rate, or the one-month LIBOR plus an applicable margin. Interest is payable quarterly in arrears, or earlier for loans with shorter interest periods. PG&E Corporation and the Utility also will pay a facility fee on the total commitments of the lenders under the revolving credit facilities. The applicable margins and the facility fees will be based on PG&E Corporation's and the Utility's senior unsecured debt ratings issued by Standard & Poor's Rating Services and Moody's Investor Service. Facility fees are payable quarterly in arrears.

PG&E Corporation's and the Utility's revolving credit facilities include usual and customary provisions for revolving credit facilities of this type, including those regarding events of default and covenants limiting liens to those permitted under their senior note indentures, mergers, sales of all or substantially all of their assets, and other fundamental changes. In addition, the revolving credit facilities require that PG&E Corporation and the Utility maintain a ratio of total consolidated debt to total consolidated capitalization of at most 65% as of the end of each fiscal quarter. PG&E Corporation's revolving credit facility agreement also requires that PG&E Corporation own, directly or indirectly, at least 80% of the common stock and at least 70% of the voting capital stock of the Utility.

***Commercial Paper Programs***

At December 31, 2013, the average yield on outstanding Utility commercial paper was 0.26%.

In January 2014, PG&E Corporation established a commercial paper program. PG&E Corporation will treat the amount of its outstanding commercial paper as a reduction to the amount available under its revolving credit facility.

The borrowings from PG&E Corporation and the Utility's commercial paper programs are used primarily to fund temporary financing needs. Liquidity support for these borrowings is provided by available capacity under their respective revolving credit facilities, as described above. The commercial paper may have maturities up to 365 days and ranks equally with PG&E Corporation's and the Utility's other unsubordinated and unsecured indebtedness. Commercial paper notes are sold at an interest rate dictated by the market at the time of issuance.

**NOTE 5 : COMMON STOCK AND SHARE-BASED COMPENSATION**

PG&E Corporation had 456,670,424 shares of common stock outstanding at December 31, 2013. PG&E Corporation held all of the Utility's outstanding common stock at December 31, 2013.

In May 2013, PG&E Corporation entered into a new equity distribution agreement providing for the sale of PG&E Corporation common stock having an aggregate gross sales price of up to $400 million. As of December 31, 2013, PG&E Corporation had old common stock having an aggregate gross sales price of $395 million and had the ability to issue an additional $5 million of its common stock under this agreement. During 2013, PG&E Corporation paid commissions of $3 million under this agreement.

During 2013, PG&E Corporation issued 26 million shares of its common stock for aggregate net cash proceeds of $1,045 million in the following transactions:

- 7 million shares were sold in an underwritten public offering for cash proceeds of $300 million, net of fees and commissions;
- 8 million shares were issued for cash proceeds of $290 million under the PG&E Corporation 401(k) plan, the Dividend Reinvestment and Stock Purchase Plan, and share-based compensation plans; and
- 11 million shares were sold for cash proceeds of $455 million, net of commissions paid of $4 million, under equity distribution agreements.

**Dividends**

The Board of Directors of PG&E Corporation and the Utility declare dividends quarterly. Under the Utility's Articles of Incorporation, the Utility cannot pay common stock dividends unless all cumulative preferred dividends on the Utility's preferred stock have been paid. For 2013, the Board of Directors of PG&E Corporation declared a quarterly common stock dividend of $0.455 per share.

Under their respective credit agreements, PG&E Corporation and the Utility are each required to maintain a ratio of consolidated total debt to consolidated capitalization of at most 65%. Based on the calculation of this ratio, $493 million of the Utility's reinvested earnings was restricted at December 31, 2013. In addition, the CPUC requires the Utility to maintain a capital structure composed of at least 52% equity on average. At December 31, 2013, the Utility was required to maintain reinvested earnings of $7.4 billion as equity to meet this requirement.

In addition, to comply with the revolving credit facility's 65% ratio requirement and the CPUC's requirement to maintain a 52% equity component, $7.7 billion and $14.6 billion of the Utility's net assets were restricted at December 31, 2013 to comply with these requirements, respectively, and could not be transferred to PG&E Corporation in the form of cash dividends. As a holding company, PG&E Corporation depends on cash distributions from the Utility to meet its debt service and other financial obligations and to pay dividends on its common stock.

**Long-Term Incentive Plan**

The PG&E Corporation LTIP permits various forms of share-based incentive awards, including stock options, stock appreciation rights, restricted stock awards, RSUs, performance shares, deferred compensation awards, and other share-based awards, to eligible employees of PG&E Corporation and its subsidiaries. Non-employee directors of PG&E Corporation are also eligible to receive certain share-based awards. A maximum of 12 million shares of PG&E Corporation common stock (subject to adjustment for changes in capital structure, stock dividends, or other similar events) has been reserved for issuance under the 2006 LTIP, of which 3,310,474 shares were available for future awards at December 31, 2013.

The following table provides a summary of total share-based compensation expense recognized by PG&E Corporation for share-based incentive awards for 2013, 2012, and 2011:

| **(in millions)** | | **2013** | | **2012** | | **2011** |
|---|---|---|---|---|---|---|
| Restricted stock units | $ | 36 | $ | 31 | $ | 23 |
| Performance shares: | | | | | | |
| Equity awards | | 28 | | 26 | | 16 |
| Liability awards | | - | | - | | (13) |
| Total compensation expense (pre-tax) | **$** | **64** | **$** | **57** | **$** | **26** |
| Total compensation expense (after-tax) | **$** | **38** | **$** | **34** | **$** | **16** |

Share-based compensation costs capitalized during 2013, 2012, and 2011 was immaterial. There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

***Restricted Stock Units***

RSU awards issued and outstanding under the LTIP generally vest over three year periods. RSUs generally vest in 20% increments on the first business day of March in year one, two, and three, with the remaining 40% vesting on the first business day of March in year four. Vested RSUs are settled in shares of PG&E Corporation common stock. Additionally, upon settlement, RSU recipients receive payment for the amount of dividend equivalents associated with the vested RSUs that have accrued since the date of grant. RSU expense is generally recognized ratably over the vesting period based on the fair values determined. The weighted average grant-date fair value for RSUs granted during 2013, 2012, and 2011 was $42.92, $42.17, and $45.10, respectively. The total fair value of RSUs that vested during 2013, 2012, and 2011 was $30 million, $18 million, and $11 million, respectively. The tax benefit from RSUs that vested during each period was not material. As of December 31, 2013, $50 million of total unrecognized compensation costs related to nonvested RSUs was expected to be recognized over the remaining weighted average period of 2.17 years.

The following table summarizes RSU activity for 2013:

| | **Number of Restricted Stock Units** | | **Weighted Average Grant-Date Fair Value** |
|---|---|---|---|
| Nonvested at January 1 | 2,069,291 | $ | 42.52 |
| Granted | 993,115 | $ | 42.92 |
| Vested | (719,071) | $ | 41.03 |
| Forfeited | (43,314) | $ | 42.68 |
| Nonvested at December 31 | **2,300,021** | $ | 43.16 |

***Performance Shares***

Performance shares awarded to recipients under the LTIP are for a specified number of shares of common stock (or cash with respect to grants before 2010) based on PG&E Corporation's total shareholder return relative to a specified group of industry peer companies over a three-year performance period. Performance shares vest after three years of service. Performance share expense is generally recognized ratably over the applicable three-year period based on the fair values determined. Dividend equivalents on performance shares, if any, will be paid in cash upon the vesting date based on the amount of common stock to which the recipients are entitled.

Total compensation expense for performance shares is based on the grant-date fair value, which is determined using a Monte Carlo simulation valuation model. The weighted average grant-date fair value for performance shares granted during 2013, 2012, and 2011 was $33.45, $41.93, and $33.91 respectively. There was no tax benefit associated with performance shares that vested during each of these periods. As of December 31, 2013, $29 million of total unrecognized compensation costs related to nonvested performance shares are expected to be recognized over the remaining weighted average period of 1.25 years.

The following table summarizes performance shares classified as equity awards activity for 2013:

| | **Number of Performance Shares** | | **Weighted Average Grant-Date Fair Value** |
|---|---|---|---|
| Nonvested at January 1 | 1,497,473 | $ | 38.15 |
| Granted | 911,620 | $ | 33.45 |
| Vested | - | $ | - |
| Forfeited [(1)] | (617,773) | $ | 34.22 |
| Nonvested at December 31 | **1,791,320** | $ | 37.85 |

(1) Includes performance shares that expired with zero value as performance targets were not met.

**NOTE 6 : PREFERRED STOCK**

PG&E Corporation has authorized 80 million shares of no par value preferred stock and 5 million shares of $100 par value preferred stock, which may be issued as redeemable or nonredeemable preferred stock. PG&E Corporation does not have any preferred stock outstanding.

The Utility has authorized 75 million shares of $25 par value preferred stock and 10 million shares of $100 par value preferred stock. The Utility specifies that 5,784,825 shares of the $25 par value preferred stock authorized are designated as nonredeemable preferred stock without mandatory redemption provisions. The following table summarizes the Utility's outstanding preferred stock, none of which had mandatory redemption provisions at December 31, 2013 and 2012:

| **(in millions, except share amounts, redemption price, and par value)** | **Shares Outstanding** | **Redemption Price** | **Balance** |
|---|---|---|---|
| **Nonredeemable $25 par value preferred stock** | | | |
| 5.00% Series | 400,000 | N/A | $ 10 |
| 5.50% Series | 1,173,163 | N/A | 30 |
| 6.00% Series | 4,211,662 | N/A | 105 |
| **Total nonredeemable preferred stock** | **5,784,825** | | **$ 145** |
| | | | |
| **Redeemable $25 par value preferred stock** | | | |
| 4.36% Series | 418,291 | $ 25.75 | $ 11 |
| 4.50% Series | 611,142 | 26.00 | 15 |
| 4.80% Series | 793,031 | 27.25 | 20 |
| 5.00% Series | 1,778,172 | 26.75 | 44 |
| 5.00% Series A | 934,322 | 26.75 | 23 |
| **Total redeemable preferred stock** | **4,534,958** | | **$ 113** |
| **Preferred stock** | | | **$ 258** |

At December 31, 2013, annual dividends on the Utility's nonredeemable preferred stock ranged from $1.25 to $1.50 per share. The Utility's redeemable preferred stock is subject to redemption at the Utility's option, in whole or in part, if the Utility pays the specified redemption price plus accumulated and unpaid dividends through the redemption date. At December 31, 2013, annual dividends on redeemable preferred stock ranged from $1.09 to $1.25 per share.

Dividends on all Utility preferred stock are cumulative. All shares of preferred stock have voting rights and an equal preference in dividend and liquidation rights. Upon liquidation or dissolution of the Utility, holders of preferred stock would be entitled to the par value of such shares plus all accumulated and unpaid dividends, as specified for the class and series. During each of 2013, 2012, and 2011 the Utility paid $14 million of dividends on preferred stock.

## NOTE 7: EARNINGS PER SHARE

PG&E Corporation's basic EPS is calculated by dividing the income available for common shareholders by the weighted average number of common shares outstanding. PG&E Corporation applies the treasury stock method of reflecting the dilutive effect of outstanding share-based compensation in the calculation of diluted EPS. The following is a reconciliation of PG&E Corporation's income available for common shareholders and weighted average common shares outstanding for calculating diluted EPS for 2013, 2012 and 2011.

| | Year Ended December 31, | | |
|---|---|---|---|
| **(in millions, except per share amounts)** | **2013** | **2012** | **2011** |
| **Income available for common shareholders** | $ 814 | $ 816 | $ 844 |
| **Weighted average common shares outstanding, basic** | 444 | 424 | 401 |
| Add incremental shares from assumed conversions: | | | |
| Employee share-based compensation | 1 | 1 | 1 |
| **Weighted average common share outstanding, diluted** | 445 | 425 | 402 |
| **Total earnings per common share, diluted** | **$ 1.83** | **$ 1.92** | **$ 2.10** |

For each of the periods presented above, the calculation of outstanding common shares on a diluted basis excluded an insignificant amount of options and securities that were antidilutive.

## NOTE 8 : INCOME TAXES

The significant components of income tax provision (benefit) by taxing jurisdiction were as follows:

| | PG&E Corporation | | | Utility | | |
|---|---|---|---|---|---|---|
| | Year Ended December 31, | | | | | |
| **(in millions)** | **2013** | **2012** | **2011** | **2013** | **2012** | **2011** |
| Current: | | | | | | |
| Federal | $ (218) | $ (74) | $ (77) | $ (222) | $ (52) | $ (83) |
| State | (26) | 33 | 152 | (23) | 41 | 161 |
| Deferred: | | | | | | |
| Federal | 552 | 374 | 504 | 604 | 404 | 534 |
| State | (35) | (92) | (135) | (28) | (91) | (128) |
| Tax credits | (5) | (4) | (4) | (5) | (4) | (4) |
| **Income tax provision** | **$ 268** | **$ 237** | **$ 440** | **$ 326** | **$ 298** | **$ 480** |

The following table describes net deferred income tax liabilities:

| | PG&E Corporation | | Utility | |
|---|---|---|---|---|
| | Year Ended December 31, | | | |
| **(in millions)** | **2013** | **2012** | **2013** | **2012** |
| **Deferred income tax assets:** | | | | |
| Customer advances for construction | $ 90 | $ 101 | $ 90 | $ 101 |
| Reserve for damages | 161 | 175 | 161 | 175 |
| Environmental reserve | 152 | 97 | 152 | 97 |
| Compensation | 167 | 229 | 102 | 179 |
| Net operating loss carryforward | 890 | 938 | 670 | 736 |
| GHG allowances | 108 | 34 | 108 | 34 |
| Other | 135 | 230 | 128 | 221 |
| **Total deferred income tax assets** | **$ 1,703** | **$ 1,804** | **$ 1,411** | **$ 1,543** |
| **Deferred income tax liabilities:** | | | | |
| Regulatory balancing accounts | $ 261 | $ 256 | $ 261 | $ 256 |
| Property related basis differences | 8,048 | 7,449 | 8,038 | 7,447 |
| Income tax regulatory asset | 748 | 663 | 748 | 663 |
| Other | 151 | 173 | 86 | 99 |
| **Total deferred income tax liabilities** | **$ 9,208** | **$ 8,541** | **$ 9,133** | **$ 8,465** |
| **Total net deferred income tax liabilities** | **$ 7,505** | **$ 6,737** | **$ 7,722** | **$ 6,922** |
| **Classification of net deferred income tax liabilities:** | | | | |
| Included in current liabilities (assets) | $ (318) | $ (11) | $ (320) | $ (17) |
| Included in noncurrent liabilities | 7,823 | 6,748 | 8,042 | 6,939 |
| **Total net deferred income tax liabilities** | **$ 7,505** | **$ 6,737** | **$ 7,722** | **$ 6,922** |

The following table reconciles income tax expense at the federal statutory rate to the income tax provision:

| | PG&E Corporation | | | Utility | | |
|---|---|---|---|---|---|---|
| | Year Ended December 31, | | | | | |
| | **2013** | **2012** | **2011** | **2013** | **2012** | **2011** |
| Federal statutory income tax rate | 35.0% | 35.0% | 35.0% | 35.0% | 35.0% | 35.0% |
| Increase (decrease) in income tax rate resulting from: | | | | | | |
| State income tax (net of federal benefit) | (3.1) | (3.9) | 1.1 | (2.2) | (3.0) | 1.6 |
| Effect of regulatory treatment of fixed asset differences | (4.2) | (4.1) | (4.4) | (3.8) | (3.9) | (4.2) |
| Tax credits | (0.4) | (0.6) | (0.5) | (0.4) | (0.6) | (0.5) |
| Benefit of loss carryback | (1.1) | (0.7) | (1.9) | (1.0) | (0.4) | (2.1) |
| Non deductible penalties | 0.8 | 0.6 | 6.5 | 0.7 | 0.5 | 6.3 |
| Other, net | (2.2) | (3.8) | (1.5) | (0.9) | (0.8) | 0.1 |
| **Effective tax rate** | **24.8%** | **22.5%** | **34.3%** | **27.4%** | **26.8%** | **36.2%** |

***Unrecognized tax benefits***

The following table reconciles the changes in unrecognized tax benefits:

| | PG&E Corporation | | | Utility | | |
|---|---|---|---|---|---|---|
| | **2013** | **2012** | **2011** | **2013** | **2012** | **2011** |
| **(in millions)** | | | | | | |
| **Balance at beginning of year** | $ 581 | $ 506 | $ 714 | $ 575 | $ 503 | $ 712 |
| Additions for tax position taken during a prior year | 12 | 32 | 2 | 12 | 26 | 2 |
| Reductions for tax position taken during a prior year | (6) | (13) | (198) | (6) | (10) | (196) |
| Additions for tax position taken during the current year | 79 | 67 | 3 | 79 | 67 | - |
| Settlements | - | (11) | (15) | - | (11) | (15) |
| **Balance at end of year** | **$ 666** | **$ 581** | **$ 506** | **$ 660** | **$ 575** | **$ 503** |

The component of unrecognized tax benefits that, if recognized, would affect the effective tax rate at December 31, 2013 for PG&E Corporation and the Utility was $29 million, with the remaining balance representing the potential deferral of taxes to later years.

***Tax settlements and years that remain subject to examination***

PG&E Corporation participates in the Compliance Assurance Process, a real-time IRS audit intended to expedite resolution of tax matters. The Compliance Assurance Process audit culminates with a letter from the IRS indicating its acceptance of the return.

In January 2014, PG&E Corporation received the IRS closing agreements for the 2008 and 2010 audit years, subject to the approval by the Joint Committee on Taxation of the U.S. Congress. The IRS has previously accepted the 2009 tax return without adjustments. The IRS is currently reviewing several matters pertaining to the 2011 and 2012 tax returns. The most significant of these matters relates to the repairs accounting method changes.

The IRS has been working with the utility industry to provide guidance concerning the deductibility of repairs. PG&E Corporation and the Utility expect the IRS to issue guidance with respect to repairs made in the natural gas transmission and distribution businesses during 2014. PG&E Corporation's and the Utility's unrecognized tax benefits may change significantly within the next 12 months depending on the guidance to be issued by the IRS and the resolution of the IRS audits related to the 2010, 2011, and 2012 tax returns. As of December 31, 2013, PG&E Corporation and the Utility believe that it is reasonably possible that unrecognized tax benefits will decrease by approximately $350 million within the next 12 months.

*Carryforwards*

As of December 31, 2013, PG&E Corporation had approximately $3.3 billion of federal net operating loss carryforwards and $68 million of tax credit carryforwards, which will expire between 2029 and 2033. In addition, PG&E Corporation had approximately $121 million of loss carryforwards related to charitable contributions, which will expire between 2014 and 2018. PG&E Corporation believes it is more likely than not the tax benefits associated with the federal operating loss, charitable contributions, and tax credits can be realized within the carryforward periods, therefore no valuation allowance was recognized as of December 31, 2013. As of December 31, 2013, PG&E Corporation had approximately $15 million of federal net operating loss carryforwards related to the tax benefit on employee stock plans that would be recorded in additional paid-in capital when used.

## NOTE 9 : DERIVATIVES

### Use of Derivative Instruments

The Utility uses both derivative and non-derivative contracts in managing its customers' exposure to commodity-related price risk, including forward contracts, swap agreements, futures contracts, and option contracts.

These instruments are not held for speculative purposes and are subject to certain regulatory requirements. Customer rates are designed to recover the Utility's reasonable costs of providing services, including the costs related to price risk management activities.

Price risk management activities that meet the definition of derivatives are recorded at fair value on the Consolidated Balance Sheets. As long as the current ratemaking mechanism discussed above remains in place and the Utility's price risk management activities are carried out in accordance with CPUC directives, the Utility expects to recover fully, in rates, all costs related to derivatives. Therefore, all unrealized gains and losses associated with the change in fair value of these derivatives are deferred and recorded within the Utility's regulatory assets and liabilities on the Consolidated Balance Sheets. Net realized gains or losses on commodity derivatives are recorded in the cost of electricity or the cost of natural gas with corresponding increases or decreases to regulatory balancing accounts for recovery from or refund to customers.

PG&E Corporation and the Utility offset cash collateral paid or cash collateral received against the fair value amounts recognized for derivative instruments executed with the same counterparty under a master netting arrangement where the right of offset and the intention to offset exist.

The Utility elects the normal purchase and sale exception for eligible derivatives. Derivatives that require physical delivery in quantities that are expected to be used by the Utility over a reasonable period in the normal course of business, and do not contain pricing provisions unrelated to the commodity delivered are eligible for the normal purchase and sale exception. The fair value of derivatives that are eligible for the normal purchase and sales exception are not reflected in the Consolidated Balance Sheets at fair value, but are accounted for under the accrual method of accounting. Therefore, expenses are recognized as incurred.

*Electricity Procurement*

The Utility enters into third-party power purchase agreements for electricity to meet customer needs. The Utility's third-party power purchase agreements are generally accounted for as leases, but certain third-party power purchase agreements are considered derivatives. The Utility elects the normal purchase and sale exception for eligible derivatives.

A portion of the Utility's third-party power purchase agreements contain market-based pricing terms. In order to reduce volatility in customer rates, the Utility may enter into financial instruments, such as futures, options, or swaps, to effectively fix and/or cap the price of future purchases and reduce cash flow variability associated with fluctuating electricity prices. These financial contracts are considered derivatives.

*Electric Transmission Congestion Revenue Rights*

The California electric transmission grid, controlled by the CAISO, is subject to transmission constraints when there is insufficient transmission capacity to supply the market. The CAISO imposes congestion charges on market participants to manage transmission congestion. The revenue generated from congestion charges is allocated to holders of CRRs. CRRs allow market participants to hedge the financial risk of CAISO-imposed congestion charges in the day-ahead market. The CAISO releases CRRs through an annual and monthly process, each of which includes an allocation phase (in which load-serving entities, such as the Utility, are allocated CRRs at no cost based on the customer demand or "load" they serve) and an auction phase (in which CRRs are priced at market and available to all market participants). The Utility can participate in the allocation and auction phases of the annual and monthly CRR processes. CRRs are considered derivatives.

*Natural Gas Procurement (Electric Fuels Portfolio)*

The Utility's electric procurement portfolio is exposed to natural gas price risk primarily through physical natural gas commodity purchases to fuel natural gas generating facilities, and electricity procurement contracts indexed to natural gas prices. To reduce the volatility in customer rates, the Utility may enter into financial instruments, such as futures, options, or swaps. The Utility also enters into fixed-price forward contracts for natural gas to reduce future cash flow variability from fluctuating natural gas prices. These instruments are considered derivatives.

***Natural Gas Procurement (Core Gas Supply Portfolio)***

The Utility enters into physical natural gas commodity contracts to fulfill the needs of its residential and smaller commercial customers known as “core” customers. The Utility does not procure natural gas for industrial and large commercial, or “non-core,” customers. Changes in temperature cause natural gas demand to vary daily, monthly, and seasonally. Consequently, varying volumes of natural gas may be purchased or sold in the multi-month, monthly, and to a lesser extent, daily spot market to balance such seasonal supply and demand. The Utility purchases financial instruments, such as futures, swaps and options, as part of its core winter hedging program in order to manage customer exposure to high natural gas prices during peak winter months. These financial instruments are considered derivatives.

**Volume of Derivative Activity**

At December 31, 2013, the volumes of PG&E Corporation’s and the Utility’s outstanding derivatives were as follows:

| | | Contract Volume (1) | | | |
|---|---|---|---|---|---|
| **Underlying Product** | **Instruments** | **Less Than 1 Year** | **1 Year or Greater but Less Than 3 Years** | **3 Years or Greater but Less Than 5 Years** | **5 Years or Greater (2)** |
| Natural Gas (3) (MMBtus (4) ) | Forwards and Swaps | 243,213,288 | 79,735,000 | 8,892,500 | - |
| | Options | 169,123,208 | 87,689,708 | 3,450,000 | - |
| Electricity (Megawatt-hours) | Forwards and Swaps | 2,537,023 | 2,009,505 | 2,008,046 | 1,534,695 |
| | Congestion Revenue Rights | 73,510,440 | 83,747,782 | 63,718,517 | 29,945,852 |

(1) Amounts shown reflect the total gross derivative volumes by commodity type that are expected to settle in each period.

(2) Derivatives in this category expire between 2019 and 2022.

(3) Amounts shown are for the combined positions of the electric fuels and core gas supply portfolios.

(4) Million British Thermal Units.

At December 31, 2012, the volumes of PG&E Corporation's and the Utility's outstanding derivatives were as follows:

| | | Contract Volume [1] | | | |
|---|---|---|---|---|---|
| Underlying Product | Instruments | Less Than 1 Year | 1 Year or Greater but Less Than 3 Years | 3 Years or Greater but Less Than 5 Years | 5 Years or Greater [2] |
| Natural Gas [3] (MMBtus [4]) | Forwards and Swaps | 329,466,510 | 98,628,398 | 5,490,000 | - |
| | Options | 221,587,431 | 216,279,767 | 10,050,000 | - |
| Electricity (Megawatt-hours) | Forwards and Swaps | 2,537,023 | 3,541,046 | 2,009,505 | 2,538,718 |
| | Options | - | 239,015 | 239,233 | 119,508 |
| | Congestion Revenue Rights | 74,198,690 | 74,187,803 | 74,240,147 | 25,699,804 |

(1) Amounts shown reflect the total gross derivative volumes by commodity type that are expected to settle in each period.

(2) Derivatives in this category expire between 2018 and 2023.

(3) Amounts shown are for the combined positions of the electric fuels and core gas supply portfolios.

(4) Million British Thermal Units .

**Presentation of Derivative Instruments in the Financial Statements**

In PG&E Corporation's and the Utility's Consolidated Balance Sheets, derivatives are presented on a net basis by counterparty where the right and the intention to offset exists under a master netting agreement. The net balances include outstanding cash collateral associated with derivative positions.

At December 31, 2013, PG&E Corporation's and the Utility's outstanding derivative balances were as follows:

| | Commodity Risk | | | |
|---|---|---|---|---|
| **(in millions)** | **Gross Derivative Balance** | **Netting** | **Cash Collateral** | **Total Derivative Balance** |
| Current assets – other | $ 42 | $ (10) | $ 16 | $ 48 |
| Other noncurrent assets – other | 99 | (4) | - | 95 |
| Current liabilities – other | (122) | 10 | 69 | (43) |
| Noncurrent liabilities – other | (110) | 4 | 2 | (104) |
| **Total commodity risk** | **$ (91)** | **$ -** | **$ 87** | **$ (4)** |

At December 31, 2012, PG&E Corporation's and the Utility's outstanding derivative balances were as follows:

| | Commodity Risk | | | |
|---|---|---|---|---|
| **(in millions)** | **Gross Derivative Balance** | **Netting** | **Cash Collateral** | **Total Derivative Balance** |
| Current assets – other | $ 48 | $ (25) | $ 36 | $ 59 |
| Other noncurrent assets – other | 99 | (11) | - | 88 |
| Current liabilities – other | (255) | 25 | 115 | (115) |
| Noncurrent liabilities – other | (221) | 11 | 14 | (196) |
| **Total commodity risk** | **$ (329)** | **$ -** | **$ 165** | **$ (164)** |

Gains and losses recorded on PG&E Corporation's and the Utility's derivatives were as follows:

| (in millions) | Commodity Risk — For the year ended December 31, 2013 | 2012 | 2011 |
|---|---|---|---|
| Unrealized gain/(loss) - regulatory assets and liabilities [1] | $ 238 | $ 391 | $ 21 |
| Realized loss - cost of electricity [2] | (178) | (486) | (558) |
| Realized loss - cost of natural gas [2] | (22) | (38) | (106) |
| **Total commodity risk** | **$ 38** | **$ (133)** | **$ (643)** |

(1) Unrealized gains and losses on commodity risk-related derivative instruments are recorded to regulatory assets or liabilities, rather than being recorded to the Consolidated Statements of Income. These amounts exclude the impact of cash collateral postings.
(2) These amounts are fully passed through to customers in rates. Accordingly, net income was not impacted by realized amounts on these instruments.

Cash inflows and outflows associated with derivatives are included in operating cash flows on PG&E Corporation's and the Utility's Consolidated Statements of Cash Flows.

The majority of the Utility's derivatives contain collateral posting provisions tied to the Utility's credit rating from each of the major credit rating agencies. At December 31, 2013, the Utility's credit rating was investment grade. If the Utility's credit rating were to fall below investment grade, the Utility would be required to post additional cash immediately to fully collateralize some of its net liability derivative positions.

The additional cash collateral that the Utility would be required to post if the credit risk-related contingency features were triggered was as follows:

| (in millions) | Balance at December 31, 2013 | 2012 |
|---|---|---|
| Derivatives in a liability position with credit risk-related contingencies that are not fully collateralized | $ (79) | $ (266) |
| Related derivatives in an asset position | 4 | 59 |
| Collateral posting in the normal course of business related to these derivatives | 65 | 103 |
| **Net position of derivative contracts/additional collateral posting requirements [1]** | **$ (10)** | **$ (104)** |

(1) This calculation excludes the impact of closed but unpaid positions, as their settlement is not impacted by any of the Utility's credit risk-related contingencies.

**NOTE 10 : FAIR VALUE MEASUREMENTS**

PG&E Corporation and the Utility measure their cash equivalents, trust assets, price risk management instruments, and other investments at fair value. A three-tier fair value hierarchy is established that prioritizes the inputs to valuation methodologies used to measure fair value:

- **Level 1 –** Observable inputs that reflect quoted prices (unadjusted) for identical assets or liabilities in active markets.
- **Level 2 –** Other inputs that are directly or indirectly observable in the marketplace.
- **Level 3 –** Unobservable inputs which are supported by little or no market activities.

The fair value hierarchy requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value.

Assets and liabilities measured at fair value on a recurring basis for PG&E Corporation and the Utility are summarized below (assets held in rabbi trusts and other investments are held by PG&E Corporation and not the Utility):

| | Fair Value Measurements At December 31, 2013 | | | | |
|---|---|---|---|---|---|
| **(in millions)** | **Level 1** | **Level 2** | **Level 3** | **Netting [1]** | **Total** |
| **Assets:** | | | | | |
| Money market investments | $ 226 | $ - | $ - | $ - | **$ 226** |

[1] Includes the effect of the contractual ability to settle contracts under master netting agreements and margin cash collateral.

[2] Represents amount before deducting $240 million, primarily related to deferred taxes on appreciation of investment value.

**Valuation Techniques**

The following describes the valuation techniques used to measure the fair value of the assets and liabilities shown in the table above. All investments that are valued using a net asset value per share can be redeemed quarterly with notice not to exceed 90 days.

***Money Market Investments***

PG&E Corporation and the Utility invest in money market funds that seek to maintain a stable net asset value. These funds invest in high quality, short-term, diversified money market instruments, such as U.S. Treasury bills, U.S. agency securities, certificates of deposit, and commercial paper with a maximum weighted average maturity of 60 days or less. PG&E Corporation's and the Utility's investments in these money market funds are valued using unadjusted prices for identical assets in an active market and are thus classified as Level 1. Money market funds are recorded as cash and cash equivalents in the Consolidated Balance Sheets.

***Trust Assets***

The assets held by the nuclear decommissioning trusts, the rabbi trusts related to the non-qualified deferred compensation plans, and the long-term disability trust are composed primarily of equity securities, debt securities, and life insurance policies. In general, investments held in the trusts are exposed to various risks, such as interest rate, credit, and market volatility risks.

Equity securities primarily include investments in common stock, which are valued based on unadjusted prices for identical securities in active markets and are classified as Level 1. Equity securities also include commingled funds, that are valued using a net asset value per share and are composed of equity securities traded publicly on exchanges across multiple industry sectors in the U.S. and other regions of the world and are classified as Level 2. Price quotes for the assets held by these funds are readily observable and available.

Debt securities are primarily composed of U.S. government and agency securities, municipal securities, and other fixed-income securities, including corporate debt securities. U.S. government and agency securities primarily consist of U.S. Treasury securities that are classified as Level 1 because the fair value is determined by observable market prices in active markets. A market approach is generally used to estimate the fair value of debt securities classified as Level 2 using evaluated pricing data, such as broker quotes, for similar securities adjusted for observable differences. Significant inputs used in the valuation model generally include benchmark yield curves and issuer spreads. The external credit ratings, coupon rate, and maturity of each security are considered in the valuation model, as applicable.

***Price Risk Management Instruments***

Price risk management instruments include physical and financial derivative contracts, such as power purchase agreements, forwards, swaps, options, and CRRs that are traded either on an exchange or over-the-counter.

Power purchase agreements, forwards, and swaps are valued using a discounted cash flow model. Exchange-traded forwards and swaps that are valued using observable market forward prices for the underlying commodity are classified as Level 1. Over-the-counter forwards and swaps that are identical to exchange-traded forwards and swaps or are valued using forward prices from broker quotes that are corroborated with market data are classified as Level 2. Exchange-traded options are valued using observable market data and market-corroborated data and are classified as Level 2. Long-dated power purchase agreements that are valued using significant unobservable data are classified as Level 3. These Level 3 contracts are valued using either estimated basis adjustments from liquid trading points or techniques, including extrapolation from observable prices, when a contract term extends beyond a period for which market data is available.

The Utility holds CRRs to hedge the financial risk of CAISO-imposed congestion charges in the day-ahead market. CRRs are valued based on prices observed in the CAISO auction, which are discounted at the risk-free rate. Limited market data is available in the CAISO auction and between auction dates; therefore, the Utility uses models to forecast CRR prices for those periods not covered in the auctions. CRRs are classified as Level 3.

***Other Investments***

Other investments in common stock are valued based on unadjusted prices for the investments and are actively traded on public exchanges. These investments are therefore considered Level 1 assets.

**Transfers between Levels**

PG&E Corporation and the Utility recognize any transfers between levels in the fair value hierarchy as of the end of the reporting period. For the years ended December 31, 2013 and 2012, there were no significant transfers between levels.

**Level 3 Measurements and Sensitivity Analysis**

The Utility's market and credit risk management function, which reports to the Chief Risk Officer of the Utility, is responsible for determining the fair value of the Utility's price risk management derivatives. Market and credit risk management utilizes models to derive pricing inputs for the valuation of the Utility's Level 3 instruments. These models use pricing inputs from brokers and historical data. The market and credit risk management function and the Utility's finance function collaborate to determine the appropriate fair value methodologies and classification for each derivative. Inputs used and fair value of Level 3 instruments are reviewed period-over-period and compared with market conditions to determine reasonableness.

CRRs and power purchase agreements are valued using historical prices or significant unobservable inputs derived from internally developed models. Historical prices include CRR auction prices. Unobservable inputs include forward electricity prices. Significant increases or decreases in any of those inputs would result in a significantly higher or lower fair value, respectively. All reasonable costs related to Level 3 instruments are expected to be recoverable through customer rates; therefore, there is no impact to net income resulting from changes in the fair value of these instruments. (See Note 9 above.)

| (in millions) | Fair Value at December 31, 2013 | | | | |
|---|---|---|---|---|---|
| **Fair Value Measurement** | **Assets** | **Liabilities** | **Valuation Technique** | **Unobservable Input** | **Range [1]** |
| Congestion revenue rights | $ 107 | $ 32 | Market approach | CRR auction prices | (6.47) - $12.04 |
| Power purchase agreements | $ - | $ 105 | Discounted cash flow | Forward prices | $23.43 - 51.75 |

(1) Represents price per megawatt-hour

| (in millions) | Fair Value at December 31, 2012 | | | | |
|---|---|---|---|---|---|
| **Fair Value Measurement** | **Assets** | **Liabilities** | **Valuation Technique** | **Unobservable Input** | **Range [1]** |
| Congestion revenue rights | $ 80 | $ 16 | Market approach | CRR auction prices | (9.04) - $55.15 |
| Power purchase agreements | $ - | $ 145 | Discounted cash flow | Forward prices | $8.59 - 62.90 |

(1) Represents price per megawatt-hour

**Level 3 Reconciliation**

The following table presents the reconciliation for Level 3 price risk management instruments for the years ended December 31, 2013 and 2012, respectively:

| | Price Risk Management Instruments | |
|---|---|---|
| **(in millions)** | **2013** | **2012** |
| Liability balance as of January 1 | **$ (79)** | **$ (74)** |
| Realized and unrealized gains (losses): | | |
| Included in regulatory assets and liabilities or balancing accounts [1] | 49 | (5) |
| **Liability balance as of December 31** | **$ (30)** | **$ (79)** |

(1)The costs related to price risk management activities are recoverable through customer rates, therefore, balancing account revenue is recorded for amounts settled and purchased and there is no impact to net income. Unrealized gains and losses are deferred in regulatory liabilities and assets.

### Financial Instruments

PG&E Corporation and the Utility use the following methods and assumptions in estimating fair value for financial instruments:

- The fair values of cash, restricted cash, net accounts receivable, short-term borrowings, accounts payable, customer deposits, and the Utility's variable rate pollution control bond loan agreements approximate their carrying values at December 31, 2013 and 2012, as they are short-term in nature or have interest rates that reset daily.

- The fair values of the Utility's fixed-rate senior notes and fixed-rate pollution control bonds and PG&E Corporation's fixed-rate senior notes were based on quoted market prices at December 31, 2013 and 2012.

The carrying amount and fair value of PG&E Corporation's and the Utility's debt instruments were as follows (the table below excludes financial instruments with carrying values that approximate their fair values):

| | At December 31, | | | |
|---|---|---|---|---|
| | 2013 | | 2012 | |
| (in millions) | Carrying Amount | Level 2 Fair Value | Carrying Amount | Level 2 Fair Value |
| **Debt (Note 4)** | | | | |
| PG&E Corporation | $ 350 | $ 354 | $ 349 | $ 371 |
| Utility | 12,334 | 13,444 | 11,645 | 13,946 |

***Available for Sale Investments***

The following table provides a summary of available-for-sale investments:

| (in millions) | Amortized Cost | Total Unrealized Gains | Total Unrealized Losses | Total Fair Value |
|---|---|---|---|---|
| **As of December 31, 2013** | | | | |
| Nuclear decommissioning trusts | | | | |
| Money market investments | $ 38 | $ - | $ - | $ 38 |
| Equity securities | | | | |
| U.S. | 246 | 811 | - | 1,057 |
| Non-U.S. | 215 | 242 | - | 457 |
| Debt securities | | | | |
| U.S. government and agency securities | 870 | 51 | (5) | 916 |
| Municipal securities | 24 | 2 | (1) | 25 |
| Other fixed-income securities | 163 | 1 | (2) | 162 |
| Total nuclear decommissioning trusts (1) | 1,556 | 1,107 | (8) | 2,655 |
| Other investments | 13 | 71 | - | 84 |
| **Total** | **$ 1,569** | **$ 1,178** | **$ (8)** | **$ 2,739** |
| **As of December 31, 2012** | | | | |
| Nuclear decommissioning trusts | | | | |
| Money market investments | $ 21 | $ - | $ - | $ 21 |
| Equity securities | | | | |
| U.S. | 331 | 618 | - | 949 |
| Non-U.S. | 199 | 181 | (1) | 379 |
| Debt securities | | | | |
| U.S. government and agency securities | 723 | 97 | - | 820 |
| Municipal securities | 56 | 4 | (1) | 59 |
| Other fixed-income securities | 168 | 5 | - | 173 |
| **Total (1)** | **$ 1,498** | **$ 905** | **$ (2)** | **$ 2,401** |

(1) Represents amounts before deducting $313 million and $240 million at December 31, 2013 and 2012, respectively, primarily related to deferred taxes on appreciation of investment value.

The fair value of debt securities by contractual maturity is as follows:

| **(in millions)** | **As of December 31, 2013** |
|---|---|
| Less than 1 year | $ 22 |
| 1–5 years | 519 |
| 5–10 years | 230 |
| More than 10 years | 332 |
| **Total maturities of debt securities** | **$ 1,103** |

The following table provides a summary of activity for the debt and equity securities:

| **(in millions)** | **2013** | **2012** | **2011** |
|---|---|---|---|
| Proceeds from sales and maturities of nuclear decommissioning trust investments | $ 1,619 | $ 1,133 | $ 1,928 |
| Gross realized gains on sales of securities held as available-for-sale | 94 | 19 | 43 |
| Gross realized losses on sales of securities held as available-for-sale | (13) | (17) | (30) |

## NOTE 11 : EMPLOYEE BENEFIT PLANS

PG&E Corporation and the Utility provide a non-contributory defined benefit pension plan for eligible employees, as well as contributory postretirement medical plans for retirees and their eligible dependents, and non-contributory postretirement life insurance plans for eligible employees and retirees. Additionally, eligible employees hired after December 31, 2012 participate in the cash balance plan that was added to the defined benefit pension plan in 2012. Eligible employees hired before December 31, 2012 were given a one-time election to participate in the cash balance plan prospectively, or to continue participating in the existing defined benefit plan. The trusts underlying certain of these plans are qualified trusts under the Internal Revenue Code of 1986, as amended. If certain conditions are met, PG&E Corporation and the Utility can deduct payments made to the qualified trusts, subject to certain limitations. PG&E Corporation and the Utility use a December 31 measurement date for all plans.

PG&E Corporation's and the Utility's funding policy is to contribute tax-deductible amounts, consistent with applicable regulatory decisions and federal minimum funding requirements. Based upon current assumptions and available information, the Utility's minimum funding requirements related to its pension plans was zero.

### Change in Plan Assets, Benefit Obligations, and Funded Status

The following tables show the reconciliation of changes in plan assets, benefit obligations, and the plans' aggregate funded status for pension benefits and other benefits for PG&E Corporation during 2013 and 2012:

***Pension Benefits***

| **(in millions)** | **2013** | **2012** |
|---|---|---|
| **Change in plan assets:** | | |
| **Fair value of plan assets at January 1** | **$ 12,141** | **$ 10,993** |
| Actual return on plan assets | 673 | 1,488 |
| Company contributions | 323 | 282 |
| Benefits and expenses paid | (610) | (622) |
| **Fair value of plan assets at December 31** | **$ 12,527** | **$ 12,141** |
| | | |
| **Change in benefit obligation:** | | |
| **Projected benefit obligation at January 1** | **$ 15,541** | **$ 14,000** |
| Service cost for benefits earned | 468 | 396 |
| Interest cost | 627 | 658 |
| Actuarial (gain) loss | (1,950) | 1,099 |
| Plan amendments | - | 9 |
| Transitional costs | 1 | 1 |
| Benefits and expenses paid | (610) | (622) |
| **Projected benefit obligation at December 31 (1)** | **$ 14,077** | **$ 15,541** |
| | | |
| **Funded status:** | | |
| Current liability | $ (6) | $ (6) |
| Noncurrent liability | (1,544) | (3,394) |
| **Accrued benefit cost at December 31** | **$ (1,550)** | **$ (3,400)** |

(1) PG&E Corporation's accumulated benefit obligation was $12,659 million and $13,778 million at December 31, 2013 and 2012, respectively.

***Other Benefits***

| (in millions) | | 2013 | | 2012 |
|---|---|---|---|---|
| **Change in plan assets:** | | | | |
| **Fair value of plan assets at January 1** | **$** | **1,758** | **$** | **1,491** |
| Actual return on plan assets | | 64 | | 191 |
| Company contributions | | 145 | | 149 |
| Plan participant contribution | | 64 | | 55 |
| Benefits and expenses paid | | (139) | | (128) |
| **Fair value of plan assets at December 31** | **$** | **1,892** | **$** | **1,758** |
| | | | | |
| **Change in benefit obligation:** | | | | |
| **Benefit obligation at January 1** | **$** | **1,940** | **$** | **1,885** |
| Service cost for benefits earned | | 53 | | 49 |
| Interest cost | | 74 | | 83 |
| Actuarial gain | | (415) | | (23) |
| Plan amendments | | - | | 5 |
| Benefits paid | | (123) | | (119) |
| Federal subsidy on benefits paid | | 4 | | 5 |
| Plan participant contributions | | 64 | | 55 |
| **Benefit obligation at December 31** | **$** | **1,597** | **$** | **1,940** |
| | | | | |
| **Funded status [(1)] :** | | | | |
| Noncurrent asset | $ | 352 | $ | - |
| Noncurrent liability | | (57) | | (181) |
| **Accrued benefit cost at December 31** | **$** | **295** | **$** | **(181)** |

(1) At December 31, 2013, the postretirement medical plan was in an overfunded position and the postretirement life insurance plan was in an underfunded position. At December 31, 2012, both the postretirement medical plan and the postretirement life insurance plan were in underfunded positions.

There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

**Components of Net Periodic Benefit Cost**

Net periodic benefit cost as reflected in PG&E Corporation's Consolidated Statements of Income was as follows:

***Pension Benefits***

| (in millions) | 2013 | 2012 | 2011 |
|---|---|---|---|
| Service cost for benefits earned | $ 468 | $ 396 | $ 320 |
| Interest cost | 627 | 658 | 660 |
| Expected return on plan assets | (650) | (598) | (669) |
| Amortization of prior service cost | 20 | 20 | 34 |
| Amortization of net actuarial loss | 111 | 123 | 50 |
| **Net periodic benefit cost** | **576** | **599** | **395** |
| Less: transfer to regulatory account [1] | (238) | (301) | (139) |
| **Total** | **$ 338** | **$ 298** | **$ 256** |

[1] The Utility recorded these amounts to a regulatory account as they are probable of recovery from customers in future rates.

***Other Benefits***

| (in millions) | 2013 | 2012 | 2011 |
|---|---|---|---|
| Service cost for benefits earned | $ 53 | $ 49 | $ 42 |
| Interest cost | 74 | 83 | 91 |
| Expected return on plan assets | (79) | (77) | (82) |
| Amortization of transition obligation | - | 24 | 26 |
| Amortization of prior service cost | 23 | 25 | 27 |
| Amortization of net actuarial loss | 6 | 6 | 4 |
| **Net periodic benefit cost** | **$ 77** | **$ 110** | **$ 108** |

There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

**Components of Accumulated Other Comprehensive Income**

PG&E Corporation and the Utility record the net periodic benefit cost for pension benefits and other benefits as a component of accumulated other comprehensive income, net of tax. Net periodic benefit cost is composed of unrecognized prior service costs, unrecognized gains and losses, and unrecognized net transition obligations as components of accumulated other comprehensive income, net of tax.

Regulatory adjustments are recorded in the Consolidated Statements of Income and Consolidated Balance Sheets to reflect the difference between pension expense or income calculated in accordance with GAAP for accounting purposes and pension expense or income for ratemaking, which is based on a funding approach. A regulatory adjustment is also recorded for the amounts that would otherwise be charged to accumulated other comprehensive income for the pension benefits related to the Utility's defined benefit pension plan. To the extent the other benefits are in an overfunded position, the Utility records a regulatory liability related to its other benefits and long term disability costs, for the excess of cumulative income for ratemaking over cumulative other benefits expense calculated in accordance with GAAP, and a portion of the credit balance in accumulated other comprehensive income. However, this recovery mechanism does not allow the Utility to record a regulatory asset for an underfunded position related to other benefits. Therefore, the charge remains in accumulated other comprehensive income (loss) for other benefits.

The estimated amounts that will be amortized into net periodic benefit costs for PG&E Corporation in 2014 are as follows:

| ***Pension Benefit*** **(in millions)** | |
|---|---|
| Unrecognized prior service cost | $ 20 |
| Unrecognized net loss | 2 |
| **Total** | **$ 22** |

| ***Other Benefits*** **(in millions)** | |
|---|---|
| Unrecognized prior service cost | $ 23 |
| Unrecognized net loss | 2 |
| **Total** | **$ 25** |

There were no material differences between the estimated amounts that will be amortized into net periodic benefit costs for PG&E Corporation and the Utility.

**Valuation Assumptions**

The following actuarial assumptions were used in determining the projected benefit obligations and the net periodic benefit costs. The following weighted average year-end assumptions were used in determining the plans' projected benefit obligations and net benefit cost.

| | **Pension Benefits** | | | **Other Benefits** | | |
|---|---|---|---|---|---|---|
| | **December 31,** | | | **December 31,** | | |
| | **2013** | **2012** | **2011** | **2013** | **2012** | **2011** |
| **Discount rate** | 4.89% | 3.98% | 4.66% | 4.70 - 5.00% | 3.75 - 4.08% | 4.41 - 4.77% |
| **Average rate of future compensation increases** | 4.00% | 4.00% | 5.00% | - | - | - |
| **Expected return on plan assets** | 6.50% | 5.40% | 5.50% | 3.50 - 6.70% | 2.90 - 6.10% | 4.40 - 5.50% |

The assumed health care cost trend rate as of December 31, 2013 was 8%, decreasing gradually to an ultimate trend rate in 2020 and beyond of approximately 5%. A one-percentage-point change in assumed health care cost trend rate would have the following effects:

| **(in millions)** | **One-Percentage-Point Increase** | **One-Percentage-Point Decrease** |
|---|---|---|
| Effect on postretirement benefit obligation | $ 86 | $ (88) |
| Effect on service and interest cost | 9 | (9) |

Expected rates of return on plan assets were developed by determining projected stock and bond returns and then applying these returns to the target asset allocations of the employee benefit plan trusts, resulting in a weighted average rate of return on plan assets. Returns on fixed-income debt investments were projected based on real maturity and credit spreads added to a long-term inflation rate. Returns on equity investments were estimated based on estimates of dividend yield and real earnings growth added to a long-term inflation rate. For the pension plan, the assumed return of 6.5% compares to a ten-year actual return of 8.7%. The rate used to discount pension benefits and other benefits was based on a yield curve developed from market data of over approximately 494 Aa-grade non-callable bonds at December 31, 2013. This yield curve has discount rates that vary based on the duration of the obligations. The estimated future cash flows for the pension benefits and other benefit obligations were matched to the corresponding rates on the yield curve to derive a weighted average discount rate.

**Investment Policies and Strategies**

The financial position of PG&E Corporation's and the Utility's funded employee benefit plans is driven by the relationship between plan assets and liabilities. As noted above, the funded status is the difference between the fair value of plan assets and projected benefit obligations. Volatility in funded status occurs when asset values change differently from liability values and can result in fluctuations in costs for financial reporting, as well as the amount of minimum contributions required under the Employee Retirement Income Security Act of 1974, as amended. PG&E Corporation's and the Utility's investment policies and strategies are designed to increase the ratio of trust assets to plan liabilities at an acceptable level of funded status volatility.

Interest rate, credit, and equity risk are the key determinants of PG&E Corporation's and the Utility's funded status volatility. In addition to affecting the trust's fixed-income portfolio market values, interest rate changes also influence liability valuations as discount rates move with current bond yields. To manage this risk, PG&E Corporation's and the Utility's trusts hold significant allocations to fixed-income investments that include U.S. government securities, corporate securities, and other fixed-income securities. Although they contribute to funded status volatility, equity investments are held to reduce long-term funding costs due to their higher expected return. The equity investment allocation is implemented through portfolios that include common stock and commingled funds across multiple industry sectors. Real assets and absolute return investments are held to diversify the trust's holdings in equity and fixed-income investments by exhibiting returns with low correlation to the direction of these markets. Real assets include commodities futures, REITS, global listed infrastructure equities, and private real estate funds. Absolute return investments include hedge fund portfolios.

Target allocations for equity investments have generally declined in favor of longer-maturity fixed-income investments and real assets as a means of dampening future funded status volatility. Derivative instruments such as equity index futures contracts are used to maintain existing equity exposure while adding exposure to fixed-income securities. In addition, derivative instruments such as equity index futures and fixed income futures are used to rebalance the fixed income/equity allocation of the pension's portfolio. Foreign currency exchange contracts are also used to hedge a portion of the currency of the global equity investments.

PG&E Corporation and the Utility apply a risk management framework for managing the risks associated with employee benefit plan trust assets. The guiding principles of this risk management framework are the clear articulation of roles and responsibilities, appropriate delegation of authority, and proper accountability and documentation. Trust investment policies and investment manager guidelines include provisions designed to ensure prudent diversification, manage risk through appropriate use of physical direct asset holdings and derivative securities, and identify permitted and prohibited investments.

The target asset allocation percentages for major categories of trust assets for pension and other benefit plans are as follows:

| | **Pension Benefits** | | | **Other Benefits** | | |
|---|---|---|---|---|---|---|

**Fair Value Measurements**

The following tables present the fair value of plan assets for pension and other benefits plans by major asset category at December 31, 2013 and 2012.

| | Fair Value Measurements | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | At December 31, | | | | | | | |
| | 2013 | | | | 2012 | | | |
| **(in millions)** | **Level 1** | **Level 2** | **Level 3** | **Total** | **Level 1** | **Level 2** | **Level 3** | **Total** |
| **Pension Benefits:** | | | | | | | | |
| Money market investments | $ 70 | $ - | $ - | **$ 70** | $ 112 | $ - | $ - | **$ 112** |
| Global equity securities | 1,123 | 2,363 | - | **3,486** | 402 | 3,017 | - | **3,419** |
| Absolute return | - | - | 554 | **554** | - | - | 513 | **513** |
| Real assets | 562 | - | 544 | **1,106** | 525 | - | 285 | **810** |
| Fixed-income securities: | | | | | | | | |
| U.S. government | 1,281 | 319 | - | **1,600** | 1,576 | 139 | - | **1,715** |
| Corporate | 1 | 4,230 | 625 | **4,856** | 3 | 4,275 | 611 | **4,889** |
| Other | 166 | 555 | - | **721** | - | 576 | - | **576** |
| **Total** | **$ 3,203** | **$ 7,467** | **$ 1,723** | **$ 12,393** | **$ 2,618** | **$ 8,007** | **$ 1,409** | **$ 12,034** |
| **Other Benefits:** | | | | | | | | |
| Money market investments | $ 31 | $ - | $ - | **$ 31** | $ 77 | $ - | $ - | **$ 77** |
| Global equity securities | 127 | 504 | - | **631** | 118 | 397 | - | **515** |
| Absolute return | - | - | 53 | **53** | - | - | 49 | **49** |
| Real assets | 67 | - | 38 | **105** | 68 | - | 28 | **96** |
| Fixed-income securities: | | | | | | | | |
| U.S. government | 119 | 5 | - | **124** | 148 | 5 | - | **153** |
| Corporate | 4 | 894 | 2 | **900** | 9 | 795 | 1 | **805** |
| Other | 14 | 37 | - | **51** | - | 38 | - | **38** |
| **Total** | **$ 362** | **$ 1,440** | **$ 93** | **$ 1,895** | **$ 420** | **$ 1,235** | **$ 78** | **$ 1,733** |
| **Total plan assets at fair value** | | | | **$ 14,288** | | | | **$ 13,767** |

In addition to the total plan assets disclosed at fair value in the table above, the trusts had other net assets of $131 million and $132 million at December 31, 2013 and 2012, respectively. These net assets and net liabilities were comprised primarily of cash, accounts receivable, accounts payable, and deferred taxes.

**Valuation Techniques**

The following describes the valuation techniques used to measure the fair value of the assets and liabilities shown in the table above. All investments that are valued using a net asset value per share can be redeemed quarterly with a notice not to exceed 90 days.

***Money Market Investments***

Money market investments consist primarily of commingled funds of U.S. government short-term securities that are considered Level 1 assets and valued at the net asset value of $1 per unit. The number of units held by the plan fluctuates based on the unadjusted price changes in active markets for the funds' underlying assets.

***Equity Securities***

The global equity categories include equity investments in common stock and equity-index futures, and commingled funds comprised of equity across multiple industries and regions of the world. Equity investments in common stock are actively traded on public exchanges and are therefore considered Level 1 assets. These equity investments are generally valued based on unadjusted prices in active markets for identical securities. Equity-index futures are valued based on unadjusted prices in active markets and are Level 1 assets. Collateral posted related to these futures consist of money market investments that are considered Level 1 assets. Commingled funds are valued using a net asset value per share and are maintained by investment companies for large institutional investors and are not publicly traded. Commingled funds are comprised primarily of underlying equity securities that are publicly traded on exchanges, and price quotes for the assets held by these funds are readily observable and available. Commingled funds are categorized as Level 2 assets.

***Absolute Return***

The absolute return category includes portfolios of hedge funds that are valued using a net asset value per share based on a variety of proprietary and non-proprietary valuation methods, including unadjusted prices for publicly-traded securities in active markets. Hedge funds are considered Level 3 assets.

***Real Assets***

The real asset category includes portfolios of commodities, commodities futures, global REITS, global listed infrastructure equities, and private real estate funds. The commodities, commodities futures, global REITS, and global listed infrastructure equities are actively traded on a public exchange and are therefore considered Level 1 assets. Collateral posted related to the commodities futures consist of money market investments that are considered Level 1 assets. Private real estate funds are valued using a net asset value per share derived using appraisals, pricing models, and valuation inputs that are unobservable and are considered Level 3 assets.

***Fixed-Income***

The fixed-income category includes U.S. government securities, corporate securities, and other fixed-income securities.

U.S. government fixed-income primarily consists of U.S. Treasury notes and U.S. government bonds that are valued based on quoted market prices or evaluated pricing data for similar securities adjusted for observable differences. These securities are categorized as Level 1 or Level 2 assets.

Corporate fixed-income primarily includes investment grade bonds of U.S. issuers across multiple industries that are valued based on a compilation of primarily observable information or broker quotes in non-active markets. The fair value of corporate bonds is determined using recently executed transactions, market price quotations (where observable), bond spreads or credit default swap spreads obtained from independent external parties such as vendors and brokers adjusted for any basis difference between cash and derivative instruments. These securities are classified as Level 2 assets. Corporate fixed-income also includes commingled funds that are valued using a net asset value per share and are comprised of corporate debt instruments. Commingled funds are considered Level 2 assets. Corporate fixed-income also includes privately secured debt portfolios which are valued using a net asset value per share using pricing models and valuation inputs that are unobservable and are considered Level 3 assets.

Other fixed-income primarily includes pass-through and asset-backed securities. Pass-through securities are valued based on benchmark yields created using observable market inputs and are Level 2 assets. Asset-backed securities are primarily valued based on broker quotes and are considered Level 2 assets. Other fixed-income also includes municipal bonds and index futures. Collateral posted related to the index futures consist of money market investments that are considered Level 1 assets. Municipal bonds are valued based on a compilation of primarily observable information or broker quotes in non-active markets and are considered Level 2 assets. Futures are valued based on unadjusted prices in active markets and are Level 1 assets.

**Transfers Between Levels**

Any transfers between levels in the fair value hierarchy are recognized as of the end of the reporting period. No significant transfers between levels occurred in the years ended December 31, 2013 and 2012.

**Level 3 Reconciliation**

The following table is a reconciliation of changes in the fair value of instruments for pension and other benefit plans that have been classified as Level 3 for the years ended December 31, 2013 and 2012:

| | Pension Benefits | | | |
|---|---|---|---|---|
| **(in millions)** | **Absolute Return** | **Corporate Fixed-Income** | **Real Assets** | **Total** |
| Balance as of January 1, 2012 | $ 487 | $ 585 | $ 65 | **$ 1,137** |
| Actual return on plan assets: | | | | |
| Relating to assets still held at the reporting date | 26 | 28 | 12 | **66** |
| Relating to assets sold during the period | - | (1) | - | **(1)** |
| Purchases, issuances, sales, and settlements | | | | |
| Purchases | - | 12 | 208 | **220** |
| Settlements | - | (13) | - | **(13)** |
| **Balance as of December 31, 2012** | **$ 513** | **$ 611** | **$ 285** | **$ 1,409** |
| Actual return on plan assets: | | | | |
| Relating to assets still held at the reporting date | 37 | 1 | 49 | **87** |
| Relating to assets sold during the period | 4 | - | (3) | **1** |
| Purchases, issuances, sales, and settlements | | | | |
| Purchases | - | 20 | 352 | **372** |
| Settlements | - | (7) | **(139)** | **(146)** |
| **Balance as of December 31, 2013** | **$ 554** | **$ 625** | **$ 544** | **$ 1,723** |

| | Other Benefits | | | |
|---|---|---|---|---|
| **(in millions)** | **Absolute Return** | **Corporate Fixed-Income** | **Real Assets** | **Total** |
| Balance as of January 1, 2012 | $ 47 | $ 1 | 6 | **$ 54** |
| Actual return on plan assets: | | | | |
| Relating to assets still held at the reporting date | 2 | - | 1 | **3** |
| Relating to assets sold during the period | - | - | - | **-** |
| Purchases, issuances, sales, and settlements | | | | |
| Purchases | - | 1 | 21 | **22** |
| Settlements | - | (1) | - | **(1)** |
| **Balance as of December 31, 2012** | **$ 49** | **$ 1** | **$ 28** | **$ 78** |
| Actual return on plan assets: | | | | |
| Relating to assets still held at the reporting date | 4 | - | 3 | **7** |
| Relating to assets sold during the period | - | - | - | **-** |
| Purchases, issuances, sales, and settlements | | | | |
| Purchases | 12 | 1 | 21 | **34** |
| Settlements | (12) | - | (14) | **(26)** |
| **Balance as of December 31, 2013** | **$ 53** | **$ 2** | **$ 38** | **$ 93** |

There were no transfers out of Level 3 in 2013 and 2012.

## Cash Flow Information

### *Employer Contributions*

PG&E Corporation and the Utility contributed $323 million to the pension benefit plans and $145 million to the other benefit plans in 2013. These contributions are consistent with PG&E Corporation's and the Utility's funding policy, which is to contribute amounts that are tax-deductible and consistent with applicable regulatory decisions and federal minimum funding requirements. None of these pension or other benefits were subject to a minimum funding requirement requiring a cash contribution in 2013. The Utility's pension benefits met all the funding requirements under ERISA. PG&E Corporation and the Utility expect to make total contributions of approximately $327 million and $71 million to the pension plan and other postretirement benefit plans, respectively, for 2014.

### *Benefits Payments and Receipts*

As of December 31, 2013, the estimated benefits expected to be paid and the estimated federal subsidies expected to be received in each of the next five fiscal years, and in aggregate for the five fiscal years thereafter, are as follows:

| **(in millions)** | **Pension** | **Other** | **Federal Subsidy** |
|---|---|---|---|
| 2014 | $ 613 | $ 90 | $ (6) |
| 2015 | 652 | 95 | (7) |
| 2016 | 692 | 100 | (8) |
| 2017 | 730 | 107 | (8) |
| 2018 | 766 | 113 | (9) |
| 2019 - 2023 | 4,326 | 609 | (35) |

There were no material differences between the estimated benefits expected to be paid by PG&E Corporation and paid by the Utility for the years presented above. There were also no material differences between the estimated subsidies expected to be received by PG&E Corporation and received by the Utility for the years presented above.

## Defined Contribution Benefit Plans

PG&E Corporation sponsors employee retirement savings plans, including a defined contribution savings plan that is qualified as a 401(k) plan under the Internal Revenue Code 1986, as amended. These plans permit eligible employees to defer compensation, to make pre-tax and after-tax contributions, and provide for employer contributions to be made to eligible participants. Employer contribution expense reflected in PG&E Corporation's Consolidated Statements of Income was as follows:

| **(in millions)**<br>**Year ended December 31,** | |
|---|---|
| 2013 | $ 71 |
| 2012 | 67 |
| 2011 | 65 |

There were no material differences between the employer contribution expense for PG&E Corporation and the Utility for the years presented above.

## NOTE 12: RESOLUTION OF REMAINING CHAPTER 11 DISPUTED CLAIMS

Various electricity suppliers filed claims in the Utility's proceeding filed under Chapter 11 of the U.S. Bankruptcy Code seeking payment for energy supplied to the Utility's customers between May 2000 and June 2001. These claims, which the Utility disputes, are being addressed in various FERC and judicial proceedings in which the State of California, the Utility, and other electricity purchasers are seeking refunds from electricity suppliers, including governmental entities, for overcharges incurred in the CAISO and the California Power Exchange wholesale electricity markets during this period.

While the FERC and judicial proceedings are pending, the Utility has pursued, and continues to pursue, settlements with electricity suppliers. The Utility entered into a number of settlement agreements with various electricity suppliers to resolve some of these disputed claims and to resolve the Utility's refund claims against these electricity suppliers. These settlement agreements provide that the amounts payable by the parties are, in some instances, subject to adjustment based on the outcome of the various refund offset and interest issues being considered by the FERC. The Utility is uncertain when and how the remaining disputed claims will be resolved.

Any net refunds, claim offsets, or other credits that the Utility receives from electricity suppliers through resolution of the remaining disputed claims, either through settlement or through the conclusion of the various FERC and judicial proceedings, are refunded to customers through rates in future periods.

The following table presents the changes in the remaining net disputed claims liability, which includes interest:

| **(in millions)** | | |
|---|---|---|
| Balance at December 31, 2012 | $ | 842 |
| Interest accrued, net of settlement | | 25 |
| Less: supplier settlements-principal amount | | (3) |
| **Balance at December 31, 2013** | **$** | **864** |

At December 31, 2013 and 2012, the remaining net disputed claims liability consisted of $154 million and $157 million, respectively, of remaining net disputed claims (classified on the Consolidated Balance Sheets within accounts payable – disputed claims and customer refunds) and $710 million and $685 million, respectively, of accrued interest (classified on the Consolidated Balance Sheets within interest payable).

At December 31, 2013 and 2012, the Utility held $291 million, respectively, in escrow, including earned interest, for payment of the remaining net disputed claims liability. These amounts are included within restricted cash on the Consolidated Balance Sheets.

Interest accrues on the remaining net disputed claims at the FERC-ordered rate, which is higher than the rate earned by the Utility on the escrow balance. Although the Utility has been collecting the difference between the accrued interest and the earned interest from customers in rates, these collections are not held in escrow. If the amount of accrued interest is greater than the amount of interest ultimately determined to be owed on the remaining net disputed claims, the Utility would refund to customers any excess interest collected. The amount of any interest that the Utility may be required to pay will depend on the final determined amount of the remaining net disputed claims and when such interest is paid.

## NOTE 13: RELATED PARTY AGREEMENTS AND TRANSACTIONS

The Utility and other subsidiaries provide and receive various services to and from their parent, PG&E Corporation, and among themselves. The Utility and PG&E Corporation exchange administrative and professional services in support of operations. Services provided directly to PG&E Corporation by the Utility are priced at the higher of fully loaded cost (i.e., direct cost of good or service and allocation of overhead costs) or fair market value, depending on the nature of the services. Services provided directly to the Utility by PG&E Corporation are generally priced at the lower of fully loaded cost or fair market value, depending on the nature and value of the services. PG&E Corporation also allocates various corporate administrative and general costs to the Utility and other subsidiaries using agreed-upon allocation factors, including the number of employees, operating and maintenance expenses, total assets, and other cost allocation methodologies. Management believes that the methods used to allocate expenses are reasonable and meet the reporting and accounting requirements of its regulatory agencies.

The Utility's significant related party transactions were:

| (in millions) | Year Ended December 31, 2013 | 2012 | 2011 |
| --- | --- | --- | --- |
| **Utility revenues from:** | | | |
| Administrative services provided to PG&E Corporation | $ 7 | $ 7 | $ 6 |
| **Utility expenses from:** | | | |
| Administrative services received from PG&E Corporation | $ 45 | $ 50 | $ 49 |
| Utility employee benefit due to PG&E Corporation | 57 | 51 | 33 |

At December 31, 2013 and 2012, the Utility had receivables of $22 million and $19 million, respectively, from PG&E Corporation included in accounts receivable – other and other noncurrent assets – other on the Utility's Consolidated Balance Sheets, and payables of $17 million, each year respectively, to PG&E Corporation included in accounts payable – other on the Utility's Consolidated Balance Sheets.

## NOTE 14: COMMITMENTS AND CONTINGENCIES

PG&E Corporation and the Utility have significant contingencies arising from their operations, including contingencies related to natural gas matters and environmental remediation. The Utility also has substantial financial commitments in connection with agreements entered into to support its operating activities. PG&E Corporation also has financial commitments described under "Other Commitments" below.

### Natural Gas Matters

On September 9, 2010, a natural gas transmission pipeline owned and operated by the Utility ruptured in San Bruno, California. The ensuing explosion and fire resulted in the deaths of eight people, numerous personal injuries, and extensive property damage. PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows have been materially affected by the costs the Utility has incurred related to the ongoing regulatory proceedings, investigations, and civil lawsuits that commenced following the San Bruno accident.

#### *Pending CPUC Investigations*

There are three CPUC investigative enforcement proceedings pending against the Utility that relate to (1) the Utility's safety recordkeeping for its natural gas transmission system, (2) the Utility's operation of its natural gas transmission pipeline system in or near locations of higher population density, and (3) the Utility's pipeline installation, integrity management, recordkeeping and other operational practices, and other events or courses of conduct, that could have led to or contributed to the San Bruno accident.

The SED has issued investigative reports and briefs in each of these investigations alleging that the Utility committed numerous violations of applicable laws and regulations. In July 2013, the SED recommended that the CPUC impose what the SED characterizes as a penalty of $2.25 billion on the Utility, allocated as follows: (1) $300 million as a fine to the State General Fund, (2) $435 million for a portion of costs related to the Utility's PSEP that were previously disallowed by the CPUC and funded by shareholders, and (3) $1.515 billion to perform PSEP work that was previously approved by the CPUC, implement operational remedies, and for future costs. (See "Disallowed Capital Costs" below.) Other parties, including the City of San Bruno, TURN, the CPUC's ORA, and the City and County of San Francisco, have recommended total penalties of at least $2.25 billion, including fines payable to the State General Fund of differing amounts.

The ALJs who oversee the investigations are expected to issue one or more presiding officers' decisions to address the violations that they have determined the Utility committed and to impose penalties. It is uncertain when the decisions will be issued. Based on the CPUC's rules, the presiding officer's decisions would become the final decisions of the CPUC 30 days after issuance unless the Utility or another party filed an appeal with the CPUC, or a CPUC commissioner requested that the CPUC review the decision, within such time. If an appeal or review request is filed, other parties would have 15 days to provide comments but the CPUC could act before considering any comments.

At December 31, 2013, the Consolidated Balance Sheets included an accrual of $200 million in other current liabilities for the minimum amount of fines deemed probable that the Utility will pay to the State General Fund. The Utility is unable to make a better estimate due to the many variables that could affect the final outcome, including how the total number and duration of violations will be determined; how the various penalty recommendations made by the SED and other parties will be considered; how the financial and tax impact of unrecoverable costs the Utility has incurred, and will continue to incur, to improve the safety and reliability of its pipeline system, will be considered; whether the Utility's costs to perform any required remedial actions will be considered; and how the CPUC will respond to public pressure. Future changes in these estimates or the assumptions on which they are based could have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. The CPUC may impose fines on the Utility that are materially higher than the amount accrued and may disallow PSEP costs that were previously authorized for recovery or other future costs. Disallowed capital investments would be charged to net income in the period in which the CPUC orders such a disallowance. See "Disallowed Capital Costs" below. Future disallowed expense and capital costs would be charged to net income in the period incurred.

***Other CPUC Enforcement Matters***

PG&E Corporation and the Utility are unable to estimate the amount or range of reasonably possible losses that may be incurred in connection with the following matters.

*Gas Safety Citation Program.* The Utility and other California gas corporations are required to provide notice to the SED of any self-identified or self-corrected violations of certain state and federal regulations that relate to the safety of their natural gas facilities and operating practices. The SED is authorized to issue citations and impose fines for self-identified or self-corrected violations and for violations that the SED identifies through its periodic audits of the Utility's operations or otherwise. The SED can exercise its discretion in determining whether to impose fines and the amount of such fines, or whether to take other enforcement action, based on the totality of the circumstances. The SED can consider such factors as the severity of the safety risk associated with each violation; the number and duration of the violations; whether the violation was self-reported, and whether corrective actions were taken. In January 2012, the SED imposed fines of $16.8 million on the Utility for self-reported failure to perform certain leak surveys and in 2013 the SED imposed fines ranging from $50,000 to $8.1 million for self-reported violations. The Utility has filed over 50 self-reports with the SED, plus additional follow-up reports, that the SED has not yet addressed. The SED is expected to impose fines or take enforcement action with respect to some of these self-reports.

*Natural Gas Transmission Pipeline Rights-of-Way.* In 2012, the Utility notified the CPUC and the SED that it is undertaking a system-wide effort to survey its transmission pipelines and identify and remove encroachments (such as building structures and vegetation overgrowth) from pipeline rights-of-way over a multi-year period. The SED could impose fines on the Utility or take other enforcement action in connection with this matter.

*Orders to Show Cause.* In August 2013, the CPUC issued two OSCs related to a document submitted by the Utility on July 3, 2013 as "errata" to correct information about some segments in Lines 101 and 147 (two of the Utility's natural gas transmission pipelines that serve the San Francisco peninsula) that had been previously provided to the CPUC in October 2011 to allow the Utility to restore operating pressure on these pipelines. On December 19, 2013, the CPUC issued a decision to impose fines of approximately $14 million on the Utility in connection with the errata submission, finding that the Utility violated CPUC rules that prohibit any person from misleading the CPUC. The Utility recorded this amount as an expense for 2013. On January 23, 2014, the Utility filed an application for the rehearing of this decision, arguing that it is erroneous in several respects. It is uncertain when the CPUC will issue a decision on the other OSC that directed the Utility to show cause why all orders issued by the CPUC to authorize increased operating pressure on the Utility's gas transmission pipelines should not be immediately suspended pending competent demonstration that the Utility's natural gas system records are reliable. Briefing on this OSC was completed on January 31, 2014.

***Disallowed Capital Costs***

In 2011, the CPUC ordered all natural gas operators in California to submit proposed plans to modernize and upgrade their natural gas transmission systems as well as associated cost forecasts and ratemaking proposals. In December 2012, the CPUC approved most of the projects proposed in the Utility's PSEP application that was filed in August 2011, but disallowed the Utility's request for rate recovery of a significant portion of costs the Utility forecasted it would incur through 2014. In October 2013, the Utility updated its PSEP application to present the results of its completed search and review of records relating to validation of operating pressure for all of the approximately 6,750 miles of the Utility's natural gas transmission pipelines. The Utility requested that the CPUC approve changes to the scope and prioritization of PSEP work, including deferring some projects to after 2014 and accelerating other projects, and that the CPUC adjust authorized revenue requirements to reflect these changes. The Utility has requested that the CPUC issue a final decision by August 2014.

At December 31, 2013, the Utility has recorded cumulative charges of $549 million for PSEP capital costs that are expected to exceed the amount to be recovered. The Utility has requested that the CPUC authorize capital costs of $766 million under the PSEP, reflecting the proposed changes in the PSEP update application. Of this amount, approximately $280 million is recorded in Property, Plant, and Equipment on the Consolidated Balance Sheets at December 31, 2013. The Utility could record additional charges to the extent PSEP capital costs are higher than currently expected, or if additional capital costs are disallowed by the CPUC. The Utility's ability to recover PSEP capital costs also could be affected by the final decisions to be issued in the CPUC's pending investigations discussed above.

***Criminal Investigation***

In June 2011, the U.S. Department of Justice, the California Attorney General's Office, and the San Mateo County District Attorney's Office began an investigation of the San Bruno accident and indicated that the Utility is a target of the investigation. Although the San Mateo County District Attorney's Office has publicly indicated that it will not pursue state criminal charges, the U.S. Department of Justice may still bring criminal charges, including charges based on claims that the Utility violated the federal Pipeline Safety Act, against PG&E Corporation or the Utility. It is uncertain whether any criminal charges will be brought against any of PG&E Corporation's or the Utility's current or former employees. The Utility is continuing to cooperate with federal investigators. PG&E Corporation and the Utility are unable to estimate the amount or range of reasonably possible losses associated with any civil or criminal penalties that could be imposed and such penalties could have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. In addition, the Utility's business or operations could be negatively affected by any remedial measures that the Utility may undertake, such as operating its natural gas transmission business subject to the supervision and oversight of an independent monitor.

***Third-Party Liability Claims***

The Utility has settled the claims of substantially all of the remaining plaintiffs who sought compensation for personal injury and property damage, and other relief, including punitive damages, following the San Bruno accident. (Approximately 165 lawsuits on behalf of approximately 525 plaintiffs have been filed against the Utility.) At December 31, 2013, the Utility has recorded cumulative charges of $565 million as its best estimate of probable loss for third-party claims related to the San Bruno accident and has made cumulative payments of $520 million for settlements. In addition, the Utility has incurred cumulative expenses of $86 million for associated legal costs. The Utility's liability for third-party claims is included in other current liabilities in the Consolidated Balance Sheets and totaled $45 million at December 31, 2013 and $146 million at December 31, 2012.

The aggregate amount of insurance coverage for third-party liability attributable to the San Bruno accident is approximately $992 million in excess of a $10 million deductible. Through December 31, 2013, the Utility has recognized cumulative insurance recoveries of $354 million for third-party claims and associated legal costs. These amounts were recorded as a reduction to operating and maintenance expense in the Consolidated Statements of Income. Although the Utility believes that a significant portion of costs incurred for third-party claims (and associated legal costs) relating to the San Bruno accident will ultimately be recovered through its insurance, it is unable to predict the amount and timing of additional insurance recoveries.

***Class Action Complaint***

On August 23, 2012, a complaint was filed in the San Francisco Superior Court against PG&E Corporation and the Utility (and other unnamed defendants) by individuals who seek certification of a class consisting of all California residents who were customers of the Utility between 1997 and 2010, with certain exceptions. The plaintiffs allege that the Utility collected more than $100 million in customer rates from 1997 through 2010 for the purpose of various safety measures and operations projects but instead used the funds for general corporate purposes such as executive compensation and bonuses. The plaintiffs allege that PG&E Corporation and the Utility engaged in unfair business practices in violation of California state law. The plaintiffs seek restitution and disgorgement, as well as compensatory and punitive damages.

PG&E Corporation and the Utility contest the plaintiffs' allegations. On May 23, 2013, the court granted PG&E Corporation's and the Utility's request to dismiss the complaint on the grounds that the CPUC has exclusive jurisdiction to adjudicate the issues raised by the plaintiffs' allegations. The plaintiffs have appealed the court's ruling to the California Court of Appeal. PG&E Corporation and the Utility are unable to estimate the amount or range of reasonably possible losses, if any, that may be incurred in connection with this matter if the lower court's ruling is reversed.

**Other Legal and Regulatory Contingencies**

PG&E Corporation and the Utility are subject to various laws and regulations and, in the normal course of business, are named as parties in a number of claims and lawsuits. In addition, penalties may be incurred for failure to comply with federal, state, or local laws and regulations. A provision for a loss contingency is recorded when it is both probable that a loss has been incurred and the amount of the loss can be reasonably estimated. PG&E Corporation and the Utility evaluate the range of reasonably estimated losses and record a provision based on the lower end of the range, unless an amount within the range is a better estimate than any other amount. The assessment of whether a loss is probable or a reasonable possibility, and whether the loss or a range of loss is estimable, often involves a series of complex judgments about future events. Loss contingencies are reviewed quarterly and estimates are adjusted to reflect the impact of all known information, such as negotiations, discovery, settlements and payments, rulings, advice of legal counsel, and other information and events pertaining to a particular matter. PG&E Corporation's and the Utility's policy is to exclude anticipated legal costs from the provision for loss and expense these costs as incurred.

Accruals for other legal and regulatory contingencies (excluding amounts related to natural gas matters above) totaled $43 million at December 31, 2013 and $34 million at December 31, 2012. These amounts are included in other current liabilities in the Consolidated Balance Sheets. The estimated reasonably possible range of loss for these matters in excess of the recorded accrual is not material. The resolution of these matters is not expected to have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, or cash flows.

**Environmental Remediation Contingencies**

The Utility is required to pay for environmental remediation at sites where it has been, or may be, a potentially responsible party under federal and state environmental laws. These sites include former manufactured gas plant sites, power plant sites, gas gathering sites, sites where natural gas compressor stations are located, and sites used by the Utility for the storage, recycling, or disposal of potentially hazardous substances. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site.

Given the complexities of the legal and regulatory environment and the inherent uncertainties involved in the early stages of a remediation project, the process for estimating remediation liabilities is subjective and requires significant judgment. The Utility records an environmental remediation liability when the site assessments indicate that remediation is probable and the Utility can reasonably estimate the loss or a range of probable amounts. The Utility records an environmental remediation liability based on the lower end of the range of estimated probable costs, unless an amount within the range is a better estimate than any other amount. Amounts recorded are not discounted to their present value.

The following table presents the changes in the environmental remediation liability:

| **(in millions)** | |
|---|---|
| Balance at December 31, 2012 | $ 910 |
| Additional remediation costs accrued: | |
| Transfer to regulatory account for recovery | 116 |
| Amounts not recoverable from customers | 49 |
| Less: Payments | (175) |
| **Balance at December 31, 2013** | **$ 900** |

The environmental remediation liability is primarily included in non-current liabilities on the Consolidated Balance Sheets and is composed of the following:

| | **Balance at December 31,** | |
|---|---|---|
| **(in millions)** | **2013** | **2012** |
| Utility-owned natural gas compressor site near Hinkley, California [1] | $ 190 | $ 226 |
| Utility-owned natural gas compressor site near Topock, Arizona [1] | 264 | 239 |
| Utility-owned generation facilities (other than for fossil fuel-fired), other facilities, and third-party disposal sites | 160 | 158 |
| Former MGP sites owned by the Utility or third parties | 184 | 181 |
| Fossil fuel-fired generation facilities and sites | 102 | 106 |
| **Total environmental remediation liability** | **$ 900** | **$ 910** |

[1] See "Natural Gas Compressor Sites" below.

At December 31, 2013, the Utility expected to recover $579 million of its environmental remediation liability through various ratemaking mechanisms authorized by the CPUC. One of these mechanisms allows the Utility rate recovery for 90% of its hazardous substance remediation costs for certain approved sites (including the Topock site) without a reasonableness review. The Utility may incur environmental remediation costs that it does not seek to recover in rates, such as the costs associated with the Hinkley site.

***Natural Gas Compressor Sites***

The Utility is legally responsible for remediating groundwater contamination caused by hexavalent chromium used in the past at the Utility's natural gas compressor sites near Hinkley, California and Topock, Arizona. The Utility is also required to take measures to abate the effects of the contamination on the environment.

***Hinkley Site***

The Utility's remediation and abatement efforts at the Hinkley site are subject to the regulatory authority of the California Regional Water Quality Control Board, Lahontan Region. On July 17, 2013, the Regional Board certified a final environmental report evaluating the Utility's proposed remedial methods to contain and remediate the underground plume of hexavalent chromium and the potential environmental impacts. The Regional Board is expected to issue the final project permits and a final clean-up order in phases through 2014 and into 2015. As the permits and order are issued, the Utility will obtain additional clarity on the total costs associated with the final remedy and related activities. In January 2014, the Regional Board also approved an updated background study plan prepared in consultation with the U.S. Geological Survey, the results of which will define the final cleanup standards. The background study is not expected to be complete until 2018.

The Utility has implemented interim remediation measures to reduce the mass of the chromium plume, monitor and control movement of the plume, and provided replacement water to affected residents. As of December 31, 2013, approximately 380 residential households located near the plume boundary were covered by the Utility's whole house water replacement program and the majority have opted to accept the Utility's offer to purchase their properties. The Utility is required to maintain and operate the program for five years or until the State of California has adopted a drinking water standard specifically for hexavalent chromium at which time the program will be evaluated. The State of California recently proposed draft regulations for hexavalent chromium and is expected to issue a final standard by June 2014.

The Utility's environmental remediation liability at December 31, 2013 reflects the Utility's best estimate of probable future costs associated with its final remediation plan, interim remediation measures, and whole house water program. Future costs will depend on many factors, including the levels of hexavalent chromium the Utility is required to use as the standard for remediation, the required time period by which those standards must be met, the extent of the chromium plume boundary, and adoption of a final drinking water standard by the State of California. Future changes in cost estimates and the assumptions on which they are based may have a material impact on future financial condition, results of operations, and cash flows.

***Topock Site***

The Utility's remediation and abatement efforts at the Topock site are subject to the regulatory authority of the California Department of Toxic Substances Control and the U.S. Department of the Interior. The California Department of Toxic Substances Control has approved the Utility's final remediation plan to contain and remediate the underground plume of hexavalent chromium, under which the Utility will implement an in-situ groundwater treatment system to convert hexavalent chromium into a non-toxic and non-soluble form of chromium. The Utility expects to submit its final remedial design plan in 2014 for approval to begin construction of the groundwater treatment system. The Utility has implemented interim remediation measures, including a system of extraction wells and a treatment plant designed to prevent movement of the chromium plume toward the Colorado River.

The Utility's environmental remediation liability at December 31, 2013 reflects its best estimate of probable future costs associated with its final remediation plan. Future costs will depend on many factors, including the extent of work to be performed to implement the final groundwater remedy and the Utility's required time frame for remediation. Future changes in cost estimates and the assumptions on which they are based may have a material impact on future financial condition, results of operations, and cash flows.

### *Reasonably Possible Environmental Contingencies*

Although the Utility has provided for known environmental obligations that are probable and reasonably estimable, the Utility's undiscounted future costs could increase to as much as $1.7 billion (including amounts related to the Hinkley and Topock sites described above) if the extent of contamination or necessary remediation is greater than anticipated or if the other potentially responsible parties are not financially able to contribute to these costs. The Utility may incur actual costs in the future that are materially different than this estimate and such costs could have a material impact on results of operations during the period in which they are recorded.

### Nuclear Insurance

The Utility is a member of NEIL, which is a mutual insurer owned by utilities with nuclear facilities. NEIL provides insurance coverage for property damages and business interruption losses incurred by the Utility if a nuclear event were to occur at the Utility's two nuclear generating units at Diablo Canyon and the retired Humboldt Bay Unit 3. NEIL provides property damage and business interruption coverage of up to $3.2 billion per nuclear incident and $2 billion per non-nuclear incident for Diablo Canyon. Humboldt Bay Unit 3 has up to $131 million of coverage for nuclear and non-nuclear property damages.

NEIL also provides coverage for damages caused by acts of terrorism at nuclear power plants. Certain acts of terrorism may be "certified" by the Secretary of the Treasury. If damages are caused by certified acts of terrorism, NEIL can obtain compensation from the federal government and will provide up to its full policy limit of $3.2 billion for each insured loss. In contrast, NEIL would treat all non-certified terrorist acts occurring within a 12-month period against one or more commercial nuclear power plants insured by NEIL as one event and the owners of the affected plants would share the $3.2 billion policy limit amount.

Under the Price-Anderson Act, public liability claims that arise from nuclear incidents that occur at Diablo Canyon, and that occur during the transportation of material to and from Diablo Canyon are limited to $13.6 billion. The Utility purchased the maximum available public liability insurance of $375 million for Diablo Canyon. The balance of the $13.6 billion of liability protection is provided under a loss-sharing program among utilities owning nuclear reactors. The Utility may be assessed up to $255 million per nuclear incident under this program, with payments in each year limited to a maximum of $38 million per incident. Both the maximum assessment and the maximum yearly assessment are adjusted for inflation at least every five years. The next scheduled adjustment is due on or before September 10, 2018.

The Price-Anderson Act does not apply to claims that arise from nuclear incidents that occur during shipping of nuclear material from the nuclear fuel enricher to a fuel fabricator or that occur at the fuel fabricator's facility. The Utility has a separate policy that provides coverage for claims arising from some of these incidents up to a maximum of $375 million per incident. In addition, the Utility has $53 million of liability insurance for Humboldt Bay Unit 3 and has a $500 million indemnification from the NRC for public liability arising from nuclear incidents, covering liabilities in excess of the liability insurance.

**Commitments**

***Third-Party Power Purchase Agreements***

As part of the ordinary course of business, the Utility enters into various agreements to purchase power and electric capacity. The price of purchased power may be fixed or variable. Variable pricing is generally based on the current market price of either natural gas or electricity at the date of delivery. The costs incurred for all power purchases and electric capacity were as follows:

| (in millions) | 2013 | 2012 | 2011 |
|---|---|---|---|
| Qualifying facilities [1] | $ 813 | $ 779 | $ 1,069 |
| Renewable energy contracts | 1,281 | 815 | 622 |
| Other power purchase agreements | 902 | 661 | 690 |

[1] Costs incurred include $ 271 , $286, and $297 attributable to renewable energy contracts with qualifying facilities at December 31, 2013 , 2012 , and 2011 , respectively.

*Qualifying Facility Power Purchase Agreement* – The Utility has entered into agreements to purchase energy and capacity with independent power producers that own generation facilities that meet the definition of a QF under federal law. As of December 31, 2013, the Utility had agreements with 170 QFs that are in operation, which expire at various dates between 2014 and 2028.

*Renewable Energy Power Purchase Agreements* – The Utility is required to gradually increase the amount of renewable energy that it delivers to its customers in order to comply with California's renewable portfolio standard requirement. The Utility has entered into various contracts to purchase renewable energy to help meet the renewable portfolio standard requirement. The Utility's obligations under a significant portion of these agreements are contingent on the third party's construction of new generation facilities. The Utility's commitments for energy payments under these renewable energy agreements are expected to grow significantly.

*Other Power Purchase Agreements* – The Utility has entered into several power purchase agreements for conventional generation resources, which include tolling agreements and resource adequacy agreements. The Utility's obligation under a portion of these agreements is contingent on the third parties' development of new generation facilities to provide capacity and energy products to the Utility. The Utility also has agreements with various irrigation districts and water agencies to purchase hydroelectric power.

At December 31, 2013, the undiscounted future expected obligations under power purchase agreements that have been approved by the CPUC and have met specified construction milestones were as follows:

| (in millions) | Qualifying Facility | Renewable (Other than QFs) | Other | Total Payments |
|---|---|---|---|---|
| 2014 | $ 913 | $ 1,906 | $ 829 | $ 3,648 |
| 2015 | 707 | 2,102 | 770 | 3,579 |
| 2016 | 587 | 2,109 | 722 | 3,418 |
| 2017 | 450 | 2,104 | 684 | 3,238 |
| 2018 | 406 | 1,962 | 640 | 3,008 |
| Thereafter | 1,614 | 30,242 | 2,984 | 34,840 |
| **Total** | **$ 4,677** | **$ 40,425** | **$ 6,629** | **$ 51,731** |

The following table shows the future fixed capacity payments due under QF agreements that are treated as capital leases. (These amounts are also included in the table above.) These payments are discounted to their present value in the table below using the Utility's incremental borrowing rate at the inception of the leases. These capital lease QF agreements expire between April 2014 and September 2021. The amount of this discount is shown in the table below as the amount representing interest.

| **(in millions)** | | |
|---|---|---|
| 2014 | $ | 27 |
| 2015 | | 24 |
| 2016 | | 22 |
| 2017 | | 18 |
| 2018 | | 12 |
| Thereafter | | 8 |
| **Total fixed capacity payments** | | **111** |
| Less: amount representing interest | | 14 |
| **Present value of fixed capacity payments** | **$** | **97** |

Minimum lease payments associated with the lease obligations are included in the Utility's cost of electricity. The timing of the recognition of the lease expense conforms to the ratemaking treatment for the Utility's recovery of the cost of electricity.

The present value of the fixed capacity payments due under these agreements is recorded on the Consolidated Balance Sheets. At December 31, 2013 and 2012, current liabilities – other included $23 million and $29 million, respectively, and noncurrent liabilities – other included $74 million and $96 million, respectively. The corresponding assets at December 31, 2013 and 2012 of $97 million and $125 million including accumulated amortization of $176 million and $148 million, respectively are included in property, plant, and equipment on the Consolidated Balance Sheets.

***Natural Gas Supply, Transportation, and Storage Commitments***

The Utility purchases natural gas directly from producers and marketers in both Canada and the United States to serve its core customers and to fuel its owned-generation facilities. The Utility also contracts for natural gas transportation from the points at which the Utility takes delivery (typically in Canada, the US Rocky Mountain supply area, and the southwestern United States) to the points at which the Utility's natural gas transportation system begins. In addition, the Utility has contracted for natural gas storage services in northern California in order to more reliably meet customers' loads.

At December 31, 2013, the Utility's undiscounted future expected payment obligations for natural gas supplies, transportation and storage were as follows:

| (in millions) | | |
| --- | --- | --- |
| 2014 | $ | 727 |
| 2015 | | 198 |
| 2016 | | 150 |
| 2017 | | 108 |
| 2018 | | 108 |
| Thereafter | | 756 |
| **Total** | **$** | **2,047** |

Costs incurred for natural gas purchases, natural gas transportation services, and natural gas storage, which include contracts less than 1 year, amounted to $1.6 billion in 2013, $1.3 billion in 2012, and $1.8 billion in 2011.

***Nuclear Fuel Agreements***

The Utility has entered into several purchase agreements for nuclear fuel. These agreements have remaining terms ranging from one to 12 years and are intended to ensure long-term nuclear fuel supply. The contracts for uranium and for conversion and enrichment services provide for 100% coverage of reactor requirements through 2020, while contracts for fuel fabrication services provide for 100% coverage of reactor requirements through 2017. The Utility relies on a number of international producers of nuclear fuel in order to diversify its sources and provide security of supply. Pricing terms are also diversified, ranging from market-based prices to base prices that are escalated using published indices.

At December 31, 2013, the undiscounted future expected payment obligations for nuclear fuel were as follows:

| (in millions) | | |
| --- | --- | --- |
| 2014 | $ | 145 |
| 2015 | | 162 |
| 2016 | | 146 |
| 2017 | | 148 |
| 2018 | | 132 |
| Thereafter | | 647 |
| **Total** | **$** | **1,380** |

Payments for nuclear fuel amounted to $162 million in 2013, $118 million in 2012, and $77 million in 2011.

***Other Commitments***

PG&E Corporation and the Utility have other commitments relating to operating leases. At December 31, 2013, the future minimum payments related to these commitments were as follows:

| (in millions) | | |
| --- | --- | --- |
| 2014 | $ | 42 |
| 2015 | | 37 |
| 2016 | | 34 |
| 2017 | | 27 |
| 2018 | | 24 |
| Thereafter | | 193 |
| **Total** | **$** | **357** |

Payments for other commitments relating to operating leases amounted to $40 million in 2013, $32 million in 2012, and $27 million in 2011. PG&E Corporation and the Utility had operating leases on office facilities expiring at various dates from 2014 to 2023. Certain leases on office facilities contain escalation clauses requiring annual increases in rent ranging from 2% to 5%. The rentals payable under these leases may increase by a fixed amount each year, a percentage of increase over base year, or the consumer price index. Most leases contain extension options ranging between one and five years.

**QUARTERLY CONSOLIDATED FINANCIAL DATA (UNAUDITED)**

| | Quarter ended | | | |
|---|---|---|---|---|
| **(in millions, except per share amounts)** | **December 31** | **September 30** | **June 30** | **March 31** |

| Comprehensive income | 96 | 348 | 235 | 241 |

The Utility recorded a charge to net income of $196 million in the third quarter of 2013 and $353 million during the fourth quarter 2012, for disallowed capital expenditures associated with the Utility's pipeline safety enhancement plan. See Note 14 of the Notes to the Consolidated Financial Statements.

The Utility recorded a provision of $110 million and $80 million in the third quarter 2013 and in the second quarter 2012, respectively, for estimated third-party claims related to the San Bruno accident. During the second quarter 2013 and third quarter 2013, the Utility recognized $45 million and $25 million, respectively, for insurance claims. During the first quarter 2012, second quarter of 2012, third quarter of 2012, and fourth quarter 2012 the Utility recognized $11 million, $25 million, $99 million, and $50 million, respectively, for insurance recoveries. See Note 14 of the Notes to the Consolidated Financial Statements.

**MANAGEM ENT'S REPORT ON INTERNAL CONTROL OVER FINANCIAL REPORTING**

Management of PG&E Corporation and Utility is responsible for establishing and maintaining adequate internal control over financial reporting. PG&E Corporation's and the Utility's internal control over financial reporting is a process designed to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles, or GAAP. Internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of PG&E Corporation and the Utility, (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with GAAP and that receipts and expenditures are being made only in accordance with authorizations of management and directors of PG&E Corporation and the Utility, and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of assets that could have a material effect on the financial statements.

Because of its inherent limitations, internal control over financial reporting may not prevent or detect misstatements. Also, projections of any evaluation of effectiveness to future periods are subject to the risk that controls may become inadequate because of changes in conditions or that the degree of compliance with the policies or procedures may deteriorate.

Management assessed the effectiveness of internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control—Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. Based on its assessment and those criteria, management has concluded that PG&E Corporation and the Utility maintained effective internal control over financial reporting as of December 31, 2013.

Deloitte & Touche LLP, an independent registered public accounting firm, has audited PG&E Corporation's and the Utility's internal control over financial reporting as of December 31, 2013, based on criteria established in *Internal Control — Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

**REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM**

To the Board of Directors and Shareholders of
PG&E Corporation and Pacific Gas and Electric Company
San Francisco, California

We have audited the accompanying consolidated balance sheets of PG&E Corporation and subsidiaries (the "Company") and of Pacific Gas and Electric Company and subsidiaries (the "Utility") as of December 31, 2013 and 2012, and the Company's related consolidated statements of income, comprehensive income, equity, and cash flows and the Utility's related consolidated statements of income, comprehensive income, shareholders' equity, and cash flows for each of the three years in the period ended December 31, 2013. These financial statements are the responsibility of the Company's and the Utility's management. Our responsibility is to express an opinion on these financial statements based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audit to obtain reasonable assurance about whether the financial statements are free of material misstatement. An audit includes examining, on a test basis, evidence supporting the amounts and disclosures in the financial statements. An audit also includes assessing the accounting principles used and significant estimates made by management, as well as evaluating the overall financial statement presentation. We believe that our audits provide a reasonable basis for our opinion.

In our opinion, such consolidated financial statements present fairly, in all material respects, the financial position of PG&E Corporation and subsidiaries and of Pacific Gas and Electric Company and subsidiaries as of December 31, 2013 and 2012, and the results of their operations and their cash flows for each of the three years in the period ended December 31, 2013, in conformity with accounting principles generally accepted in the United States of America.

As discussed in Note 14 to the consolidated financial statements, there are three investigative enforcement proceedings pending with the California Public Utilities Commission that may result in material amounts of penalties.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the Company's and the Utility's internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control—Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission and our report dated February 11, 2014 expressed an unqualified opinion on the Company's and the Utility's internal control over financial reporting.

/s/ DELOITTE & TOUCHE LLP

San Francisco, California

February 11, 2014

## REPORT OF INDEPENDENT REGISTERED PUBLIC ACCOUNTING FIRM

To the Board of Directors and Shareholders of
PG&E Corporation and Pacific Gas and Electric Company
San Francisco, California

We have audited the internal control over financial reporting of PG&E Corporation and subsidiaries (the "Company") and of Pacific Gas and Electric Company and subsidiaries (the "Utility") as of December 31, 2013, based on criteria established in *Internal Control — Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission. The Company's and the Utility's management is responsible for maintaining effective internal control over financial reporting and for its assessment of the effectiveness of internal control over financial reporting, included in the accompanying *Management's Report on Internal Control Over Financial Reporting.* Our responsibility is to express an opinion on the Company's and the Utility's internal control over financial reporting based on our audits.

We conducted our audits in accordance with the standards of the Public Company Accounting Oversight Board (United States). Those standards require that we plan and perform the audits to obtain reasonable assurance about whether effective internal control over financial reporting was maintained in all material respects. Our audits included obtaining an understanding of internal control over financial reporting, assessing the risk that a material weakness exists, testing and evaluating the design and operating effectiveness of internal control based on the assessed risk, and performing such other procedures as we considered necessary in the circumstances. We believe that our audits provide a reasonable basis for our opinion.

A company's internal control over financial reporting is a process designed by, or under the supervision of, the company's principal executive and principal financial officers, or persons performing similar functions, and effected by the company's board of directors, management, and other personnel to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles. A company's internal control over financial reporting includes those policies and procedures that (1) pertain to the maintenance of records that, in reasonable detail, accurately and fairly reflect the transactions and dispositions of the assets of the company; (2) provide reasonable assurance that transactions are recorded as necessary to permit preparation of financial statements in accordance with generally accepted accounting principles, and that receipts and expenditures of the company are being made only in accordance with authorizations of management and directors of the company; and (3) provide reasonable assurance regarding prevention or timely detection of unauthorized acquisition, use, or disposition of the company's assets that could have a material effect on the financial statements.

Because of the inherent limitations of internal control over financial reporting, including the possibility of collusion or improper management override of controls, material misstatements due to error or fraud may not be prevented or detected on a timely basis. Also, projections of any evaluation of the effectiveness of the internal control over financial reporting to future periods are subject to the risk that the controls may become inadequate because of changes in conditions, or that the degree of compliance with the policies or procedures may deteriorate.

In our opinion, the Company and the Utility maintained, in all material respects, effective internal control over financial reporting as of December 31, 2013, based on the criteria established in *Internal Control — Integrated Framework (1992)* issued by the Committee of Sponsoring Organizations of the Treadway Commission.

We have also audited, in accordance with the standards of the Public Company Accounting Oversight Board (United States), the consolidated financial statements as of and for the year ended December 31, 2013 of the Company and the Utility and our report dated February 11, 2014 expressed an unqualified opinion on those financial statements and includes an explanatory paragraph relating to three investigative enforcement proceedings pending with the California Public Utilities Commission that may result in material amounts of penalties.

CERTIFICATION OF PRINCIPAL EXECUTIVE OFFICER
PURSUANT TO SECURITIES AND EXCHANGE COMMISSION RULE 13a-14(a)

I, Anthony F. Earley, Jr., certify that:

1. I have reviewed this Annual Report on Form 10-K for the year ended December 31, 2013 of PG&E Corporation;

2. Based on my knowledge, this report does not contain any untrue statement of a material fact or omit to state a material fact necessary to make the statements made, in light of the circumstances under which such statements were made, not misleading with respect to the period covered by this report;

3. Based on my knowledge, the financial statements, and other financial information included in this report, fairly present in all material respects the financial condition, results of operations and cash flows of the registrant as of, and for, the periods presented in this report;

4. The registrant's other certifying officer and I are responsible for establishing and maintaining disclosure controls and procedures (as defined in Exchange Act Rules 13a-15(e) and 15d-15(e)) and internal control over financial reporting (as defined in Exchange Act Rules 13a-15(f) and 15d-15(f)) for the registrant and have:

   a. Designed such disclosure controls and procedures, or caused such disclosure controls and procedures to be designed under our supervision, to ensure that material information relating to the registrant, including its consolidated subsidiaries, is made known to us by others within those entities, particularly during the period in which this report is being prepared;

   b. Designed such internal control over financial reporting, or caused such internal control over financial reporting to be designed under our supervision, to provide reasonable assurance regarding the reliability of financial reporting and the preparation of financial statements for external purposes in accordance with generally accepted accounting principles;

   c. Evaluated the effectiveness of the registrant's disclosure controls and procedures and presented in this report our conclusions about the effectiveness of the disclosure controls and procedures, as of the end of the period covered by this report based on such evaluation; and

   d. Disclosed in this report any change in the registrant's internal control over financial reporting that occurred during the registrant's most recent fiscal quarter (the registrant's fourth quarter in the case of an annual report) that has materially affected, or is reasonably likely to materially affect, the registrant's internal control over financial reporting; and

5. The registrant's other certifying officer and I have disclosed, based on our most recent evaluation of internal control over financial reporting, to the registrant's auditors and the audit committee of registrant's board of directors (or persons performing the equivalent functions):

   a. All significant deficiencies and material weaknesses in the design or operation of internal control over financial reporting which are reasonably likely to adversely affect the registrant's ability to record, process, summarize and report financial information; and

   b. Any fraud, whether or not material, that involves management or other employees who have a significant role in the registrant's internal control over financial reporting.

**UNITS OF MEASUREMENT**

| | | |
|---|---|---|
| 1 Kilowatt (kW) | = | One thousand watts |
| 1 Kilowatt-Hour (kWh) | = | One kilowatt continuously for one hour |
| 1 Megawatt (MW) | = | One thousand kilowatts |
| 1 Megawatt-Hour (MWh) | = | One megawatt continuously for one hour |
| 1 Gigawatt (GW) | = | One million kilowatts |
| 1 Gigawatt-Hour (GWh) | = | One gigawatt continuously for one hour |
| 1 Kilovolt (kV) | = | One thousand volts |
| 1 MVA | = | One megavolt ampere |
| 1 Mcf | = | One thousand cubic feet |
| 1 MMcf | = | One million cubic feet |
| 1 Bcf | = | One billion cubic feet |
| 1 MDth | = | One thousand decatherms |

## GLOSSARY

The following terms and abbreviations appearing in the text of this report have the meanings indicated below.

| | |
|---|---|
| 2014 Annual Report | PG&E Corporation's and Pacific Gas and Electric Company's combined Annual Report on Form 10-K for the year ended December 31, 2014, including the information incorporated by reference into the report |
| AB | Assembly Bill |
| AFUDC | allowance for funds used during construction |
| ALJ | administrative law judge |
| ARO | asset retirement obligation |
| CAISO | California Independent System Operator |
| CARB | California Air Resources Board |
| CCA | Community Choice Aggregator |
| Central Coast Board | Central Coast Regional Water Quality Control Board |
| CPUC | California Public Utilities Commission |
| CRRs | congestion revenue rights |
| DOE | Department of Energy |
| EPA | Environmental Protection Agency |
| EPS | earnings per common share |
| EV | electric vehicle |
| FERC | Federal Energy Regulatory Commission |
| GAAP | U.S. Generally Accepted Accounting Principles |
| GHG | greenhouse gas |
| GRC | general rate case |
| GT&S | gas transmission and storage |
| IRS | Internal Revenue Service |
| LTIP | long term incentive plan |
| MD&A | Management's Discussion and Analysis of Financial Condition and Results of Operations |
| NEIL | Nuclear Electric Insurance Limited |
| NRC | Nuclear Regulatory Commission |
| NTSB | National Transportation Safety Board |
| ORA | Office of Ratepayer Advocates |
| PSEP | pipeline safety enhancement plan |
| QF | Qualifying facility |
| Regional Board | California Regional Water Quality Control Board, Lahontan Region |
| REITS | Global real estate investment trust |
| ROE | return on equity |
| RPS | renewable portfolio standard |
| SEC | U.S. Securities and Exchange Commission |
| SED | Safety and Enforcement Division of the CPUC, formerly known as the Consumer Protection and Safety Division or the CPSD |
| TO | transmission owner |
| TURN | The Utility Reform Network |
| Utility | Pacific Gas and Electric Company |
| VIE(s) | variable interest entity(ies) |
| Water Board | California State Water Resources Control Board |

## PART I

## ITEM 1. BUSINESS

PG&E Corporation, incorporated in California in 1995, is a holding company whose primary operating subsidiary is Pacific Gas and Electric Company, a public utility operating in northern and central California. The Utility was incorporated in California in 1905. PG&E Corporation became the holding company of the Utility and its subsidiaries in 1997. The Utility generates revenues mainly through the sale and delivery of electricity and natural gas to customers. At the state level, the Utility is regulated primarily by the CPUC. At the federal level, the Utility is subject to the jurisdiction of the FERC and the NRC. PG&E Corporation's and the Utility's operating revenues, income, and total assets can be found in Item 6. Selected Financial Data.

The principal executive offices of PG&E Corporation and the Utility are located at 77 Beale Street, P.O. Box 770000, San Francisco, California 94177. PG&E Corporation's telephone number is (415) 973-1000 and the Utility's telephone number is (415) 973-7000.

At December 31, 2014, PG&E Corporation and its subsidiaries had 22,581 employees, including 22,569 employees of the Utility. Of the Utility's regular employees, 13,649 are covered by collective bargaining agreements with the local chapters of three labor unions: the International Brotherhood of Electrical Workers ("IBEW"); the Engineers and Scientists of California ("ESC"); and the Service Employees International Union ("SEIU"). The two agreements with IBEW, and the single agreement with ESC, will expire on December 31, 2015. The SEIU collective bargaining agreement will expire on July 31, 2015.

This is a combined Annual Report on Form 10-K for PG&E Corporation and the Utility. PG&E Corporation's and the Utility's Annual Reports on Form 10-K, Quarterly Reports on Form 10-Q, Current Reports on Form 8-K, and proxy statements, are available free of charge on both PG&E Corporation's website, *www.pgecorp.com*, and the Utility's website, *www.pge.com*, as promptly as practicable after they are filed with, or furnished to, the SEC. The information contained on these websites is not part of this or any other report that PG&E Corporation and the Utility files with, or furnishes to, the SEC.

This Annual Report on Form 10-K contains forward-looking statements that are necessarily subject to various risks and uncertainties. For a discussion of the significant risks that could affect the outcome of these forward-looking statements and PG&E Corporation's and the Utility's future financial condition and results of operations, see "Item 1A. Risk Factors" and the section entitled "Cautionary Language Regarding Forward-Looking Statements" in Item 7. MD&A. In particular, PG&E Corporation's and the Utility's financial results are expected to be materially affected by the final outcome of the CPUC's pending investigative enforcement proceedings against the Utility. These investigations relate to (1) the Utility's safety recordkeeping for its natural gas transmission system, (2) the Utility's operation of its natural gas transmission pipeline system in or near locations of higher population density, and (3) the Utility's pipeline installation, integrity management, recordkeeping and other operational practices, and other events or courses of conduct, that could have led to or contributed to the pipeline accident that occurred in San Bruno, California on September 9, 2010. PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows have been materially affected by the costs the Utility has incurred related to shareholder funded safety work, the ongoing regulatory investigations, and civil lawsuits that commenced following the San Bruno accident. In addition, PG&E Corporation's and the Utility's financial results could be materially affected by the outcome of the federal criminal prosecution of the Utility and the other enforcement matters discussed in "Enforcement and Litigation Matters" in Item 7. MD&A.

### Regulatory Environment

The Utility's business is subject to a complex set of energy, environmental and other laws, regulations, and regulatory proceedings at the federal, state, and local levels. This section and the "Ratemaking Mechanisms" section below summarize some of the more significant laws, regulations, and regulatory proceedings affecting the Utility. See "Enforcement and Litigation Matters" and "Ratemaking and Other Regulatory Proceedings" in Item 7. MD&A for discussion of specific pending regulatory matters that are expected to materially affect PG&E Corporation and the Utility.

PG&E Corporation is a "public utility holding company" as defined under the Public Utility Holding Company Act of 2005 and is subject to regulatory oversight by the FERC. PG&E Corporation and its subsidiaries are exempt from all requirements of the Public Utility Holding Company Act of 2005 other than the obligation to provide access to their books and records to the FERC and the CPUC for ratemaking purposes.

*The California Public Utilities Commission*

The CPUC consists of five members appointed by the Governor of California and confirmed by the California State Senate for staggered six-year terms. The CPUC has jurisdiction over the rates and terms and conditions of service for the Utility's electricity and natural gas distribution operations, electricity generation, and natural gas transmission and storage services. The CPUC also has jurisdiction over the Utility's issuances of securities, dispositions of utility assets and facilities, energy purchases on behalf of the Utility's electricity and natural gas retail customers, rates of return, rates of depreciation, oversight of nuclear decommissioning, and aspects of the siting of facilities used in providing electric and natural gas utility service.

The California Legislature also directs the CPUC to implement state laws and policies, such as the laws relating to increasing renewable energy resources, the development and widespread deployment of distributed generation and self-generation resources, the reduction of GHG emissions, and the development of energy storage technologies and facilities. In addition, the CPUC is responsible for approving funding and administration of state-mandated public purpose programs such as energy efficiency and other customer programs.

The CPUC enforces state laws that set forth safety requirements pertaining to the design, construction, testing, operation, and maintenance of utility electric and gas facilities. The CPUC also has authority to enforce compliance with certain federal regulations related to the safety of natural gas facilities. The CPUC has adopted a gas safety enforcement program and authorized the SED to issue citations and impose fines for violations of certain state and federal regulations that relate to the safety of natural gas facilities and operating practices. (See "Enforcement and Litigation Matters" in Item 7. MD&A for information about the presiding officer decisions issued in the three CPUC investigative enforcement proceedings pending against the Utility and SED's enforcement actions taken against the Utility.) In December 2014, the CPUC also adopted an interim electric safety enforcement program that became effective January 1, 2015. (On January 7, 2015, the Utility requested that the CPUC reconsider this decision.) Under both the gas and electric programs, the SED can impose fines up to $50,000 per violation, per day. The CPUC is expected to review both safety programs during 2015 to determine whether any further changes are needed.

In addition, the CPUC conducts audits and reviews of the Utility's accounting, performance and compliance with regulatory guidelines, as well as investigations into various matters, such as deregulation, competition, and the environment, in order to determine its future policies. The CPUC has imposed various conditions that govern the relationship between the Utility and PG&E Corporation and other affiliates, including financial conditions that require PG&E Corporation's Board of Directors to give first priority to the capital requirements of the Utility, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner. (For more information, see "Liquidity and Financial Resources" in Item 7. MD&A and Item 1A. Risk Factors.)

*The Federal Energy Regulatory Commission and the California Independent System Operator*

The FERC has jurisdiction over the Utility's electricity transmission revenue requirements and rates, the licensing of substantially all of the Utility's hydroelectric generation facilities, and the interstate sale and transportation of natural gas. The FERC regulates interconnections of transmission systems with other electric systems and generation facilities, tariffs and conditions of service of regional transmission organizations and the terms and rates of wholesale electricity sales. The FERC also is charged with adopting and enforcing mandatory standards governing the reliability of the nation's electricity transmission grid, including standards to protect the nation's bulk power system against potential disruptions from cyber and physical security breaches. The FERC has authority to impose fines of up to $1 million per day for violation of certain federal statutes and regulations.

The CAISO is the FERC-approved regional transmission organization for the Utility's service territory. The CAISO controls the operation of the transmission system in California and provides open access transmission service on a nondiscriminatory basis. The CAISO also is responsible for planning transmission system additions, ensuring the maintenance of adequate reserves of generation capacity, and ensuring that the reliability of the transmission system is maintained.

*The Nuclear Regulatory Commission*

The NRC oversees the licensing, construction, operation and decommissioning of nuclear facilities, including the Utility's two nuclear generating units at Diablo Canyon and the Utility's retired nuclear generating unit at Humboldt Bay. (See "Electric Generation Resources" below.) NRC regulations require extensive monitoring and review of the safety, radiological, seismic, environmental, and security aspects of these facilities. In the event of non-compliance, the NRC has the authority to impose fines or to force a shutdown of a nuclear plant, or both. NRC safety and security requirements have, in the past, necessitated substantial capital expenditures at Diablo Canyon, and substantial capital expenditures could be required in the future.

### *Other Regulation*

The California Energy Resources Conservation and Development Commission, commonly called the CEC, is the state's primary energy policy and planning agency. The CEC is responsible for licensing all thermal power plants over 50 MW within California. The CEC also is responsible for forecasts of future energy needs used by the CPUC in determining the adequacy of the utilities' electricity procurement plans.

The CARB is the state agency charged with setting and monitoring GHG and other emission limits. The CARB also is responsible for adopting and enforcing regulations to implement state law requirements to gradually reduce GHG emissions in California to 1990 levels by 2020. (See "Environmental Regulation — Air Quality and Climate Change" below.)

In addition, the Utility obtains permits, authorizations, and licenses in connection with the construction and operation of the Utility's generation facilities, electricity transmission lines, natural gas transportation pipelines, and gas compressor station facilities. The Utility also periodically obtains permits, authorizations, and licenses in connection with distribution of electricity and natural gas that grant the Utility rights to occupy and/or use public property for the operation of the Utility's business and to conduct certain related operations. The Utility has franchise agreements with approximately 300 cities and counties that permit the Utility to install, operate, and maintain the Utility's electric and natural gas facilities in the public streets and roads. In exchange for the right to use public streets and roads, the Utility pays annual fees to the cities and counties. In most cases, the Utility's franchise agreements are for an indeterminate term, with no expiration date.

## Ratemaking Mechanisms

The Utility's rates for electricity and natural gas utility services are set at levels that are intended to allow the Utility to recover its costs of providing service including a return on invested capital ("cost-of-service ratemaking"). Before setting rates, the CPUC and the FERC conduct various proceedings to determine the annual amount that the Utility will be authorized to collect from its customers ("revenue requirements"). The Utility's revenue requirements consist primarily of a base amount set to enable the Utility to recover its reasonable operating expenses (maintenance, administration and general expenses) and capital costs (depreciation, tax, and financing expenses). In addition, the CPUC authorizes the Utility to collect revenues to recover costs that it is allowed to "pass-through" to customers, including its costs to procure electricity, natural gas and nuclear fuel, to administer public purpose and customer programs, and to decommission its nuclear facilities.

The Utility's rate of return on electric transmission assets is determined in the FERC TO proceedings. The authorized rate of return on all other assets is set in the CPUC's cost of capital proceeding. Other than its electric transmission and certain gas transmission and storage revenues, the Utility's base revenues are "decoupled" from its sales volume. Regulatory balancing accounts, or revenue adjustment mechanisms, ensure that the Utility will fully collect its authorized base revenue requirements. The Utility's earnings primarily depend on its ability to manage its base operating and capital costs (referred to as "Utility Revenues and Costs that Impact Earnings" in Item 7. MD&A) within its authorized base revenue requirements.

To develop retail rates, authorized revenue requirements are allocated among customer classes which are mainly residential, commercial, industrial, and agricultural. Rate changes become effective prospectively on or after the date of CPUC or FERC decisions.

California AB 327, which became effective on January 1, 2014, repealed prior law that restricted the CPUC's ability to change residential electric rates and to reduce the level of rate assistance for certain low-income customers. AB 327 also authorized the CPUC to approve fixed charges to be collected from residential customers. In 2012, the CPUC opened a rulemaking proceeding to examine residential rate design in California that, consistent with AB 327, allows the CPUC to simplify the rate structure to bring marginal rates closer to reflecting the Utility's actual costs. In February 2014, as ordered by the CPUC, the Utility submitted a long-term residential rate reform plan that proposes a fixed customer charge, gradual flattening of the tiered rate structure, and an optional time-of-use rate. The CPUC is expected to issue a final decision by the summer of 2015.

AB 327 also requires the CPUC to develop a new structure for net energy metering by December 31, 2015, that must be implemented no later than July 1, 2017. California's net energy metering program currently allows customers installing renewable distributed generation to receive bill credits for power delivered to the grid at their full retail rate. Increasing levels of self-generation of electricity by customers, coupled with net metering and retail rates that do not reflect the Utility's cost structure, has shifted costs to the remaining customers. AB 327 gives the CPUC new authority to reduce the cost shift associated with renewable distributed generation through residential rate and net energy metering reform. In July 2014, the CPUC began a rulemaking proceeding to develop a successor to the existing net energy metering program to comply with the requirements of AB 327. The CPUC is expected to issue a proposed decision in the fall of 2015.

From time to time, the CPUC may use incentive ratemaking mechanisms that provide the Utility an opportunity to earn additional revenues. For example, the Utility has earned incentives for the successful implementation of energy efficiency programs. (See "Results of Operations" in Item 7. MD&A.)

***Base Revenues***

*General Rate Cases*

The GRC is the primary proceeding in which the CPUC determines the amount of base revenue requirements that the Utility is authorized to collect from customers to recover the Utility's anticipated costs, including return on rate base, related to its electricity and natural gas distribution and Utility owned electricity generation operations. The CPUC generally conducts a GRC every three years. The CPUC approves the annual revenue requirements for the first year (or "test year") of the GRC period and typically authorizes the Utility to receive annual increases (known as "attrition adjustments") in revenue requirements for the subsequent years of the GRC period. Attrition rate adjustments are generally provided for cost increases related to inflation and increases in invested capital. Parties in the Utility's GRC include the ORA and TURN, who generally represent the overall interests of residential customers, as well as a myriad of other intervenors who represent residential and other customer interests.

On August 14, 2014, the CPUC issued a decision in the Utility's 2014 GRC, authorizing the Utility to collect a total 2014 revenue requirement of approximately $7.1 billion to recover anticipated costs associated with electric generation, as well as electric and natural gas distribution (See "Results of Operations" in Item 7. MD&A.) The CPUC also authorized attrition increases of $324 million for 2015 and $371 million for 2016.

On December 9, 2014, the CPUC issued a decision adopting a risk-based decision-making framework for the CPUC to use in evaluating future major rate cases. The CPUC ordered the utilities to file an application on May 1, 2015, to initiate a new proceeding called the Safety Model Assessment Proceeding in which the CPUC will review the models the utilities use to assess and prioritize risks. After this proceeding concludes, each utility would file an application to initiate the first phase of their next GRC. In this phase, known as the Risk Assessment Mitigation Phase, the CPUC will examine the utility's assessment of its key risks and its proposed programs for mitigating those risks.

*Natural Gas Transmission and Storage Rate Cases*

The CPUC determines the Utility's authorized revenue requirements and rates for its natural gas transmission and storage services in the GT&S rate case. In December 2013, the Utility filed its 2015 GT&S rate case application (covering 2015 through 2017) requesting the CPUC approve a total annual revenue requirement of $1.29 billion for anticipated costs of providing natural gas transmission and storage services beginning on January 1, 2015. See "Ratemaking and Other Regulatory Proceedings – 2015 GT&S Rate Case" in Item 7. MD&A for additional information.

*Cost of Capital Proceedings*

The CPUC periodically conducts a cost of capital proceeding to authorize the Utility's capital structure and rates of return for its electric generation, electric and natural gas distribution, and natural gas transmission and storage rate base. The CPUC has authorized the Utility's capital structure through 2016, consisting of 52% common equity, 47% long-term debt, and 1% preferred stock. The CPUC also authorized the Utility to earn a 10.40% ROE effective January 1, 2013, compared to the 11.35% previously authorized. The Utility's ROE can be automatically adjusted if the utility bond index changes by certain thresholds on an annual basis. The index changes to date have not exceeded the threshold so the 2015 ROE has remained at 10.40%. The Utility's next cost of capital application is due in April 2016.

*Electricity Transmission Owner Rate Cases*

The FERC determines the amount of authorized revenue requirement, including rate of return on electric transmission assets, that the Utility may collect in rates in the TO tariff rate case. The Utility generally files a TO tariff rate case every year. The FERC typically authorizes the Utility to charge new rates based on the requested revenue requirement, subject to refund, before the FERC has issued a final decision. These FERC-approved rates are included by the CPUC in the Utility's retail electric rates and are collected from retail electric customers. (See "Ratemaking and Other Regulatory Proceedings – FERC Transmission Owner Rate Cases" in Item 7. MD&A.) The Utility also recovers revenue requirements for its wholesale electric transmission costs through charges collected under specific contracts with wholesale transmission customers that the Utility entered into before the CAISO began its operations in 1998. These wholesale customers are charged individualized rates based on the terms of their contracts.

***Revenues to Recover Energy Procurement and Other Pass-Through Costs***

*Electricity Procurement Costs*

California investor-owned electric utilities are responsible for procuring electricity required to meet customer demand, plus applicable reserve margins, that are not satisfied from their own generation facilities and existing electricity contracts. The utilities are responsible for scheduling and bidding electric generation resources, including electricity procured from third parties or the wholesale market, to meet customer demand according to which resources are the least expensive (i.e., using the principles of "least-cost dispatch"). In addition, the utilities are required to obtain CPUC approval of their procurement plans based on long-term demand forecasts. In January 2012, the CPUC approved the Utility's procurement plan (covering 2012 through 2020).

California law allows electric utilities to recover the costs incurred in compliance with their CPUC-approved electricity procurement plans without further after-the-fact reasonableness review. Costs associated with electricity purchases may be disallowed if they are not in compliance with the CPUC-approved plan or if the utility failed to follow the principles of least-cost dispatch. The Utility recovers its electricity procurement costs annually through the energy resource recovery account ("ERRA"). (See Note 3 of the Notes to the Consolidated Financial Statements in Item 8.) Each year, the CPUC reviews the Utility's forecasted procurement costs related to power purchase agreements, derivative instruments, GHG costs, and generation fuel expense and approves a forecasted revenue requirement. The CPUC may adjust a utility's retail electricity rates more frequently if the forecasted aggregate over-collections or under-collections in the ERRA exceed five percent of its prior year electricity procurement revenues. The CPUC performs an annual compliance review of the transactions recorded in the ERRA.

The CPUC has approved various power purchase agreements that the Utility has entered into with third parties in accordance with the Utility's CPUC-approved procurement plan, the renewable energy mandate, and resource adequacy requirements. See "Electric Utility Operations – Electricity Resources" below as well as Note 14 of the Notes to the Consolidated Financial Statements in Item 8 for additional information.

*Natural Gas Procurement and Transportation Costs*

The Utility sets the natural gas procurement rate for small commercial and residential customers (referred to as "core" customers) monthly, based on the forecasted costs of natural gas, core pipeline capacity and storage costs. The Utility recovers the cost of gas purchased on behalf of core customers as well as the cost of derivative instruments through its retail gas rates subject to limits as set forth in its Core Procurement Incentive Mechanism ("CPIM"). The Utility reflects the difference between actual natural gas purchase costs and forecasted natural gas purchase costs in several natural gas balancing accounts, with under-collections and over-collections taken into account in subsequent monthly rates. This is accomplished through monthly advice letters that are effective upon filing. The Utility recovers the cost of gas used in generation facilities as a cost of electricity that is recovered annually through retail electricity rates.

The CPIM protects the Utility against after-the-fact reasonableness reviews of these gas procurement costs. Under the CPIM, the Utility's natural gas purchase costs for a fixed 12-month period are compared to an aggregate market-based benchmark based on a weighted average of published monthly and daily natural gas price indices at the points where the Utility typically purchases natural gas. Costs that fall within a tolerance band, which is 99% to 102% of the commodity benchmark, are considered reasonable and are fully recovered in customers' rates. One-half of the costs above 102% of the benchmark are recoverable in customers' rates, and the Utility's customers receive in their rates 80% of any savings resulting from the Utility's cost of natural gas that is less than 99% of the benchmark. The Utility retains the remaining amount of savings as incentive revenues, subject to a cap equal to 1.5% of total natural gas commodity costs. While this incentive mechanism remains in place, changes in the price of natural gas, consistent with the market-based benchmark, are not expected to materially impact net income.

The Utility incurs transportation costs under various agreements with interstate and Canadian third-party transportation service providers. These providers transport natural gas from the points at which the Utility takes delivery of natural gas (typically in Canada, the U.S. Rocky Mountains, and the southwestern United States) to the points at which the Utility's natural gas transportation system begins. These agreements are governed by FERC-approved tariffs that detail rates, rules, and terms of service for the provision of natural gas transportation services to the Utility on interstate and Canadian pipelines. United States tariffs are approved for each pipeline for service to all of its shippers, including the Utility, by the FERC in a FERC ratemaking review process, and the applicable Canadian tariffs are approved by the Alberta Utilities Commission and the National Energy Board. The transportation costs the Utility incurs under these agreements are recovered through CPUC-approved rates as core natural gas procurement costs or as a cost of electricity.

*Costs Associated with Public Purpose and Customer Programs*

The CPUC authorizes the Utility to recover the costs of various public purpose and other customer programs through the collection of rates from most Utility customers. These programs relate to energy efficiency, demand response, distributed generation, energy research and development, and other matters. Additionally, the CPUC has authorized the Utility to provide a discount rate for low-income customers, known as California Alternate Rates for Energy ("CARE"), which is subsidized by the Utility's other customers.

*Nuclear Decommissioning Costs*

The Utility's nuclear power facilities consist of two units at Diablo Canyon and the retired facility at Humboldt Bay. Nuclear decommissioning requires the safe removal of nuclear facilities from service and the reduction of residual radioactivity to a level that permits termination of the NRC license and release of the property for unrestricted use. The Utility files an application with the CPUC every three years requesting approval of the Utility's estimated decommissioning costs and authorization to recover the estimated costs through rates. Nuclear decommissioning charges collected through rates are held in nuclear decommissioning trusts to be used for the eventual decommissioning of each nuclear unit.

**Electric Utility Operations**

The Utility generates electricity and provides electricity transmission and distribution services throughout its service territory in northern and central California to residential, commercial, industrial, and agricultural customers. The Utility provides "bundled" services (i.e., electricity, transmission and distribution services) to most customers in its service territory. Customers also can obtain electricity from alternative providers such as municipalities or CCAs, as well as from self-generation resources, such as rooftop solar installations.

During 2014, the Utility continued to make improvements to its electric transmission and distribution systems to accommodate the integration of new renewable energy resources, distributed generation resources, and energy storage facilities, and to help create a platform for the development of new Smart Grid technologies. The Utility plans to continue making similar improvements in 2015. In December 2014, the CPUC issued a decision that permits the California investor-owned electric utilities to own EV retail charging equipment in their respective service territories to help meet the state's goal of reducing GHG emissions by promoting cleaner transportation. On February 9, 2015, the Utility filed an application to request that the CPUC approve the Utility's proposal to develop, maintain, and operate an EV-charging infrastructure in its service territory. (For more information about the Utility's application, see "Ratemaking And Other Regulatory Proceedings" in Item 7. MD&A.)

***Electricity Resources***

The Utility is required to maintain physical generating capacity adequate to meet its customers' demand for electricity ("load"), including peak demand and planning and operating reserves, deliverable to the locations and at times as may be necessary to provide reliable electric service. The Utility is required to dispatch, or schedule all of the electricity resources within its portfolio in the most cost-effective way**.**

The following table shows the percentage of the Utility's total deliveries of electricity to customers in 2014 represented by each major electricity resource, and further discussed below.

Total 2014 Actual Electricity Generated and Procured – 74,547 GWh [(1)]:

| | Percent of Bundled Retail Sales | |
|---|---|---|
| Owned Generation Facilities | | |
| Nuclear | 20.6 % | |
| Small Hydroelectric | 0.8 % | |
| Large Hydroelectric | 6.6 % | |
| Fossil fuel-fired | 7.4 % | |
| Solar | 0.4 % | |
| Total | | 35.8 % |
| | | |
| Qualifying Facilities | | |
| Renewable | 3.7 % | |
| Non-Renewable | 8.5 % | |
| Total | | 12.2 % |
| Irrigation Districts and Water Agencies | | |
| Small Hydroelectric | 0.1 % | |
| Large Hydroelectric | 0.8 % | |
| Total | | 0.9 % |
| Other Third-Party Purchase Agreements | | |
| Renewable | 22.0 % | |
| Large Hydroelectric | 0.9 % | |
| Non-Renewable | 6.6 % | |
| Total | | 29.5 % |
| Others, Net [(2)] | | 21.6 % |
| **Total [(3)]** | | **100.0 %** |

[(1)] This amount excludes electricity provided to direct access customers and CCAs who procure their own supplies of electricity.
[(2)] Mainly comprised of net CAISO open market purchases.
[(3)] Non-renewable sources, including nuclear, large hydroelectric, and fossil fuel-fired are offset by transmission and distribution related system losses.

*Renewable Energy Resources*. California law requires load-serving entities, such as the Utility, to gradually increase the amount of renewable energy they deliver to their customers to at least 33% of their total annual retail sales. This program, known as the RPS program, became effective in December 2011, established three multi-year compliance periods that have gradually increasing RPS targets: 2011 through 2013, 2014 through 2016, and 2017 through 2020. After 2020, the RPS compliance periods will be annual.

Renewable generation resources, for purposes of the RPS program, include bioenergy such as biogas and biomass, certain hydroelectric facilities (30 MW or less), wind, solar, and geothermal energy. During 2014, 27% of the Utility's energy deliveries were from renewable energy sources, exceeding the annual RPS target of 23.3%. Approximately 22% of the renewable energy delivered to the Utility's customers was purchased from non-QF third parties. Additional renewable resources were provided by QFs (3.8%), the Utility's small hydroelectric facilities (0.8%), and the Utility's solar facilities (0.5%).

The total 2014 renewable deliveries shown above were comprised of the following:

| Type | GWh | Percent of Bundled Retail Sales |
|---|---|---|
| Biopower | 3,458 | 4.6% |

*Energy Storage.* As required by California law, the CPUC has established initial energy storage procurement targets to be achieved by each load-serving entity, such as the Utility. The Utility has an 80.5 MW of energy storage target to meet its 2014 energy storage plan. In December 2014, the Utility held its first competitive request for two types of proposals: (1) an energy storage agreement with the owner of an energy storage facility that would enable the Utility to offer stored energy into the CAISO market and (2) a purchase and sale agreement under which the counterparty would build a storage facility and transfer the facility to the Utility provided the facility meets certain operational conditions. Offers are due by February 17, 2015. The Utility intends to complete negotiations and execute contracts by October 1, 2015 and to submit the executed contracts for CPUC approval by December 1, 2015.

*Owned Generation Facilities.* At December 31, 2014, the Utility owned the following generation facilities, all located in California, listed by energy source and further described below:

| Generation Type | County Location | Number of Units | Net Operating Capacity (MW) |
|---|---|---|---|
| Nuclear [1]: | | | |
| Diablo Canyon | San Luis Obispo | 2 | 2,240 |
| Hydroelectric [2]: | | | |
| Conventional | 16 counties in northern and central California | 104 | 2,677 |
| Helms pumped storage | Fresno | 3 | 1,212 |
| Fossil fuel-fired: | | | |
| Colusa Generating Station | Colusa | 1 | 657 |
| Gateway Generating Station | Contra Costa | 1 | 580 |
| Humboldt Bay Generating Station | Humboldt | 10 | 163 |
| Fuel Cell: | | | |
| CSU East Bay Fuel Cell | Alameda | 1 | 1 |
| SF State Fuel Cell | San Francisco | 2 | 2 |
| Photovoltaic [3]: | Various | 13 | 152 |
| **Total** | | **137** | **7,684** |

[1] The Utility's Diablo Canyon power plant consists of two nuclear power reactor units, Units 1 and 2. For the year ended December 31, 2014, the Utility's Diablo Canyon power plant achieved an average overall capacity factor of approximately 87%. The ability of the Utility to produce nuclear generation depends on the availability of nuclear fuel. The Utility has entered into various purchase agreements for nuclear fuel that are intended to ensure long-term fuel supply. (See Note 14 to the Consolidated Financial Statements in Item 8.) The Diablo Canyon power plant refueling outages are typically scheduled every 20 months. The average length of a refueling outage over the last five years has been approximately 49.5 days. The actual refueling schedule and outage duration will depend on the scope of the work required for a particular outage and other factors. The NRC operating licenses for the two operating units at Diablo Canyon include various license conditions related to seismic design and safety. The current licenses expire in 2024 and 2025. In November 2009, the Utility filed an application with the NRC to seek the renewal of the licenses, a process which can take several years. After the March 2011 earthquake in Japan that damaged nuclear facilities, the NRC granted the Utility's request to delay processing its renewal application until certain advanced seismic studies of the fault zones in the region surrounding Diablo Canyon were completed. The seismic studies have been completed and in September 2014, the Utility submitted a report to the NRC and the CPUC's Independent Peer Review Panel that confirmed the seismic safety of the plant. The Independent Review Panel is providing comments on the report and the Utility expects its review to be completed within the next six to eight months. (See also "Environmental Matters" and Item 1A. Risk Factors.)

[2] The Utility's hydroelectric system consists of 107 generating units at 67 powerhouses. All of the Utility's powerhouses are licensed by the FERC (except for three small powerhouses not subject to FERC licensing requirements), with license terms between 30 and 50 years.

[3] The Utility's larger operational photovoltaic facilities include the Five Points solar station (15 MW), the Westside solar station (15 MW), the Stroud solar station (20 MW), the Huron solar station (20 MW), the Cantua solar station (20 MW), the Giffen solar station (10 MW), the Gates solar station (20 MW), the West Gates solar station (10 MW) and the Guernsey solar station (20 MW). All of these facilities are located in Fresno County, except for the Guernsey solar station, which is located in Kings County.

*Generation Resources from Third Parties.* The Utility has entered into various agreements to purchase power and electric capacity, including agreements for renewable energy resources, in accordance with its CPUC-approved procurement plan. (See "Ratemaking Mechanisms" above.) For more information regarding the Utility's power purchase agreements, see Note 14 of the Notes to the Consolidated Financial Statements in Item 8.

***Electricity Transmission***

At December 31, 2014, the Utility owned approximately 18,100 circuit miles of interconnected transmission lines operating at voltages ranging from 60 kV to 500 kV. The Utility also operated 91 electric transmission substations with a capacity of approximately 63,400 MVA. The Utility's electric transmission system is interconnected with electric power systems in the

Western Electricity Coordinating Council, which includes many western states, Alberta and British Columbia, and parts of Mexico.

In November 2013, the Utility, MidAmerican Transmission, LLC, and Citizens Energy Corporation were selected by the CAISO to jointly develop a new 230-kV transmission line to address the growing power demand in Fresno, Madera and Kings counties area. The 70-mile line will connect the Utility-owned and -operated Gates and Gregg substations. The new line will help reduce the number and duration of power outages, improve voltage in the area, support economic development, and bolster efforts to integrate clean, renewable energy onto the grid. The transmission line is expected to commence operations by 2022, and could come online earlier.

Throughout 2014, the Utility upgraded several critical substations and re-conductored a number of transmission lines to improve maintenance and system flexibility, reliability and safety. The Utility expects to undertake various additional transmission projects over the next several years to upgrade and expand the capacity of its transmission system to accommodate system load growth, secure access to renewable generation resources, replace aging or obsolete equipment and improve system reliability. The Utility also has taken steps to improve the physical security of its transmission substations and equipment.

***Electricity Distribution***

The Utility's electricity distribution network consists of approximately 141,700 circuit miles of distribution lines (of which approximately 20% are underground and approximately 80% are overhead), 55 transmission switching substations, and 603 distribution substations, with a capacity of approximately 30,200 MVA. The Utility’s distribution network interconnects with its transmission system, primarily at switching and distribution substations, where equipment reduces the high-voltage transmission voltages to lower voltages, ranging from 44 kV to 2.4 kV, suitable for distribution to the Utility’s customers.

These distribution substations serve as the central hubs for the Utility’s electric distribution network. Emanating from each substation are primary and secondary distribution lines connected to local transformers and switching equipment that link distribution lines and provide delivery to end-users. In some cases, the Utility sells electricity from its distribution facilities to entities, such as municipal and other utilities, that resell the electricity. In October 2014, the Utility commenced operations at the first of three new electric distribution control centers. This 24,000-square foot, state-of-the-art facility, located in Fresno, California, will enhance electric reliability and resiliency for the Utility’s customers throughout the Central Valley and will utilize current and future Smart Grid technologies. Additional facilities in Rocklin and Concord, California, are expected to be completed in 2015 and 2016, respectively. These control centers form a key part of the Utility’s efforts to create a smarter, more resilient grid.

In 2014, the Utility replaced approximately 295,000 feet of underground cable, replaced approximately 975,000 feet of overhead wire, and installed or replaced 20 distribution substation transformer banks to improve reliability and provide capacity to accommodate growing demand. The Utility plans to continue performing work to improve the reliability and safety of its electricity distribution operations in 2015.

*Electricity Operating Statistics*

The following table shows certain of the Utility's operating statistics from 2012 to 2014 for electricity sold or delivered, including the classification of revenues by type of service.

| | | 2014 | | 2013 | | 2012 |
|---|---|---|---|---|---|---|
| Customers (average for the year) | | 5,276,025 | | 5,243,216 | | 5,214,170 |
| Deliveries (in GWh) [(1)] | | 86,303 | | 86,513 | | 86,113 |
| Revenues (in millions): | | | | | | |
| Residential | $ | 4,784 | $ | 5,091 | $ | 4,953 |
| Commercial | | 5,141 | | 4,905 | | 4,735 |
| Industrial | | 1,543 | | 1,388 | | 1,408 |
| Agricultural | | 1,172 | | 1,021 | | 901 |
| Public street and highway lighting | | 79 | | 75 | | 79 |
| Other [(2)] | | (172) | | (128) | | (11) |
| Subtotal | | 12,547 | | 12,352 | | 12,065 |
| Regulatory balancing accounts [(3)] | | 1,109 | | 137 | | (51) |
| **Total operating revenues** | **$** | **13,656** | **$** | **12,489** | **$** | **12,014** |
| Selected Statistics: | | | | | | |
| Average annual residential usage (kWh) | | 6,458 | | 6,752 | | 5,961 |
| Average billed revenues per kWh: | | | | | | |
| Residential | $ | 0.1603 | $ | 0.1643 | $ | 0.1594 |
| Commercial | | 0.1585 | | 0.1499 | | 0.1449 |
| Industrial | | 0.0998 | | 0.0928 | | 0.917 |
| Agricultural | | 0.1516 | | 0.1454 | | 0.1458 |
| Net plant investment per customer | $ | 6,339 | $ | 6,002 | $ | 4,919 |

(1) These amounts include electricity provided to direct access customers and CCAs who procure their own supplies of electricity.
(2) This activity is primarily related to a remittance of revenue to the Department of Water Resources ("DWR") (the Utility acts as a billing and collection agent on behalf of the DWR), partially offset by other miscellaneous revenue items.
(3) These amounts represent revenues authorized to be billed. The 2014 activity represents an increase to balancing account receivable primarily related to the adoption of the 2014 GRC.

**Natural Gas Utility Operations**

The Utility provides natural gas transportation services to "core" customers (i.e., small commercial and residential customers) and to "non-core" customers (i.e., industrial, large commercial, and natural gas-fired electric generation facilities) that are connected to the Utility's gas system in its service territory. Core customers can purchase natural gas procurement service (i.e., natural gas supply) from either the Utility or non-utility third-party gas procurement service providers (referred to as core transport agents). When core customers purchase gas supply from a core transport agent, the Utility continues to provide gas delivery, metering and billing services to customers. When the Utility provides both transportation and procurement services, the Utility refers to the combined service as "bundled" natural gas service. Currently, more than 91% of core customers, representing nearly 80% of the annual core market demand, receive bundled natural gas service from the Utility.

The Utility does not provide procurement service to non-core customers, who must purchase their gas supplies from third-party suppliers. The Utility offers backbone gas transmission, gas delivery (local transmission and distribution), and gas storage services as separate and distinct services to its non-core customers. Access to the Utility's backbone gas transmission system is available for all natural gas marketers and shippers, as well as non-core customers. The Utility also delivers gas to off-system customers (i.e., outside of the Utility's service territory) and to third-party natural gas storage customers.

*Natural Gas Supplies*

The Utility can receive natural gas from all the major natural gas basins in western North America, including basins in western Canada, the Rocky Mountains, and the southwestern United States. The Utility also is supplied by natural gas fields in California. The Utility purchases natural gas to serve its core customers directly from producers and marketers in both Canada and the United States. The contract lengths and natural gas sources of the Utility's portfolio of natural gas purchase contracts have fluctuated generally based on market conditions. During 2014, the Utility purchased approximately 269,590 MMcf of natural gas (net of the sale of excess supply of gas). Substantially all this natural gas was purchased under contracts with a term of one year or less. The Utility's largest individual supplier represented approximately 17% of the total natural gas volume the Utility purchased during 2014.

*Natural Gas System Assets*

The Utility owns and operates an integrated natural gas transmission, storage, and distribution system that includes most of northern and central California. At December 31, 2014, the Utility's natural gas system consisted of approximately 42,700 miles of distribution pipelines, over 6,400 miles of backbone and local transmission pipelines, and various storage facilities. The Utility owns and operates eight natural gas compressor stations on its backbone transmission system and one small station on its local transmission system that are used to move gas through the Utility's pipelines. The Utility's backbone transmission system, composed primarily of Lines 300, 400, and 401, is used to transport gas from the Utility's interconnection with interstate pipelines, other local distribution companies, and California gas fields to the Utility's local transmission and distribution systems.

The Utility has firm transportation agreements for delivery of natural gas from western Canada to the United States-Canada border with TransCanada NOVA Gas Transmission, Ltd. and TransCanada Foothills Pipe Lines Ltd., B.C. System. These companies' pipeline systems connect at the border to the pipeline system owned by Gas Transmission Northwest, LLC, which provides natural gas transportation services to a point of interconnection with the Utility's natural gas transportation system on the Oregon-California border near Malin, Oregon. The Utility also has firm transportation agreements with Ruby Pipeline, LLC to transport this gas from the U.S Rocky Mountains to the interconnection point with the Utility's natural gas transportation system in the area of Malin, Oregon, at the California border, and firm transportation agreements with Transwestern Pipeline Company, LLC and El Paso Natural Gas Company to transport this natural gas from supply points in the U.S. Southwest to interconnection points with the Utility's natural gas transportation system in the area of California near Topock, Arizona. The Utility also has a transportation agreement with Kern River Gas Transmission Company to transport gas from the U.S. Rocky Mountains to the interconnection point with the Utility's natural gas system in the area of Daggett, California. For more information regarding the Utility's natural gas transportation agreements, see Note 14 of the Notes to the Consolidated Financial Statements in Item 8.

The Utility owns and operates three underground natural gas storage fields and has a 25% interest in a fourth storage field, all of which are connected to the Utility's transmission system. The Utility owns and operates compressors and other facilities at these storage fields that are used to inject gas into the fields for storage and later withdrawal. In addition, four independent storage operators are interconnected to the Utility's northern California transmission system.

The Utility also owns and operates a 42,000-square-foot control center in San Ramon, California to monitor and control all aspects of its natural gas system across its service area.

During 2014, the Utility completed its system-wide replacement of 847 miles of cast iron natural gas distribution pipeline with plastic pipe. Additionally, the Utility conducted an annual system-wide review of its transmission pipeline class location designations. As part of its distribution integrity management program, during 2014 the Utility completed inspections of approximately 35,000 sewer laterals.

Since work began on the PSEP and other gas transmission work in 2011, the Utility has validated the maximum allowable operating pressure for all of its transmission pipelines through records verification; accomplished four-year goal of strength testing or records validation of 783 miles of transmission pipeline; replaced 127 miles of transmission pipeline; automated 208 valves; and collected and digitized more than 3.8 million pipeline records.

### *Natural Gas Operating Statistics*

The following table shows the Utility's operating statistics from 2012 through 2014 (excluding subsidiaries) for natural gas, including the classification of revenues by type of service.

| | 2014 | 2013 | 2012 |
|---|---|---|---|
| Customers (average for the year) | 4,394,283 | 4,378,797 | 4,353,278 |
| Gas purchased (MMcf) | 202,215 | 240,414 | 247,792 |
| Average price of natural gas purchased | $ 4.09 | $ 3.29 | $ 2.45 |
| Bundled gas sales (MMcf): | | | |
| Residential | 143,514 | 181,775 | 185,376 |
| Commercial | 42,080 | 46,668 | 47,341 |
| **Total Bundled Gas Sales** | **185,594** | **228,443** | **232,717** |
| Revenues (in millions): | | | |
| Bundled gas sales: | | | |
| Residential | $ 1,683 | $ 1,870 | $ 1,852 |
| Commercial | 419 | 395 | 383 |
| Other | 51 | 44 | 66 |
| Bundled gas revenues | 2,153 | 2,309 | 2,301 |
| Transportation service only revenue | 662 | 555 | 499 |
| Subtotal | 2,815 | 2,864 | 2,800 |
| Regulatory balancing accounts | 617 | 240 | 221 |
| **Total operating revenues** | **$ 3,432** | **$ 3,104** | **$ 3,021** |
| Selected Statistics: | | | |
| Average annual residential usage (Mcf) | 34 | 44 | 45 |
| Average billed bundled gas sales revenues per Mcf: | | | |
| Residential | $ 11.72 | $ 10.29 | $ 9.99 |
| Commercial | 9.96 | 8.47 | 8.09 |
| Net plant investment per customer | $ 2,468 | $ 2,234 | $ 1,696 |

## Competition

### *Competition in the Electricity Industry*

California law allows qualifying non-residential customers of investor-owned electric utilities to purchase electricity from energy service providers other than the regulated utilities, (referred to as “direct access”) up to certain annual and overall GWh limits that have been specified for each utility.

The Utility’s customers may, under certain circumstances, obtain power from a CCA instead of from the Utility. California law permits cities and counties and certain other public agencies to generate and/or purchase electricity for their local residents and businesses after they have registered as CCAs and submitted an Implementation Plan to the CPUC. Under these arrangements, the Utility continues to provide transmission, distribution, metering, and billing services to the customers of the CCAs and remains the electricity provider of last resort for those customers. The law provides that a CCA can procure electricity for all of its residents who do not affirmatively elect to continue to receive electricity from the Utility. The Utility is able to recover from each CCA any costs of implementing the program that are reasonably attributable to the CCA, and to recover from all customers any costs of implementing the program not reasonably attributable to a CCA.

In some circumstances, governmental entities such as cities and irrigation districts, which have authority under the state constitution or state statute to provide retail electric service, seek to acquire the Utility’s distribution facilities, either under a consensual transaction, or via eminent domain.

The Utility is also subject to increased competition due to the increasing viability of distributed generation and energy storage. The levels of self-generation of electricity by customers (primarily solar installations) and the use of customer net energy metering, which allows self-generating customers to receive bill credits at the full retail rate, are increasing.

### *Competition in the Natural Gas Industry*

The Utility primarily competes with other natural gas pipeline companies for customers transporting natural gas into the southern California market on the basis of transportation rates, access to competitively priced supplies of natural gas, and the quality and reliability of transportation services. The Utility also competes for storage services with other third-party storage providers, primarily in northern California.

## Environmental Regulation

The Utility's operations are subject to extensive federal, state and local laws and requirements relating to the protection of the environment and the safety and health of the Utility's personnel and the public. These laws and requirements relate to a broad range of activities, including the remediation of hazardous and radioactive substances; the discharge of pollutants into the air, water, and soil; the reporting and reduction of carbon monoxide ($CO_2$) and other GHG emissions; the transportation, handling, storage and disposal of spent nuclear fuel; and the environmental impacts of land use, including endangered species and habitat protection. The penalties for violation of these laws and requirements can be severe and may include significant fines, damages, and criminal or civil sanctions. These laws and requirements also may require the Utility, under certain circumstances, to interrupt or curtail operations. (See Item 1A. Risk Factors.) Generally, the Utility has recovered most of the costs of complying with environmental laws and regulations in the Utility's rates, subject to reasonableness review. Environmental costs associated with the clean-up of most sites that contain hazardous substances are subject to a special ratemaking mechanism described in Note 14: Contingencies—Environmental Remediation Contingencies, of the Notes to the Consolidated Financial Statements in Item 8.

### *Hazardous Waste Compliance and Remediation*

The Utility's facilities are subject to the requirements of the federal Resource Conservation and Recovery Act and the Comprehensive Environmental Response, Compensation and Liability Act of 1980 as amended (CERCLA). The Utility is also subject to the regulations adopted by the EPA, the federal agency responsible for implementing the federal environmental laws. The Utility also must comply with environmental laws and regulations adopted by the State of California and various state and local agencies. These federal and state laws impose strict liability for the release of a hazardous substance on the (1) owner or operator of the site where the release occurred, (2) on companies that disposed of, or arranged for the disposal of, the hazardous substances, and (3) in some cases, their corporate successors. Under CERCLA these persons (known as “potentially responsible parties”) may be jointly and severally liable for the costs of cleaning up the hazardous substances, paying for the harm caused to natural resources, and paying for the costs of required health studies.

The Utility has a comprehensive program in place to comply with these federal, state, and local laws and regulations. Under federal and California laws, the Utility may be responsible for remediation of hazardous substances even if it did not deposit those substances on the site. The Utility's remediation activities are overseen by the California Department of Toxic Substances Control, several California regional water quality control boards, and various other federal, state, and local agencies. The Utility has incurred significant environmental remediation liabilities associated with former manufactured gas plant sites, power plant sites, gas gathering sites, sites where natural gas compressor stations are located, and sites used by the Utility for the storage, recycling, or disposal of potentially hazardous substances. Groundwater at the Utility's Hinkley and Topock natural gas compressor stations contains hexavalent chromium as a result of the Utility's past operating practices. The Utility is responsible for remediating this groundwater contamination and for abating the effects of the contamination on the environment.

For more information about environmental remediation liabilities, see Note 14: Commitments and Contingencies–Environmental Remediation Contingencies, of the Notes to the Consolidated Financial Statements in Item 8.

### *Air Quality and Climate Change*

The Utility's electricity generation plants, natural gas pipeline operations, fleet, and fuel storage tanks are subject to numerous air pollution control laws, including the federal Clean Air Act, as well as state and local statutes. These laws and regulations cover, among other pollutants, those contributing to the formation of ground-level ozone, $CO_2$, sulfur dioxide ($SO_2$), mono-nitrogen oxide ($NO_x$), particulate matter, and other GHG emissions.

In December 2009, the EPA concluded that GHG emissions contribute to climate change and issued a finding that GHG emissions cause or contribute to air pollution that endangers public health and welfare. In May 2014, the United States released its third National Climate Assessment, which stated that the global climate is changing and that impacts related to climate change are already evident in many sectors and are expected to become increasingly disruptive across the nation throughout this century and beyond.

*Federal Regulation*. At the federal level, the EPA is charged with implementation and enforcement of the Clean Air Act. Although there have been several legislative attempts to address climate change through imposition of nationwide regulatory limits on GHG emissions, comprehensive federal legislation has not yet been enacted. In the absence of federal legislative action, the EPA has used its existing authority under the Clean Air Act to address GHG emissions.

In January 2014, the EPA published draft regulations under section 111(b) of the Clean Air Act to control $CO_2$, the most common GHG, from new fossil fuel-fired power plants. While these draft regulations as presently written do not apply to the Utility's power plants, it is possible that the final regulations may affect the design, construction, operation and cost of future fossil fuel-fired power plants. The EPA is expected to issue final regulations in 2015.

In June 2014, the EPA published draft federal regulations under section 111(d) of the Clean Air Act that are designed to reduce $CO_2$ emissions from existing fossil fuel-fired power plants on a national basis by as much as 30% by 2030, compared with 2005 levels. The EPA is expected to issue final regulations in 2015. As proposed, once the EPA has finalized regulations, states have up to two or three years to submit final plans depending on whether they work alone or in partnership with other states, and up to 15 years for full implementation of all emission reduction measures. It is uncertain whether and how these federal regulations will ultimately impact California, since existing state regulation currently requires, among other things, the gradual reduction of state-wide GHG emissions to 1990 levels by 2020. As described below, the Utility expects all costs and revenues associated with the state-wide, comprehensive cap-and-trade program to be passed through to customers.

*State Regulation.* California law requires the gradual reduction of state-wide GHG emissions to 1990 levels by 2020. The CARB has approved various regulations to implement AB 32, including GHG emissions reporting and a state-wide, comprehensive cap-and-trade program that sets gradually declining limits (or "caps") on the amount of GHGs that may be emitted by major GHG emission sources within different sectors of the economy. The cap–and-trade program's first compliance period, which began on January 1, 2013, applied to the electricity generation and large industrial sectors. The next compliance period, which began on January 1, 2015, expanded to include the natural gas and transportation sectors, effectively covering all the economy's major sectors until 2020. The Utility's compliance obligation as a natural gas supplier applies to the GHG emissions attributable to the combustion of natural gas delivered to the Utility's customers other than natural gas delivery customers that are separately regulated as covered entities and have their own compliance obligation. During each year of the program, the CARB issues emission allowances (i.e., the rights to emit GHGs) equal to the amount of GHG emissions allowed for that year. Emitters can obtain allowances from the CARB at quarterly auctions or from third parties or exchanges. Emitters may also satisfy a portion of their compliance obligation through the purchase of offset credits; e.g., credits for GHG reductions achieved by third parties (such as landowners, livestock owners, and farmers) that occur outside of the emitters' facilities through CARB-qualified offset projects such as reforestation or biomass projects. The Utility expects all costs and revenues associated with the GHG cap-and-trade program to be passed through to customers. The California RPS program that requires the utilities to gradually increase the amount of renewable energy delivered to their customers is also expected to help reduce GHG emissions in California.

*Climate Change Mitigation and Adaptation Strategies.* During 2014, the Utility continued its programs to develop strategies to mitigate the impact of the Utility's operations (including customer energy usage) on the environment and to plan for the actions that it will need to take to adapt to the likely impacts of climate change on the Utility's future operations. The Utility regularly reviews the most relevant scientific literature on climate change such as sea level rise, temperature changes, rainfall and runoff patterns, and wildfire risk, to help the Utility identify and evaluate climate change-related risks and develop the necessary adaptation strategies. The Utility also engages with leaders from business, government, academia, and non-profit organizations to share information and plan for the future.

With respect to electric operations, climate scientists project that, sometime in the next several decades, climate change will lead to increased electricity demand due to more extreme, persistent, and frequent hot weather. The Utility believes its strategies to reduce GHG emissions—through energy efficiency and demand response programs, infrastructure improvements, and the use of renewable energy and energy storage—are effective strategies for adapting to the expected increase in demand for electricity. The Utility's vegetation management activities also reduce the risk of wildfire impacts on electric and gas facilities. Over the long-term, the Utility also faces the risk of higher flooding potential at coastal and low elevation facilities due to sea level rise.

Climate scientists also predict that climate change will result in significant reductions in snowpack in parts of the Sierra Nevada Mountains. This could, in turn, affect the Utility's hydroelectric generation. To plan for this potential change, the Utility is engaging with state and local stakeholders and also adopting strategies such as maintaining higher winter carryover reservoir storage levels, reducing discretionary reservoir water releases, and developing new modeling tools for forecasting runoff.

With respect to natural gas operations, both safety-related pipeline strength testing and normal pipeline maintenance and operations release the GHG methane into the atmosphere. The Utility has taken steps to reduce the release of methane by implementing techniques including drafting and cross-compression, which reduce the pressure and volume of natural gas within pipelines prior to venting. In addition, the Utility continues to replace a substantial portion of its older cast iron, steel and plastic distribution pipelines and steel gas transmission mains with new pipe, which reduces leakage.

***Emissions Data***

PG&E Corporation and the Utility track and report their annual environmental performance results across a broad spectrum of areas. The Utility reports its GHG emissions to the CARB and the EPA on a mandatory basis. On a voluntary basis, the Utility reports a more comprehensive emissions inventory to The Climate Registry, a non-profit organization. The Utility's third-party verified voluntary GHG inventory reported to The Climate Registry for 2013 totaled more than 57 million metric tonnes of $CO_2$-e, two-thirds of which came from natural gas use. The following table shows the 2013 GHG emissions data the Utility reported to the CARB under AB 32. PG&E Corporation and the Utility publish additional GHG emissions data in their annual Corporate Responsibility and Sustainability Report.

| Source | Amount (metric tonnes $CO_2$ – equivalent) |
|---|---|
| Fossil Fuel-Fired Plants [1] | 2,382,463 |
| Natural Gas Compressor Stations [2] | 325,701 |
| Distribution Fugitive Natural Gas Emissions | 213,858 |
| Customer Natural Gas Use [3] | 43,506,493 |

[1] Includes nitrous oxide and methane emissions from the Utility's generating stations.
[2] Includes compressor stations emitting more than 25,000 metric tonnes of $CO_2$-e annually.
[3] Includes emissions from the combustion of natural gas delivered to all entities on the Utility's distribution system, including entities that have their own compliance obligation under AB 32. The Utility's compliance obligation under AB 32 (discussed above under "State Regulation") applies to the combustion of natural gas delivered to customers other than customers that have their own compliance obligation. Excluding the GHG emissions of entities that have their own compliance obligation, the Utility's GHG emissions for 2013 were approximately 19 million metric tonnes, as calculated by the CARB.

The following table shows the Utility's third-party-verified $CO_2$ emissions rate associated with the electricity delivered to customers in 2013 as compared to the national and California averages for electric utilities:

| | Amount (Pounds of $CO_2$ per MWh) |
|---|---|
| U.S. Average [1] | 1,232 |
| California's Average [1] | 611 |
| Pacific Gas and Electric Company [2] | 427 |

[1] Source: EPA eGRID.
[2] Since the Utility purchases a portion of its electricity from the wholesale market, the Utility is not able to track some of its delivered electricity back to a specific generator. Therefore, there is some unavoidable uncertainty in the Utility's emissions rate.

### *Air Emissions Data for Utility-Owned Generation*

In addition to GHG emissions data provided above, the table below sets forth information about the air emissions from the Utility's owned generation facilities. The Utility's owned generation (primarily nuclear and hydroelectric facilities) comprised approximately 36.4% of the Utility's delivered electricity in 2013. PG&E Corporation and the Utility also publish air emissions data in their annual Corporate Responsibility and Sustainability Report.

| | 2013 | 2012 |
|---|---|---|
| Total $NO_x$ Emissions (tons) | 153 | 158 |
| $NO_x$ Emissions Rate (pounds/MWh) | 0.01 | 0.01 |
| Total $SO_2$ Emissions (tons) | 17 | 15 |
| $SO_2$ Emissions Rate (pounds/MWh) | 0.0011 | 0.0009 |

### *Water Quality*

On May 19, 2014, the EPA issued final regulations to implement the requirements of the federal Clean Water Act that require cooling water intake structures at electric power plants, such as the nuclear generation facilities at Diablo Canyon, to reflect the best technology available to minimize adverse environmental impacts. The federal regulations provide more flexibility in complying with some of the Clean Water Act's requirements. Various industry and environmental groups have challenged the federal regulations in proceedings pending in the U.S. Court of Appeals for the Fourth Circuit. California's once-through cooling policy discussed below is considered to be at least as stringent as the new federal regulations. Therefore, California's implementation process for the state policy will likely continue without any significant change.

At the state level, the California Water Board has adopted a policy on once-through cooling that generally requires the installation of cooling towers or other significant measures to reduce the impact on marine life from existing power generation facilities in California by at least 85%. The California Water Board has appointed a committee to evaluate the feasibility and cost of using alternative technologies to achieve compliance at Diablo Canyon. The committee's consultant submitted its final report to the California Water Board in September 2014 and the board is expected to issue a final decision regarding Diablo Canyon's compliance with the state policy in 2015. If the California Water Board requires the installation of cooling towers that the Utility believes are not technically or economically feasible, the Utility may be forced to cease operations at Diablo Canyon and may incur a material charge. Even if the Utility is not required to install cooling towers, it could incur significant costs to comply with alternative compliances measures or to make payments to support various environmental mitigation projects. The Utility would seek to recover such costs in rates. The Utility's Diablo Canyon operations must be in compliance with the California Water Board's policy by December 31, 2024.

The final requirements of the federal and state cooling water policies could affect future negotiations between the Central Coast Board and the Utility regarding the status of the 2003 settlement agreement. (See "Diablo Canyon Power Plant" in Item 3. Legal Proceedings below.)

### *Nuclear Fuel Disposal*

Under the Nuclear Waste Policy Act of 1982, the DOE and electric utilities with commercial nuclear power plants were authorized to enter into contracts under which the DOE would be required to dispose of the utilities' spent nuclear fuel and high-level radioactive waste by January 1998, in exchange for fees paid by the utilities' customers. The DOE has been unable to meet its contractual obligation with the Utility to dispose of nuclear waste from the Utility's two nuclear generating units at Diablo Canyon and the retired nuclear facility at Humboldt Bay. As a result, the Utility constructed interim dry cask storage facilities to store its spent fuel onsite at Diablo Canyon and at Humboldt Bay until such time as the DOE fulfills its contractual obligation to take possession of the spent fuel. The Utility and other nuclear power plant owners sued the DOE to recover the costs that they incurred to construct interim storage facilities for spent nuclear fuel.

In September 2012, the U.S. Department of Justice and the Utility executed a settlement agreement that awarded the Utility $266 million for spent fuel storage costs incurred through December 31, 2010. The settlement agreement also provided a claims process by which the Utility submits annual requests for reimbursement of its ongoing spent fuel storage costs. In 2013 and 2014, the Utility was awarded an additional $50 million for costs incurred between 2011 and July 2014. These proceeds are being refunded to customers through rates. The settlement agreement, as amended, does not address costs incurred for spent fuel storage beyond 2016 and such costs could be subject to future litigation. Considerable uncertainty continues to exist regarding when and whether the DOE will meet its contractual obligation to the Utility and other nuclear power plant owners to dispose of spent fuel.

## ITEM 1A. RISK FACTORS

PG&E Corporation's and the Utility's financial results are influenced by many factors that are difficult to predict, involve uncertainties that may materially affect actual results and are often beyond their control. (Also see Cautionary Language Regarding Forward-Looking Statements in Item 7. MD&A.) In addition to other disclosures within this Form 10-K, including MD&A in Item 7 and Note 2: Summary of Significant Accounting Policies in the Notes to the Consolidated Financial Statements in Item 8 and other documents filed with the SEC from time to time, the following key risk factors should be considered in evaluating an investment in PG&E Corporation and the Utility. Such factors could affect actual results of operations and cause results to differ substantially from historical results or from results that are currently sought.

### Risks Related to the Outcome of Enforcement Matters, Investigations, and Regulatory Proceedings

***PG&E Corporation's and the Utility's financial results could be materially affected by the outcomes of the CPUC investigative enforcement proceedings pending against the Utility, the federal criminal prosecution of the Utility, and the investigations and other potential enforcement matters discussed in Item 7. MD&A.***

In September 2014, the CPUC ALJs overseeing the three investigative enforcement proceedings against the Utility issued a decision to impose total penalties of $1.4 billion on the Utility based on their findings that the Utility committed approximately 3,700 violations of natural gas regulations. The Utility and other parties have appealed these decisions. (See "Enforcement and Litigation Matters – Pending CPUC Investigations" in Item 7. MD&A.) The CPUC could issue a final decision that imposes a materially higher amount of penalties. The impact on PG&E Corporation's and the Utility's consolidated financial statements will vary depending on the forms and amounts of penalties imposed.

Further, if the Utility is convicted of the pending federal criminal charges, the Utility could be required to pay a material amount of fines. Based on the superseding indictment's allegations, the maximum alternative fine would be approximately $1.13 billion. (See "Enforcement and Litigation Matters – Federal Criminal Indictment" in Item 7. MD&A.) The Utility also could incur a material amount of costs to comply with remedial measures that the CPUC or a federal judge may impose on the Utility, such as a requirement that the Utility's natural gas operations be supervised by a third-party monitor.

The CPUC could impose penalties or take other enforcement action with respect to communications that may have violated the CPUC's rules regarding ex parte communications (See "Enforcement and Litigation Matters – Improper CPUC Communications" in Item 7. MD&A.) In response to the Utility's violations of the CPUC's rules regarding ex parte communications relating to the 2015 GT&S rate case, the CPUC issued a decision to disallow up to the entire amount of incremental revenues that would have been collected from ratepayers over the five-month period between March 2015 and August 2015. The exact amount of the revenue disallowance will be determined in the CPUC's final decision in the 2015 GT&S rate case. See "Ratemaking and Other Regulatory Proceedings – 2015 Gas Transmission and Storage Rate Case" in Item 7. MD&A. Federal and state law enforcement authorities have begun investigations in connection with these matters and they could take enforcement action in the future. The Utility could be subject to additional penalties or reputational harm if it fails to comply with the restrictions on communications between the Utility and the CPUC imposed by the CPUC in November 2014.

In addition, the Utility could incur material charges, including fines and other penalties, in connection with the new CPUC investigation of the Utility's compliance with natural gas distribution record-keeping practices, the self-reports the Utility has submitted to the CPUC in accordance with the SED's gas safety citation program, the SED's audit findings, the other matters discussed in "Enforcement and Litigation Matters" in Item 7. MD&A, and other self-reports the Utility may file under the gas safety program or under the new electric safety program.

The Utility could be subject to additional regulatory or governmental enforcement action with respect to compliance with federal, state or local laws, regulations or orders that could result in additional fines, penalties or customer refunds, including those regarding renewable energy and resource adequacy requirements; customer billing; customer service; affiliate transactions; vegetation management; design, construction, operating and maintenance practices; safety and inspection practices; and federal electric reliability standards. The amount of such fines, penalties, or customer refunds could have a material effect on PG&E Corporation's and the Utility's financial results.

***PG&E Corporation's and the Utility's financial results depend upon the amount of revenues the Utility is authorized to collect through rates and the Utility's ability to manage its operating expenses so that it is able to earn its authorized rate of return in a timely manner.***

As a regulated entity, the Utility's rates are set by the CPUC or the FERC on a prospective basis and are generally designed to allow the Utility to collect sufficient revenues to recover the costs of providing service, including a return on and of its capital investments. PG&E Corporation's and the Utility's financial results could be materially affected if the CPUC or the FERC does not authorize sufficient revenues for the Utility to safely and reliably serve its customers and earn its authorized ROE. The outcome of the Utility's ratemaking proceedings can be affected by many factors, including the level of opposition by intervening parties; general economic conditions and potential rate impacts; increasing levels of regulatory review; changes in the political, regulatory, or legislative environments; and the opinions of the Utility's regulators, consumer and other stakeholder organizations, and customers, about the Utility's ability to provide safe, reliable, and affordable electric and gas services. As the Utility's reputation continues to suffer from the negative media coverage of the ongoing enforcement proceedings, the risk of adverse regulatory outcomes may increase. In addition, the restrictions on communications between the Utility and the CPUC imposed by the CPUC in November 2014 prevent the Utility from fully participating in the regulatory process, which, in turn may affect regulatory outcomes. The Utility's relationship with the CPUC also may be negatively affected depending on what, if any, future action may be taken, or negative media coverage that may be generated, in response to the release of approximately 65,000 emails between the Utility and the CPUC to the CPUC and the City of San Bruno.

In addition to the amount of authorized revenues, PG&E Corporation's and the Utility's financial results could be materially affected if the Utility's actual costs to safely and reliably serve its customers differ from authorized or forecast costs. The Utility may incur additional costs for many reasons including changing market circumstances, unanticipated events (such as storms, accidents, catastrophic or other events affecting the Utility's operations), or compliance with new state laws or policies. Although the Utility may be allowed to recover some or all of the additional costs, there may be a substantial time lag between when the Utility incurs the costs and when the Utility is authorized to collect revenues to recover such costs. Alternatively, the CPUC or the FERC may disallow costs that they determine were not reasonably or prudently incurred by the Utility.

The Utility's ability to recover its costs also may be affected by the economy and the economy's corresponding impact on the Utility's customers. For example, a sustained downturn or sluggishness in the economy could reduce the Utility's sales to industrial and commercial customers or the level of uncollectible bills could increase. Although the Utility generally recovers its costs through rates, regardless of sales volume, rate pressures increase when the costs are borne by a smaller sales base.

Changes in commodity prices also may have an adverse effect on the Utility's ability to timely recover its operating costs and earn its authorized ROE. Although the Utility generally recovers its electricity and natural gas procurement costs from customers as "pass-through" costs, a significant and sustained rise in commodity prices could create overall rate pressures that make it more difficult for the Utility to recover its costs that are not categorized as "pass-through" costs. To relieve some of this upward rate pressure, the CPUC could authorize lower revenues than the Utility requested or disallow full cost recovery. Further, should the deployment of new electricity generation and energy storage technologies spread and become more cost-effective, the Utility's ability to recover its investments and earn its authorized ROE could be adversely affected unless rates are appropriately adjusted. Also, a confluence of technology-related cost declines and sustained federal or state subsidies could make a combination of distributed generation and energy storage a viable, cost-effective alternative to the Utility's bundled electric service, which could further threaten the Utility's ability to recover its generation, transmission, and distribution investments.

***PG&E Corporation's and the Utility's future financial results could be materially affected by the extent to which its natural gas transmission costs exceed authorized revenues and whether the Utility is able to continue using regulatory accounting for its natural gas transmission business.***

The Utility's ability to recover its natural gas transmission and storage costs in 2015, 2016, and 2017 and earn its authorized ROE will be materially affected by the amount of revenues the CPUC ultimately authorizes the Utility to collect in the 2015 GT&S rate case proceeding. (See "Ratemaking and Other Regulatory Proceedings" in Item 7. MD&A.) In addition, the Utility plans to perform certain work during 2015 through 2017, including work to complete projects under the PSEP and to identify and remove encroachments from gas transmission pipeline rights-of-way. The Utility has not sought to recover the costs it incurs to perform this work. Actual costs to perform this work could materially exceed forecasts and negatively affect PG&E Corporation's and the Utility's results of operations. The Utility expects that it will continue to incur costs to respond to public opposition to the Utility's work to remove trees and other encroachments. The media attention to the Utility's encroachment work also may negatively affect the Utility's reputation.

If rates in the 2015 GT&S rate case and future rate cases are not set at a level that allows the Utility to recover the cost of providing natural gas transmission service and a reasonable return on its investment in future periods, the Utility may be required to discontinue the application of regulatory accounting to its natural gas transmission business. (See Note 3 of the Notes to the Consolidated Financial Statements in Item 8 as well as "Critical Accounting Policies" in Item 7. MD&A.) If that occurs, the regulatory assets and liabilities that do not qualify for regulatory accounting treatment would be charged against income in the period in which that determination was made and these charges could have a material impact on PG&E Corporation's and the Utility's financial results. In addition, if regulatory accounting did not apply, the Utility's future financial results could become more volatile as compared to historical financial results due to the differences in the timing of expense or gain recognition.

***PG&E Corporation's and the Utility's financial results depend upon the Utility's continuing ability to recover "pass-through" costs, including electricity and natural gas procurement costs, from customers in a timely manner. The CPUC may disallow procurement costs for a variety of reasons. In addition, the Utility's ability to recover these costs could be affected by the loss of Utility customers and decreased new customer growth, if the CPUC fails to adjust the Utility's rates to reflect such events.***

The Utility meets customer demand for electricity from a variety of sources, including electricity generated from the Utility's own generation facilities, electricity provided by third parties under power purchase agreements, and purchases on the wholesale electricity market. The Utility must manage these sources using the commercial and CPUC regulatory principles of "least cost dispatch" and prudent administration of power purchase agreements in compliance with its CPUC-approved long-term procurement plan. The CPUC could disallow procurement costs incurred by the Utility if the CPUC determines that the Utility did not comply with these principles or if the Utility did not comply with its procurement plan. Further, the contractual prices for electricity under the Utility's power purchase agreements could become uneconomic in the future for a variety of reasons, including developments in alternative energy technology, increased self-generation by customers, an increase in distributed generation, and lower customer demand due to adverse economic conditions or the loss of the Utility's customers to other generation providers. Despite original CPUC approval of the contracts, the CPUC could disallow contract costs if it determines that the costs are unreasonably above market. The Utility also could incur a CPUC disallowance and/or liability to the counterparties under its contracts to procure electricity from conventional and renewable generation resources if such resources are physically curtailed by the CAISO during periods of over-generation when generation resources scheduled with the CAISO exceed customer load.

The Utility's ability to recover the costs it incurs in the wholesale electricity market may be affected by the whether the wholesale electricity market in California continues to function effectively. Although market mechanisms are designed to limit excessive prices, these market mechanisms could fail, or the related systems and software on which the market mechanisms rely may not perform as intended which could result in excessive market prices. The CPUC could prohibit the Utility from passing through the higher costs of electricity to customers. For example, during the 2000 and 2001 energy crisis, the market mechanism flaws in California's then-newly established wholesale electricity market led to dramatically high market prices for electricity that the Utility was unable to recover through customer rates, ultimately causing the Utility to file a petition for reorganization under Chapter 11 of the U.S. Bankruptcy Code.

Further, PG&E Corporation's and the Utility's financial results could be affected by the loss of Utility customers and decreased new customer growth that occurs through municipalization of the Utility's facilities, an increase in the number of CCAs who provide electricity to their residents, and an increase in the number of consumers who become direct access customers of alternative generation providers. (See "Competition in the Electric Industry" in Item 1.) As the number of bundled customers (i.e., those primarily residential customers who receive electricity and distribution service from the Utility) declines, the rates for remaining customers could increase as the Utility would have a smaller customer base from which to recover its procurement costs. Although the Utility is permitted to collect non-bypassable charges for generation-related costs incurred on behalf of former customers, as well as charges for distribution, metering, or other services the Utility continues to provide to such customers, the charges may not be sufficient for the Utility to fully recover the costs to provide these services. In addition, the Utility's ability to collect non-bypassable charges has been, and may continue to be, challenged by certain customer groups. Furthermore, if the former customers return to receiving electricity supply from the Utility, the Utility could incur costs to meet their electricity needs that it may not be able to timely recover through rates or that it may not be able to recover at all.

In addition, increasing levels of self-generation of electricity by customers (primarily solar installations) and the use of customer net energy metering, which allows self-generating customers to receive bill credits for surplus power at the full retail rate, could put upward rate pressure on remaining customers. Also, a confluence of technology-related cost declines and sustained federal or state subsidies could make a combination of distributed generation and energy storage a viable, cost-effective alternative to the Utility's bundled electric service which could further threaten the Utility's ability to recover its generation, transmission, and distribution investments. If the number of the Utility's customers decreases or grows at a slower rate than anticipated, the Utility's level of capital investment would likely decline as well, in turn leading to a slower growth in rate base and earnings. Reduced energy demand or significantly slowed growth in demand due to customer migration to other energy providers, adoption of energy

efficient technology, conservation, increasing levels of distributed generation and self-generation, unless substantially offset through regulatory cost allocations, could adversely impact PG&E Corporation's and the Utility's financial results.

PG&E Corporation's and the Utility's financial results could be materially affected if the Utility is unable to recover a material portion of its procurement costs and/or if the CPUC fails to adjust the Utility's rates to reflect the impact of changing loads, the wide deployment of distributed generation, and the development of new electricity generation and energy storage technologies.

**Risks Related to Liquidity and Capital Requirements**

***PG&E Corporation's and the Utility's financial results will be affected by their ability to continue accessing the capital markets and by the terms of debt and equity financings.***

PG&E Corporation's and the Utility's ability to access the capital and credit markets and the costs and terms of available financing depend on many factors, including the ultimate outcome of the matters discussed under "Enforcement and Litigation Matters" in Item 7. MD&A., the ultimate amount of costs the Utility incurs but does not recover through rates, and the outcome of pending and future ratemaking proceedings. These outcomes in turn can affect PG&E Corporation's and the Utility's credit ratings and outlook. If PG&E Corporation's or the Utility's credit ratings were downgraded to below investment grade, their ability to access the capital and credit markets would be negatively affected and could result in higher borrowing costs, fewer financing options, including reduced access to the commercial paper market, additional collateral posting requirements, which in turn could affect liquidity and lead to an increased financing need. Other factors can affect the availability and terms of debt and equity financing, including changes in the federal or state regulatory environment affecting energy companies generally or PG&E Corporation and the Utility in particular, the overall health of the energy industry, volatility in electricity or natural gas prices, and general economic and financial market conditions.

The reputations of PG&E Corporation and the Utility continue to suffer from the negative publicity about the CPUC investigations, the criminal investigations, the criminal prosecution, and the other pending enforcement matters. Their negative reputations and continuing uncertainty surrounding the outcomes of these matters may undermine investors' confidence in management's ability to execute its business strategy and restore a constructive regulatory environment. As a result, investors may be less willing to buy shares of PG&E Corporation common stock resulting in a lower stock price. Further, the market price of PG&E Corporation common stock could decline materially after the outcomes are determined. The amount and timing of future share issuances also could affect the stock price. Declines in the stock price would increase the dilutive effect of future stock issuances and make it more difficult or expensive for PG&E Corporation to complete future equity offerings.

If the Utility were unable to access the capital markets, it could be required to decrease or suspend dividends to PG&E Corporation and PG&E Corporation could be required to contribute capital to the Utility to enable the Utility to fulfill its obligation to serve. To maintain PG&E Corporation's dividend level in these circumstances, PG&E Corporation would be further required to access the capital or credit markets. PG&E Corporation may need to decrease or discontinue its common stock dividend if it is unable to access the capital or credit markets on reasonable terms.

***PG&E Corporation's ability to meet its debt service and other financial obligations and to pay dividends on its common stock depends on the Utility's earnings and cash flows.***

PG&E Corporation is a holding company with no revenue generating operations of its own. The Utility must use its resources to satisfy its own obligations, including its obligation to serve customers, to pay principal and interest on outstanding debt, to pay preferred stock dividends, and meet its obligations to employees and creditors, before it can distribute cash to PG&E Corporation. Under the CPUC's rules applicable to utility holding companies, the Utility's dividend policy must be established by the Utility's Board of Directors as though the Utility were a stand-alone utility company and PG&E Corporation's Board of Directors give "first priority" to the Utility's capital requirements, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner. The CPUC has interpreted this "first priority" obligation to include the requirement that PG&E Corporation "infuse the Utility with all types of capital necessary for the Utility to fulfill its obligation to serve." In addition, before the Utility can pay common stock dividends to PG&E Corporation, the Utility must maintain its authorized capital structure with an average 52% equity component.

Depending on the outcome of the CPUC investigations, criminal prosecution, and other enforcement matters pending against the Utility, future issuances of PG&E Corporation common stock may materially dilute EPS. (See "Liquidity and Financial Resources" in Item 7. MD&A.) Further, if PG&E Corporation were required to infuse the Utility with significant capital or if the Utility was unable to distribute cash to PG&E Corporation, or both, PG&E Corporation may be unable to pay principal and interest on its outstanding debt, pay its common stock dividend or meet other obligations.

PG&E Corporation's and the Utility's ability to pay dividends also could be affected by financial covenants contained in their respective credit agreements that require each company to maintain a ratio of consolidated total debt to consolidated capitalization of at most 65%.

**Risks Related to Operations and Information Technology**

***The operations of the Utility's electricity and natural gas generation, transmission, and distribution facilities is inherently dangerous and involves significant risks which, if they materialize, can adversely affect PG&E Corporation's and the Utility's financial results, and the Utility's insurance may not be sufficient to cover losses caused by an operating failure or catastrophic event.***

The Utility owns and operates extensive electricity and natural gas facilities, including two nuclear generation units and an extensive hydroelectric generating system. (See "Utility Operations" in Item 1. Business.) The Utility's ability to earn its authorized ROE depends on its ability to efficiently maintain, operate, and protect its facilities, and provide electricity and natural gas services safely and reliably. The Utility undertakes substantial capital investment projects to construct, replace, and improve its electricity and natural gas facilities. In addition, the Utility is obligated to decommission its electricity generation facilities at the end of their useful operating lives. The Utility's ability to safely and reliably operate, maintain, construct and decommission its facilities is subject to numerous risks, many of which are beyond the Utility's control, including those that arise from:

- the breakdown or failure of equipment, electric transmission or distribution lines, or natural gas transmission and distribution pipelines, that can cause explosions, fires, or other catastrophic events (such as the San Bruno accident discussed in Item 7. MD&A.);
- the release of radioactive materials caused by a nuclear accident, seismic activity, natural disaster, or terrorist act;
- the failure of a large dam or other major hydroelectric facility, or the failure of one or more levees that protect land on which the Utility's assets are built;
- the failure to take expeditious or sufficient action to mitigate operating conditions, facilities, or equipment, that the Utility has identified, or reasonably should have identified, as unsafe, which failure then leads to a catastrophic event (such as a wild land fire or natural gas explosion), and the failure to respond effectively to a catastrophic event;
- severe weather events such as storms, tornadoes, floods, drought, earthquakes, tsunamis, wild land and other fires, pandemics, solar events, electromagnetic events, or other natural disasters;
- operator or other human error;
- construction performed by third parties, such as ground excavation or "dig-ins" that damage the Utility's underground facilities;
- the release of hazardous or toxic substances into the air, water, or soil; and
- attacks by third parties, including cyber-attacks, acts of terrorism, vandalism, or war.

The occurrence of any of these events could interrupt fuel supplies; affect demand for electricity or natural gas; cause unplanned outages or reduce generating output; damage the Utility's assets or operations; damage the assets or operations of third parties on which the Utility relies; damage property owned by customers or others; and cause personal injury or death. As a result, the Utility could incur costs to purchase replacement power, to repair assets and restore service, to compensate third parties, or to pay penalties or implement remedial measures. These costs may not be recoverable through rates or insurance and could have a material impact of PG&E Corporation's financial results and reputation. As an example, see the discussion in Item 7. MD&A. of the Utility's unrecovered pipeline-related costs incurred since the San Bruno accident.

Further, although the Utility often enters into agreements for third-party contractors to perform work, such as patrolling and inspection of facilities or the construction or demolition or facilities, the Utility may retain liability for the quality and completion of the contractor's work and can be subject to penalties or other enforcement action if the contractor violates applicable laws, rules, regulations, or orders. Insurance, equipment warranties, or other contractual indemnification requirements may not be sufficient or effective to provide full or even partial recovery under all circumstances or against all hazards or liabilities to which the Utility may become subject. An uninsured loss could have a material effect on PG&E Corporation's and the Utility's financial

results. Future insurance coverage may not be available at rates and on terms as favorable as the Utility's current insurance coverage or may not be available at all.

***The Utility's operational and information technology systems could fail to function properly or be damaged by third parties (including cyber-attacks and acts of terrorism), severe weather, natural disasters, or other events. Any of these events could disrupt the Utility's operations and cause the Utility to incur unanticipated losses and expense or liability to third parties.***

The operation of the Utility's extensive electricity and natural gas systems rely on evolving information and operational technology systems and network infrastructures that are becoming more complex as new technologies and systems are implemented to modernize capabilities to safely and reliably deliver gas and electric services. The Utility's ability to serve its customers requires the continued operation of complex information technology systems and network infrastructure that are interconnected with the systems and infrastructure owned by third parties. The Utility's business is highly dependent on its ability to process and monitor, on a daily basis, a very large number of tasks and transactions, many of which are highly complex. Despite implementation of security measures, all of the Utility's technology systems are vulnerable to disability or failures due to hacking, viruses, acts of war or terrorism and other causes. The failure of the Utility's information and operational systems and networks due to a physical attack, cyber-attack or other cause could significantly disrupt operations; cause harm to the public or employees; result in outages or reduced generating output; damage the Utility's assets or operations or those of third parties; and subject the Utility to claims by customers or third parties, any of which could have a material effect on PG&E Corporation's and the Utility's financial results.

The Utility's systems, including its financial information, operational systems, advanced metering, and billing systems, require ongoing maintenance, modification, and updating, which can be costly and increase the risk of errors and malfunction. The Utility often relies on third-party vendors to maintain, modify, and update its systems and these third-party vendors could cease to exist. Any disruptions or deficiencies in existing systems, or disruptions, delays or deficiencies in the modification or implementation of new systems, could result in increased costs, the inability to track or collect revenues, the diversion of management's and employees' attention and resources, and could negatively affect the effectiveness of the Utility's control environment, and/or the Utility's ability to timely file required regulatory reports.

In addition, the Utility's information systems contain confidential information, including information about customers and employees. The theft, damage, or improper disclosure of confidential information can subject the Utility to penalties for violation of applicable privacy laws, subject the Utility to claims from third parties, reduce the value of proprietary information, and harm the Utility's reputation.

***The operation and decommissioning of the Utility's nuclear power plants expose it to potentially significant liabilities and the Utility may not be able to fully recover its costs if regulatory requirements change or the plant ceases operations before the licenses expire.***

The operation of the Utility's nuclear generation facilities exposes it to potentially significant liabilities from environmental, health and financial risks, such as risks relating to the storage, handling and disposal of spent nuclear fuel, the release of radioactive materials caused by a nuclear accident, seismic activity, natural disaster, or terrorist act. The operation of the nuclear facilities also depends on the availability of adequate fuel supplies. If the Utility incurs losses that are either not covered by insurance or exceed the amount of insurance available, such losses could have a material effect on PG&E Corporation's and the Utility's financial results. In addition, the Utility may be required under federal law to pay up to $255 million of liabilities arising out of each nuclear incident occurring not only at the Utility's Diablo Canyon facility but at any other nuclear power plant in the United States. (See Note 14 of the Notes to the Consolidated Financial Statements in Item 8.)

In addition, the Utility continues to face public concern about the safety of nuclear generation and nuclear fuel. Some of these nuclear opposition groups regularly file petitions at the NRC and in other forums challenging the actions of the NRC and urging governmental entities to adopt laws or policies in opposition to nuclear power. Although an action in opposition may ultimately fail, regulatory proceedings may take longer to conclude and be more costly to complete. It is also possible that public pressure could grow and that future changes in legislation, regulations, orders, or their interpretation, could result in the Utility ceasing operations at Diablo Canyon before the licenses expire. In such an instance, the Utility could be required to record a charge for the remaining amount of its unrecovered investment and such charge could have a material effect on PG&E Corporation and the Utility's financial results.

The Utility has incurred, and may continue to incur, substantial costs to comply with NRC regulations and orders. (See "Regulatory Environment" in Item 1. Business.) If the Utility were unable to recover these costs, PG&E Corporation's and the Utility's financial results could be materially affected. The Utility may determine that it cannot comply with the new regulations or orders in a feasible and economic manner and voluntarily cease operations; alternatively, the NRC may order the Utility to

cease operations until it can comply with new regulations, orders, or decisions. The Utility may incur a material charge if it ceases operations at Diablo Canyon before the licenses expire.

At the state level, the California Water Board has adopted a policy on once-through cooling that generally requires the installation of cooling towers or other significant measures to reduce the impact on marine life from existing power generation facilities in California by at least 85%. If the California Water Board requires the installation of cooling towers that the Utility believes are not technically or economically feasible, the Utility may be forced to cease operations at Diablo Canyon and may incur a material charge. Even if the Utility is not required to install cooling towers, it could incur significant costs to comply with alternative compliances measures or to make payments to support various environmental mitigation projects.

The Utility also has an obligation to decommission its electricity generation facilities, including its nuclear facilities, as well as gas transmission system assets, at the end of their useful lives. (See Note 2: Summary of Significant Accounting Policies – Asset Retirement Obligations of the Notes to the Consolidated Financial Statement in Item 8.) The CPUC authorizes the Utility to recover its estimated costs to decommission its nuclear facilities through nuclear decommissioning charges that are collected from customers and held in nuclear decommissioning trusts to be used for the eventual decommissioning of each nuclear unit. If the Utility's actual decommissioning costs, including the amounts held in the nuclear decommissioning trusts, exceed estimated costs, PG&E Corporation's and the Utility's financial results could be materially affected.

**Risks Related to Environmental Factors**

***The Utility's operations are subject to extensive environmental laws and changes in or liabilities under these laws could adversely affect PG&E Corporation's and the Utility's financial results.***

The Utility's operations are subject to extensive federal, state, and local environmental laws, regulations, orders, relating to air quality, water quality and usage, remediation of hazardous wastes, and the protection and conservation of natural resources and wildlife. The Utility incurs significant capital, operating, and other costs associated with compliance with these environmental statutes, rules, and regulations. The Utility has been, and may be, required to pay for environmental remediation costs at sites where it is identified as a potentially responsible party under federal and state environmental laws. Although the Utility has recorded liabilities for known environmental obligations, these costs can be difficult to estimate due to uncertainties about the extent of contamination, remediation alternatives, the applicable remediation levels, and the financial ability of other potentially responsible parties. (See Note 14 to the Notes to the Consolidated Financial Statements in Item 8 for more information.)

Environmental remediation costs could increase in the future as a result of new legislation, the current trend toward more stringent standards, and stricter and more expansive application of existing environmental regulations. Failure to comply with these laws and regulations, or failure to comply with the terms of licenses or permits issued by environmental or regulatory agencies, could expose the Utility to claims by third parties or the imposition of civil or criminal fines or other sanctions.

The CPUC has authorized the Utility to recover its environmental remediation costs for certain sites through various ratemaking mechanisms. One of these mechanisms allows the Utility rate recovery for 90% of its hazardous substance remediation costs for certain approved sites without a reasonableness review. The CPUC may discontinue or change these ratemaking mechanisms in the future or the Utility may incur environmental costs that exceed amounts the CPUC has authorized the Utility to recover in rates.

Some of the Utility's environmental costs, such as the remediation costs associated with the Hinkley natural gas compressor site, are not recoverable through rates or insurance. (See "Environmental Regulation" in Item 1.) The Utility's costs to remediate groundwater contamination near the Hinkley natural gas compressor site and to abate the effects of the contamination have had, and may continue to have, a material effect on PG&E Corporation's and the Utility's financial results. Their financial results also can be materially affected by changes in estimated costs and by the extent to which actual remediation costs differ from recorded liabilities.

***The Utility's future operations may be affected by climate change that may have a material impact on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.***

The Utility has been studying the potential effects of climate change (increased temperatures, reduced precipitation, rising sea levels) on the Utility's operations and is developing contingency plans to adapt to those events and conditions that the Utility believes are most significant. Scientists project that climate change will increase electricity demand due to more extreme, persistent and hot weather. Increasing temperatures and lower levels of precipitation in the Utility's service territory would reduce snowpack in the Sierra Mountains. If the levels of snowpack were reduced, the Utility's hydroelectric generation would decrease and the Utility would need to acquire additional generation from other sources at a greater cost. Should the Utility increase

reliance on conventional generation resources to replace hydroelectric generation and to meet increased customer demand, it may become more costly for the Utility to comply with GHG emissions limits. In addition, increasing temperatures and lower levels of precipitation could increase the occurrence of wildfires in the Utility's service territory causing damage to the Utility's facilities or the facilities of third parties on which the Utility relies to provide service. In addition, flooding caused by rising sea levels could damage the Utility's facilities, including hydroelectric assets such as dams and canals, and the electric transmission assets that are located on levees throughout the Utility's service territory. The Utility could incur substantial costs to repair or replace facilities, restore service, compensate customers and other third parties for damages or injuries. The Utility anticipates that the increased costs would be recovered through rates, but as rate pressures increase, the likelihood of disallowance or non-recovery may increase.

Events or conditions caused by climate change could have a greater impact on the Utility's operations than the Utility's studies suggest and could result in lower revenues or increased expenses, or both. If the CPUC fails to adjust the Utility's rates to reflect the impact of events or conditions caused by climate change, PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows could be materially affected.

**Other Risk Factors**

***The Utility may be required to incur substantial costs in order to obtain or renew licenses and permits needed to operate the Utility's business and the Utility may be subject to fines and penalties for failure to comply or obtain license renewal.***

The Utility must comply with the terms of various governmental permits, authorizations, and licenses, including those issued by the FERC for the continued operation of the Utility's hydroelectric generation facilities, and those issued by environmental and other federal, state and local governmental agencies. Many of the Utility's capital investment projects, and some maintenance activities, often require the Utility to obtain land use, construction, environmental, or other governmental permits. These permits, authorizations, and licenses may be difficult to obtain on a timely basis, causing work delays. Further, existing permits and licenses could be revoked or modified by the agencies that granted them if facts develop that differ significantly from the facts assumed when they were issued. In addition, the Utility often seeks periodic renewal of a license or permit, such as a waste discharge permit or a FERC operating license for a hydroelectric generation facility. If a license or permit is not renewed for a particular facility and the Utility is required to cease operations at that facility, the Utility could incur an impairment charge or other costs. Before renewing a permit or license, the issuing agency may impose additional requirements that may increase the Utility's compliance costs. In particular, in connection with a license renewal for one or more of the Utility's hydroelectric generation facilities or assets, the FERC may impose new license conditions that could, among other things, require increased expenditures or result in reduced electricity output and/or capacity at the facility. In addition, local governments may attempt to assert jurisdiction over various utility operations by requiring permits or other approvals that the Utility has not been previously required to obtain.

The Utility may incur penalties and sanctions for failure to comply with the terms and conditions of licenses and permits which could have a material effect on PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows. If the Utility cannot obtain, renew, or comply with necessary governmental permits, authorizations, licenses, ordinances, or other requirements, or if the Utility cannot recover the increase in associated compliance and other costs in a timely manner, PG&E Corporation's and the Utility's financial results could be materially affected.

***Poor investment performance or other factors could require PG&E Corporation and the Utility to make significant unplanned contributions to its pension plan, other postretirement benefits plans, and nuclear decommissioning trusts.***

PG&E Corporation and the Utility provide defined benefit pension plans and other postretirement benefits for eligible employees and retirees. The Utility also maintains three trusts for the purposes of providing funds to decommission its nuclear facilities. The performance of the debt and equity markets affects the value of plan assets and trust assets. A decline in the market value may increase the funding requirements for these plans and trusts. The cost of providing pension and other postretirement benefits is also affected by other factors, including interest rates used to measure the required minimum funding levels, the rate of return on plan assets, employee demographics, discount rates used in determining future benefit obligations, rates of increase in health care costs, future government regulation, and prior contributions to the plans. Similarly, funding requirements for the nuclear decommissioning trusts are affected by the rates of return on trust assets, changes in the laws or regulations regarding nuclear decommissioning or decommissioning funding requirements as well as changes in assumptions or forecasts related to decommissioning dates, technology and the cost of labor, materials and equipment. (See Note 2: Summary of Significant Accounting Policies of the Notes to the Consolidated Financial Statements in Item 8.) If the Utility is required to make significant unplanned contributions to fund the pension and postretirement plans or if actual nuclear decommissioning costs exceed the amount of nuclear decommissioning trust funds and the Utility is unable to recover the contributions or additional costs in rates, PG&E Corporation's and the Utility's financial results could be materially affected.

***The Utility's success depends on the availability of the services of a qualified workforce and its ability to maintain satisfactory collective bargaining agreements which cover a substantial number of employees. PG&E Corporation's and the Utility's results may suffer if the Utility is unable to attract and retain qualified personnel and senior management talent, or if prolonged labor disruptions occur.***

The Utility's workforce is aging and many employees are or will become eligible to retire within the next few years. Although the Utility has undertaken efforts to recruit and train new field service personnel, the Utility may be faced with a shortage of experienced and qualified personnel. The majority of the Utility's employees are covered by collective bargaining agreements with three unions. Labor disruptions could occur depending on the outcome of negotiations to renew the terms of these agreements. In addition, some of the remaining non-represented Utility employees could join one of these unions in the future.

PG&E Corporation and the Utility also may face challenges in attracting and retaining senior management talent especially if they are unable to restore the reputational harm generated by the negative publicity stemming from the ongoing enforcement proceedings. Any such occurrences could negatively impact PG&E Corporation's and the Utility's financial condition and results of operations.

## ITEM 1B. UNRESOLVED STAFF COMMENTS

None.

## ITEM 2. PROPERTIES

The Utility owns or has obtained the right to occupy and/or use real property comprising the Utility's electricity and natural gas distribution facilities, natural gas gathering facilities and generation facilities, and natural gas and electricity transmission facilities, which are described in Item 1. Business, under "Electric Utility Operations" and "Natural Gas Utility Operations." The Utility occupies or uses real property that it does not own primarily through various leases, easements, rights-of-way, permits, or licenses from private landowners or governmental authorities. In total, the Utility occupies 11.2 million square feet of real property, including 8.8 million square feet owned by the Utility. The Utility's corporate headquarters comprises approximately 1.7 million square feet located in several Utility-owned buildings in San Francisco, California.

PG&E Corporation also leases approximately 42,000 square feet of office space from a third party in San Francisco, California. This lease will expire in 2022.

The Utility currently owns approximately 167,000 acres of land, including approximately 140,000 acres of watershed lands. In 2002 the Utility agreed to permanently preserve six "beneficial public values" on all its watershed lands through conservation easements or equivalent protections, and to make up to 44,000 acres of its watershed lands available for donation to public entities or qualified non-profit conservation organizations. The six "beneficial public values" being preserved through these conservation easements include: natural habitat of fish, wildlife, and plants; open space; outdoor recreation by the general public; sustainable forestry; agricultural uses; and historic values. The Pacific Forest Watershed Lands Stewardship Council oversees the implementation of a land conservation plan that articulates the long-term management objectives for these watershed lands. The Utility's goal is to implement all the transactions needed to implement the land conservation plan by the end of 2017, subject to securing all required regulatory approvals.

## ITEM 3. LEGAL PROCEEDINGS

In addition to the following proceedings, PG&E Corporation and the Utility are parties to various lawsuits and regulatory proceedings in the ordinary course of their business. For more information regarding material lawsuits and proceedings, see "Enforcement and Litigation Matters" in Note 14 of the Notes to the Consolidated Financial Statements in Item 8 and in Item 7. MD&A.

***Diablo Canyon Power Plant***

The Utility's Diablo Canyon power plant employs a "once-through" cooling water system that is regulated under a Clean Water Act permit issued by the Central Coast Board. This permit allows the Diablo Canyon power plant to discharge the cooling water at a temperature no more than 22 degrees above the temperature of the ambient receiving water, and requires that the beneficial uses of the water be protected. The beneficial uses of water in this region include industrial water supply, marine and wildlife habitat, shellfish harvesting, and preservation of rare and endangered species. In January 2000, the Central Coast Board issued a proposed draft cease and desist order alleging that, although the temperature limit has never been exceeded, the Utility's Diablo Canyon power plant's discharge was not protective of beneficial uses.

In October 2000, the Utility and the Central Coast Board reached a tentative settlement under which the Central Coast Board agreed to find that the Utility's discharge of cooling water from the Diablo Canyon power plant protects beneficial uses and that the intake technology reflects the best technology available, as defined in the federal Clean Water Act. As part of the tentative settlement, the Utility agreed to take measures to preserve certain acreage north of the plant and to fund approximately $6 million in environmental projects and future environmental monitoring related to coastal resources. On March 21, 2003, the Central Coast Board voted to accept the settlement agreement. On June 17, 2003, the settlement agreement was executed by the Utility, the Central Coast Board and the California Attorney General's Office. A condition to the effectiveness of the settlement agreement is that the Central Coast Board renew Diablo Canyon's permit.

At its July 10, 2003 meeting, the Central Coast Board did not renew the permit and continued the permit renewal hearing indefinitely. Several Central Coast Board members indicated that they no longer supported the settlement agreement, and the Central Coast Board requested a team of independent scientists, as part of a technical working group, to develop additional information on possible mitigation measures for Central Coast Board staff. In January 2005, the Central Coast Board published the scientists' draft report recommending several such mitigation measures. If the Central Coast Board adopts the scientists'

recommendations, and if the Utility ultimately is required to implement the projects proposed in the draft report, it could incur costs of up to approximately $30 million. The Utility would seek to recover these costs through rates charged to customers.

The final requirements of the federal and state cooling water policies (discussed above in Item 1. Business under "Environmental Regulation – Water Quality") could affect future negotiations between the Central Coast Board and the Utility regarding the status of the 2003 settlement agreement. PG&E Corporation and the Utility believe that the ultimate outcome of this matter will not have a material impact on the Utility's financial condition or results of operations.

***CPUC Investigations Regarding the Utility's Gas Transmission System and the San Bruno Accident***

There are three CPUC investigative enforcement proceedings pending against the Utility. These investigations relate to (1) the Utility's safety recordkeeping for its natural gas transmission system, (2) the Utility's operation of its natural gas transmission pipeline system in or near locations of higher population density, and (3) the Utility's pipeline installation, integrity management, recordkeeping and other operational practices, and other events or courses of conduct, that could have led to or contributed to the San Bruno accident.

On September 2, 2014, the assigned CPUC ALJs issued their presiding officer decisions in these investigations in which they determined that the Utility committed approximately 3,700 violations of law, rules and regulations. The ALJs jointly issued a decision calling for total penalties of $1.4 billion on the Utility to address all violations, allocated as follows: (1) $950 million fine to be paid to the State General Fund, (2) $400 million refund to ratepayers of previously authorized revenues, and (3) remedial measures that the ALJs estimate will cost the Utility at least $50 million. The presiding officer decisions are not the final decisions of the CPUC. Three of the five CPUC Commissioners have requested that the CPUC review the decisions. It is possible that one or more Commissioners will issue an alternate penalty decision for consideration by the CPUC. In addition, in October 2014, the Utility and other parties, including the SED, TURN, the ORA, the City and County of San Francisco, and the City of San Bruno appealed the presiding officer decisions.

In its appeals, the Utility argued that the penalties imposed and the findings and conclusions on which they are based do not meet applicable legal standards, are based on the misapplication of California law and regulations, and are unconstitutional. The Utility has asked the CPUC to order the Utility to pay a significantly reduced penalty that is reasonable and proportionate in light of the nature of the violations and that takes into account the substantial unrecovered amounts the Utility has already spent and forecasts that it will spend on gas system safety. The Utility requested that it be allowed 180 days to raise the funds it may be ordered to pay to the State General Fund rather than the 40 days specified in the decision. The Utility also argued that the entire penalty should go toward funding investments in the Utility's gas transmission system. TURN, the ORA, and the City and County of San Francisco jointly filed an appeal urging the CPUC to disallow the Utility's recovery of remaining PSEP costs of $877 million and to require the Utility to pay $473 million to the State General Fund. These parties also argue that the record in the investigative proceedings would support an even larger penalty than stated in the decision. The City of San Bruno appealed the rejection of its proposals for the appointment of an independent monitor to oversee the Utility's natural gas operations and for the establishment of a pipeline safety trust. It is uncertain when the final outcome of the investigations will be determined.

While the various appeals and requests for review of the presiding officer decisions are unresolved there continues to be significant uncertainty about the ultimate forms and amounts of penalties (including fines) that will be imposed on the Utility. The impact on PG&E Corporation's and the Utility's Consolidated Financial Statements will depend on the amounts and forms of penalties that are ultimately adopted by the CPUC. For more information, see discussions "Enforcement and Litigation Matters" in Item 7. MD&A and Note 14: Commitments and Contingencies of the Notes to the Consolidated Financial Statements in Item 8.

***Federal Criminal Indictment***

On July 29, 2014, a federal grand jury in the Northern District of California returned a 28-count superseding criminal indictment against the Utility in federal district court replacing the indictment that had been returned on April 1, 2014. The superseding indictment charges 27 felony counts (increased from 12 counts charged in the original indictment) alleging that the Utility knowingly and willfully violated minimum safety standards under the Natural Gas Pipeline Safety Act relating to record keeping, pipeline integrity management, and identification of pipeline threats. The superseding indictment also includes one felony count charging that the Utility illegally obstructed the NTSB's investigation into the cause of the San Bruno accident. The maximum statutory fine for each felony count is $500,000, for total fines of $14 million. The superseding indictment also alleges an alternative fine under the Alternative Fines Act which states, in part: "If any person derives pecuniary gain from the offense, or if the offense results in pecuniary loss to a person other than the defendant, the defendant may be fined not more than the greater of twice the gross gain or twice the gross loss." Based on the superseding indictment's allegations that the Utility derived gross gains of approximately $281 million and that the victims suffered losses of approximately $565 million, the maximum alternate fine would be approximately $1.13 billion.

The Utility entered a plea of not guilty. The Utility believes that criminal charges and the alternate fine allegations are not merited and that it did not knowingly and willfully violate minimum safety standards under the Natural Gas Pipeline Safety Act or obstruct the NTSB's investigation, as alleged in the superseding indictment. A status conference is scheduled to be held in court on March 9, 2015. PG&E Corporation and the Utility have not accrued any charges for criminal fines in their consolidated financial statements as such amounts are not considered to be probable.

***Litigation Related to the San Bruno Accident and Natural Gas Spending***

At December 31, 2014, there were also five purported shareholder derivative lawsuits outstanding against PG&E Corporation and the Utility seeking recovery on behalf of PG&E Corporation and the Utility for alleged breaches of fiduciary duty by officers and directors, among other claims. The plaintiffs for three of these lawsuits filed a consolidated complaint with the San Mateo County Superior Court in November 2013, which has been amended to add a fourth shareholder plaintiff and to discuss recent events, including the federal criminal indictment discussed above. In August 2014, the judge lifted the stay on the consolidated complaint for the limited purpose of allowing briefing and hearing on demurrers (state court motions to dismiss). On September 15, 2014, PG&E Corporation, the Utility and the individual defendants asked the court to dismiss the consolidated complaint because the plaintiffs (1) failed to demand that the Boards of Directors pursue claims against the defendant directors and officers and (2) have not adequately pled why such demand should be excused. The court has since clarified that the appropriate board on whom the plaintiffs should have demanded with respect to the claims in the operative complaint is the 2013 PG&E Corporation Board of Directors (and the 2014 Board regarding the allegations first raised in plaintiffs' 2014 amended consolidated complaint). The Court has invited plaintiffs to amend their complaint to accommodate this clarification, and defendants to refile a demurrer on this amended complaint if they so choose. Accordingly, briefing and litigation on this motion is expected to continue through the first quarter of 2015. On September 22, 2014, PG&E Corporation, the Utility, and the individual defendants filed a petition with the California Court of Appeal requesting a new order continuing the stay until resolution of the federal criminal indictment discussed above. A fifth purported shareholder derivative lawsuit that was filed in the U.S. District Court for the Northern District of California remains stayed.

## ITEM 4. MINE SAFETY DISCLOSURES

Not applicable.

## EXECUTIVE OFFICERS OF THE REGISTRANTS

The following individuals serve as executive officers [1] of PG&E Corporation and/or the Utility, as of February 10, 2015. Except as otherwise noted, all positions have been held at Pacific Gas and Electric Company.

| Name | Age | Positions Held Over Last Five Years | Time in Position |
|---|---|---|---|
| Anthony F. Earley, Jr. | 65 | Chairman of the Board, Chief Executive Officer, and President, PG&E Corporation | September 13, 2011 to present |
| | | Executive Chairman of the Board, DTE Energy Company | October 1, 2010 to September 12, 2011 |
| | | Chairman of the Board and Chief Executive Officer, DTE Energy Company | August 1998 to September 30, 2010 |
| Christopher P. Johns | 54 | President | August 1, 2009 to present |
| | | Senior Vice President, Financial Services | May 1, 2009 to July 31, 2009 |
| | | Senior Vice President and Chief Financial Officer, PG&E Corporation | May 1, 2009 to July 31, 2009 |
| Nickolas Stavropoulos | 56 | Executive Vice President, Gas Operations | June 13, 2011 to present |
| | | Executive Vice President and Chief Operating Officer, U.S. Gas Distribution, National Grid | August 2007 to March 31, 2011 |
| Geisha J. Williams | 53 | Executive Vice President, Electric Operations | June 1, 2011 to present |
| | | Senior Vice President, Energy Delivery | December 1, 2007 to May 31, 2011 |

| | | | |
|---|---|---|---|
| Karen A. Austin | 53 | Senior Vice President and Chief Information Officer | June 1, 2011 to present |
| | | President, Consumer Electronics, Sears Holdings | February 2009 to May 2011 |
| Desmond A. Bell | 52 | Senior Vice President, Safety and Shared Services | January 1, 2012 to present |
| | | Senior Vice President, Shared Services and Chief Procurement Officer | October 1, 2008 to December 31, 2011 |
| Helen A. Burt | 58 | Senior Vice President, Corporate Affairs | September 18, 2014 to present |
| | | Senior Vice President, Corporate Affairs, PG&E Corporation | September 18, 2014 to present |
| | | Senior Vice President and Chief Customer Officer | February 27, 2006 to September 17, 2014 |
| Loraine M. Giammona | 47 | Senior Vice President and Chief Customer Officer | September 18, 2014 to present |
| | | Vice President, Customer Service | January 23, 2012 to September 17, 2014 |
| | | Regional Vice President, Customer Care, Comcast Cable | November 2002 to January 2012 |
| Edward D. Halpin | 53 | Senior Vice President and Chief Nuclear Officer | April 2, 2012 to present |
| | | President, Chief Executive Officer and Chief Nuclear Officer, South Texas Project Nuclear Operating Company | December 2009 to March 2012 |
| Kent M. Harvey | 56 | Senior Vice President and Chief Financial Officer, PG&E Corporation | August 1, 2009 to present |
| | | Senior Vice President, Financial Services | August 1, 2009 to present |
| Gregory K. Kiraly | 50 | Senior Vice President, Electric Distribution Operations | September 18, 2012 to present |
| | | Vice President, Electric Distribution Operations | October 1, 2011 to September 17, 2012 |
| | | Vice President, SmartMeter Operations | August 23, 2010 to September 30, 2011 |
| | | Vice President, Electric Maintenance and Construction | January 1, 2010 to August 22, 2010 |
| Steven E. Malnight | 42 | Senior Vice President, Regulatory Affairs | September 18, 2014 to present |
| | | Vice President, Customer Energy Solutions | May 15, 2011 to September 17, 2014 |
| | | Vice President, Integrated Demand Side Management | July 1, 2010 to May 14, 2011 |
| | | Vice President, Renewable Energy | May 1, 2009 to June 30, 2010 |
| Hyun Park | 53 | Senior Vice President and General Counsel, PG&E Corporation | November 13, 2006 to present |
| John R. Simon | 50 | Senior Vice President, Human Resources | April 16, 2007 to present |
| | | Senior Vice President, Human Resources, PG&E Corporation | April 16, 2007 to present |

| | | | |
|---|---|---|---|
| Jesus Soto, Jr. | 47 | Senior Vice President, Engineering, Construction and Operations | September 16, 2013 to present |
| | | Senior Vice President, Gas Transmission Operations | May 29, 2012 to September 15, 2013 |
| | | Vice President, Operations Services, El Paso Pipeline Group | May 2007 to May 2012 |
| Fong Wan | 53 | Senior Vice President, Energy Procurement | October 1, 2008 to present |
| Dinyar B. Mistry | 53 | Vice President, Chief Financial Officer, and Controller | October 1, 2011 to present |
| | | Vice President and Controller, PG&E Corporation | March 8, 2010 to present |
| | | Vice President and Controller | March 8, 2010 to September 30, 2011 |
| | | Vice President and Chief Risk and Audit Officer | September 16, 2009 to March 7, 2010 |
| | | Vice President and Chief Risk and Audit Officer, PG&E Corporation | August 1, 2009 to March 7, 2010 |

---

(1) Mr. Earley, Mr. Johns, Ms. Burt, Mr. Harvey, Mr. Park, and Mr. Simon are executive officers of both PG&E Corporation and the Utility. All other listed officers are executive officers of the Utility only.

## PART II

## ITEM 5. MARKET FOR REGISTRANT'S COMMON EQUITY, RELATED STOCKHOLDER MATTERS AND ISSUER PURCHASES OF EQUITY SECURITIES

As of January 27, 2015, there were 61,989 holders of record of PG&E Corporation common stock. PG&E Corporation common stock is listed on the New York Stock Exchange. The high and low sales prices of PG&E Corporation common stock for each quarter of the two most recent fiscal years are set forth on page 128 of this report within "Quarterly Consolidated Financial Data (Unaudited)"in Item 8. Shares of common stock of the Utility are wholly owned by PG&E Corporation. Information about the frequency and amount of dividends on common stock declared by PG&E Corporation and the Utility for the two most recent fiscal years and information about the restrictions upon the payment of dividends on their common stock Utility appears in PG&E Corporation's Consolidated Statements of Equity, the Utility's Consolidated Statements of Shareholders' Equity, and Note 5: Common Stock and Share-Based Compensation − Dividends in Item 8 and in "Liquidity and Financial Resources – Dividends" in Item 7. MD&A.

***Sales of Unregistered Equity Securities***

PG&E Corporation did not make any equity contributions to the Utility during the quarter ended December 31, 2014. The Utility was in compliance with the 52% common equity component of its capital structure authorized by the CPUC and had adequate capital to fund its capital expenditures. PG&E Corporation did not make any sales of unregistered equity securities during 2014.

***Issuer Purchases of Equity Securities***

During the quarter ended December 31, 2014, PG&E Corporation did not redeem or repurchase any shares of common stock outstanding. Also, during the quarter ended December 31, 2014, the Utility did not redeem or repurchase any shares of its various series of preferred stock outstanding.

## ITEM 6. SELECTED FINANCIAL DATA

| (in millions, except per share amounts) | 2014 | 2013 | 2012 | 2011 | 2010 |
|---|---|---|---|---|---|
| **PG&E Corporation** | | | | | |
| **For the Year** | | | | | |
| Operating revenues | $ 17,090 | $ 15,598 | $ 15,040 | $ 14,956 | $ 13,841 |
| Operating income | 2,450 | 1,762 | 1,693 | 1,942 | 2,308 |
| Income from continuing operations | 1,450 | 828 | 830 | 858 | 1,113 |
| Earnings per common share from continuing operations, basic [(1)] | 3.07 | 1.83 | 1.92 | 2.10 | 2.86 |
| Earnings per common share from continuing operations, diluted | 3.06 | 1.83 | 1.92 | 2.10 | 2.82 |
| Dividends declared per common share [(2)] | 1.82 | 1.82 | 1.82 | 1.82 | 1.82 |
| **At Year-End** | | | | | |
| Common stock price per share | $ 53.24 | $ 40.28 | $ 40.18 | $ 41.22 | $ 47.84 |
| Total assets | 60,127 | 55,605 | 52,449 | 49,750 | 46,025 |
| Long-term debt (excluding current portion) | 15,050 | 12,717 | 12,517 | 11,766 | 10,906 |
| Capital lease obligations (excluding current portion) [(3)] | 69 | 90 | 113 | 212 | 248 |
| Energy recovery bonds (excluding current portion) [(4)] | - | - | - | - | 423 |
| **Pacific Gas and Electric Company** | | | | | |
| **For the Year** | | | | | |
| Operating revenues | $ 17,088 | $ 15,593 | $ 15,035 | $ 14,951 | $ 13,840 |
| Operating income | 2,452 | 1,790 | 1,695 | 1,944 | 2,314 |
| Income available for common stock | 1,419 | 852 | 797 | 831 | 1,107 |
| **At Year-End** | | | | | |
| Total assets | 59,865 | 55,049 | 51,923 | 49,242 | 45,679 |
| Long-term debt (excluding current portion) | 14,700 | 12,717 | 12,167 | 11,417 | 10,557 |
| Capital lease obligations (excluding current portion) [(3)] | 69 | 90 | 113 | 212 | 248 |
| Energy recovery bonds (excluding current portion) [(4)] | - | - | - | - | 423 |

[(1)] See "Summary of Changes in Net Income and Earnings per Share" in Item 7. MD&A.
[(2)] Information about the frequency and amount of dividends and restrictions on the payment of dividends is set forth in "Liquidity and Financial Resources – Dividends" in MD&A in Item 7 and in PG&E Corporation's Consolidated Statements of Equity, the Utility's Consolidated Statements of Shareholders' Equity, and Note 5 in Item 8.
[(3)] The capital lease obligations amounts are included in noncurrent liabilities – other in PG&E Corporation's and the Utility's Consolidated Balance Sheets.
[(4)] The energy recovery bonds matured in December 2012.

**ITEM 7. MANAGEMENT'S DISCUSSION AND ANALYSIS OF FINANCIAL CONDITION AND RESULTS OF OPERATIONS**

**OVERVIEW**

Pacific Gas and Electric Company generates revenues mainly through the sale and delivery of electricity and natural gas to customers. PG&E Corporation is the parent holding company of the Utility. The authorized revenue requirements set by the CPUC in the GRC and GT&S rate cases and by the FERC in TO rate cases provide the Utility an opportunity to earn its authorized rates of return on its "rate base" – the Utility's net investment in facilities, equipment, and other property used or useful in providing utility service to its customers. Other than its electric transmission and certain GT&S revenues, the Utility's decoupling of base revenues and sales volume eliminates volatility in the revenues earned by the Utility due to fluctuations in customer demand.

The Utility's revenue requirements are set based on forecast costs. Differences between forecast costs and actual costs can occur for numerous reasons, including the volume of new customer connections, the detection and mitigation of emerging safety threats, and the impact of market forces on the cost of labor and materials. Differences in costs can also arise from changes in laws and regulations at both the state and federal level. Generally, differences between actual costs and forecast costs could affect the Utility's ability to earn its authorized return (referred to as "Utility Revenues and Costs that Impacted Earnings" in Results of Operations below). However, for certain operating costs, such as costs associated with pension and other employee benefits, the Utility is authorized to track the difference between actual amounts and forecast amounts and recover or refund the difference through rates (referred to as "Utility Revenues and Costs that did not Impact Earnings" in Results of Operations below). The Utility also collects additional revenue requirements to recover certain costs that the CPUC has authorized the Utility to pass on to customers. Therefore, although these costs can fluctuate, they generally do not impact net income (referred to as "Utility Revenues and Costs that did not Impact Earnings" in Results of Operations below). See "Ratemaking Mechanisms" in Item 1 for further discussion.

There may be some types of costs that the CPUC has determined will not be recoverable through rates or for which the Utility does not seek recovery, such as certain pipeline-related costs and fines associated with the Utility's natural gas transmission system. The CPUC could also disallow recovery of costs that it finds were not prudently or reasonably incurred. The timing and amount of the unrecoverable or disallowed costs can materially impact the Utility's net income, as described more fully below.

This is a combined report of PG&E Corporation and the Utility, and includes separate Consolidated Financial Statements for each of these two entities. This combined MD&A should be read in conjunction with the Consolidated Financial Statements and the Notes to the Consolidated Financial Statements included in Item 8.

### Summary of Changes in Net Income and Earnings per Share

PG&E Corporation's financial results for 2014 reflect an increase in the Utility's revenues as authorized in the CPUC's final decision issued in the Utility's 2014 GRC on August 14, 2014. (See "Results of Operations" below.)

The following table is a summary reconciliation of the key changes, after-tax, in PG&E Corporation's income available for common shareholders and EPS for the year ended December 31, 2014 compared to the prior year (see "Results of Operations" below for additional information):

| (in millions, except per share amounts) | Earnings | EPS (diluted) |
|---|---|---|
| **Income Available for Common Shareholders - 2013** | $ 814 | $ 1.83 |
| Natural gas matters [1] | 176 | 0.43 |
| 2014 GRC expense recovery[2] | 134 | 0.29 |
| Tax benefit - repairs method and forecast change [3] | 115 | 0.24 |
| Growth in rate base earnings [4] | 101 | 0.21 |
| Gain on disposition of SolarCity stock | 27 | 0.06 |
| Regulatory matters [5] | 20 | 0.04 |
| Gas transmission revenues | 8 | 0.02 |
| Uneconomic project and lease termination | 8 | 0.02 |
| Increase in shares outstanding [6] | - | (0.15) |
| Other | 33 | 0.07 |
| **Income Available for Common Shareholders - 2014** | **$ 1,436** | **$ 3.06** |

[1] Represents the decrease in net costs related to natural gas matters during 2014 as compared to 2013. These amounts are not recoverable through rates. See "Results of Operations - Operating and Maintenance" below.
[2] In 2013, the Utility incurred approximately $200 million of expense and $1 billion of capital costs above authorized levels. The 2014 GRC decision authorized revenues that support this higher level of spending in 2014 and throughout the GRC period. The amounts in the table represent the after-tax higher authorized revenue recognized during 2014, for the recovery of these expenses and costs.
[3] Represents the favorable impact of recent IRS guidance and forecast changes based on flow-through ratemaking treatment for federal tax deductions resulting from temporary differences attributable to the accelerated recognition of repairs and certain other property-related costs, as reflected in the revenue requirements authorized in the 2014 GRC decision. See "Income Tax Provision" below.
[4] Represents the impact of the increase in rate base as authorized in various rate cases, including the 2014 GRC, during 2014 as compared to 2013.
[5] Includes customer energy efficiency incentive awards.
[6] Represents the impact of a higher number of weighted average shares of common stock outstanding during 2014 as compared to 2013. PG&E Corporation issues shares to fund its equity contributions to the Utility to maintain the Utility's capital structure and fund operations, including unrecovered expenses.

### Key Factors Affecting Results of Operations, Financial Condition, and Cash Flows

PG&E Corporation and the Utility believe that their future results of operations, financial condition, and cash flows will be materially affected by the following factors:

- *The Outcome of Pending Investigations and Enforcement Matters.* The assigned CPUC ALJs overseeing the three pending investigations regarding the Utility's gas transmission system and the San Bruno accident have issued decisions to impose total fines and disallowances of $1.4 billion on the Utility. The Utility and other parties have appealed the decisions and several Commissioners have requested reviews of the decisions. It is uncertain when the final outcome of these investigations will be determined. At December 31, 2014, the Consolidated Balance Sheets included an accrual of $200 million for the minimum amount of fines deemed probable. There is also a pending federal criminal indictment against the Utility alleging that the Utility knowingly and willfully violated the Pipeline Safety Act and illegally obstructed the NTSB's investigation into the cause of the San Bruno accident. Based on the superseding indictment's allegations, the maximum statutory fine would be $14 million and the maximum alternative fine would be approximately $1.13 billion. Federal and state authorities also are conducting investigations in connection with certain communications between the Utility and CPUC personnel. Fines may be imposed, or other regulatory or governmental enforcement action could be taken, with respect to these and other enforcement matters. (See "Enforcement and Litigation Matters" below.)

- *The Timing and Outcome of Ratemaking Proceedings*. In the GT&S rate case the Utility has requested that the CPUC authorize revenue requirements for the Utility's gas transmission and storage operations from 2015 through 2017. The Utility has requested an increase in its 2015 revenue requirements of $555 million over the comparable authorized revenues, as well as increases for 2016 and 2017. In response to Utility's violations of the CPUC's rules regarding ex parte communications relating to the 2015 GT&S rate case, the CPUC issued a decision to disallow some GT&S incremental revenues that may otherwise be authorized in the final decision which is scheduled to be issued in August 2015. The Utility and other parties have filed applications requesting the CPUC to reconsider this decision. It is uncertain whether this decision will be upheld and what amount of revenue requirements will ultimately be authorized in the final GT&S rate case decision. It is also uncertain whether the final outcome of the pending CPUC investigations will affect the outcome of the 2015 GT&S rate case. In addition, the Utility has a TO rate case pending at the FERC. (See "Ratemaking and Other Regulatory Proceedings" below.) The outcome of regulatory proceedings can be affected by many factors, including the level of opposition by intervening parties, potential rate impacts, the Utility's reputation, the regulatory and political environments, and other factors discussed in Item 1A. Risk Factors.

- *The Ability of the Utility to Control Operating Costs and Capital Expenditures.* PG&E Corporation's and the Utility's future results of operations, financial condition, and cash flows could be materially affected if the Utility's actual costs differ from the amounts authorized in the final 2014 GRC decision and future rate case decisions. During the quarter ended December 31, 2014, the Utility recorded a charge of $116 million for the increase in the Utility's forecast of PSEP capital expenditures that are expected to exceed authorized amounts. The Utility could incur additional charges in the future if the forecast of PSEP-related capital expenditures increases. The Utility also forecasts that in 2015 it will incur unrecovered pipeline-related expenses ranging from $100 million to $150 million, including costs to perform continuing work under the Utility's PSEP and other gas transmission safety work, as well as legal and other expenses. Actual costs could be higher. The final outcome of the pending CPUC investigations and the CPUC enforcement actions with respect to the Utility's violations of the ex parte communication rules also could affect the ultimate amount of unrecovered costs.

- *The Amount and Timing of the Utility's Financing Needs.* PG&E Corporation contributes equity to the Utility as needed to maintain the Utility's CPUC-authorized capital structure. In 2014, PG&E Corporation issued $802 million of common stock and made equity contributions to the Utility of $705 million. PG&E Corporation forecasts that it will continue issuing a material amount of equity to support the Utility's capital expenditures and to fund unrecovered pipeline-related costs. PG&E Corporation expects that it will issue additional common stock to fund its equity contributions to enable the Utility to pay fines and compliance costs as may be required by the final outcomes of the CPUC investigations, the criminal proceeding, and the other enforcements matters. These additional issuances could have a material dilutive effect on PG&E Corporation's EPS. PG&E Corporation's and the Utility's ability to access the capital markets and the terms and rates of future financings could be affected by the outcome of the matters discussed in "Enforcement and Litigation Matters" below, changes in their respective credit ratings, general economic and market conditions, and other factors.

For more information about the factors and risks that could affect PG&E Corporation's and the Utility's future results of operations, financial condition, and cash flows, or that could cause future results to differ from historical results, see Item 1A. Risk Factors. In addition, this 2014 Annual Report contains forward-looking statements that are necessarily subject to various risks and uncertainties. These statements reflect management's judgment and opinions that are based on current estimates, expectations, and projections about future events and assumptions regarding these events and management's knowledge of facts as of the date of this report. See the section entitled "Cautionary Language Regarding Forward Looking Statements" below for a list of some of the factors that may cause actual results to differ materially. PG&E Corporation and the Utility are not able to predict all the factors that may affect future results. PG&E Corporation and the Utility do not undertake an obligation to update forward-looking statements, whether in response to new information, future events, or otherwise.

## RESULTS OF OPERATIONS

The following discussion presents PG&E Corporation's and the Utility's operating results for 2014, 2013, and 2012. See "Key Factors Affecting Results of Operations, Financial Condition, and Cash Flows" above for further discussion about factors that could affect future results of operations.

### PG&E Corporation

The consolidated results of operations consist primarily of results related to the Utility, which are discussed in the "Utility" section below. The following table provides a summary of net income (loss) available for common shareholders:

| (in millions) | 2014 | 2013 | 2012 |
|---|---|---|---|
| Consolidated Total | $ 1,436 | $ 814 | $ 816 |
| PG&E Corporation | 17 | (38) | 19 |
| Utility | $ 1,419 | $ 852 | $ 797 |

PG&E Corporation's net income or loss consists primarily of interest expense on long-term debt, other income or loss from investments, and income taxes. In 2014, PG&E Corporation's operating results increased reflecting $45 million of realized gains and associated tax benefits recognized in connection with an equity investment in SolarCity. PG&E Corporation's operating results in 2013 reflected an impairment loss of $28 million on its tax equity fund investments and higher charitable contributions as compared to 2012.

### Utility

The table below shows certain items from the Utility's Consolidated Statements of Income for 2014, 2013 and 2012. The table separately identifies the revenues and costs that impacted earnings from those that did not impact earnings. In general, expenses the Utility is authorized to pass through directly to customers (such as costs to purchase electricity and natural gas, as well as costs to fund public purpose programs) and the corresponding amount of revenues collected to recover those pass-through costs, do not impact earnings. In addition, expenses that have been specifically authorized (such as the payment of pension costs) and the corresponding revenues the Utility is authorized to collect to recover such costs, do not impact earnings.

Revenues that impact earnings are primarily those that have been authorized by the CPUC and the FERC to recover the Utility's costs to own and operate its assets and to provide the Utility an opportunity to earn its authorized rate of return on rate base. Expenses that impact earnings are primarily those that the Utility incurs to own and operate its assets.

The Utility's operating results for 2014 reflect the increase in authorized revenues effective January 1, 2014 that was approved by the CPUC in the 2014 GRC decision issued on August 14, 2014. (See "Utility Revenues and Costs that Impacted Earnings" below.)

| | 2014 | | | 2013 | | | 2012 | | |
|---|---|---|---|---|---|---|---|---|---|
| | Revenues and Costs: | | | Revenues and Costs: | | | Revenues and Costs: | | |
| (in millions) | That Impacted Earnings | That Did Not Impact Earnings | Total Utility | That Impacted Earnings | That Did Not Impact Earnings | Total Utility | That Impacted Earnings | That Did Not Impact Earnings | Total Utility |
| Electric operating revenues | $ 7,059 | $ 6,597 | $13,656 | $ 6,465 | $ 6,024 | $12,489 | $ 6,414 | $ 5,600 | $12,014 |
| Natural gas operating revenues | 2,072 | 1,360 | 3,432 | 1,776 | 1,328 | 3,104 | 1,772 | 1,249 | 3,021 |
| **Total operating revenues** | **9,131** | **7,957** | **17,088** | **8,241** | **7,352** | **15,593** | **8,186** | **6,849** | **15,035** |
| Cost of electricity | - | 5,615 | 5,615 | - | 5,016 | 5,016 | - | 4,162 | 4,162 |
| Cost of natural gas | - | 954 | 954 | - | 968 | 968 | - | 861 | 861 |
| Operating and maintenance | 4,247 | 1,388 | 5,635 | 4,374 | 1,368 | 5,742 | 4,563 | 1,482 | 6,045 |
| Depreciation, amortization, and decommissioning | 2,432 | - | 2,432 | 2,077 | - | 2,077 | 1,928 | 344 | 2,272 |
| **Total operating expenses** | **6,679** | **7,957** | **14,636** | **6,451** | **7,352** | **13,803** | **6,491** | **6,849** | **13,340** |
| **Operating income** | **2,452** | **-** | **2,452** | **1,790** | **-** | **1,790** | **1,695** | **-** | **1,695** |
| Interest income [(1)] | | | 8 | | | 8 | | | 6 |
| Interest expense [(1)] | | | (720) | | | (690) | | | (680) |
| Other income, net [(1)] | | | 77 | | | 84 | | | 88 |
| **Income before income taxes** | | | 1,817 | | | 1,192 | | | 1,109 |
| Income tax provision [(1)] | | | 384 | | | 326 | | | 298 |
| **Net income** | | | 1,433 | | | 866 | | | 811 |
| Preferred stock dividend requirement [(1)] | | | 14 | | | 14 | | | 14 |
| **Income Available for Common Stock** | | | **$ 1,419** | | | **$ 852** | | | **$ 797** |

[(1)] These items impacted earnings.

### Utility Revenues and Costs that Impacted Earnings

The following discussion presents the Utility's operating results for 2014, 2013 and 2012, focusing on revenues and expenses that impacted earnings for these periods.

*Operating Revenues*

The Utility's electric and natural gas operating revenues that impacted earnings increased $890 million or 11% in 2014 compared to 2013. This amount includes an increase to base revenues of $460 million as authorized by the CPUC in the 2014 GRC decision. The GRC decision also resulted in higher base revenues of $150 million in 2014 related primarily to the DOE settlement in 2012 for spent nuclear fuel storage costs. (See "Ratemaking and Other Regulatory Proceedings" below.) The total increase in operating revenues also includes approximately $150 million, consisting of revenues authorized by the CPUC for recovery of nuclear decommissioning costs and certain PSEP-related costs and revenues authorized by the FERC in the TO rate case. The Utility also collected higher gas transmission revenues driven by increased demand for gas-fired generation.

The Utility's electric and natural gas operating revenues increased $55 million or 1% in 2013 compared to 2012, primarily due to an increase of $294 million as authorized in various rate cases, partially offset by a decrease in revenues of $196 million as a result of the lower ROE authorized by the CPUC in the 2013 Cost of Capital proceeding.

*Operating and Maintenance*

The Utility's operating and maintenance expenses that impacted earnings decreased $127 million or 3% in 2014 compared to 2013 and $189 million or 4% in 2013 compared to 2012, primarily due to lower net costs incurred in connection with natural gas matters shown in the table below. These decreases were offset by higher benefit-related expenses and other operating expenses of $120 million in 2014 as compared to 2013 and $53 million in 2013 as compared to 2012. Additionally, the Utility incurred an $88 million charge in 2012 for an increase in estimated environmental remediation costs associated with the Hinkley natural gas

compressor station site, with no comparable charge taken in 2013.

The following table provides a summary of the Utility's costs associated with natural gas matters that are not recoverable through rates:

| (in millions) | 2014 | 2013 | 2012 | Cumulative December 31, 2014 |
|---|---|---|---|---|
| Pipeline-related expenses [(1)] | $ 347 | $ 387 | $ 477 | $ 1,757 |
| Disallowed capital expenditures [(2)] | 116 | 196 | 353 | 665 |
| Accrued fines [(3)] | 12 | 22 | 17 | 251 |
| Third-party liability claims [(4)] | (7) | 110 | 80 | 558 |
| Insurance recoveries [(5)] | (112) | (70) | (185) | (466) |
| Contribution to City of San Bruno | - | - | 70 | 70 |
| **Total natural gas matters** | **$ 356** | **$ 645** | **$ 812** | **$ 2,835** |

(1) In 2014, the Utility incurred $149 million of PSEP-related expenses, $155 million of other gas safety-related work, and $43 million of legal and other expenses. From December 31, 2010 through December 31, 2014, the Utility incurred respective expenses of $885 million, $502 million, and $370 million. See "Enforcement and Litigation Matters" below.

(2) Amounts represent charges for PSEP capital costs expected to exceed the authorized amount. See "Pipeline Safety Enhancement Plan" in Note 14 of the Consolidated Financial Statements in Item 8.

(3) Includes fines related to ex parte communications, the Carmel incident, and other fines. See "Pending CPUC Investigations" below. The Utility has paid $40 million of fines through December 31, 2014.

(4) Amounts represent third-party liability claims and associated legal costs. The Utility's liability for third-party claims related to the San Bruno accident was reduced in 2014 to reflect the settlement of all outstanding third-party claims. Since the San Bruno accident, the Utility has made cumulative settlement payments of $532 million through December 31, 2014.

(5) The Utility has recognized insurance recoveries for third-party claims and associated legal costs. The Utility has been engaged in settlement negotiations with its insurers regarding recovery of its remaining claims and costs.

*Depreciation, Amortization, and Decommissioning*

The Utility's depreciation, amortization, and decommissioning expenses increased $355 million or 17% in 2014 compared to 2013 and $149 million or 8% in 2013 compared to 2012. In 2014, the increase was primarily due to higher depreciation rates as authorized by the CPUC in the 2014 GRC decision and higher nuclear decommissioning expense reflecting the year-to-date increase as authorized by the CPUC in the nuclear decommissioning triennial proceeding. Additionally, depreciation, amortization, and decommissioning expenses were impacted by an increase in capital additions during 2014 as compared to 2013, and during 2013 as compared to 2012.

*Interest Income, Interest Expense, and Other Income, Net*

There were no material changes to interest income, interest expense, and other income, net for the periods presented.

*Income Tax Provision*

The Utility's revenue requirements for 2014 through 2016, as authorized in the 2014 GRC decision, reflect flow-through ratemaking for income tax expense benefits attributable to the accelerated recognition of repair costs and certain other property-related costs for federal tax purposes. PG&E Corporation and the Utility's effective tax rates for 2014 are lower as compared to 2013, and are expected to remain lower in 2015 and 2016 due to these temporary differences that are now being flowed through. PG&E Corporation and the Utility's 2014 financial results reflect a reduction in income tax expense associated with these temporary differences. (See Note 8 of the Notes to the Consolidated Financial Statements in Item 8.)

The Tax Increase Prevention Act, signed into law on December 19, 2014, extended 50% bonus federal tax depreciation on qualified property placed into service in 2014. The Utility's earnings were not impacted by the incremental tax depreciation as the flow-through ratemaking discussed above does not apply and the 2014 GRC decision requires the Utility to refund to customers the estimated cost of service benefits associated with this tax law change.

The Utility's income tax provision increased $58 million or 18% in 2014 as compared to 2013 and $28 million or 9% in 2013 as compared to 2012. The increase in the tax provision was primarily due to higher pre-tax income, partially offset by certain reductions in tax expense for flow-through treatment as discussed above.

The following table reconciles the income tax expense at the federal statutory rate to the income tax provision:

| | 2014 | | 2013 | | 2012 | |
|---|---|---|---|---|---|---|
| Federal statutory income tax rate | 35.0 | % | 35.0 | % | 35.0 | % |
| Increase (decrease) in income tax rate resulting from: | | | | | | |
| State income tax (net of federal benefit) (1) | 1.6 | | (2.2) | | (3.0) | |
| Effect of regulatory treatment of fixed asset differences (2) | (14.7) | | (3.8) | | (3.9) | |
| Tax credits | (0.7) | | (0.4) | | (0.6) | |
| Benefit of loss carryback | (0.8) | | (1.0) | | (0.4) | |
| Non deductible penalties | 0.3 | | 0.7 | | 0.5 | |
| Other, net | 0.4 | | (0.9) | | (0.8) | |
| **Effective tax rate** | **21.1** | **%** | **27.4** | **%** | **26.8** | **%** |

(1) Includes the effect of state flow-through ratemaking treatment.
(2) Represents effect of federal flow-through ratemaking treatment including those deductions related to repairs and certain other property-related costs discussed above.

**Utility Revenues and Costs that did not Impact Earnings**

*Cost of Electricity*

The Utility's cost of electricity includes the costs of power purchased from third parties, transmission, fuel used in its own generation facilities, fuel supplied to other facilities under power purchase agreements, and realized gains and losses on price risk management activities. (See Note 9 of the Notes to the Consolidated Financial Statements in Item 8.) The volume of power purchased by the Utility is driven by customer demand, the availability of the Utility's own generation facilities (including hydroelectric generations), and the cost effectiveness of each source of electricity. Additionally, the cost of electricity is impacted by the higher cost of procuring renewable energy as the Utility increases the amount of its renewable energy deliveries to comply with California law.

| **(in millions)** | | 2014 | | 2013 | | 2012 |
|---|---|---|---|---|---|---|
| Cost of purchased power | $ | 5,266 | $ | 4,696 | $ | 3,873 |
| Fuel used in own generation facilities | | 349 | | 320 | | 289 |
| **Total cost of electricity** | **$** | **5,615** | **$** | **5,016** | **$** | **4,162** |
| Average cost of purchased power per kWh | $ | 0.101 | $ | 0.094 | $ | 0.079 |
| **Total purchased power (in millions of kWh)** | | **52,008** | | **49,941** | | **48,933** |

*Cost of Gas*

The Utility's cost of natural gas includes the costs of procurement, storage, transportation of natural gas, and realized gains and losses on price risk management activities. (See Note 9 of the Notes to the Consolidated Financial Statements in Item 8.) The Utility's cost of natural gas is impacted by the market price of natural gas, changes in the cost of storage and transportation, changes in customer demand, and by costs associated with complying with California's GHG laws.

| **(in millions)** | **2014** | **2013** | **2012** |
|---|---|---|---|
| Cost of natural gas sold | $ 813 | $ 807 | $ 676 |
| Transportation cost of natural gas sold | 141 | 161 | 185 |
| **Total cost of natural gas** | **$ 954** | **$ 968** | **$ 861** |
| Average cost per Mcf of natural gas sold | $ 4.37 | $ 3.54 | $ 2.91 |
| **Total natural gas sold (in millions of Mcf)** [(1)] | **186** | **228** | **232** |

[(1)] One thousand cubic feet

*Operating and Maintenance Expenses*

The Utility's operating expenses that did not impact earnings include certain costs that the Utility is authorized to recover as incurred such as pension contributions and public purpose programs costs. If the Utility were to spend more than authorized amounts, these expenses could have an impact to earnings. For 2014, 2013 and 2012, no material amounts were incurred above authorized amounts.

## LIQUIDITY AND FINANCIAL RESOURCES

### Overview

The Utility's ability to fund operations, finance capital expenditures, and make distributions to PG&E Corporation depends on the levels of its operating cash flows and access to the capital and credit markets. The CPUC authorizes the Utility's capital structure, the aggregate amount of long-term debt and short-term debt that the Utility may issue, and the revenue requirements the Utility is able to collect related to its debt financing costs. The Utility generally utilizes equity contributions from PG&E Corporation and long-term senior unsecured debt issuances to maintain its CPUC-authorized long-term capital structure consisting of 52% equity and 48% debt and preferred stock (see "Ratemaking Mechanisms" in Item 1). The Utility's future equity needs will continue to be affected by costs that are not recoverable through rates, including costs related to natural gas matters, fines imposed in connection with the pending CPUC investigations and other matters described in "Enforcement and Litigation Matters" below, and certain environmental remediation costs. The Utility relies on short-term debt, including commercial paper, to fund temporary financing needs.

PG&E Corporation's ability to fund operations, make scheduled principal and interest payments, fund equity contributions to the Utility, and pay dividends, primarily depends on the level of cash distributions received from the Utility and PG&E Corporation's access to the capital and credit markets. PG&E Corporation has material stand-alone cash flows related to the issuance of equity and long-term debt, dividend payments, and borrowings and repayments under its revolving credit facility. PG&E Corporation relies on short-term debt, including commercial paper, to fund temporary financing needs.

PG&E Corporation's and the Utility's credit ratings may be affected by the ultimate outcome of the pending enforcement and litigation matters. Credit rating downgrades may increase the cost and availability of short-term borrowing, including commercial paper, the costs associated with credit facilities, and long-term debt costs. In addition, the majority of the Utility's derivatives contain collateral posting provisions tied to the Utility's credit rating from each of the major credit rating agencies. If the Utility's credit rating were to fall below investment grade, the Utility would be required to post additional cash immediately to fully collateralize some of its net liability derivative positions. (See Note 9 of the Notes to the Consolidated Financial Statements in Item 8.)

PG&E Corporation's equity contributions to the Utility are funded primarily through common stock issuances. During 2014, PG&E Corporation sold 11 million shares of common stock for cash proceeds of $496 million, net of commissions of $4 million, under an equity distribution agreement. There were no sales during the fourth quarter of 2014. In addition, during 2014, PG&E Corporation sold 8 million shares of common stock under its 401(k) plan, the Dividend Reinvestment and Stock Purchase Plan, and share-based compensation plans for total cash proceeds of $306 million.

The proceeds from these equity issuances were used for general corporate purposes, including the contribution of equity into the Utility. For the year ended December 31, 2014, PG&E Corporation made equity contributions to the Utility of $705 million to ensure that the Utility had adequate capital to maintain the 52% common equity ratio authorized by the CPUC. These equity issuances have been dilutive to PG&E Corporation's EPS to the extent that the proceeds were used by the Utility to restore equity that has been reduced by unrecoverable costs and charges.

PG&E Corporation forecasts that it will issue additional common stock to fund the Utility's equity needs. PG&E Corporation forecasts that it will issue between $400 million and $600 million in common stock during 2015, excluding amounts attributable to fines the Utility may be required to pay in connection with final outcomes of the CPUC investigations, the criminal proceeding, and other enforcements matters. Future issuances of common stock by PG&E Corporation to fund equity contributions could continue to have a material dilutive effect on EPS depending upon the ultimate outcomes of the matters described in "Enforcement and Litigation Matters" below and the outcome of the GT&S rate case as described in "Ratemaking and Other Regulatory Proceedings" below.

### Cash and Cash Equivalents

PG&E Corporation and the Utility maintain separate bank accounts and primarily invest their cash in money market funds. In addition to cash and cash equivalents, the Utility holds restricted cash that primarily consists of cash held in escrow pending the resolution of the remaining disputed claims that were filed in the Utility's reorganization proceeding under Chapter 11 of the U.S. Bankruptcy Code. (See Note 12 of the Notes to the Consolidated Financial Statements in Item 8.)

**Revolving Credit Facilities and Commercial Paper Programs**

At December 31, 2014, PG&E Corporation and the Utility had $300 million and $2.6 billion available under their respective $300 million and $3.0 billion revolving credit facilities. (See Note 4 of the Notes to the Consolidated Financial Statements in Item 8.)

The revolving credit facilities require that PG&E Corporation and the Utility maintain a ratio of total consolidated debt to total consolidated capitalization of at most 65% as of the end of each fiscal quarter. PG&E Corporation's revolving credit facility agreement also requires that PG&E Corporation own, directly or indirectly, at least 80% of the common stock and at least 70% of the voting capital stock of the Utility. In addition, these revolving credit facilities include usual and customary provisions regarding events of default and covenants limiting liens to those permitted under PG&E Corporation's and the Utility's senior note indentures, mergers, sales of all or substantially all of PG&E Corporation's and the Utility's assets, and other fundamental changes. At December 31, 2014, PG&E Corporation and the Utility were in compliance with all covenants under their respective revolving credit facilities.

**2014 Debt Financings**

PG&E Corporation and the Utility issued $2.3 billion in long-term debt and $300 million in short-term debt during the year ended December 31, 2014. (See Note 4 of the Notes to the Consolidated Financial Statements in Item 8.)

**Dividends**

The Board of Directors of PG&E Corporation and the Utility have authority to declare dividends on their respective common stock. Dividends are not payable unless and until declared by the applicable Board of Directors. The CPUC requires that the Utility maintain, on average, its authorized capital structure including a 52% equity component and that the PG&E Corporation Board of Directors give first priority to the Utility's capital requirements, as determined to be necessary and prudent to meet the Utility's obligation to serve or to operate the Utility in a prudent and efficient manner. Each Board of Directors retains authority to change the common stock dividend rate at any time, especially if unexpected events occur that would change their view as to the prudent level of cash conservation.

The Board of Directors of PG&E Corporation declared and paid common stock dividends of $0.455 per share for each of the quarters in 2014, 2013, and 2012, for annual dividends of $1.82 per share. The Utility's Board of Directors declared and paid common stock dividends in the aggregate amount of $179 million to PG&E Corporation for each of the quarters in 2014, 2013, and 2012. The Utility's preferred stock is cumulative and any dividends in arrears must be paid before the Utility may pay any common stock dividends.

The following table summarizes PG&E Corporation's and the Utility's dividends paid:

| (in millions) | 2014 | 2013 | 2012 |
|---|---|---|---|
| **PG&E Corporation:** | | | |
| Common stock dividends paid | $ 802 | $ 782 | $ 746 |
| Common stock dividends reinvested in Dividend Reinvestment and Stock Purchase Plan | 21 | 22 | 22 |
| **Utility:** | | | |
| Common stock dividends paid | $ 716 | $ 716 | $ 716 |
| Preferred stock dividends paid | 14 | 14 | 14 |

Additionally, in December 2014, the following dividends were declared:

- the Board of Directors of PG&E Corporation declared quarterly common stock dividends of $0.455 per share, totaling $217 million, of which approximately $211 million was paid in January 2015 to shareholders of record on December 31, 2014;
- the Board of Directors of the Utility declared dividends on its outstanding series of preferred stock, payable in February 2015, to shareholders of record on January 30, 2015.

Subject to the outcome of the matters described in "Enforcement and Litigation Matters" below, PG&E Corporation expects that its Board will continue to maintain the current quarterly common stock dividend. (See Item 1A. Risk Factors.)

**PG&E Corporation**

PG&E Corporation affiliates previously entered into four tax equity agreements to fund residential and commercial retail solar energy installations with four separate privately held funds that were considered VIEs. On July 2, 2014, PG&E Corporation disposed of its interest in the tax equity agreements for $87 million and has no remaining commitment to fund these agreements. Sales proceeds, lease payments, investment contributions, benefits, and customer payments received were included in cash flows from operating and investing activities within the Consolidated Statements of Cash Flows to coincide with the applicable lease structure.

**Utility**

***Operating Activities***

The Utility's cash flows from operating activities primarily consist of receipts from customers less payments of operating expenses, other than expenses such as depreciation that do not require the use of cash.

The Utility's cash flows from operating activities for 2014, 2013, and 2012 were as follows:

| (in millions) | 2014 | 2013 | 2012 |
|---|---|---|---|
| Net income | $ 1,433 | $ 866 | $ 811 |
| Adjustments to reconcile net income to net cash provided by operating activities: | | | |
| Depreciation, amortization, and decommissioning | 2,432 | 2,077 | 2,272 |
| Allowance for equity funds used during construction | (100) | (101) | (107) |
| Deferred income taxes and tax credits, net | 731 | 1,103 | 684 |
| PSEP disallowed capital expenditures | 116 | 196 | 353 |
| Other | 226 | 299 | 236 |
| Effect of changes in operating assets and liabilities: | (1,219) | (1,024) | 679 |
| **Net cash provided by operating activities** | **$ 3,619** | **$ 3,416** | **$ 4,928** |

During 2014, net cash provided by operating activities increased by $203 million as compared to 2013. This increase was primarily due to $500 million in net tax refunds received during 2014 as compared to $62 million in net tax payments made during 2013, $160 million in additional GHG auction proceeds during 2014 as compared to 2013, and $137 million in additional collateral returned to the Utility in 2014 as compared to 2013. The increase was offset by higher purchased power costs of $599 million (see "Cost of Electricity" within "Results of Operations – Utility Revenues and Costs that did not Impact Earnings" above) and various fluctuations in other cash flows.

During 2013, net cash provided by operating activities decreased by $1.5 billion as compared to 2012 when the Utility collected $460 million from customers related to the energy recovery bonds which matured at the end of 2012. In addition, in 2013, the amount of cash collateral returned to the Utility by third parties was $243 million lower than in 2012, the payments the Utility received under the DOE settlement for reimbursement of the Utility's spent nuclear fuel disposal costs was $221 million lower, net of legal fees, than the Utility received in 2012, and the Utility's tax payments were $236 million higher than in 2012. The remaining changes in cash flows from operating activities consisted of fluctuations in activities within the normal course of business such as the timing and amount of customer billings and collections.

Future cash flow from operating activities will be affected by various factors, including:

- the timing and outcome of ratemaking proceedings, including the 2015 GT&S rate case;
- the timing and amount of fines or penalties that will be imposed in connection with the pending investigations and other enforcement matters, as well as any costs associated with remedial actions the Utility may be required to implement (see "Enforcement and Litigation Matters" below);
- the timing and amount of pipeline-related costs the Utility incurs, but does not recover, associated with its natural gas system (see "Operating and Maintenance" within "Results of Operations – Utility Revenues and Costs that Impacted Earnings" above);
- the volatility in energy commodity costs and seasonal load;
- the timing and amount of tax payments, tax refunds, net collateral payments, and interest payments; and
- the timing of the resolution of the Chapter 11 disputed claims and the related refunds passed through to customers (see Note 12 of the Notes to the Consolidated Financial Statements in Item 8).

***Investing Activities***

The Utility's investing activities primarily consist of construction of new and replacement facilities necessary to deliver safe and reliable electricity and natural gas services to its customers. The amount and timing of the Utility's capital expenditures is affected by many factors such as the approvals of the CPUC, FERC, and other regulatory agencies, the volume of new customer connections, and the occurrence of storms that cause outages or damages to the Utility's infrastructure. The funds in the nuclear decommissioning trusts, along with accumulated earnings, are used exclusively for decommissioning and dismantling the Utility's nuclear generation facilities.

The Utility's cash flows from investing activities for 2014, 2013, and 2012 were as follows:

| **(in millions)** | **2014** | **2013** | **2012** |
|---|---|---|---|
| Capital expenditures | $ (4,833) | $ (5,207) | $ (4,624) |
| Decrease in restricted cash | 3 | 29 | 50 |
| Proceeds from sales and maturities of nuclear decommissioning trust investments | 1,336 | 1,619 | 1,133 |
| Purchases of nuclear decommissioning trust investments | (1,334) | (1,604) | (1,189) |
| Other | 29 | 21 | 16 |
| **Net cash used in investing activities** | **$ (4,799)** | **$ (5,142)** | **$ (4,614)** |

Net cash used in investing activities decreased by $343 million in 2014 compared to 2013 due to a decrease of $374 million in capital expenditures. This decrease was primarily due to lower PSEP-related capital expenditures and the absence of additional investment in the Utility's photovoltaic program.

Net cash used in investing activities increased by $528 million in 2013 compared to 2012 due to an increase of $583 million in capital expenditures, partially offset by net proceeds associated with sales of nuclear decommissioning trust investments in 2013 as compared to net purchases of nuclear decommissioning trust investments in 2012.

Future cash flows used in investing activities primarily depend on the timing and amount of capital expenditures. The Utility forecasts that it will incur $5.5 billion in capital expenditures in 2015 and between $5.3 billion and $5.8 billion in 2016. Most of the Utility's revenue requirements to recover forecasted capital expenditures are authorized in the GRC, TO, and GT&S rate cases.

*Financing Activities*

The Utility's financing activities are impacted by the conditions in the capital markets and the maturity date of existing debt instruments. The Utility forecasts that its financing needs will increase as it incurs non-recoverable pipeline-related costs and fines associated with the pending investigations and other enforcement matters.

The Utility's cash flows from financing activities for 2014, 2013, and 2012 were as follows:

| (in millions) | 2014 | 2013 | 2012 |
|---|---|---|---|
| Net issuances (repayments) of commercial paper, net of discount | $ (583) | $ 542 | $ (1,021) |
| Proceeds from issuance of short-term debt, net of issuance costs | 300 | - | - |
| Proceeds from issuance of long-term debt, net of premium, discount, and issuance costs | 1,961 | 1,532 | 1,137 |
| Short-term debt matured | - | - | (250) |
| Repayments of long-term debt | (539) | (861) | (50) |
| Energy recovery bonds matured | - | - | (423) |
| Preferred stock dividends paid | (14) | (14) | (14) |
| Common stock dividends paid | (716) | (716) | (716) |
| Equity contribution from PG&E Corporation | 705 | 1,140 | 885 |
| Other | 56 | (26) | 28 |
| **Net cash provided by (used in) financing activities** | **$ 1,170** | **$ 1,597** | **$ (424)** |

In 2014, net cash provided by financing activities decreased by $427 million compared to the same period in 2013. In 2013, net cash provided by financing activities increased by $2.0 billion compared to 2012. Cash provided by or used in financing activities is driven by the Utility's financing needs, which depends on the level of cash provided by or used in operating activities and the level of cash provided by or used in investing activities.

**CONTRACTUAL COMMITMENTS**

The following table provides information about PG&E Corporation's and the Utility's contractual commitments at December 31, 2014:

| | Payment due by period | | | | |
|---|---|---|---|---|---|
| **(in millions)** | **Less Than 1 Year** | **1-3 Years** | **3-5 Years** | **More Than 5 Years** | **Total** |
| **Utility** | | | | | |
| Long-term debt [(1)]: | $ 714 | $ 2,304 | $ 2,870 | $ 21,779 | $ 27,667 |
| Purchase obligations [(2)]: | | | | | |
| Power purchase agreements: | 3,566 | 6,839 | 6,239 | 33,896 | 50,540 |
| Natural gas supply, transportation, and storage | 544 | 271 | 214 | 648 | 1,677 |
| Nuclear fuel agreements | 138 | 260 | 224 | 429 | 1,051 |
| Pension and other benefits [(3)] | 388 | 776 | 776 | 388 | 2,328 |
| Operating leases [(2)] | 44 | 76 | 57 | 183 | 360 |
| Preferred dividends [(4)] | 14 | 28 | 28 | - | 70 |
| **PG&E Corporation** | | | | | |
| Long-term debt [(1)]: | 8 | 16 | 359 | - | 383 |
| **Total Contractual Commitments** | **$ 5,416** | **$ 10,570** | **$ 10,767** | **$ 57,323** | **$ 84,076** |

[(1)] Includes interest payments over the terms of the debt. Interest is calculated using the applicable interest rate at December 31, 2014 and outstanding principal for each instrument with the terms ending at each instrument's maturity. (See Note 4 of the Notes to the Consolidated Financial Statements in Item 8.)
[(2)] See Note 14 of the Notes to the Consolidated Financial Statements in Item 8.
[(3)] See Note 11 of the Notes to the Consolidated Financial Statements in Item 8. Payments into the pension and other benefits plans are based on annual contribution requirements. As these annual requirements continue indefinitely into the future, the amount shown in the column entitled "more than 5 years"

represents only 1 year of contributions for the Utility's pension and other benefit plans.
[4] Based on historical performance, it is assumed for purposes of the table above that dividends are payable within a fixed period of five years.

The contractual commitments table above excludes potential payments associated with unrecognized tax positions. Due to the uncertainty surrounding tax audits, PG&E Corporation and the Utility cannot make reliable estimates of the amounts and periods of future payments to major tax jurisdictions related to unrecognized tax benefits. Matters relating to tax years that remain subject to examination are discussed in Note 8 of the Notes to the Consolidated Financial Statements in Item 8.

**Off-Balance Sheet Arrangements**

PG&E Corporation and the Utility do not have any off-balance sheet arrangements that have had, or are reasonably likely to have, a current or future material effect on their financial condition, changes in financial condition, revenues or expenses, results of operations, liquidity, capital expenditures, or capital resources, other than those discussed in Note 14 of the Notes to the Consolidated Financial Statements (the Utility's commodity purchase agreements) in Item 8.

**ENFORCEMENT AND LITIGATION MATTERS**

Since the San Bruno accident occurred on September 9, 2010, PG&E Corporation and the Utility have incurred total cumulative charges of approximately $2.8 billion related to natural gas matters that are not recoverable through rates. See "Results of Operations" above.

**Pending CPUC Investigations**

On September 2, 2014, the assigned CPUC ALJs issued their presiding officer decisions in the three investigative enforcement proceedings pending against the Utility related to the Utility's natural gas transmission operations and practices and the San Bruno accident. The ALJs determined that the Utility committed approximately 3,700 violations of law, rules and regulations. The ALJs jointly issued a decision calling for total fines and disallowances of $1.4 billion on the Utility to address all violations, allocated as shown in the table below. The ALJs' decisions are not the final decisions of the CPUC. Three CPUC Commissioners have requested that the CPUC review the decisions. It is possible that one or more Commissioners will issue an alternate penalty decision for consideration by the CPUC. In addition, the Utility and other parties, including the SED, TURN, the ORA, the City and County of San Francisco, and the City of San Bruno have appealed the presiding officer decisions. (For additional information, see Note 14 of the Notes to the Consolidated Financial Statements in Item 8.) It is uncertain when the final outcome of the investigations will be determined.

While the various appeals and requests for review of the presiding officer decisions are unresolved there continues to be significant uncertainty about the ultimate forms and amounts of penalties (including fines) that will be imposed on the Utility. At December 31, 2014, the Consolidated Balance Sheets included an accrual of $200 million in other current liabilities for the minimum amount of fines deemed probable. The impact on PG&E Corporation's and the Utility's Consolidated Financial Statements will depend on the amounts and forms of penalties that are ultimately adopted by the CPUC. Fines payable to the State General Fund or refunds of revenues would be charged to net income when it is probable that such fines or refunds will be imposed and the amounts can be reasonably estimated. A disallowance of previously authorized and incurred capital costs would be charged to net income when the disallowance is probable and the amount can be reasonably estimated. Penalties in the form of future disallowed costs would be charged to net income in the period during which the actual costs are incurred. Although PG&E Corporation and the Utility believe it is probable that the CPUC will impose total penalties materially in excess of the $200 million previously accrued, they are unable to make a better estimate due to the variety of potential combinations of amounts and forms of penalties that could ultimately be imposed on the Utility and uncertainty about the timing of recognition. PG&E Corporation and the Utility believe the final outcome of the investigations will have a material impact on their financial condition, results of operations, and cash flows.

If the presiding officer joint decision becomes final, the Utility estimates that its total pre-tax unrecovered costs and fines related to natural gas transmission operations would be about $4.85 billion based on current forecasts, allocated as follows:

| Description of Component: | | Amounts (in millions) |
|---|---|---|
| Fine payable to the State General Fund | $ | 950 |
| Refund of revenues previously authorized | | 400 |
| Additional estimated unrecoverable costs (1) | | 50 |
| **Total penalty** | | **1,400** |
| PSEP costs previously disallowed | | 635 |
| **Total penalty and PSEP cost disallowance** | | **2,035** |
| Gas pipeline safety costs incurred or committed (2) | | 2,800 |
| Less: Credit for PSEP costs previously disallowed | | (635) |
| Total estimated shareholder impact before non-deductibility of fines | | **4,200** |
| Estimated impact of non-deductibility of fines for tax purposes (3) | | 650 |
| **Total estimated shareholder impact (pre-tax)** | **$** | **4,850** |

(1) The presiding officer joint decision estimates that the Utility would incur at least $50 million to implement remedial measures. Actual costs could differ materially based on the scope and timing of work. In addition, the decision requires shareholders to reimburse intervenors for legal and litigation expenses.
(2) Actual and forecast costs for gas pipeline safety work in 2010 and beyond that will not be recovered through rates, including previously disallowed PSEP capital and expense. This amount includes charges of $665 million, including an additional charge of $116 million recorded during the three months ended December 31, 2014, for PSEP capital costs that are forecasted to exceed the authorized amounts.
(3) Estimated impact calculated based on the Utility's statutory tax rate.

**Federal Criminal Indictment**

On July 29, 2014, a federal grand jury in the Northern District of California returned a 28-count superseding criminal indictment against the Utility in federal district court replacing the indictment that had been returned on April 1, 2014. The superseding indictment charges 27 felony counts (increased from 12 counts charged in the original indictment) alleging that the Utility knowingly and willfully violated minimum safety standards under the Natural Gas Pipeline Safety Act relating to record keeping, pipeline integrity management, and identification of pipeline threats. The superseding indictment also includes one felony count charging that the Utility illegally obstructed the NTSB's investigation into the cause of the San Bruno accident. The maximum statutory fine for each felony count is $500,000, for total fines of $14 million. The superseding indictment also alleges an alternative fine under the Alternative Fines Act which states, in part: "If any person derives pecuniary gain from the offense, or if the offense results in pecuniary loss to a person other than the defendant, the defendant may be fined not more than the greater of twice the gross gain or twice the gross loss." Based on the superseding indictment's allegations that the Utility derived gross gains of approximately $281 million and that the victims suffered losses of approximately $565 million, the maximum alternate fine would be approximately $1.13 billion.

The Utility entered a plea of not guilty. The Utility believes that criminal charges and the alternate fine allegations are not merited and that it did not knowingly and willfully violate minimum safety standards under the Natural Gas Pipeline Safety Act or obstruct the NTSB's investigation, as alleged in the superseding indictment. A status conference is scheduled to be held in court on March 9, 2015. PG&E Corporation and the Utility have not accrued any charges for criminal fines in their consolidated financial statements as such amounts are not considered to be probable.

**Other Enforcement Matters**

PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows also may be affected by the outcome of the following matters.

*Improper CPUC Communications*

On September 15, 2014, the Utility notified the CPUC and the ALJ overseeing the 2015 GT&S rate case that it believes certain communications between the Utility and CPUC personnel relating to the 2015 GT&S rate case violated the CPUC's rules regarding ex parte communications. Ex parte communications include any communication between a decision maker and an interested person concerning substantive issues in certain identified categories of formal proceedings before the CPUC. (The Utility discovered the communications as part of an internal review of communications between the Utility and the CPUC undertaken after the City of San Bruno filed a motion at the CPUC in late July 2014 alleging that various email communications

between the Utility's employees and CPUC personnel violated the ex parte communication rules with respect to the pending CPUC investigative enforcement proceedings against the Utility. The Utility believes that the communications cited by San Bruno in its July 2014 motion are not prohibited ex parte communications. The CPUC has not yet addressed San Bruno's motion and its request that the CPUC penalize the Utility.)

On November 20, 2014, the CPUC issued a decision imposing a fine of $1.05 million on the Utility and disallowing up to the entire amount of the revenue increase that would have been collected from ratepayers over the five-month period between March 2015 and August 2015. The exact amount of the revenue disallowance will be determined in the CPUC's final decision in the GT&S rate case expected to be issued in August 2015. In addition, the decision prohibits the Utility from engaging in any oral or written ex parte communications, as well as procedural communications, with Commissioners or their advisors in any rate-setting or adjudicatory proceeding and requires the Utility to report communications with senior CPUC staff, in any rate-setting proceeding or adjudicatory proceeding before the CPUC, for one year from the effective date of the decision. With respect to the GT&S rate case, the ban will be in effect until the resolution of the GT&S rate case or one year from the effective date of the decision, whichever is later. The Utility and other parties have requested that the CPUC reconsider its decision. The ORA, TURN, and the City of San Bruno argue that the applicable law supports the imposition of a fine ranging from $2.5 million to $250 million. It is uncertain when the CPUC will address these applications for rehearing. (See "Ratemaking and Other Regulatory Proceedings" below.)

In October and December 2014, the Utility notified the CPUC of additional email communications between the Utility and CPUC personnel regarding various matters (not limited to the GT&S rate case), that the Utility believes may constitute or describe ex parte communications. As of January 30, 2015, the Utility had provided copies of approximately 65,000 email communications between the CPUC and the Utility to the CPUC and the City of San Bruno. It is uncertain whether any of these email communications will be challenged as prohibited ex parte communications or as improper or illegal.

The Utility believes it is probable that CPUC enforcement actions will be taken in connection with these additional ex parte communications but is unable to reasonably estimate the amount or range of future charges that could be incurred given the CPUC's wide discretion and the number of factors that can be considered in determining the final penalties. It is also possible that other parties may request that the CPUC rescind decisions or take other action in open or closed proceedings to address ex parte communications that they may allege occurred regarding substantive issues in those proceedings. For example, TURN and the ORA have filed petitions to request that the CPUC rescind a $29 million shareholder incentive awarded to the Utility in 2010 for the successful implementation of the Utility's 2006-2008 energy efficiency programs based on their allegation that prohibited ex parte communications tainted the decision. It is uncertain whether the CPUC will grant these petitions or whether parties will request the CPUC to take action in other proceedings. It is also uncertain whether the ex parte communication issues will affect the outcome of other pending legal matters, ratemaking or regulatory proceedings, investigations and enforcement matters.

Finally, the U.S. Attorney's Office in San Francisco and the California Attorney General's office have begun investigations in connection with these communications. The Utility is cooperating with the federal and state investigators. It is uncertain whether any charges will be brought against the Utility.

*Gas Safety Citation Program*

The SED, the division of the CPUC primarily responsible for overseeing the safety of electric and natural gas utility operations in California, conducts periodic audits of the Utility's operating practices and investigates potential violations. In December 2011, the CPUC adopted a gas safety citation program and delegated authority to the SED to issue citations and impose fines on California gas corporations, such as the Utility, for violations of certain state and federal regulations that relate to the safety of natural gas facilities and operating practices. (As required by state law, a similar program for electric safety became effective on an interim basis on January 1, 2015. For more information, see "Regulatory Environment" in Item 1.) The California gas corporations are required to inform the SED of self-identified or self-corrected violations. The SED can consider various factors in determining whether to impose fines and the amount of fines, including the severity of the safety risk associated with each violation, the number and duration of the violations, whether the violation was self-reported, and whether corrective actions were taken.

Since the gas safety program became effective, the Utility has filed approximately 84 self-reports and the SED has imposed fines ranging from $50,000 to $16.8 million (including the $10.85 million fine related to an explosion in Carmel, California that is discussed below) for violations identified through self-reports, SED investigations and audits. The SED recently has stated that it will not conduct further investigations into 65 self-reports the Utility had filed through December 31, 2014. The Utility believes it is probable that the SED will impose fines or take other enforcement action with respect to some of the Utility's remaining self-reports or other self-reports that the Utility has filed since January 1, 2015. The Utility believes it is reasonably possible that the SED will impose fines on the Utility based on allegations of noncompliance that are contained in some of the

SED's audits. The Utility is unable to reasonably estimate the amount or range of future charges that could be incurred for fines imposed by the SED given the wide discretion the SED has in determining whether to bring enforcement action and the number of factors that can be considered in determining the amount of fines.

*Carmel Incident*

On March 3, 2014, a vacant house in Carmel, California was severely damaged due to a natural gas explosion while the Utility's employees were performing work to upgrade the main natural gas distribution pipeline in the area. There were no injuries or fatalities. The SED conducted an investigation of the incident and alleged that the Utility committed two violations of certain natural gas safety regulations by failing to follow procedures to update records, to provide its welding crew with accurate information, and to take steps to make safe any actual or potential hazard to life or property. On November 20, 2014, the SED issued a citation to the Utility that included a fine of $10.85 million for these alleged violations. The Utility recorded this amount as an expense for 2014. The Utility has appealed the citation to the CPUC. The SED has requested that the CPUC dismiss the Utility's appeal as untimely. The CPUC has not yet addressed the SED's request. In addition, the Utility was informed that the U.S. Attorney's Office was investigating the Carmel incident. It is uncertain whether any charges will be brought against the Utility.

*CPUC Investigation Regarding Natural Gas Distribution Facilities Record-Keeping*

On November 20, 2014, the CPUC issued an order instituting a new investigation into whether the Utility violated applicable laws pertaining to record-keeping practices for its natural gas distribution service and facilities. The order also requires the Utility to show cause why (1) the CPUC should not find that the Utility violated provisions of the California Public Utilities Code, CPUC general orders or decisions, other rules, or requirements, and/or engaged in unreasonable and/or imprudent practices related to these matters, and (2) the CPUC should not impose penalties, and/or any other forms of relief, if any violations are found.

In particular, the order cites the SED's investigative reports alleging that the Utility violated rules regarding safety record-keeping in connection with six natural gas distribution incidents, including the natural gas explosion that occurred in Carmel, California on March 3, 2014. (See "Carmel Incident" above.) On December 22, 2014, as directed by the CPUC, the Utility submitted a report that explained why the Utility believes the SED's investigative findings do not constitute violations of law and also outlined the various programs, measures and actions the Utility has undertaken to continuously improve its distribution record keeping practices.

PG&E Corporation and the Utility believe it is reasonably possible that the CPUC will impose fines on the Utility or take other enforcement action in connection with this matter, but are unable to reasonably estimate the amount or range of future loss contingencies.

*Natural Gas Transmission Pipeline Rights-of-Way*

In 2012, the Utility notified the CPUC and the SED that the Utility planned to complete a system-wide survey of its transmission pipelines in an effort to identify encroachments (such as building structures and vegetation overgrowth) on the Utility's pipeline rights-of-way. The Utility also submitted a proposed compliance plan that set forth the scope and timing of remedial work to remove identified encroachments over a multi-year period and to pay penalties if the proposed milestones were not met. In March 2014, the Utility informed the SED that the survey has been completed and that remediation work, including removal of the encroachments, is expected to continue for several years. The SED has not addressed the Utility's proposed compliance plan, and it is reasonably possible that the SED will impose fines on the Utility or take other enforcement action in the future based on the Utility's failure to continuously survey its system and remove encroachments.

**Other Pending Lawsuits and Claims**

At December 31, 2014, there were also five purported shareholder derivative lawsuits outstanding against PG&E Corporation and the Utility seeking recovery on behalf of PG&E Corporation and the Utility for alleged breaches of fiduciary duty by officers and directors, among other claims. The plaintiffs for three of these lawsuits filed a consolidated complaint with the San Mateo County Superior Court in November 2013, which has been amended to add a fourth shareholder plaintiff and to discuss recent events, including the federal criminal indictment discussed above. In August 2014, the judge lifted the stay on the consolidated complaint for the limited purpose of allowing briefing and hearing on demurrers (state court motions to dismiss). On September 15, 2014, PG&E Corporation, the Utility and the individual defendants asked the court to dismiss the consolidated complaint because the plaintiffs (1) failed to demand that the Boards of Directors pursue claims against the defendant directors and officers and (2) have not adequately pled why such demand should be excused. The court has since clarified that the appropriate

board on whom the plaintiffs should have demanded with respect to the claims in the operative complaint is the 2013 PG&E Corporation Board of Directors (and the 2014 Board regarding the allegations first raised in plaintiffs' 2014 amended consolidated complaint). The Court has invited plaintiffs to amend their complaint to accommodate this clarification, and defendants to refile a demurrer on this amended complaint if they so choose. Accordingly, briefing and litigation on this motion is expected to continue through the first quarter of 2015. On September 22, 2014, PG&E Corporation, the Utility, and the individual defendants filed a petition with the California Court of Appeal requesting a new order continuing the stay until resolution of the federal criminal indictment discussed above. A fifth purported shareholder derivative lawsuit that was filed in the U.S. District Court for the Northern District of California remains stayed.

PG&E Corporation and the Utility are uncertain when and how the above lawsuits will be resolved.

**RATEMAKING AND OTHER REGULATORY PROCEEDINGS**

The Utility is subject to substantial regulation by the CPUC, the FERC, the NRC and other federal and state regulatory agencies. The resolutions of these and other proceedings may affect PG&E Corporation's and the Utility's financial condition, results of operations, and cash flows.

**2015 Gas Transmission and Storage Rate Case**

*Utility's GT&S Request*

In its December 2013 GT&S rate case application, the Utility requested that the CPUC authorize a 2015 revenue requirement of $1.29 billion to recover anticipated costs of providing natural gas transmission and storage services, an increase of $555 million over currently authorized amounts. The Utility also requested attrition increases of $61 million in 2016 and $168 million in 2017 based on its forecasted capital expenditures and the associated growth in rate base, as well as increasing costs of labor, materials, and other expenses. The Utility requested that the CPUC authorize the Utility's forecast of its 2015 weighted average rate base for its gas transmission and storage business of $3.56 billion, which includes the capital spend above authorized levels for the prior rate case period. The Utility has not requested authorization to recover approximately $150 million of costs it forecasts it will incur over the three-year period to pressure test pipelines placed into service after 1961 that lack records and perform remedial work associated with the Utility's pipeline corrosion control program. The Utility also has not requested authorization to recover costs it forecasts it will incur during 2015 through 2017 to identify and remove encroachments from its gas transmission pipeline rights-of-way.

The Utility also has proposed changes to the revenue sharing mechanism authorized in the last GT&S rate case (covering 2011-2014) that subjected a portion of the Utility's transportation and storage revenue requirement to market risk. The Utility proposed full balancing account treatment that allows for recovery of the Utility's authorized transportation and storage revenue requirements except for the revenue requirement associated with the Utility's 25% interest in the Gill Ranch storage field.

*Intervenors' Recommendations*

The ORA has recommended a 2015 revenue requirement of $1,044 million, an increase of $329 million over authorized amounts, and attrition increases of $39 million for 2016 and $61 million for 2017. The ORA also recommended that the GT&S rate case period be expanded to four years with an attrition increase of $35 million for 2018. The ORA proposed that the CPUC authorize 2015 capital expenditures of $595 million, compared to the Utility's request of $779 million. TURN has stated that it intends to make its revenue requirement recommendation in its opening brief to be filed after hearings conclude on February 27, 2015. Nevertheless, TURN has submitted testimony recommending that the Utility not recover costs associated with hydrostatic testing for pipeline segments placed in service between January 1, 1956 and June 30, 1961, as well as certain other work that TURN considers to be remedial. TURN also recommended the disallowance of about $200 million of capital expenditures incurred over the period 2011 through 2014 and recommended that about $500 million of these capital expenditures be subject to a reasonableness review and an independent audit. TURN states that the Utility's cost recovery should not begin until the CPUC issues a decision on the independent audit.

*Procedural Schedule*

Hearings began on February 2, 2015 and are scheduled to end on February 27, 2015. The current procedural schedule calls for a final decision to be issued in August 2015. The CPUC has stated that if a final CPUC decision is issued in the three investigative enforcement proceedings pending against the Utility within the schedule of the 2015 GT&S rate case, the schedule and scope of issues to be considered may be further amended to consider the implications of that decision on the Utility's revenue requirements.

*Order to Show Cause*

On September 15, 2014, the Utility notified the CPUC and the ALJ overseeing the 2015 GT&S rate case that it believes certain communications between the Utility and CPUC personnel relating to the 2015 GT&S rate case violated the CPUC's rules regarding ex parte communications. The CPUC issued an order to show cause why the Utility should not be penalized. On November 20, 2014, the CPUC issued a decision that prohibits the Utility from recovering up to the entire amount of the revenue increase that would have been collected from ratepayers over the five-month period between March 2015 (the date the final decision was originally scheduled to be issued) and August 2015 (the date called for under the revised procedural schedule issued after the Utility's notification of ex parte communications). The decision states that the exact amount of this revenue disallowance will be determined in the CPUC's final decision in the 2015 GT&S rate case. The CPUC also imposed a fine of $1.05 million on the Utility for the violations. (See "Enforcement and Litigation Matters" above regarding additional ex parte communications that were self-reported by the Utility.) The Utility and other parties have filed applications requesting the CPUC to rehear its decision. The ORA, TURN, and the City of San Bruno argue that the applicable law supports the imposition of a fine ranging from $2.5 million to $250 million. It is uncertain when the CPUC will address these applications for rehearing.

*Regulatory Accounting*

The Utility's continued use of regulatory accounting under GAAP (which enables it to account for the effects of regulation, including recording regulatory assets and liabilities) for gas transmission and storage service depends on its ability to recover its cost of service. The Utility's ability to recover its costs of providing gas transmission and storage service will be affected by the outcome of the 2015 GT&S rate case and future GT&S rate cases. If the Utility were unable to continue using regulatory accounting under GAAP, there would be differences in the timing of expense or gain recognition that could materially affect PG&E Corporation's and the Utility's future financial results.

**Proposal for Electric Vehicle Infrastructure Development**

On February 9, 2015, the Utility filed an application requesting the CPUC to approve the Utility's proposal to deploy, own and maintain EV charging infrastructure in its service territory, including EV retail charging stations, to promote and facilitate the deployment of EVs. Under the Utility's proposal, the Utility would develop EV charging infrastructure over an estimated five years to meet approximately 25% of projected EV charging station needs by 2020. The Utility's EV charging infrastructure is expected to be used in future programs designed to aid the integration of increased intermittent renewable energy on the state's electric power grid. The Utility estimates that it would incur capital costs of $551 million and operating costs of $103 million over the proposed project timeline. The Utility has requested that the CPUC authorize the Utility to collect an average annual revenue requirement over the project development years of $81 million to recover these costs. The Utility has requested that the CPUC issue a decision before the end of 2015.

**FERC Transmission Owner Rate Case**

The Utility has one TO rate case pending at the FERC. The Utility has requested a 2015 retail electric transmission revenue requirement of $1,366 million, a $326 million increase to the currently authorized revenue requirement of $1,039.6 million (The FERC approved the current revenue requirement on November 7, 2014). The proposed rates will be effective March 1, 2015, subject to refund, pending a final decision by the FERC. The Utility's 2015 cost forecasts reflect the continuing need to replace and modernize aging electric transmission infrastructure, to meet the need for increased capacity in the CAISO controlled grid, and to comply with new rules aimed at ensuring the physical and cyber security of the nation's electric system. The Utility forecasts that it will make investments of $975 million in 2014 and $1,125 million in 2015 in various capital projects. The Utility's proposed rate base for 2015 is $5.12 billion, compared to $4.57 billion in 2014. The Utility has requested that the FERC approve an 11.26% ROE. The procedural schedule is currently being held in abeyance while settlement discussions are held.

## ENVIRONMENTAL MATTERS

The Utility's operations are subject to extensive federal, state, and local laws and permits relating to the protection of the environment and the safety and health of the Utility's personnel and the public. These laws and requirements relate to a broad range of the Utility's activities, including the remediation of hazardous wastes; the reporting and reduction of $CO_2$ and other GHG emissions; the discharge of pollutants into the air, water, and soil; and the transportation, handling, storage, and disposal of spent nuclear fuel. (See Item 1A. Risk Factors and "Environmental Regulation" in Item 1.)

### Natural Gas Compressor Station Sites

The Utility is legally responsible for remediating groundwater contamination caused by hexavalent chromium used in the past at the Utility's natural gas compressor stations. The Utility is also required to take measures to abate the effects of the contamination on the environment. At December 31, 2014, $158 million and $291 million was accrued in the Consolidated Balances Sheets for estimated undiscounted remediation costs associated with the Hinkley site and the Topock site, respectively. Costs associated with the Hinkley site are not recovered through rates. (See Note 14 of the Notes to the Consolidated Financial Statements in Item 8.)

## RISK MANAGEMENT ACTIVITIES

The Utility and PG&E Corporation, mainly through its ownership of the Utility, are exposed to market risk, which is the risk that changes in market conditions will adversely affect net income or cash flows. PG&E Corporation and the Utility face market risk associated with their operations; their financing arrangements; the marketplace for electricity, natural gas, electric transmission, natural gas transportation, and storage; emissions allowances, other goods and services; and other aspects of their businesses. PG&E Corporation and the Utility categorize market risks as "price risk" (see "Ratemaking Mechanisms" in Item 1) and "interest rate risk." The Utility is also exposed to "credit risk," the risk that counterparties fail to perform their contractual obligations.

The Utility actively manages market risk through risk management programs designed to support business objectives, discourage unauthorized risk-taking, reduce commodity cost volatility, and manage cash flows. The Utility uses derivative instruments only for non-trading purposes (i.e., risk mitigation) and not for speculative purposes. The Utility's risk management activities include the use of energy and financial instruments such as forward contracts, futures, swaps, options, and other instruments and agreements, most of which are accounted for as derivative instruments. Some contracts are accounted for as leases.

### Commodity Price Risk

The Utility is exposed to commodity price risk as a result of its electricity and natural gas procurement activities, including the procurement of natural gas and nuclear fuel necessary for electricity generation and natural gas procurement for core customers. As long as the Utility can conclude that it is probable that its reasonably incurred wholesale electricity procurement costs and natural gas costs are recoverable, fluctuations in electricity and natural gas prices will not affect earnings. Such fluctuations, however, may impact cash flows. The Utility's natural gas transportation and storage costs for core customers are also fully recoverable through a ratemaking mechanism.

The Utility's authorized revenue requirement for natural gas transportation and storage service to non-core customers is not balancing account protected. The Utility recovers these costs through fixed reservation charges and volumetric charges from long-term contracts, resulting in price and volumetric risk.

The Utility uses value-at-risk to measure its shareholders' exposure to these risks. The Utility's value-at-risk was approximately $1 million and $14 million at December 31, 2014 and 2013, respectively. During the 12 months ended December 31, 2014, the Utility's approximate high, low, and average values-at-risk were $9 million, $1 million and $5 million, respectively. During 2013, the value-at-risk amounts were $14 million, $9 million and $12 million, respectively. (See Note 9 of the Notes to the Consolidated Financial Statements in Item 8 for further discussion of price risk management activities.)

### Interest Rate Risk

Interest rate risk sensitivity analysis is used to measure interest rate risk by computing estimated changes in cash flows as a result of assumed changes in market interest rates. At December 31, 2014 and December 31, 2013, if interest rates changed by 1% for all PG&E Corporation and Utility variable rate long-term debt, short-term debt, and cash investments, the impact on net income over the next 12 months would be $9 million and $11 million, respectively, based on net variable rate debt and other

interest rate-sensitive instruments outstanding.

**Energy Procurement Credit Risk**

The Utility conducts business with counterparties mainly in the energy industry, including the CAISO market, other California investor-owned electric utilities, municipal utilities, energy trading companies, financial institutions, electricity generation companies, and oil and natural gas production companies located in the United States and Canada. If a counterparty fails to perform on its contractual obligation to deliver electricity or gas, then the Utility may find it necessary to procure electricity or gas at current market prices, which may be higher than the contract prices.

The Utility manages credit risk associated with its counterparties by assigning credit limits based on evaluations of their financial conditions, net worth, credit ratings, and other credit criteria as deemed appropriate. Credit limits and credit quality are monitored periodically. The Utility ties many energy contracts to master commodity enabling agreements that may require security (referred to as "Credit Collateral" in the table below). Credit collateral may be in the form of cash or letters of credit. The Utility may accept other forms of performance assurance in the form of corporate guarantees of acceptable credit quality or other eligible securities (as deemed appropriate by the Utility). Credit collateral or performance assurance may be required from counterparties when current net receivables and replacement cost exposure exceed contractually specified limits.

The following table summarizes the Utility's credit risk exposure to its counterparties as of December 31, 2014 and December 31, 2013:

| (in millions) | Gross Credit Exposure Before Credit Collateral [1] | Credit Collateral | Net Credit Exposure [2] | Number of Wholesale Customers or Counterparties >10% | Net Credit Exposure to Wholesale Customers or Counterparties >10% |
|---|---|---|---|---|---|
| December 31, 2014 | $ 88 | $ (18) | $ 70 | 3 | 29 |
| December 31, 2013 | 87 | $ (9) | $ 78 | 2 | 34 |

[1] Gross credit exposure equals mark-to-market value on physically and financially settled contracts, and net receivables (payables) where netting is contractually allowed. Gross and net credit exposure amounts reported above do not include adjustments for time value or liquidity.
[2] Net credit exposure is the Gross Credit Exposure Before Credit Collateral minus Credit Collateral (cash deposits and letters of credit posted by counterparties and held by the Utility). For purposes of this table, parental guarantees are not included as part of the calculation.

## CRITICAL ACCOUNTING POLICIES

The preparation of Consolidated Financial Statements in accordance with GAAP involves the use of estimates and assumptions that affect the recorded amounts of assets and liabilities as of the date of the financial statements and the reported amounts of revenues and expenses during the reporting period. The accounting policies described below are considered to be critical accounting policies due, in part, to their complexity and because their application is relevant and material to the financial position and results of operations of PG&E Corporation and the Utility, and because these policies require the use of material judgments and estimates. Actual results may differ substantially from these estimates. These policies and their key characteristics are outlined below.

**Regulatory Accounting**

The Utility's rates are primarily set by the CPUC and the FERC and are designed to recover the cost of providing service. The Utility capitalizes and records, as regulatory assets, costs that would otherwise be charged to expense if it is probable that the incurred costs will be recovered in future rates. Regulatory assets are amortized over the future periods that the costs are expected to be recovered. If costs expected to be incurred in the future are currently being recovered through rates, the Utility records those expected future costs as regulatory liabilities. In addition, the Utility records regulatory liabilities when the CPUC or the FERC requires a refund to be made to customers or has required that a gain or other reduction of net allowable costs be given to customers over future periods. At December 31, 2014, PG&E Corporation and the Utility reported regulatory assets (including current regulatory balancing accounts receivable) of $9.0 billion and regulatory liabilities (including current balancing accounts payable) of $7.6 billion. (See Notes 2 and 3 of the Notes to the Consolidated Financial Statements in Item 8.)

Determining probability requires significant judgment by management and includes, but is not limited to, consideration of testimony presented in regulatory hearings, proposed regulatory decisions, final regulatory orders, and the strength or status of applications for rehearing or state court appeals. For some of the Utility's regulatory assets, including utility retained generation, the Utility has determined that the costs are recoverable based on specific approval from the CPUC. The Utility also records a regulatory asset when a mechanism is in place to recover current expenditures and historical experience indicates that recovery of incurred costs is probable, such as the regulatory assets for pension benefits; deferred income tax; price risk management; and unamortized loss, net of gain, on reacquired debt. The CPUC has not denied the recovery of any material costs previously recognized by the Utility as regulatory assets for the periods 2012 through 2014. If the Utility determined that it is no longer probable that regulatory assets would be recovered or reflected in future rates, or if the Utility ceased to be subject to rate regulation, the regulatory assets would be charged against income in the period in which that determination was made.

In addition, regulatory accounting standards require recognition of a loss if it becomes probable that capital expenditures will be disallowed for ratemaking purposes and if a reasonable estimate of the amount of the disallowance can be made. Such assessments require significant judgment by management regarding probability of recovery, as described above, and the ultimate cost of construction of capital assets. The Utility records a loss to the extent capital costs are expected to exceed the amount to be recovered. The Utility records a provision based on its best estimate; to the extent there is a high degree of uncertainty in the Utility's forecast, it will record a provision based on the lower end of the range of possible losses. The Utility's capital forecasts involve a series of complex judgments regarding detailed project plans, estimates included in third-party contracts, historical cost experience for similar projects, permitting requirements, environmental compliance standards, and a variety of other factors. The Utility recorded charges of $116 million, $196 million, and $353 million in 2014, 2013, and 2012, respectively, for PSEP capital costs that are expected to exceed the amount to be recovered. See "Pipeline Safety Enhancement Plan" in Note 14 of the Notes to the Consolidated Financial Statements in Item 8. The additional charge in 2014 primarily reflects costs for Line 109 (that runs through the San Francisco peninsula) mostly related to emergent permitting conditions and requirements, as well as updated estimates for the few remaining PSEP projects. Management will continue to periodically assess its PSEP capital costs and the related CPUC regulatory proceedings, and further charges could be required in future periods.

**Loss Contingencies**

***Environmental Remediation Liabilities***

The Utility is subject to loss contingencies pursuant to federal and California environmental laws and regulations that in the future may require the Utility to pay for environmental remediation at sites where it has been, or may be, a potentially responsible party. Such contingencies may exist for the remediation of hazardous substances at various potential sites, including former manufactured gas plant sites, power plant sites, gas compressor stations, and sites used by the Utility for the storage, recycling, or disposal of potentially hazardous materials, even if the Utility did not deposit those substances on the site.

The Utility generally commences the environmental remediation assessment process upon notification from federal or state agencies, or other parties, of a potential site requiring remedial action. (In some instances, the Utility may initiate action to determine its remediation liability for sites that it no longer owns in cooperation with regulatory agencies. For example, the Utility has begun a program related to certain former manufactured gas plant sites.) Based on such notification, the Utility completes an assessment of the potential site and evaluates whether it is probable that a remediation liability has been incurred. The Utility records an environmental remediation liability when site assessments indicate remediation is probable and it can reasonably estimate the loss or a range of possible losses. Given the complexities of the legal and regulatory environment and the inherent uncertainties involved in the early stages of a remediation project, the process for estimating remediation liabilities is subjective and requires significant judgment. Key factors evaluated in developing cost estimates include the extent and types of hazardous substances at a potential site, the range of technologies that can be used for remediation, the determination of the Utility's liability in proportion to other responsible parties, and the extent to which such costs are recoverable from third parties.

When possible, the Utility estimates costs using site-specific information, but also considers historical experience for costs incurred at similar sites depending on the level of information available. Estimated costs are composed of the direct costs of the remediation effort and the costs of compensation for employees who are expected to devote a significant amount of time directly to the remediation effort. These estimated costs include remedial site investigations, remediation actions, operations and maintenance activities, post remediation monitoring, and the costs of technologies that are expected to be approved to remediate the site. Remediation efforts for a particular site generally extend over a period of several years. During this period, the laws governing the remediation process may change, as well as site conditions, thereby possibly affecting the cost of the remediation effort.

At December 31, 2014 and 2013, the Utility's accruals for undiscounted gross environmental liabilities were $954 million and $900 million, respectively. The Utility's undiscounted future costs could increase to as much as $1.8 billion if the extent of contamination or necessary remediation is greater than anticipated or if the other potentially responsible parties are not financially able to contribute to these costs, and could increase further if the Utility chooses to remediate beyond regulatory requirements. Although the Utility has provided for known environmental obligations that are probable and reasonably estimable, estimated costs may vary significantly from actual costs, and the amount of additional future costs may be material to results of operations in the period in which they are recognized.

***Legal and Regulatory Matters***

PG&E Corporation and the Utility are subject to various laws and regulations and, in the normal course of business, PG&E Corporation and the Utility are subject to claims or named as parties in lawsuits. In addition, the Utility can incur penalties for failure to comply with federal, state, or local laws and regulations. PG&E Corporation and the Utility record a provision for a loss when it is both probable that a loss has been incurred and the amount of the loss can be reasonably estimated. PG&E Corporation and the Utility evaluate the range of reasonably estimated losses and record a provision based on the lower end of the range, unless an amount within the range is a better estimate than any other amount. These accruals, and the estimates of any additional reasonably possible losses (or reasonably possible losses in excess of the amounts accrued), are reviewed quarterly and are adjusted to reflect the impacts of negotiations, discovery, settlements and payments, rulings, advice of legal counsel, and other information and events pertaining to a particular matter. In assessing the amount of such losses, PG&E Corporation's and the Utility's policy is to exclude anticipated legal costs. (See "Enforcement and Litigation Matters" and "Legal and Regulatory Contingencies" in Note 14 of the Notes to the Consolidated Financial Statements in Item 8.)

**Asset Retirement Obligations**

PG&E Corporation and the Utility account for an ARO at fair value in the period during which the legal obligation is incurred if a reasonable estimate of fair value and its settlement date can be made. At the time of recording an ARO, the associated asset retirement costs are capitalized as part of the carrying amount of the related long-lived asset. The Utility recognizes a regulatory asset or liability for the timing differences between the recognition of expenses and costs recovered through the ratemaking process. (See Notes 2 and 3 of the Notes to the Consolidated Financial Statements in Item 8.)

To estimate its liability, the Utility uses a discounted cash flow model based upon significant estimates and assumptions about future decommissioning costs, inflation rates, and the estimated date of decommissioning. The estimated future cash flows are discounted using a credit-adjusted risk-free rate that reflects the risk associated with the decommissioning obligation.

At December 31, 2014, the Utility's recorded ARO for the estimated cost of retiring these long-lived assets was $3.6 billion. Changes in these estimates and assumptions could materially affect the amount of the recorded ARO for these assets. For example, a premature shutdown of the nuclear facilities at Diablo Canyon would increase the likelihood of an earlier start to decommissioning and cause an increase in the ARO. Additionally, if the inflation adjustment increased 25 basis points, the amount of the ARO would increase by approximately 1.70%. Similarly, an increase in the discount rate by 25 basis points would decrease the amount of the ARO by 1.70%.

**Pension and Other Postretirement Benefit Plans**

PG&E Corporation and the Utility sponsor a non-contributory defined benefit pension plan for eligible employees as well as contributory postretirement health care and medical plans for eligible retirees and their eligible dependents, and non-contributory postretirement life insurance plans for eligible employees and retirees. Pension and other benefit expense is based on the differences between actuarial assumptions and actual plan results and is deferred in accumulated other comprehensive income (loss) and amortized into income on a gradual basis. The differences between pension benefit expense recognized in accordance with GAAP and amounts recognized for ratemaking purposes are recorded as regulatory assets or liabilities as amounts are probable of recovery from customers. To the extent the other benefits are in an overfunded position, the Utility records a regulatory liability for a portion of the credit balance in accumulated other comprehensive income. (See Note 3 of the Notes to the Consolidated Financial Statements in Item 8.)

The pension and other postretirement benefit obligations are calculated using actuarial models as of the December 31 measurement date. The significant actuarial assumptions used in determining pension and other benefit obligations include the discount rate, the average rate of future compensation increases, the health care cost trend rate and the expected return on plan assets. PG&E Corporation and the Utility review these assumptions on an annual basis and adjust them as necessary. While PG&E Corporation and the Utility believe that the assumptions used are appropriate, significant differences in actual experience,

plan changes or amendments, or significant changes in assumptions may materially affect the recorded pension and other postretirement benefit obligations and future plan expenses. During 2014, PG&E Corporation and the Utility adopted the Society of Actuaries 2014 Mortality Tables Report (RP-2014) and Mortality Improvement Scale (MP-2014 with modifications), which adjusted the mortality assumptions used for measuring retirement plan obligations. The updated mortality assumptions reflect increasing life expectancies in the United States, resulting in an increase to PG&E Corporation's and the Utility's pension and PBOP plans' projected benefit obligations. Future pension and postretirement expenses are also expected to increase due to the new mortality assumptions.

In establishing health care cost assumptions, PG&E Corporation and the Utility consider recent cost trends and projections from industry experts. This evaluation suggests that current rates of inflation are expected to continue in the near term. In recognition of continued high inflation in health care costs and given the design of PG&E Corporation's plans, the assumed health care cost trend rate for 2014 is 7.5%, gradually decreasing to the ultimate trend rate of 3.5% in 2024 and beyond.

Expected rates of return on plan assets were developed by estimating future stock and bond returns and then applying these returns to the target asset allocations of the employee benefit trusts, resulting in a weighted average rate of return on plan assets. Fixed-income returns were projected based on real maturity and credit spreads added to a long-term inflation rate. Equity returns were projected based on estimates of dividend yield and real earnings growth added to a long-term rate of inflation. For the Utility's defined benefit pension plan, the assumed return of 6.2% compares to a ten-year actual return of 9.3%.

The rate used to discount pension benefits and other benefits was based on a yield curve developed from market data of approximately 715 Aa-grade non-callable bonds at December 31, 2014. This yield curve has discount rates that vary based on the duration of the obligations. The estimated future cash flows for the pension and other postretirement benefit obligations were matched to the corresponding rates on the yield curve to derive a weighted average discount rate.

The following reflects the sensitivity of pension costs and projected benefit obligation to changes in certain actuarial assumptions:

| (in millions) | Increase (Decrease) in Assumption | | Increase in 2014 Pension Costs | | Increase in Projected Benefit Obligation at December 31, 2014 | |
|---|---|---|---|---|---|---|
| Discount rate | (0.50) | % | $ | 52 | $ | 1,319 |
| Rate of return on plan assets | (0.50) | % | | 62 | | - |
| Rate of increase in compensation | 0.50 | % | | 32 | | 316 |

The following reflects the sensitivity of other postretirement benefit costs and accumulated benefit obligation to changes in certain actuarial assumptions:

| (in millions) | Increase (Decrease) in Assumption | | Increase in 2014 Other Postretirement Benefit Costs | | Increase in Accumulated Benefit Obligation at December 31, 2014 | |
|---|---|---|---|---|---|---|
| Health care cost trend rate | 0.50 | % | $ | 4 | $ | 53 |
| Discount rate | (0.50) | % | | 3 | | 128 |
| Rate of return on plan assets | (0.50) | % | | 9 | | - |

**NEW ACCOUNTING PRONOUNCEMENTS**

See Note 2 of the Notes to the Consolidated Financial Statements.

**CAUTIONARY LANGUAGE REGARDING FORWARD-LOOKING STATEMENTS**

This report contains forward-looking statements that are necessarily subject to various risks and uncertainties. These statements reflect management's judgment and opinions which are based on current estimates, expectations, and projections about future events and assumptions regarding these events and management's knowledge of facts as of the date of this report. These forward-looking statements relate to, among other matters, estimated costs, including penalties and fines, associated with various investigations and proceedings; forecasts of pipeline-related expenses that the Utility will not recover through rates; forecasts of capital expenditures; estimates and assumptions used in critical accounting policies, including those relating to regulatory assets and liabilities, environmental remediation, litigation, third-party claims, and other liabilities; and the level of future equity or debt issuances. These statements are also identified by words such as "assume," "expect," "intend," "forecast," "plan," "project," "believe," "estimate," "predict," "anticipate," "may," "should," "would," "could," "potential" and similar expressions. PG&E Corporation and the Utility are not able to predict all the factors that may affect future results. Some of the factors that could cause future results to differ materially from those expressed or implied by the forward-looking statements, or from historical results, include, but are not limited to:

- the final outcomes of the pending CPUC investigations and enforcement matters, the federal criminal prosecution of the Utility, and the other investigations that have been or may be commenced relating to the Utility's compliance with natural gas-related laws and regulations, including the ultimate amount of fines imposed, whether a monitor is appointed to oversee the Utility's natural gas operations, and the ultimate amount of costs related to the Utility's natural gas operations that is disallowed or unrecoverable;

- the timing and outcome of additional regulatory enforcement actions or criminal investigations that may be or have been commenced relating to communications between the Utility and the CPUC that may have violated the CPUC's rules regarding ex parte communications or are alleged to otherwise be improper, and whether such outcomes or investigations negatively affect the final decisions to be issued in the 2015 GT&S rate case, the pending CPUC investigations, or other ratemaking proceedings;

- whether PG&E Corporation and the Utility are able to repair the harm to their reputations caused by negative publicity about the San Bruno accident, the criminal prosecution, the citations issued by the SED against the Utility under the CPUC's gas safety citation program, the state and federal investigations, the CPUC's restrictions on the Utility's communications with the CPUC, and the Utility's ongoing work to remove encroachments from transmission pipeline rights-of-way;

- the restrictions on communications between the Utility and the CPUC that have been imposed by the CPUC that, along with continuing public criticism of the Utility and the CPUC, may make it more difficult for the Utility to sustain or repair a constructive working relationship with the CPUC and achieve balanced regulatory outcomes;

- the timing and outcome of ratemaking proceedings (such as the 2015 GT&S rate case and the TO rate case) and whether the cost and revenue forecasts assumed in such outcomes prove to be accurate;

- the amount and timing of additional common stock and debt issuances by PG&E Corporation, the proceeds of which are contributed as equity to maintain the Utility's authorized capital structure as the Utility incurs charges and costs that it cannot recover through rates, including costs and fines associated with natural gas matters and the pending investigations;

- the outcomes of future investigations or other enforcement proceedings that may be commenced relating to the Utility's compliance with laws, rules, regulations, or orders applicable to its operations, including the construction, expansion or replacement of its electric and gas facilities; inspection and maintenance practices, customer billing and privacy, and physical and cyber security; and whether the current or potentially worsening state regulatory environment increases the likelihood of unfavorable outcomes;

- the impact of environmental laws, regulations, and orders; the ultimate amount of costs incurred to discharge the Utility's known and unknown remediation obligations; the extent to which the Utility is able to recover environmental costs in rates or from other sources; and the ultimate amount of environmental costs the Utility incurs but does not recover, such as the remediation costs associated with the Utility's natural gas compressor station site located near Hinkley, California;

- the impact of new legislation or NRC regulations, recommendations, policies, decisions, or orders relating to the nuclear industry, including operations, seismic design, security, safety, relicensing, the storage of spent nuclear fuel, decommissioning, cooling water intake, or other issues; and whether the Utility decides to request that the NRC resume processing the Utility's renewal application for the two Diablo Canyon operating licenses, and if so, whether the NRC

grants the renewal;

- the impact of droughts or other weather-related conditions or events, climate change, natural disasters, acts of terrorism, war, or vandalism (including cyber-attacks), and other events, that can cause unplanned outages, reduce generating output, disrupt the Utility's service to customers, or damage or disrupt the facilities, operations, or information technology and systems owned by the Utility, its customers, or third parties on which the Utility relies; and subject the Utility to third-party liability for property damage or personal injury, or result in the imposition of civil, criminal, or regulatory penalties on the Utility;

- the impact of environmental laws and regulations aimed at the reduction of $CO_2$ and GHGs, and whether the Utility is able to continue recovering associated compliance costs, such as the cost of emission allowances and offsets under cap-and-trade regulations and the cost of renewable energy procurement;

- the impact that reductions in customer demand for electricity and natural gas have on the Utility's ability to make and recover its investments through rates and earn its authorized ROE;

- the supply and price of electricity, natural gas, and nuclear fuel; the extent to which the Utility can manage and respond to the volatility of energy commodity prices; the ability of the Utility and its counterparties to post or return collateral in connection with price risk management activities; and whether the Utility is able to recover timely its electric generation and energy commodity costs through rates, especially if the integration of renewable generation resources force conventional generation resource providers to curtail production, triggering "take or pay" provisions in the Utility's power purchase agreements;

- whether the Utility's information technology, operating systems and networks, including the advanced metering system infrastructure, customer billing, financial, and other systems, can continue to function accurately while meeting regulatory requirements; whether the Utility is able to protect its operating systems and networks from damage, disruption, or failure caused by cyber-attacks, computer viruses, or other hazards; whether the Utility's security measures are sufficient to protect against unauthorized or inadvertent disclosure of information contained in such systems and networks; and whether the Utility can continue to rely on third-party vendors and contractors that maintain and support some of the Utility's operating systems;

- the extent to which costs incurred in connection with third-party claims or litigation can be recovered through insurance, rates, or from other third parties; including the timing and amount of insurance recoveries related to third party claims arising from the San Bruno accident;

- the ability of PG&E Corporation and the Utility to access capital markets and other sources of debt and equity financing in a timely manner on acceptable terms;

- changes in credit ratings which could result in increased borrowing costs especially if PG&E Corporation or the Utility were to lose its investment grade credit ratings;

- the impact of federal or state laws or regulations, or their interpretation, on energy policy and the regulation of utilities and their holding companies, including how the CPUC interprets and enforces the financial and other conditions imposed on PG&E Corporation when it became the Utility's holding company, and whether the ultimate outcomes of the CPUC's pending investigations, the criminal prosecution, and other enforcement matters affect the Utility's ability to make distributions to PG&E Corporation, and, in turn, PG&E Corporation's ability to pay dividends;

- the outcome of federal or state tax audits and the impact of any changes in federal or state tax laws, policies, regulations, or their interpretation; and

- the impact of changes in GAAP, standards, rules, or policies, including those related to regulatory accounting, and the impact of changes in their interpretation or application.

For more information about the significant risks that could affect the outcome of these forward-looking statements and PG&E Corporation's and the Utility's future financial condition, results of operations, and cash flows, see Item 1A. Risk Factors above. PG&E Corporation and the Utility do not undertake any obligation to update forward-looking statements, whether in response to new information, future events, or otherwise.

## ITEM 7A. QUANTITATIVE AND QUALITATIVE DISCLOSURES ABOUT MARKET RISK

Information responding to Item 7A is set forth under the heading "Risk Management Activities," in MD&A in Item 7 and in Note 9: Derivatives and Note 10: Fair Value Measurements of the Notes to the Consolidated Financial Statements in Item 8.

ITEM 8. FINANCIAL STATEMENTS AND SUPPLEMENTARY DATA

**PG&E Corporation**
**CONSOLIDATED STATEMENTS OF INCOME**
**(in millions, except per share amounts)**

| | Year ended December 31, | | |
|---|---|---|---|
| | **2014** | **2013** | **2012** |
| **Operating Revenues** | | | |
| Electric | $ 13,658 | $ 12,494 | $ 12,019 |
| Natural gas | 3,432 | 3,104 | 3,021 |
| **Total operating revenues** | **17,090** | **15,598** | **15,040** |

## NOTES TO THE CONSOLIDATED FINANCIAL STATEMENTS

### NOTE 1: ORGANIZATION AND BASIS OF PRESENTATION

PG&E Corporation is a holding company whose primary operating subsidiary is Pacific Gas and Electric Company, a public utility operating in northern and central California. The Utility generates revenues mainly through the sale and delivery of electricity and natural gas to customers. The Utility is primarily regulated by the CPUC and the FERC. In addition, the NRC oversees the licensing, construction, operation, and decommissioning of the Utility's nuclear generation facilities.

This is a combined annual report of PG&E Corporation and the Utility. PG&E Corporation's consolidated financial statements include the accounts of PG&E Corporation, the Utility, and other wholly owned and controlled subsidiaries. The Utility's consolidated financial statements include the accounts of the Utility and its wholly owned and controlled subsidiaries. All intercompany transactions have been eliminated in consolidation. The Notes to the Consolidated Financial Statements apply to both PG&E Corporation and the Utility. PG&E Corporation and the Utility operate in one segment.

The consolidated financial statements have been prepared in accordance with GAAP and in accordance with the instructions to Form 10-K and Regulation S-X promulgated by the SEC. The preparation of financial statements in conformity with GAAP requires the use of estimates and assumptions that affect the reported amounts of assets, liabilities, revenues and expenses and the disclosure of contingent assets and liabilities. Some of the more significant estimates and assumptions relate to the Utility's regulatory assets and liabilities, legal and regulatory contingencies, environmental remediation liabilities, AROs, and pension and other postretirement benefit plans obligations. Management believes that its estimates and assumptions reflected in the consolidated financial statements are appropriate and reasonable. Actual results could differ materially from those estimates.

### NOTE 2: SUMMARY OF SIGNIFICANT ACCOUNTING POLICIES

#### Regulation and Regulated Operations

As a regulated entity, the Utility collects rates from customers to recover "revenue requirements" that have been authorized by the CPUC or the FERC based on the Utility's costs of service. The Utility's ability to recover a significant portion of its authorized revenue requirements through rates is generally independent, or "decoupled," from the volume of the Utility's electricity and natural gas sales. The Utility records assets and liabilities that result from the regulated ratemaking process that would not be recorded under GAAP for nonregulated entities. The Utility capitalizes and records, as regulatory assets, costs that would otherwise be charged to expense if it is probable that the incurred costs will be recovered in future rates. Regulatory assets are amortized over the future periods in which the costs are recovered. If costs expected to be incurred in the future are currently being recovered through rates, the Utility records those expected future costs as regulatory liabilities. Amounts that are probable of being credited or refunded to customers in the future are also recorded as regulatory liabilities.

The Utility also records a regulatory balancing account asset or liability for differences between customer billings and authorized revenue requirements that are probable of recovery or refund. In addition, the Utility records a regulatory balancing account asset or liability for differences between incurred costs and customer billings or authorized revenue meant to recover those costs, to the extent that these differences are probable of recovery or refund. These differences have no impact on net income. See "Revenue Recognition" below.

Management continues to believe the use of regulatory accounting is applicable and that all regulatory assets and liabilities are recoverable or refundable. To the extent that portions of the Utility's operations cease to be subject to cost of service rate regulation, or recovery is no longer probable as a result of changes in regulation or other reasons, the related regulatory assets and liabilities are written off.

**Revenue Recognition**

The Utility recognizes revenues when electricity and natural gas services are delivered. The Utility records unbilled revenues for the estimated amount of energy delivered to customers but not yet billed at the end of the period. Unbilled revenues are included in accounts receivable on the Consolidated Balance Sheets. Rates charged to customers are based on CPUC and FERC authorized revenue requirements.

The CPUC authorizes most of the Utility's revenues in the Utility's GRC and its GT&S rate cases, which generally occur every three years. In general, the Utility's ability to recover revenue requirements authorized by the CPUC in these rates cases is independent, or "decoupled" from the volume of the Utility's sales of electricity and natural gas services. The Utility recognizes revenues that have been authorized for rate recovery, are objectively determinable and probable of recovery, and are expected to be collected within 24 months. Generally, revenue is recognized ratably over the year.

The CPUC also has authorized the Utility to collect additional revenue requirements to recover costs that the Utility has been authorized to pass on to customers, including costs to purchase electricity and natural gas; and to fund public purpose, demand response, and customer energy efficiency programs. In general, the revenue recognition criteria for pass-through costs billed to customers are met at the time the costs are incurred.

The FERC authorizes the Utility's revenue requirements in periodic (often annual) TO rate cases. The Utility's ability to recover revenue requirements authorized by the FERC is dependent on the volume of the Utility's electricity sales, and revenue is recognized only for amounts billed and unbilled.

**Cash and Cash Equivalents**

Cash and cash equivalents consist of cash and short-term, highly liquid investments with original maturities of three months or less. Cash equivalents are stated at fair value.

**Restricted Cash**

Restricted cash consists primarily of the Utility's cash held in escrow pending the resolution of the remaining disputed claims made by electricity suppliers in the Utility's proceeding under Chapter 11 of the U.S. Bankruptcy Code. (See Note 12 below.)

**Allowance for Doubtful Accounts Receivable**

PG&E Corporation and the Utility recognize an allowance for doubtful accounts to record uncollectable customer accounts receivable at estimated net realizable value. The allowance is determined based upon a variety of factors, including historical write-off experience, aging of receivables, current economic conditions, and assessment of customer collectability.

**Inventories**

Inventories are carried at weighted-average cost and include natural gas stored underground as well as materials and supplies. Natural gas stored underground represents gas that is recorded to inventory when injected and then expensed as the gas is withdrawn for distribution to customers or to be used as fuel for electric generation. Materials and supplies are recorded to inventory when purchased and then expensed or capitalized to plant, as appropriate, when consumed or installed.

The Utility also purchases GHG emission allowances that are recorded as inventory. They are carried at weighted-average cost and included in current assets – other and other noncurrent assets – other on the Consolidated Balance Sheets. The costs of the GHG emissions are expensed and recoverable through rates.

**Property, Plant, and Equipment**

Property, plant, and equipment are reported at the lower of their historical cost less accumulated depreciation or fair value. Historical costs include labor and materials, construction overhead, and AFUDC. (See "AFUDC" below.) The Utility's total estimated useful lives and balances of its property, plant, and equipment were as follows:

| (in millions, except estimated useful lives) | Estimated Useful Lives (years) | Balance at December 31, 2014 | 2013 |
|---|---|---|---|
| Electricity generating facilities [1] | 10 to 100 | $ 9,374 | $ 9,116 |
| Electricity distribution facilities | 10 to 55 | 26,633 | 25,333 |
| Electricity transmission facilities | 10 to 70 | 9,155 | 8,429 |
| Natural gas distribution facilities | 20 to 60 | 9,741 | 9,117 |
| Natural gas transportation and storage facilities | 7 to 65 | 5,937 | 5,265 |
| Construction work in progress | | 2,220 | 1,834 |
| **Total property, plant, and equipment** | | **63,060** | **59,094** |
| Accumulated depreciation | | (19,120) | (17,843) |
| **Net property, plant, and equipment** | | $ **43,940** | $ **41,251** |

[1] Balance includes nuclear fuel inventories. Stored nuclear fuel inventory is stated at weighted-average cost. Nuclear fuel in the reactor is expensed as it is used based on the amount of energy output. (See Note 14 below.)

The Utility depreciates property, plant, and equipment using the composite, or group, method of depreciation, in which a single depreciation rate is applied to the gross investment balance in a particular class of property. This method approximates the straight line method of depreciation over the useful lives of property, plant, and equipment. The Utility's composite depreciation rates were 3.77% in 2014, 3.51% in 2013, and 3.63% in 2012. The useful lives of the Utility's property, plant, and equipment are authorized by the CPUC and the FERC, and the depreciation expense is recovered through rates charged to customers. Depreciation expense includes a component for the original cost of assets and a component for estimated cost of future removal, net of any salvage value at retirement. Upon retirement, the original cost of the retired assets, net of salvage value, is charged against accumulated depreciation. The cost of repairs and maintenance, including planned major maintenance activities and minor replacements of property, is charged to operating and maintenance expense as incurred.

**AFUDC**

AFUDC represents the estimated costs of debt (i.e., interest) and equity funds used to finance regulated plant additions before they go into service and is capitalized as part of the cost of construction. AFUDC is recoverable from customers through rates over the life of the related property once the property is placed in service. AFUDC related to the cost of debt is recorded as a reduction to interest expense. AFUDC related to the cost of equity is recorded in other income. The Utility recorded AFUDC related to debt and equity, respectively, of $45 million and $100 million during 2014, $47 million and $101 million during 2013, and $49 million and $107 million during 2012.

**Asset Retirement Obligations**

Detailed studies of the cost to decommission the Utility's nuclear generation facilities are conducted every three years in conjunction with the Nuclear Decommissioning Cost Triennial Proceeding conducted by the CPUC. The decommissioning cost estimates are based on the plant location and cost characteristics for the Utility's nuclear power plants. Actual decommissioning costs may vary from these estimates as a result of changes in assumptions such as decommissioning dates; regulatory requirements; technology; and costs of labor, materials, and equipment.

The Utility adjusts its nuclear decommissioning obligation to reflect changes in the estimated costs of decommissioning its nuclear power facilities and records this as an adjustment to the ARO liability on its Consolidated Balance Sheets. The total nuclear decommissioning obligation accrued was $2.5 billion at December 31, 2014 and 2013. The estimated undiscounted nuclear decommissioning cost for the Utility's nuclear power plants was $3.5 billion at December 31, 2014 and 2013 (or $6.1 billion in future dollars). These estimates are based on the 2012 decommissioning cost studies, prepared in accordance with CPUC requirements.

The following table summarizes the changes in ARO liability during 2014 and 2013:

| (in millions) | 2014 | 2013 |
|---|---|---|
| ARO liability at beginning of year | $ 3,538 | $ 2,919 |
| Revision in estimated cash flows | (16) | 596 |
| Accretion | 163 | 130 |
| Liabilities settled | (110) | (107) |
| **ARO liability at end of year** | **$ 3,575** | **$ 3,538** |

The Utility has not recorded a liability related to certain ARO's for assets that are expected to operate in perpetuity. As the Utility cannot estimate a settlement date or range of potential settlement dates for these assets, reasonable estimates of fair value cannot be made. As such, ARO liabilities are not recorded for retirement activities associated with substations and certain hydroelectric facilities; removal of lead-based paint in some facilities and certain communications equipment from leased property; and restoration or land to the conditions under certain agreements.

**Disallowance of Plant Costs**

PG&E Corporation and the Utility record a charge when it is both probable that costs incurred or projected to be incurred for recently completed plant will not be recoverable through rates charged to customers and the amount of disallowance can be reasonably estimated. The Utility recorded charges of $116 million, $196 million and $353 million in 2014, 2013, and 2012, respectively, for PSEP capital costs that are expected to exceed the CPUC's authorized levels or that are specifically disallowed. (See "Enforcement and Litigation Matters" in Note 14 below).

**Nuclear Decommissioning Trusts**

The Utility's nuclear generation facilities consist of two units at Diablo Canyon and one retired facility at Humboldt Bay. Nuclear decommissioning requires the safe removal of a nuclear generation facility from service and the reduction of residual radioactivity to a level that permits termination of the NRC license and release of the property for unrestricted use. The Utility's nuclear decommissioning costs are recovered from customers through rates and are held in trusts until authorized for release by the CPUC.

The Utility classifies its investments held in the nuclear decommissioning trusts as "available-for-sale." Since the Utility's nuclear decommissioning trust assets are managed by external investment managers, the Utility does not have the ability to sell its investments at its discretion. Therefore, all unrealized losses are considered other-than-temporary impairments. Gains or losses on the nuclear decommissioning trust investments are refundable or recoverable, respectively, from customers through rates. Therefore, trust earnings are deferred and included in the regulatory liability for recoveries in excess of the ARO. There is no impact on the Utility's earnings or accumulated other comprehensive income. The cost of debt and equity securities sold by the trust is determined by specific identification.

**Gains and Losses on Debt Extinguishments**

Deferred gains and losses on debt extinguishments are recorded to regulatory assets in current assets and regulatory assets in other noncurrent assets on the Consolidated Balance Sheets. Gains and losses on debt extinguishments associated with regulated operations are deferred and amortized over a period consistent with the recovery of costs through regulated rates. PG&E Corporation and the Utility recorded unamortized loss on debt extinguishments, net of gain, of $135 million, $157 million, and $163 million at December 31, 2014, 2013, and 2012, respectively. The amortization expense related to this loss was $22 million in 2014 and $23 million in both 2013 and 2012.

**Variable Interest Entities**

A VIE is an entity that does not have sufficient equity at risk to finance its activities without additional subordinated financial support from other parties, or whose equity investors lack any characteristics of a controlling financial interest. An enterprise that has a controlling financial interest in a VIE is a primary beneficiary and is required to consolidate the VIE.

Some of the counterparties to the Utility's power purchase agreements are considered VIEs. Each of these VIEs was designed to own a power plant that would generate electricity for sale to the Utility. To determine whether the Utility was the primary beneficiary of any of these VIEs at December 31, 2014, it assessed whether it absorbs any of the VIE's expected losses or receives any portion of the VIE's expected residual returns under the terms of the power purchase agreement, analyzed the variability in the VIE's gross margin, and considered whether it had any decision-making rights associated with the activities that are most significant to the VIE's performance, such as dispatch rights and operating and maintenance activities. The Utility's financial obligation is limited to the amount the Utility pays for delivered electricity and capacity. The Utility did not have any decision-making rights associated with any of the activities that are most significant to the economic performance of any of these VIEs. Since the Utility was not the primary beneficiary of any of these VIEs at December 31, 2014, it did not consolidate any of them.

PG&E Corporation affiliates previously entered into four tax equity agreements to fund residential and commercial retail solar energy installations with four separate privately held funds that were considered VIEs. Since PG&E Corporation was not the primary beneficiary of any of these VIEs, they were not consolidated. On July 2, 2014, PG&E Corporation disposed of its interest in the tax equity agreements and has no remaining commitment to fund these agreements.

**Other Accounting Policies**

For other accounting policies impacting PG&E Corporation's and the Utility's consolidated financial statements, see "Income Taxes" in Note 8, "Derivatives" in Note 9, "Fair Value Measurements" in Note 10, and "Contingencies" in Note 14 of the Notes to the Consolidated Financial Statements.

**Reporting of Amounts Reclassified Out of Accumulated Other Comprehensive Income**

The changes, net of income tax, in PG&E Corporation's accumulated other comprehensive income (loss) for the year ended December 31, 2014 consisted of the following:

| (in millions, net of income tax) | Pension Benefits | Other Benefits | Other Investments | Total |
|---|---|---|---|---|
| Beginning balance | $ (7) | 15 | 42 | 50 |
| **Other comprehensive income before reclassifications:** | | | | |
| Change in investments (net of taxes of $0, $0, and $4, respectively) | - | - | 5 | 5 |
| Unrecognized net actuarial loss (net of taxes of $404, $19, and $0, respectively) | (588) | (28) | - | (616) |
| Unrecognized prior service cost (net of taxes of $0, $0, and $0, respectively) | 1 | - | - | 1 |
| Transfer to regulatory account (net of taxes of $394, $19, and $0, respectively) | 573 | 28 | - | 601 |
| **Amounts reclassified from other comprehensive income:** | | | | |
| Amortization of prior service cost (net of taxes of $8, $9, and $0, respectively) [1] | 12 | 14 | - | 26 |
| Amortization of net actuarial loss (net of taxes of $1, $1, and $0, respectively) [1] | 1 | 1 | - | 2 |
| Transfer to regulatory account (net of taxes of $9, $10, and $0, respectively) [1] | (13) | (15) | - | (28) |
| Realized gain on investments (net of taxes of $0, $0, and $20, respectively) | - | - | (30) | (30) |
| **Net current period other comprehensive loss** | **(14)** | **-** | **(25)** | **(39)** |
| **Ending balance** | **$ (21)** | **15** | **17** | **11** |

[1] These components are included in the computation of net periodic pension and other postretirement benefit costs. (See Note 11 below for additional details.)

The changes, net of income tax, in PG&E Corporation's accumulated other comprehensive income (loss) for the year ended December 31, 2013 consisted of the following:

| (in millions, net of income tax) | Pension Benefits | Other Benefits | Other Investments | Total |
|---|---|---|---|---|
| Beginning balance | $ (28) | (77) | 4 | (101) |
| **Other comprehensive income before reclassifications:** | | | | |
| Change in investments (net of taxes of $0, $0, and $26, respectively) | - | - | 38 | 38 |
| Unrecognized net actuarial loss (net of taxes of $804, $35, and $0, respectively) | 1,169 | 45 | - | 1,214 |
| Transfer to regulatory account (net of taxes of $790, $22, and $0, respectively) | (1,150) | 31 | - | (1,119) |
| **Amounts reclassified from other comprehensive income:** [1] | | | | |
| Amortization of prior service cost (net of taxes of $8, $10, and $0, respectively) | 12 | 13 | - | 25 |
| Amortization of net actuarial loss (net of taxes of $45, $3, and $0, respectively) | 66 | 3 | - | 69 |
| Transfer to regulatory account (net of taxes of $54, $0, and $0, respectively) | (76) | - | - | (76) |
| **Net current period other comprehensive income** | **21** | **92** | **38** | **151** |
| **Ending balance** | **$ (7)** | **15** | **42** | **50** |

[1] These components are included in the computation of net periodic pension and other postretirement benefit costs. (See Note 11 below for additional details.)

With the exception of other investments, there was no material difference between PG&E Corporation and the Utility for the information disclosed above.

**New Accounting Pronouncements**

***Revenue Recognition Standard***

In May 2014, the Financial Accounting Standards Board issued Accounting Standards Update No. 2014-09, *Revenue from Contracts with Customers,* which amends existing revenue recognition guidance. The accounting standards update will be effective on January 1, 2017. PG&E Corporation and the Utility are currently evaluating the impact the guidance will have on their consolidated financial statements and related disclosures.

## NOTE 3: REGULATORY ASSETS, LIABILITIES, AND BALANCING ACCOUNTS

**Regulatory Assets**

Long-term regulatory assets are comprised of the following:

| | Balance at December 31, | | Recovery |
|---|---|---|---|
| **(in millions)** | **2014** | **2013** | **Period** |
| Pension benefits [1] | $ 2,347 | $ 1,444 | N/A [4] |
| Deferred income taxes [1] | 2,390 | 1,835 | 47 years |
| Utility retained generation [2] | 456 | 503 | 11 years |
| Environmental compliance costs [1] | 717 | 628 | 32 years |
| Price risk management [1] | 127 | 106 | 10 years |
| Electromechanical meters [3] | 70 | 135 | 2 years |
| Unamortized loss, net of gain, on reacquired debt [1] | 113 | 135 | 12 years |
| Other | 102 | 127 | Various |
| **Total long-term regulatory assets** | **$ 6,322** | **$ 4,913** | |

[1] Represents the cumulative differences between amounts recognized for ratemaking purposes and amounts recognized in accordance with GAAP. Pension benefits also includes amounts that otherwise would be recorded to accumulated other comprehensive income/loss in the Consolidated Balance Sheets. (See Note 11 below.)
[2] In connection with the settlement agreement entered into among PG&E Corporation, the Utility, and the CPUC in 2003 to resolve the Utility's proceeding under Chapter 11, the CPUC authorized the Utility to recover $1.2 billion of costs related to the Utility's retained generation assets. The individual components of these regulatory assets are being amortized over the respective lives of the underlying generation facilities, consistent with the period over which the related revenues are recognized.
[3] Represents the expected future recovery of the net book value of electromechanical meters that were replaced with SmartMeter™ devices.
[4] The Utility expects to continuously recover pension benefits.

In general, the Utility does not earn a return on regulatory assets if the related costs do not accrue interest. Accordingly, the Utility earns a return only on its regulatory assets for retained generation, regulatory assets for electromechanical meters, and regulatory assets for unamortized loss, net of gain, on reacquired debt.

### Regulatory Liabilities

Long-term regulatory liabilities are comprised of the following:

| (in millions) | Balance at December 31, 2014 | | Balance at December 31, 2013 | |
|---|---|---|---|---|
| Cost of removal obligations [1] | $ | 4,211 | $ | 3,844 |
| Recoveries in excess of AROs [2] | | 754 | | 748 |
| Public purpose programs [3] | | 701 | | 587 |
| Other | | 624 | | 481 |
| **Total long-term regulatory liabilities** | **$** | **6,290** | **$** | **5,660** |

(1) Represents the cumulative differences between asset removal costs recorded and amounts collected in rates for expected asset removal costs.
(2) Represents the cumulative differences between ARO expenses and amounts collected in rates primarily for the decommissioning of the Utility's nuclear generation facilities. Decommissioning costs recovered through rates are primarily placed in nuclear decommissioning trusts. This regulatory liability also represents the deferral of realized and unrealized gains and losses on the nuclear decommissioning trust investments. (See Note 10 below.)
(3) Represents amounts received from customers designated for public purpose program costs expected to be incurred beyond the next 12 months, primarily related to energy efficiency programs.

### Regulatory Balancing Accounts

The Utility's recovery of revenue requirements and costs is generally decoupled from the volume of sales. The Utility tracks (1) differences between the Utility's authorized revenue requirement and actual customer billings, and (2) differences between incurred costs and customer billings. To the extent these differences are probable of recovery or refund over the next 12 months, the Utility records a current regulatory balancing account receivable or payable. Regulatory balancing accounts that the Utility expects to collect or refund over a period exceeding 12 months are recorded as other noncurrent assets – regulatory assets or noncurrent liabilities – regulatory liabilities, respectively, in the Consolidated Balance Sheets.

The Utility sells and delivers electricity and natural gas. The Utility also administers public purpose programs, primarily related to customer energy efficiency programs. The balancing accounts associated with these items will fluctuate during the year based on seasonal electric and gas usage and the timing of when costs are incurred and customer revenues are collected.

Current regulatory balancing accounts receivable and payable are comprised of the following:

| | Receivable | | | |
|---|---|---|---|---|
| | Balance at December 31, | | | |
| (in millions) | 2014 | | 2013 | |
| Electric distribution | $ | 344 | $ | 102 |
| Utility generation | | 261 | | 57 |
| Gas distribution | | 566 | | 70 |
| Energy procurement | | 608 | | 410 |
| Public purpose programs | | 109 | | 56 |
| Other | | 378 | | 429 |
| **Total regulatory balancing accounts receivable** | **$** | **2,266** | **$** | **1,124** |

| (in millions) | Payable Balance at December 31, 2014 | | 2013 | |
|---|---|---|---|---|
| Energy procurement | $ | 188 | $ | 298 |
| Public purpose programs | | 154 | | 171 |
| Other [1] | | 748 | | 539 |
| **Total regulatory balancing accounts payable** | **$** | **1,090** | **$** | **1,008** |

[1] At December 31, 2014, Other regulatory balancing accounts payable mostly includes energy supplier settlements. (See Note 12 for additional details.)

## NOTE 4: DEBT

### Long-Term Debt

The following table summarizes PG&E Corporation's and the Utility's long-term debt:

| | December 31, | |
|---|---|---|
| **(in millions)** | **2014** | **2013** |
| **PG&E Corporation** | | |
| Senior notes, 5.75%, due 2014 | - | 350 |
| Senior notes, 2.40%, due 2019 | 350 | - |
| Less: current portion | - | (350) |
| **Total senior notes** | **350** | **-** |
| **Total PG&E Corporation long-term debt** | **350** | **-** |
| **Utility** | | |
| Senior notes: | | |
| 4.80% due 2014 | - | 539 |
| 5.625% due 2017 | 700 | 700 |
| 8.25% due 2018 | 800 | 800 |
| 3.50% due 2020 | 800 | 800 |
| 4.25% due 2021 | 300 | 300 |
| 3.25% due 2021 | 250 | 250 |
| 2.45% due 2022 | 400 | 400 |
| 3.25% due 2023 | 375 | 375 |
| 3.85% due 2023 | 300 | 300 |
| 3.40% due 2024 | 350 | - |
| 3.75% due 2024 | 450 | - |
| 6.05% due 2034 | 3,000 | 3,000 |
| 5.80% due 2037 | 950 | 950 |
| 6.35% due 2038 | 400 | 400 |
| 6.25% due 2039 | 550 | 550 |
| 5.40% due 2040 | 800 | 800 |
| 4.50% due 2041 | 250 | 250 |
| 4.45% due 2042 | 400 | 400 |
| 3.75% due 2042 | 350 | 350 |
| 4.60% due 2043 | 375 | 375 |
| 5.125% due 2043 | 500 | 500 |
| 4.75% due 2044 | 675 | - |
| 4.30% due 2045 | 500 | - |
| Less: current portion | - | (539) |
| Unamortized discount, net of premium | (43) | (51) |
| **Total senior notes, net of current portion** | **13,432** | **11,449** |
| Pollution control bonds: | | |
| Series 1996 C, E, F, 1997 B, variable rates (1), due 2026 (2) | 614 | 614 |
| Series 2004 A-D, 4.75%, due 2023 (3) | 345 | 345 |
| Series 2009 A-D, variable rates (1), due 2016 and 2026 (4) | 309 | 309 |
| **Total pollution control bonds** | **1,268** | **1,268** |
| **Total Utility long-term debt, net of current portion** | **14,700** | **12,717** |
| **Total consolidated long-term debt, net of current portion** | **$ 15,050** | **$ 12,717** |

(1) At December 31, 2014, interest rates on these bonds and the related loans ranged from 0.01% to 0.02%.

(2) Each series of these bonds is supported by a separate letter of credit. In April 2014, the letters of credit were extended to April 1, 2019. Although the stated maturity date is 2026, each series will remain outstanding only if the Utility extends or replaces the letter of credit related to the series or otherwise obtains consent from the issuer to the continuation of the series without a credit facility.

(3) The Utility has obtained credit support from an insurance company for these bonds.

[(4)] Each series of these bonds is supported by a separate direct-pay letter of credit. In June 2014, Series A and B letters of credit were extended to June 5, 2019. Series C and D letters expire on December 3, 2016 to coincide with the maturity of the underlying bonds. Subject to certain requirements, the Utility may choose not to provide a credit facility without issuer consent.

***Pollution Control Bonds***

The California Pollution Control Financing Authority and the California Infrastructure and Economic Development Bank have issued various series of fixed rate and multi-modal tax-exempt pollution control bonds for the benefit of the Utility. Substantially all of the net proceeds of the pollution control bonds were used to finance or refinance pollution control and sewage and solid waste disposal facilities at the Geysers geothermal power plant or at the Utility's Diablo Canyon nuclear power plant. In 1999, the Utility sold all bond-financed facilities at the non-retired units of the Geysers geothermal power plant to Geysers Power Company, LLC pursuant to purchase and sale agreements stating that Geysers Power Company, LLC will use the bond-financed facilities solely as pollution control facilities for so long as any tax-exempt pollution control bonds issued to finance the Geysers project are outstanding. The Utility has no knowledge that Geysers Power Company, LLC intends to cease using the bond-financed facilities solely as pollution control facilities.

**Short-term Borrowings**

The following table summarizes PG&E Corporation's and the Utility's outstanding borrowings under their revolving credit facilities and commercial paper programs at December 31, 2014:

| (in millions) | Termination Date | Facility Limit | Letters of Credit Outstanding | Commercial Paper | Facility Availability |
|---|---|---|---|---|---|
| PG&E Corporation | April 2019 | $ 300 [(1)] | $ - | $ - | $ 300 |
| Utility | April 2019 | 3,000 [(2)] | 84 | 333 | 2,583 |
| **Total revolving credit facilities** | | **$ 3,300** | **$ 84** | **$ 333** | **$ 2,883** |

[(1)] Includes a $100 million sublimit for letters of credit and a $100 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.
[(2)] Includes a $1.0 billion sublimit for letters of credit and a $300 million commitment for loans that are made available on a same-day basis and are repayable in full within 7 days.

For 2014, the average outstanding bank borrowings on PG&E Corporation's revolving credit facility was $27 million and the maximum outstanding balance during the year was $260 million. In February 2014, PG&E Corporation repaid the full outstanding bank borrowings of $260 million and initiated borrowing under its commercial paper program established in January 2014. For the year ended December 31, 2014, PG&E Corporation's average outstanding commercial paper balance was $118 million and the maximum outstanding balance during the period was $260 million. For 2014, the Utility's average outstanding commercial paper balance was $609 million and the maximum outstanding balance during the year was $1.4 billion. The Utility did not have any bank borrowings in 2014.

***Revolving Credit Facilities***

In April 2014, PG&E Corporation and the Utility amended and restated their revolving credit facilities to extend their termination dates from April 1, 2018 to April 1, 2019. These agreements contain substantially similar terms as the original 2011 credit agreements. PG&E Corporation's and the Utility's revolving credit facilities may be used for working capital, the repayment of commercial paper, and other corporate purposes. At PG&E Corporation's and the Utility's request and at the sole discretion of each lender, the facilities may be extended for additional periods. Provided certain conditions are met, PG&E Corporation and the Utility have the right to increase, in one or more requests, given not more frequently than once a year, the aggregate lenders' commitments under the revolving credit facilities by up to $100 million and $500 million, respectively, in the aggregate for all such increases.

Borrowings under the revolving credit facilities (other than swingline loans) bear interest based, at PG&E Corporation's and the Utility's election, on (1) a London Interbank Offered Rate plus an applicable margin or (2) the base rate plus an applicable margin. The base rate will equal the higher of the following: the administrative agent's announced base rate, 0.5% above the federal funds rate, or the one-month LIBOR plus an applicable margin. Interest is payable quarterly in arrears, or earlier for loans with shorter interest periods. PG&E Corporation and the Utility also will pay a facility fee on the total commitments of the lenders under the revolving credit facilities. The applicable margins and the facility fees will be based on PG&E Corporation's and the Utility's senior unsecured debt ratings issued by Standard & Poor's Rating Services and Moody's Investor Service. Facility fees are payable quarterly in arrears.

PG&E Corporation's and the Utility's revolving credit facilities include usual and customary provisions for revolving credit facilities of this type, including those regarding events of default and covenants limiting liens to those permitted under their senior note indentures, mergers, sales of all or substantially all of their assets, and other fundamental changes. In addition, the revolving credit facilities require that PG&E Corporation and the Utility maintain a ratio of total consolidated debt to total consolidated capitalization of at most 65% as of the end of each fiscal quarter. PG&E Corporation's revolving credit facility agreement also requires that PG&E Corporation own, directly or indirectly, at least 80% of the common stock and at least 70% of the voting capital stock of the Utility.

***Commercial Paper Programs***

For 2014, the average yield on outstanding PG&E Corporation and Utility commercial paper was 0.24% and 0.23%, respectively.

The borrowings from PG&E Corporation and the Utility's commercial paper programs are used primarily to fund temporary financing needs. Liquidity support for these borrowings is provided by available capacity under their respective revolving credit facilities, as described above. PG&E Corporation and the Utility treat the amount of its outstanding commercial paper as a reduction to the amount available under its revolving credit facilities. The commercial paper may have maturities up to 365 days and ranks equally with PG&E Corporation's and the Utility's other unsubordinated and unsecured indebtedness. Commercial paper notes are sold at an interest rate dictated by the market at the time of issuance.

***Other Short-term Borrowings***

In May 2014, the Utility issued $300 million principal amount of Floating Rate Senior Notes due May 11, 2015.

## Repayment Schedule

PG&E Corporation's and the Utility's combined long-term debt principal repayment amounts at December 31, 2014 are reflected in the table below:

| **(in millions, except interest rates)** | **2015** | **2016** | **2017** | **2018** | **2019** | **Thereafter** | **Total** |
|---|---|---|---|---|---|---|---|
| **PG&E Corporation** | | | | | | | |
| Average fixed interest rate | - | - | - | - | 2.40 % | - | 2.40 % |
| Fixed rate obligations | $ - | $ - | $ - | $ - | $ 350 | $ - | $ 350 |
| **Utility** | | | | | | | |
| Average fixed interest rate | - | - | 5.63 % | 8.25 % | - | 4.92 % | 5.15 % |
| Fixed rate obligations | $ - | $ - | $ 700 | $ 800 | $ - | $ 12,320 | $ 13,820 |
| Variable interest rate as of December 31, 2014 | - | 0.01 % | - | - | 0.01 % | - | 0.01 % |
| Variable rate obligations [(1)] | $ - | $ 160 | $ - | $ - | $ 763 | $ - | $ 923 |
| **Total consolidated debt** | **$ -** | **$ 160** | **$ 700** | **$ 800** | **$ 1,113** | **$ 12,320** | **$ 15,093** |

[(1)] These bonds, due in 2016 and 2026, are backed by separate letters of credit that expire on December 3, 2016, April 1, 2019, or June 5, 2019.

**NOTE 5: COMMON STOCK AND SHARE-BASED COMPENSATION**

PG&E Corporation had 475,913,404 shares of common stock outstanding at December 31, 2014. PG&E Corporation held all of the Utility's outstanding common stock at December 31, 2014.

In February 2014, PG&E Corporation entered into a new equity distribution agreement providing for the sale of PG&E Corporation common stock having an aggregate gross sales price of up to $500 million. During 2014, PG&E Corporation sold 11 million shares under the February 2014 equity distribution agreement for cash proceeds of $496 million, exhausting the capacity under this agreement. This amount is net of commissions paid of $4 million.

In addition, PG&E Corporation issued common stock under the PG&E Corporation 401(k) plan, the Dividend Reinvestment and Stock Purchase Plan, and share-based compensation plans. During 2014, 8 million shares were issued for cash proceeds of $306 million under these plans.

**Dividends**

The Board of Directors of PG&E Corporation and the Utility declare dividends quarterly. Under the Utility's Articles of Incorporation, the Utility cannot pay common stock dividends unless all cumulative preferred dividends on the Utility's preferred stock have been paid. For 2014, the Board of Directors of PG&E Corporation declared a quarterly common stock dividend of $0.455 per share.

Under their respective credit agreements, PG&E Corporation and the Utility are each required to maintain a ratio of consolidated total debt to consolidated capitalization of at most 65%. In addition, the CPUC requires the Utility to maintain a capital structure composed of at least 52% equity on a weighted average over four years. PG&E Corporation and the Utility are in compliance with these restrictions. At December 31, 2014, the Utility had restricted net assets of $14.6 billion and was limited to $153 million of additional common stock dividends it could pay to PG&E Corporation at December 31, 2014.

**Long-Term Incentive Plan**

The PG&E Corporation LTIP permits various forms of share-based incentive awards, including restricted stock awards, restricted stock units, performance shares, and other share-based awards, to eligible employees of PG&E Corporation and its subsidiaries. Non-employee directors of PG&E Corporation are also eligible to receive certain share-based awards. In May 2014, the 2006 LTIP was terminated and the 2014 LTIP became effective. A maximum of 17 million shares of PG&E Corporation common stock (subject to certain adjustments) has been reserved for issuance under the 2014 LTIP, of which 16,184,126 shares were available for future awards at December 31, 2014.

The following table provides a summary of total share-based compensation expense recognized by PG&E Corporation for share-based incentive awards for 2014, 2013, and 2012:

| **(in millions)** | **2014** | **2013** | **2012** |
|---|---|---|---|
| Restricted stock units | $ 42 | $ 36 | $ 31 |
| Performance shares | 36 | 28 | 26 |
| Total compensation expense (pre-tax) | **$ 78** | **$ 64** | **$ 57** |
| Total compensation expense (after-tax) | **$ 47** | **$ 38** | **$ 34** |

The amount of share-based compensation costs capitalized during 2014, 2013, and 2012 was immaterial. There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

***Restricted Stock Units***

Prior to 2014, restricted stock units generally vested over four years in 20% increments on the first business day of March in year one, two, and three, with the remaining 40% vesting on the first business day of March in year four. Restricted stock units granted in 2014 generally vest equally over three years. Vested restricted stock units are settled in shares of PG&E Corporation common stock accompanied by cash payments to settle any dividend equivalents associated with the vested restricted stock units. Compensation expense is generally recognized rateably over the vesting period based on grant-date fair value. The weighted average grant-date fair value for restricted stock units granted during 2014, 2013, and 2012 was $43.76, $42.92, and $42.17, respectively. The total fair value of restricted stock units that vested during 2014, 2013, and 2012 was $34 million, $30 million, and $18 million, respectively. The tax benefit from restricted stock units that vested during each period was not material. As of December 31, 2014, $51 million of total unrecognized compensation costs related to nonvested restricted stock units was expected to be recognized over the remaining weighted average period of 1.77 years.

The following table summarizes restricted stock unit activity for 2014:

| | Number of Restricted Stock Units | Weighted Average Grant-Date Fair Value |
|---|---|---|
| Nonvested at January 1 | 2,300,021 | $ 43.16 |
| Granted | 1,092,035 | $ 43.76 |
| Vested | (777,883) | $ 43.28 |
| Forfeited | (75,816) | $ 43.01 |
| Nonvested at December 31 | **2,538,357** | $ 43.38 |

***Performance Shares***

Performance shares generally will vest three years after the grant date. Upon vesting, performance shares are settled in shares of common stock based on PG&E Corporation's total shareholder return relative to a specified group of industry peer companies over a three-year performance period. Dividend equivalents are paid in cash based on the amount of common stock to which the recipients are entitled.

Compensation expense attributable to performance share is generally recognized rateably over the applicable three-year period based on the grant-date fair value determined using a Monte Carlo simulation valuation model. The weighted average grant-date fair value for performance shares granted during 2014, 2013, and 2012 was $51.81, $33.45, and $41.93 respectively. There was no tax benefit associated with performance shares during each of these periods. As of December 31, 2014, $34 million of total unrecognized compensation costs related to nonvested performance shares was expected to be recognized over the remaining weighted average period of 1.18 years.

The following table summarizes activity for performance shares in 2014:

| | Number of Performance Shares | Weighted Average Grant-Date Fair Value |
|---|---|---|
| Nonvested at January 1 | 1,791,320 | $ 37.85 |
| Granted | 843,185 | 51.81 |
| Vested | (275,247) | 41.94 |
| Forfeited [1] | (665,319) | 42.34 |
| Nonvested at December 31 | **1,693,939** | $ 42.37 |

[1] Includes performance shares that expired with zero value as performance targets were not met.

**NOTE 6: PREFERRED STOCK**

PG&E Corporation has authorized 80 million shares of no par value preferred stock and 5 million shares of $100 par value preferred stock, which may be issued as redeemable or nonredeemable preferred stock. PG&E Corporation does not have any preferred stock outstanding.

The Utility has authorized 75 million shares of $25 par value preferred stock and 10 million shares of $100 par value preferred stock. At December 31, 2014 and December 31, 2013, the Utility's preferred stock outstanding included $145 million of shares with interest rates between 5% and 6% designated as nonredeemable preferred stock and $113 million of shares with interest rates between 4.36% and 5% that are redeemable between $25.75 and $27.25 per share. The Utility's preferred stock outstanding are not subject to mandatory redemption. All outstanding preferred stock has a $25 par value.

At December 31, 2014, annual dividends on the Utility's nonredeemable preferred stock ranged from $1.25 to $1.50 per share. The Utility's redeemable preferred stock is subject to redemption at the Utility's option, in whole or in part, if the Utility pays the specified redemption price plus accumulated and unpaid dividends through the redemption date. At December 31, 2014, annual dividends on redeemable preferred stock ranged from $1.09 to $1.25 per share.

Dividends on all Utility preferred stock are cumulative. All shares of preferred stock have voting rights and an equal preference in dividend and liquidation rights. Upon liquidation or dissolution of the Utility, holders of preferred stock would be entitled to the par value of such shares plus all accumulated and unpaid dividends, as specified for the class and series. The Utility paid $14 million of dividends on preferred stock in each of 2014, 2013, and 2012.

**NOTE 7: EARNINGS PER SHARE**

PG&E Corporation's basic EPS is calculated by dividing the income available for common shareholders by the weighted average number of common shares outstanding. PG&E Corporation applies the treasury stock method of reflecting the dilutive effect of outstanding share-based compensation in the calculation of diluted EPS. The following is a reconciliation of PG&E Corporation's income available for common shareholders and weighted average common shares outstanding for calculating diluted EPS for 2014, 2013, and 2012.

| | Year Ended December 31, | | |
|---|---|---|---|
| **(in millions, except per share amounts)** | **2014** | **2013** | **2012** |
| **Income available for common shareholders** | $ 1,436 | $ 814 | $ 816 |
| **Weighted average common shares outstanding, basic** | 468 | 444 | 424 |
| Add incremental shares from assumed conversions: | | | |
| Employee share-based compensation | 2 | 1 | 1 |
| **Weighted average common share outstanding, diluted** | 470 | 445 | 425 |
| **Total earnings per common share, diluted** | **$ 3.06** | **$ 1.83** | **$ 1.92** |

For each of the periods presented above, the calculation of outstanding common shares on a diluted basis excluded an insignificant amount of options and securities that were antidilutive.

**NOTE 8: INCOME TAXES**

PG&E Corporation and the Utility use the liability method of accounting for income taxes. The income tax provision includes current and deferred income taxes resulting from operations during the year. PG&E Corporation and the Utility estimate current period tax expense in addition to calculating deferred tax assets and liabilities. Deferred tax assets and liabilities result from temporary tax and accounting timing differences, such as those arising from depreciation expense.

PG&E Corporation and the Utility recognize a tax benefit if it is more likely than not that a tax position taken or expected to be taken in a tax return will be sustained upon examination by taxing authorities based on the merits of the position. The tax benefit recognized in the financial statements is measured based on the largest amount of benefit that is greater than 50% likely of being realized upon settlement. As such, the difference between a tax position taken or expected to be taken in a tax return in future periods and the benefit recognized and measured pursuant to this guidance represents an unrecognized tax benefit.

Investment tax credits are deferred and amortized to income over time. PG&E Corporation amortizes its investment tax credits over the projected investment recovery period. The Utility amortizes its investment tax credits over the life of the related property in accordance with regulatory treatment.

PG&E Corporation files a consolidated U.S. federal income tax return that includes the Utility and domestic subsidiaries in which its ownership is 80% or more. PG&E Corporation files a combined state income tax return in California. PG&E Corporation and the Utility are parties to a tax-sharing agreement under which the Utility determines its income tax provision (benefit) on a stand-alone basis.

The significant components of income tax provision (benefit) by taxing jurisdiction were as follows:

| | PG&E Corporation | | | Utility | | |
|---|---|---|---|---|---|---|
| | Year Ended December 31, | | | | | |
| **(in millions)** | **2014** | **2013** | **2012** | **2014** | **2013** | **2012** |
| Current: | | | | | | |
| Federal | $ (84) | $ (218) | $ (74) | $ (84) | $ (222) | $ (52) |
| State | (41) | (26) | 33 | (29) | (23) | 41 |
| Deferred: | | | | | | |
| Federal | 396 | 552 | 374 | 426 | 604 | 404 |
| State | 78 | (35) | (92) | 75 | (28) | (91) |

| **Income tax provision** | **$ 345** | **$ 268** | **$ 237** | **$ 384** | **$ 326** | **$ 298** |

The following table describes net deferred income tax liabilities:

| | PG&E Corporation | | Utility | |
|---|---|---|---|---|
| | Year Ended December 31, | | | |
| **(in millions)** | **2014** | **2013** | **2014** | **2013** |
| **Deferred income tax assets:** | | | | |
| Customer advances for construction | $ 88 | $ 90 | $ 88 | $ 90 |
| Reserve for damages | 137 | 161 | 137 | 161 |
| Environmental reserve | 111 | 152 | 111 | 152 |
| Compensation | 107 | 167 | 36 | 102 |
| Net operating loss carryforward | 1,177 | 890 | 946 | 670 |
| GHG allowances | 56 | 108 | 56 | 108 |
| Other | 74 | 135 | 100 | 128 |
| **Total deferred income tax assets** | **$ 1,750** | **$ 1,703** | **$ 1,474** | **$ 1,411** |

| | | | | |
|---|---|---|---|---|
| **Deferred income tax liabilities:** | | | | |
| Regulatory balancing accounts | $ 512 | $ 261 | $ 512 | $ 261 |
| Property related basis differences | 8,683 | 8,048 | 8,666 | 8,038 |
| Income tax regulatory asset [(1)] | 974 | 748 | 974 | 748 |
| Other | 88 | 151 | 86 | 86 |
| **Total deferred income tax liabilities** | **$ 10,257** | **$ 9,208** | **$ 10,238** | **$ 9,133** |
| **Total net deferred income tax liabilities** | **$ 8,507** | **$ 7,505** | **$ 8,764** | **$ 7,722** |
| **Classification of net deferred income tax liabilities:** | | | | |
| Included in current liabilities (assets) | $ (6) | $ (318) | $ (9) | $ (320) |
| Included in noncurrent liabilities | 8,513 | 7,823 | 8,773 | 8,042 |
| **Total net deferred income tax liabilities** | **$ 8,507** | **$ 7,505** | **$ 8,764** | **$ 7,722** |

(1) Represents the deferred income tax component of the cumulative differences between amounts recognized for ratemaking purposes and amounts recognized in accordance with GAAP. (See Note 3 above.)

The following table reconciles income tax expense at the federal statutory rate to the income tax provision:

| | **PG&E Corporation** | | | **Utility** | | |
|---|---|---|---|---|---|---|
| | **Year Ended December 31,** | | | | | |
| | **2014** | **2013** | **2012** | **2014** | **2013** | **2012** |
| Federal statutory income tax rate | 35.0 % | 35.0 % | 35.0 % | 35.0 % | 35.0 % | 35.0 % |
| Increase (decrease) in income tax rate resulting from: | | | | | | |
| State income tax (net of federal benefit) [(1)] | 1.4 | (3.1) | (3.9) | 1.6 | (2.2) | (3.0) |
| Effect of regulatory treatment of fixed asset differences [(2)] | (15.0) | (4.2) | (4.1) | (14.7) | (3.8) | (3.9) |
| Tax credits | (0.7) | (0.4) | (0.6) | (0.7) | (0.4) | (0.6) |
| Benefit of loss carryback | (0.8) | (1.1) | (0.7) | (0.8) | (1.0) | (0.4) |
| Non deductible penalties | 0.3 | 0.8 | 0.6 | 0.3 | 0.7 | 0.5 |
| Other, net | (0.8) | (2.2) | (3.8) | 0.4 | (0.9) | (0.8) |
| **Effective tax rate** | **19.4 %** | **24.8 %** | **22.5 %** | **21.1 %** | **27.4 %** | **26.8 %** |

(1) Includes the effect of state flow-through ratemaking treatment.
(2) Represents effect of federal flow-through ratemaking treatment including those deductions related to repairs and certain other property-related costs discussed below in the "2014 GRC Impact" section.

***Unrecognized tax benefits***

The following table reconciles the changes in unrecognized tax benefits:

| | PG&E Corporation | | | Utility | | |
|---|---|---|---|---|---|---|
| | 2014 | 2013 | 2012 | 2014 | 2013 | 2012 |
| **(in millions)** | | | | | | |
| **Balance at beginning of year** | $ 666 | $ 581 | $ 506 | $ 660 | $ 575 | $ 503 |
| Additions for tax position taken during a prior year | 7 | 12 | 32 | 7 | 12 | 26 |
| Reductions for tax position taken during a prior year | (9) | (6) | (13) | (9) | (6) | (10) |
| Additions for tax position taken during the current year | 61 | 79 | 67 | 61 | 79 | 67 |
| Settlements | (12) | - | (11) | (12) | - | (11) |
| **Balance at end of year** | **$ 713** | **$ 666** | **$ 581** | **$ 707** | **$ 660** | **$ 575** |

The component of unrecognized tax benefits that, if recognized, would affect the effective tax rate at December 31, 2014 for PG&E Corporation and the Utility was $20 million, with the remaining balance representing the potential deferral of taxes to later years.

PG&E Corporation's and the Utility's unrecognized tax benefits may change significantly within the next 12 months depending on the IRS guidance that is issued and the resolution of the audits related to the 2011, 2012, and 2013 tax returns (see "2014 GRC impact" below). As of December 31, 2014, it is reasonably possible that unrecognized tax benefits will decrease by approximately $330 million within the next 12 months, and most of this decrease would not impact net income.

Interest income, interest expense and penalties associated with income taxes are reflected in income tax expense on the Consolidated Statements of Income. For the years ended December 31, 2014, 2013, and 2012, these amounts were immaterial.

***2014 GRC impact***

The 2014 GRC decision authorized revenue requirements that reflect flow-through ratemaking for temporary income tax differences attributable to repair costs and certain other property-related costs for federal tax purposes. For these temporary differences, PG&E Corporation and the Utility recognize the deferred tax impact in the current period and record offsetting regulatory assets or liabilities. Therefore, PG&E Corporation's and the Utility's effective income tax rates are impacted as these differences arise and reverse. PG&E Corporation and the Utility recognize such differences as regulatory assets or liabilities as it is probable that these amounts will be recovered from or returned to customers in future rates. In addition, recent guidance from the IRS allowed the Utility to deduct more repair costs than previously forecasted in the GRC. For the year ended December 31, 2014, the Utility recognized a reduction in income tax expense of $235 million consistent with a lower revenue requirement in the 2014 GRC and IRS guidance.

***IRS settlements and years that remain subject to examination***

PG&E Corporation participates in the Compliance Assurance Process, a real-time IRS audit intended to expedite resolution of tax matters. The Compliance Assurance Process audit culminates with a letter from the IRS indicating its acceptance of the return.

The IRS is currently reviewing several matters in the 2011, 2012, and 2013 tax returns. The most significant relates to a 2011 accounting method change to adopt guidance issued by the IRS in determining which repair costs are deductible for the electric transmission and distribution businesses. PG&E Corporation and the Utility expect that the IRS will complete the review of the deductible repair costs for the electric transmission and distribution businesses in 2015. The IRS is also expected to issue guidance during 2015 that determines which repair costs are deductible for the natural gas transmission and distribution businesses.

The Tax Increase Prevention Act, signed into law on December 19, 2014, extended 50% bonus federal tax depreciation on qualified property placed into service in 2014.

***Carryforwards***

As of December 31, 2014, PG&E Corporation had approximately $4.1 billion of federal net operating loss carryforwards and $77 million of tax credit carryforwards, which will expire between 2029 and 2034. In addition, PG&E Corporation had approximately $219 million of loss carryforwards related to charitable contributions, which will expire between 2015 and 2019. PG&E Corporation had $123 million of California net operating loss carryforwards which will expire between 2033 and 2034 and $30 million of California credit carryforwards, some of which will expire in 2024 and others which will carryforward indefinitely. PG&E Corporation believes it is more likely than not the tax benefits associated with the federal net operating loss, charitable contributions, and tax credits can be realized within the carryforward periods, therefore no valuation allowance was recognized as of December 31, 2014. As of December 31, 2014, PG&E Corporation had approximately $24 million of federal net operating loss carryforwards related to the tax benefit on employee stock plans that would be recorded in additional paid-in capital when used.

## NOTE 9: DERIVATIVES

### Use of Derivative Instruments

The Utility is exposed to commodity price risk as a result of its electricity and natural gas procurement activities. Procurement costs are recovered through customer rates. The Utility uses both derivative and non-derivative contracts to manage volatility in customer rates due to fluctuating commodity prices. Derivatives include forward contracts, swaps, futures, options, and CRRs.

These instruments are not held for speculative purposes and are subject to certain regulatory requirements. Customer rates are designed to recover the Utility's reasonable costs of providing services, including the costs related to price risk management activities.

Price risk management activities that meet the definition of derivatives are recorded at fair value on the Consolidated Balance Sheets. As long as the current ratemaking mechanism discussed in Note 2, above, remains in place and the Utility's price risk management activities are carried out in accordance with CPUC directives, the Utility expects to recover fully, in rates, all costs related to derivatives. Therefore, all unrealized gains and losses associated with the change in fair value of these derivatives are deferred and recorded within the Utility's regulatory assets and liabilities on the Consolidated Balance Sheets. Net realized gains or losses on commodity derivatives are recorded in the cost of electricity or the cost of natural gas with corresponding increases or decreases to regulatory balancing accounts for recovery from or refund to customers.

Cash collateral paid or received is offset against the fair value of derivative instruments executed with the same counterparty under a master netting arrangement, where the right of offset and the intention to offset exist. Derivatives are presented in the Utility's Consolidated Balance Sheets on a net basis; see below.

The Utility elects the normal purchase and sale exception for eligible derivatives. Eligible derivatives are those that require physical delivery in quantities that are expected to be used by the Utility over a reasonable period in the normal course of business, and do not contain pricing provisions unrelated to the commodity delivered. The fair value of these items is not reflected in the Consolidated Balance Sheets at fair value, eligible derivatives are accounted for under the accrual method of accounting.

**Volume of Derivative Activity**

At December 31, 2014 and 2013, respectively, the volumes of the Utility's outstanding derivatives were as follows:

| Underlying Product | Instruments | Contract Volume 2014 | Contract Volume 2013 |
|---|---|---|---|
| Natural Gas [1] (MMBtus [2]) | Forwards and Swaps | 308,130,101 | 331,840,788 |
| | Options | 164,418,002 | 260,262,916 |
| Electricity (Megawatt-hours) | Forwards and Swaps | 5,346,787 | 8,089,269 |
| | Congestion Revenue Rights [3] | 224,124,341 | 250,922,591 |

[1] Amounts shown are for the combined positions of the electric fuels and core gas supply portfolios.
[2] Million British Thermal Units.
[3] CRRs are financial instruments that enable the holders to manage variability in congestion costs based on demand when there is insufficient transmission capacity.

**Presentation of Derivative Instruments in the Financial Statements**

At December 31, 2014, the Utility's outstanding derivative balances were as follows:

| (in millions) | Commodity Risk Gross Derivative Balance | Netting | Cash Collateral | Total Derivative Balance |
|---|---|---|---|---|
| Current assets – other | $ 73 | $ (4) | $ 19 | $ 88 |
| Other noncurrent assets – other | 178 | (13) | - | 165 |
| Current liabilities – other | (78) | 4 | 26 | (48) |
| Noncurrent liabilities – other | (140) | 13 | 9 | (118) |
| **Total commodity risk** | **$ 33** | **$ -** | **$ 54** | **$ 87** |

At December 31, 2013, the Utility's outstanding derivative balances were as follows:

| (in millions) | Commodity Risk Gross Derivative Balance | Netting | Cash Collateral | Total Derivative Balance |
|---|---|---|---|---|
| Current assets – other | $ 42 | $ (10) | $ 16 | $ 48 |
| Other noncurrent assets – other | 99 | (4) | - | 95 |
| Current liabilities – other | (122) | 10 | 69 | (43) |
| Noncurrent liabilities – other | (110) | 4 | 2 | (104) |
| **Total commodity risk** | **$ (91)** | **$ -** | **$ 87** | **$ (4)** |

Gains and losses recorded on the Utility's derivatives were as follows:

| (in millions) | Commodity Risk For the year ended December 31, 2014 | 2013 | 2012 |
|---|---|---|---|
| Unrealized gain/(loss) - regulatory assets and liabilities [1] | $ 124 | $ 238 | $ 391 |
| Realized loss - cost of electricity [2] | (83) | (178) | (486) |
| Realized loss - cost of natural gas [2] | (8) | (22) | (38) |
| **Total commodity risk** | **$ 33** | **$ 38** | **$ (133)** |

[1] Unrealized gains and losses on commodity risk-related derivative instruments are recorded to regulatory assets or liabilities, rather than being recorded to the Consolidated Statements of Income. These amounts exclude the impact of cash collateral postings.
[2] These amounts are fully passed through to customers in rates. Accordingly, net income was not impacted by realized amounts on these instruments.

Cash inflows and outflows associated with derivatives are included in operating cash flows on the Utility's Consolidated Statements of Cash Flows.

The majority of the Utility's derivatives contain collateral posting provisions tied to the Utility's credit rating from each of the major credit rating agencies. At December 31, 2014, the Utility's credit rating was investment grade. If the Utility's credit rating were to fall below investment grade, the Utility would be required to post additional cash immediately to fully collateralize some of its net liability derivative positions.

The additional cash collateral that the Utility would be required to post if the credit risk-related contingency features were triggered was as follows:

| | Balance at December 31, | |
|---|---|---|
| **(in millions)** | **2014** | **2013** |
| Derivatives in a liability position with credit risk-related contingencies that are not fully collateralized | $ (47) | $ (79) |
| Related derivatives in an asset position | - | 4 |
| Collateral posting in the normal course of business related to these derivatives | 44 | 65 |
| **Net position of derivative contracts/additional collateral posting requirements** [1] | **$ (3)** | **$ (10)** |

[1] This calculation excludes the impact of closed but unpaid positions, as their settlement is not impacted by any of the Utility's credit risk-related contingencies.

**NOTE 10: FAIR VALUE MEASUREMENTS**

PG&E Corporation and the Utility measure their cash equivalents, trust assets, price risk management instruments, and other investments at fair value. A three-tier fair value hierarchy is established that prioritizes the inputs to valuation methodologies used to measure fair value:

- **Level 1 –** Observable inputs that reflect quoted prices (unadjusted) for identical assets or liabilities in active markets.
- **Level 2 –** Other inputs that are directly or indirectly observable in the marketplace.
- **Level 3 –** Unobservable inputs which are supported by little or no market activities.

The fair value hierarchy requires an entity to maximize the use of observable inputs and minimize the use of unobservable inputs when measuring fair value.

Assets and liabilities measured at fair value on a recurring basis for PG&E Corporation and the Utility are summarized below (assets held in rabbi trusts and other investments are held by PG&E Corporation and not the Utility):

| (in millions) | Fair Value Measurements At December 31, 2014 Level 1 | Level 2 | Level 3 | Netting [1] | Total |
|---|---|---|---|---|---|
| **Assets:** | | | | | |
| Money market investments | $ 94 | $ - | $ - | $ - | **$ 94** |
| Nuclear decommissioning trusts | | | | | |
| Money market investments | 17 | - | - | - | **17** |
| Global equity securities | 1,585 | 13 | - | - | **1,598** |
| Fixed-income securities | 741 | 389 | - | - | **1,130** |
| Total nuclear decommissioning trusts [2] | **2,343** | **402** | **-** | **-** | **2,745** |
| Price risk management instruments (Note 9) | | | | | |
| Electricity | - | 17 | 232 | 2 | **251** |
| Gas | 1 | 1 | - | - | **2** |
| Total price risk management instruments | **1** | **18** | **232** | **2** | **253** |
| Rabbi trusts | | | | | |
| Fixed-income securities | - | 42 | - | - | **42** |
| Life insurance contracts | - | 72 | - | - | **72** |
| Total rabbi trusts | **-** | **114** | **-** | **-** | **114** |
| Long-term disability trust | | | | | |
| Money market investments | 7 | - | - | - | **7** |
| Global equity securities | - | 25 | - | - | **25** |
| Fixed-income securities | - | 128 | - | - | **128** |
| Total long-term disability trust | **7** | **153** | **-** | **-** | **160** |
| Other investments | 33 | - | - | - | **33** |
| **Total assets** | **$ 2,478** | **$ 687** | **$ 232** | **$ 2** | **$ 3,399** |
| **Liabilities:** | | | | | |
| Price risk management instruments (Note 9) | | | | | |
| Electricity | $ 47 | $ 5 | $ 163 | $ (52) | **$ 163** |
| Gas | - | 3 | - | - | **3** |
| **Total liabilities** | **$ 47** | **$ 8** | **$ 163** | **$ (52)** | **$ 166** |

[1] Includes the effect of the contractual ability to settle contracts under master netting agreements and margin cash collateral.
[2] Represents amount before deducting $324 million, primarily related to deferred taxes on appreciation of investment value.

| (in millions) | Fair Value Measurements At December 31, 2013 Level 1 | Level 2 | Level 3 | Netting [1] | Total |
|---|---|---|---|---|---|
| **Assets:** | | | | | |
| Money market investments | $ 226 | $ - | $ - | $ - | $ **226** |

| U.S. equity securities | - | 14 | - | - | **14** |
| Non-U.S. equity securities | - | 12 | - | - | **12** |
| Fixed-income securities | - | 122 | - | - | **122** |
| Total long-term disability trust | **9** | **148** | **-** | **-** | **157** |
| Other investments | 84 | - | - | - | **84** |
| **Total assets** | **$ 2,622** | **$ 643** | **$ 107** | **$ 2** | **$ 3,374** |
| **Liabilities:** | | | | | |
| Price risk management instruments (Note 9) | | | | | |
| Electricity | $ 19 | $ 72 | $ 137 | $ (84) | $ **144** |
| Gas | 1 | 3 | - | (1) | **3** |
| **Total liabilities** | **$ 20** | **$ 75** | **$ 137** | **$ (85)** | **$ 147** |

[1] Includes the effect of the contractual ability to settle contracts under master netting agreements and margin cash collateral.
[2] Represents amount before deducting $313 million, primarily related to deferred taxes on appreciation of investment value.

**Valuation Techniques**

The following describes the valuation techniques used to measure the fair value of the assets and liabilities shown in the tables above. Investments, primarily consisting of equity securities, that are valued using a net asset value per share can be redeemed quarterly with notice not to exceed 90 days. Equity investments valued at net asset value per share utilize investment strategies aimed at matching the performance of indexed funds. Transfers between levels in the fair value hierarchy are recognized as of the end of the reporting period. There were no material transfers between any levels for the year ended December 31, 2014 and 2013.

***Trust Assets***

Nuclear decommissioning trust assets and other trust assets are composed primarily of equity securities, debt securities, and life insurance policies. In general, investments held in the trusts are exposed to various risks, such as interest rate, credit, and market volatility risks.

Global equity securities primarily include investments in common stock that are valued based on quoted prices in active markets and are classified as Level 1. Equity securities also include commingled funds that are composed of equity securities traded publicly on exchanges across multiple industry sectors in the U.S. and other regions of the world. Investments in these funds are classified as Level 2 because price quotes are readily observable and available.

Debt securities are primarily composed of U.S. government and agency securities, municipal securities, and other fixed-income securities, including corporate debt securities. U.S. government and agency securities primarily consist of U.S. Treasury securities that are classified as Level 1 because the fair value is determined by observable market prices in active markets. A market approach is generally used to estimate the fair value of debt securities classified as Level 2 using evaluated pricing data such as broker quotes, for similar securities adjusted for observable differences. Significant inputs used in the valuation model generally include benchmark yield curves and issuer spreads. The external credit ratings, coupon rate, and maturity of each security are considered in the valuation model, as applicable.

***Price Risk Management Instruments***

Price risk management instruments include physical and financial derivative contracts, such as power purchase agreements, forwards, swaps, options, and CRRs that are traded either on an exchange or over-the-counter.

Power purchase agreements, forwards, and swaps are valued using a discounted cash flow model. Exchange-traded forwards and swaps that are valued using observable market forward prices for the underlying commodity are classified as Level 1. Over-the-counter forwards and swaps that are identical to exchange-traded forwards and swaps, or are valued using forward prices from broker quotes that are corroborated with market data are classified as Level 2. Exchange-traded options are valued using observable market data and market-corroborated data and are classified as Level 2.

Long-dated power purchase agreements that are valued using significant unobservable data are classified as Level 3. These Level 3 contracts are valued using either estimated basis adjustments from liquid trading points or techniques, including extrapolation from observable prices, when a contract term extends beyond a period for which market data is available. Market and credit risk management utilizes models to derive pricing inputs for the valuation of the Utility's Level 3 instruments using pricing inputs from brokers and historical data.

The Utility holds CRRs to hedge the financial risk of CAISO-imposed congestion charges in the day-ahead market. CRRs are classified as Level 3 and are valued based on CRR auction prices, including historical prices. Limited market data is available in the CAISO auction and between auction dates; therefore, the Utility uses models to forecast CRR prices for those periods not covered in the auctions.

**Level 3 Measurements and Sensitivity Analysis**

The Utility's market and credit risk management function, which reports to the Chief Risk Officer of the Utility, is responsible for determining the fair value of the Utility's price risk management derivatives. The Utility's finance and risk management functions collaborate to determine the appropriate fair value methodologies and classification for each derivative. Inputs used and the fair value of Level 3 instruments are reviewed period-over-period and compared with market conditions to determine reasonableness.

Significant increases or decreases in any of those inputs would result in a significantly higher or lower fair value, respectively. All reasonable costs related to Level 3 instruments are expected to be recoverable through customer rates; therefore, there is no impact to net income resulting from changes in the fair value of these instruments. (See Note 9 above.)

| (in millions) | Fair Value at December 31, 2014 | | | | |
|---|---|---|---|---|---|
| **Fair Value Measurement** | **Assets** | **Liabilities** | **Valuation Technique** | **Unobservable Input** | **Range [1]** |
| Congestion revenue rights | $ 232 | $ 63 | Market approach | CRR auction prices | $ (15.97) - 8.17 |
| Power purchase agreements | $ - | $ 100 | Discounted cash flow | Forward prices | $ 16.04 - 56.21 |

[1] Represents price per megawatt-hour

| (in millions) | Fair Value at December 31, 2013 | | | | |
|---|---|---|---|---|---|
| **Fair Value Measurement** | **Assets** | **Liabilities** | **Valuation Technique** | **Unobservable Input** | **Range [1]** |
| Congestion revenue rights | $ 107 | $ 32 | Market approach | CRR auction prices | $ (6.47) - 12.04 |
| Power purchase agreements | $ - | $ 105 | Discounted cash flow | Forward prices | $ 23.43 - 51.75 |

[1] Represents price per megawatt-hour

**Level 3 Reconciliation**

The following table presents the reconciliation for Level 3 price risk management instruments for the years ended December 31, 2014 and 2013, respectively:

| | Price Risk Management Instruments | |
|---|---|---|
| **(in millions)** | **2014** | **2013** |
| Liability balance as of January 1 | **$ (30)** | **$ (79)** |
| Realized and unrealized gains: | | |
| Included in regulatory assets and liabilities or balancing accounts [1] | 99 | 49 |
| **Asset (liability) balance as of December 31** | **$ 69** | **$ (30)** |

[1] The costs related to price risk management activities are recoverable through customer rates, therefore, balancing account revenue is recorded for amounts settled and purchased and there is no impact to net income. Unrealized gains and losses are deferred in regulatory liabilities and assets.

**Financial Instruments**

PG&E Corporation and the Utility use the following methods and assumptions in estimating fair value for financial instruments:

- The fair values of cash, restricted cash, net accounts receivable, short-term borrowings, accounts payable, customer deposits, floating rate senior notes, and the Utility's variable rate pollution control bond loan agreements approximate their carrying values at December 31, 2014 and 2013, as they are short-term in nature or have interest rates that reset daily.

- The fair values of the Utility's fixed-rate senior notes and fixed-rate pollution control bonds and PG&E Corporation's fixed-rate senior notes were based on quoted market prices at December 31, 2014 and 2013.

The carrying amount and fair value of PG&E Corporation's and the Utility's debt instruments were as follows (the table below excludes financial instruments with carrying values that approximate their fair values):

| | At December 31, | | | |
|---|---|---|---|---|
| | 2014 | | 2013 | |
| **(in millions)** | **Carrying Amount** | **Level 2 Fair Value** | **Carrying Amount** | **Level 2 Fair Value** |
| **Debt (Note 4)** | | | | |
| PG&E Corporation | $ 350 | $ 352 | $ 350 | $ 354 |
| Utility | 13,778 | 15,851 | 12,334 | 13,444 |

*Available for Sale Investments*

The following table provides a summary of available-for-sale investments:

| (in millions) | Amortized Cost | Total Unrealized Gains | Total Unrealized Losses | Total Fair Value |
|---|---|---|---|---|
| **As of December 31, 2014** | | | | |
| Nuclear decommissioning trusts | | | | |
| Money market investments | $ 17 | $ - | $ - | $ 17 |
| Global equity securities | 520 | 1,087 | (9) | 1,598 |
| Fixed-income securities | 1,059 | 75 | (4) | 1,130 |
| Total nuclear decommissioning trusts [(1)] | 1,596 | 1,162 | (13) | 2,745 |
| Other investments | 5 | 28 | - | 33 |
| **Total** | **$ 1,601** | **$ 1,190** | **$ (13)** | **$ 2,778** |
| **As of December 31, 2013** | | | | |
| Nuclear decommissioning trusts | | | | |
| Money market investments | $ 38 | $ - | $ - | $ 38 |
| Equity securities | | | | |
| U.S. | 246 | 811 | - | 1,057 |
| Non-U.S. | 215 | 242 | - | 457 |
| Debt securities | | | | |
| U.S. government and agency securities | 870 | 51 | (5) | 916 |
| Municipal securities | 24 | 2 | (1) | 25 |
| Other fixed-income securities | 163 | 1 | (2) | 162 |
| Total nuclear decommissioning trusts [(1)] | 1,556 | 1,107 | (8) | 2,655 |
| Other investments | 13 | 71 | - | 84 |
| **Total [(1)]** | **$ 1,569** | **$ 1,178** | **$ (8)** | **$ 2,739** |

[(1)] Represents amounts before deducting $324 million and $313 million at December 31, 2014 and 2013, respectively, primarily related to deferred taxes on appreciation of investment value.

The fair value of debt securities by contractual maturity is as follows:

| (in millions) | As of December 31, 2014 |
|---|---|
| Less than 1 year | $ 17 |
| 1–5 years | 466 |
| 5–10 years | 263 |
| More than 10 years | 384 |
| **Total maturities of debt securities** | **$ 1,130** |

The following table provides a summary of activity for the debt and equity securities:

| (in millions) | 2014 | 2013 | 2012 |
|---|---|---|---|
| Proceeds from sales and maturities of nuclear decommissioning trust investments | $ 1,336 | $ 1,619 | $ 1,133 |
| Gross realized gains on sales of securities held as available-for-sale | 118 | 94 | 19 |
| Gross realized losses on sales of securities held as available-for-sale | (12) | (13) | (17) |

## NOTE 11: EMPLOYEE BENEFIT PLANS

### Pension Plan and Postretirement Benefits Other than Pensions ("PBOP")

PG&E Corporation and the Utility sponsor a non-contributory defined benefit pension plan for eligible employees hired before December 31, 2012 and a cash balance plan for those eligible employees hired after this date or who made a one-time election to participate ("Pension Plan"). The trusts underlying certain of these plans are qualified trusts under the Internal Revenue Code of 1986, as amended. If certain conditions are met, PG&E Corporation and the Utility can deduct payments made to the qualified trusts, subject to certain limitations. PG&E Corporation's and the Utility's funding policy is to contribute tax-deductible amounts, consistent with applicable regulatory decisions and federal minimum funding requirements. Based upon current assumptions and available information, the Utility's minimum funding requirements related to its pension plans is zero.

PG&E Corporation and the Utility also sponsor contributory postretirement medical plans for retirees and their eligible dependents, and non-contributory postretirement life insurance plans for eligible employees and retirees. PG&E Corporation and the Utility use a fiscal year-end measurement date for all plans.

### Change in Plan Assets, Benefit Obligations, and Funded Status

The following tables show the reconciliation of changes in plan assets, benefit obligations, and the plans' aggregate funded status for pension benefits and other benefits for PG&E Corporation during 2014 and 2013:

***Pension Plan***

| (in millions) | 2014 | 2013 |
|---|---|---|
| **Change in plan assets:** | | |
| **Fair value of plan assets at beginning of year** | **$ 12,527** | **$ 12,141** |
| Actual return on plan assets | 1,946 | 673 |
| Company contributions | 332 | 323 |
| Benefits and expenses paid | (589) | (610) |
| **Fair value of plan assets at end of year** | **$ 14,216** | **$ 12,527** |
| | | |
| **Change in benefit obligation:** | | |
| **Benefit obligation at beginning of year** | **$ 14,077** | **$ 15,541** |
| Service cost for benefits earned | 383 | 468 |
| Interest cost | 695 | 627 |
| Actuarial (gain) loss | 2,131 | (1,950) |
| Plan amendments | (1) | - |
| Transitional costs | - | 1 |
| Benefits and expenses paid | (589) | (610) |
| **Benefit obligation at end of year** [1] | **$ 16,696** | **$ 14,077** |
| | | |
| **Funded Status:** | | |
| Current liability | $ (6) | $ (6) |
| Noncurrent liability | (2,474) | (1,544) |
| **Net liability at end of year** | **$ (2,480)** | **$ (1,550)** |

[1] PG&E Corporation's accumulated benefit obligation was $14.9 billion and $12.6 billion at December 31, 2014 and 2013, respectively.

***Postretirement Benefits Other than Pensions***

| (in millions) | 2014 | 2013 |
|---|---|---|
| **Change in plan assets:** | | |
| **Fair value of plan assets at beginning of year** | **$ 1,892** | **$ 1,758** |
| Actual return on plan assets | 241 | 64 |
| Company contributions | 57 | 145 |
| Plan participant contribution | 63 | 64 |
| Benefits and expenses paid | (161) | (139) |
| **Fair value of plan assets at end of year** | **$ 2,092** | **$ 1,892** |
| | | |
| **Change in benefit obligation:** | | |
| **Benefit obligation at beginning of year** | **$ 1,597** | **$ 1,940** |
| Service cost for benefits earned | 45 | 53 |
| Interest cost | 76 | 74 |
| Actuarial (gain) loss | 166 | (415) |
| Benefits paid | (140) | (123) |
| Federal subsidy on benefits paid | 4 | 4 |
| Plan participant contributions | 63 | 64 |
| **Benefit obligation at end of year** | **$ 1,811** | **$ 1,597** |
| | | |
| **Funded Status:** [1] | | |
| Noncurrent asset | $ 368 | $ 352 |
| Noncurrent liability | (87) | (57) |
| **Net asset at end of year** | $ **281** | $ **295** |

[1] At December 31, 2014 and 2013, the postretirement medical plan was in an overfunded position and the postretirement life insurance plan was in an underfunded position.

There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

**Components of Net Periodic Benefit Cost**

Net periodic benefit cost as reflected in PG&E Corporation's Consolidated Statements of Income was as follows:

***Pension Plan***

| **(in millions)** | **2014** | **2013** | **2012** |
|---|---|---|---|
| Service cost | $ 383 | $ 468 | $ 396 |
| Interest cost | 695 | 627 | 658 |
| Expected return on plan assets | (807) | (650) | (598) |
| Amortization of prior service cost | 20 | 20 | 20 |
| Amortization of net actuarial loss | 2 | 111 | 123 |
| **Net periodic benefit cost** | **293** | **576** | **599** |
| Less: transfer to regulatory account [1] | 42 | (238) | (301) |
| **Total expense recognized** | **$ 335** | **$ 338** | **$ 298** |

[1] The Utility recorded these amounts to a regulatory account as they are probable of recovery from customers in future rates.

***Postretirement Benefits Other than Pensions***

| **(in millions)** | **2014** | **2013** | **2012** |
|---|---|---|---|
| Service cost | $ 45 | $ 53 | $ 49 |
| Interest cost | 76 | 74 | 83 |
| Expected return on plan assets | (103) | (79) | (77) |
| Amortization of transition obligation | - | - | 24 |
| Amortization of prior service cost | 23 | 23 | 25 |
| Amortization of net actuarial loss | 2 | 6 | 6 |
| **Net periodic benefit cost** | **$ 43** | **$ 77** | **$ 110** |

There was no material difference between PG&E Corporation and the Utility for the information disclosed above.

**Components of Accumulated Other Comprehensive Income**

PG&E Corporation and the Utility record unrecognized prior service costs, unrecognized gains and losses, and unrecognized net transition obligations related to pension and post-retirement benefits other than pension as components of accumulated other comprehensive income, net of tax. In addition, regulatory adjustments are recorded in the Consolidated Statements of Income and Consolidated Balance Sheets to reflect the difference between expense or income calculated in accordance with GAAP for accounting purposes and expense or income for ratemaking purposes, which is based on authorized plan contributions. For pension benefits, a regulatory asset or liability is recorded for amounts that would otherwise be recorded to accumulated other comprehensive income. For post-retirement benefits other than pension, the Utility generally records a regulatory liability for amounts that would otherwise be recorded to accumulated other comprehensive income. As the Utility is unable to record a regulatory asset for these other benefits, the charge remains in accumulated other comprehensive income (loss).

The estimated amounts that will be amortized into net periodic benefit costs for PG&E Corporation in 2015 are as follows:

| (in millions) | | Pension Plan | | PBOP Plans |
|---|---|---|---|---|
| Unrecognized prior service cost | $ | 15 | $ | 19 |
| Unrecognized net loss | | 11 | | 4 |
| **Total** | **$** | **26** | **$** | **23** |

There were no material differences between the estimated amounts that will be amortized into net periodic benefit costs for PG&E Corporation and the Utility.

**Valuation Assumptions**

In 2014, PG&E Corporation and the Utility adopted the Society of Actuaries 2014 Mortality Tables Report (RP-2014) and Mortality Improvement Scale (MP-2014 with modifications), which updated the mortality assumptions used for measuring retirement plan obligations. This new mortality table and improvement scale extends the assumed life expectancy of plan participants, resulting in an increase in PG&E Corporation's and the Utility's accrued benefit cost as of December 31, 2014. Total pension and postretirement benefit obligation increased $82 million and $18 million in 2014, respectively.

The following actuarial assumptions were used in determining the projected benefit obligations and the net periodic benefit costs. The following weighted average year-end assumptions were used in determining the plans' projected benefit obligations and net benefit cost.

| | Pension Plan | | | PBOP Plans | | |
|---|---|---|---|---|---|---|
| | December 31, | | | December 31, | | |
| | 2014 | 2013 | 2012 | 2014 | 2013 | 2012 |
| **Discount rate** | 4.00 % | 4.89 % | 3.98 % | 3.89 - 4.09 % | 4.70 - 5.00 % | 3.75 - 4.08 % |
| **Rate of future compensation increases** | 4.00 % | 4.00 % | 4.00 % | - | - | - |
| **Expected return on plan assets** | 6.20 % | 6.50 % | 5.40 % | 3.30 - 6.70 % | 3.50 - 6.70 % | 2.90 - 6.10 % |

The assumed health care cost trend rate as of December 31, 2014 was 7.5%, decreasing gradually to an ultimate trend rate in 2024 and beyond of approximately 3.5%. A one-percentage-point change in assumed health care cost trend rate would have the following effects:

| (in millions) | | One-Percentage-Point Increase | | One-Percentage-Point Decrease |
|---|---|---|---|---|
| Effect on postretirement benefit obligation | $ | 107 | $ | (108) |
| Effect on service and interest cost | | 8 | | (8) |

Expected rates of return on plan assets were developed by determining projected stock and bond returns and then applying these returns to the target asset allocations of the employee benefit plan trusts, resulting in a weighted average rate of return on plan assets. Returns on fixed-income debt investments were projected based on real maturity and credit spreads added to a long-term inflation rate. Returns on equity investments were estimated based on estimates of dividend yield and real earnings growth added to a long-term inflation rate. For the pension plan, the assumed return of 6.2% compares to a ten-year actual return of 9.3%. The rate used to discount pension benefits and other benefits was based on a yield curve developed from market data of over approximately 715 Aa-grade non-callable bonds at December 31, 2014. This yield curve has discount rates that vary based on the duration of the obligations. The estimated future cash flows for the pension benefits and other benefit obligations were matched to the corresponding rates on the yield curve to derive a weighted average discount rate.

**Investment Policies and Strategies**

The financial position of PG&E Corporation's and the Utility's funded status is the difference between the fair value of plan assets and projected benefit obligations. Volatility in funded status occurs when asset values change differently from liability values and can result in fluctuations in costs in financial reporting, as well as the amount of minimum contributions required under the Employee Retirement Income Security Act of 1974, as amended. PG&E Corporation's and the Utility's investment policies and strategies are designed to increase the ratio of trust assets to plan liabilities at an acceptable level of funded status volatility.

The trusts asset allocations are meant to manage volatility, reduce costs, and diversify its holdings. Interest rate, credit, and equity risk are the key determinants of PG&E Corporation's and the Utility's funded status volatility. In addition to affecting the trusts's fixed income portfolio market values, interest rate changes also influence liability valuations as discount rates move with current bond yields. To manage volatility, PG&E Corporation's and the Utility's trusts hold significant allocations in long maturity fixed-income investments. Although they contribute to funded status volatility, equity investments are held to reduce long-term funding costs due to their higher expected return. Real assets and absolute return investments are held to diversify the trust's holdings in equity and fixed-income investments by exhibiting returns with low correlation to the direction of these markets. Real assets include commodities futures, REITS, global listed infrastructure equities, and private real estate funds. Absolute return investments include hedge fund portfolios.

Target allocations for equity investments have generally declined in favor of longer-maturity fixed-income investments and real assets as a means of dampening future funded status volatility. Derivative instruments such as equity index futures contracts are used to maintain existing equity exposure while adding exposure to fixed-income securities. In addition, derivative instruments such as equity index futures and fixed income futures are used to rebalance the fixed income/equity allocation of the pension's portfolio. Foreign currency exchange contracts are also used to hedge a portion of the currency of the global equity investments.

The target asset allocation percentages for major categories of trust assets for pension and other benefit plans are as follows:

| | Pension Plan | | | PBOP Plans | | |
|---|---|---|---|---|---|---|
| | **2015** | **2014** | **2013** | **2015** | **2014** | **2013** |
| Global equity | 25 % | 25 % | 25 % | 31 % | 30 % | 28 % |
| Absolute return | 5 % | 5 % | 5 % | 3 % | 3 % | 4 % |
| Real assets | 10 % | 10 % | 10 % | 8 % | 8 % | 8 % |
| Fixed income | 60 % | 60 % | 60 % | 58 % | 59 % | 60 % |
| **Total** | **100 %** | **100 %** | **100 %** | **100 %** | **100 %** | **100 %** |

PG&E Corporation and the Utility apply a risk management framework for managing the risks associated with employee benefit plan trust assets. The guiding principles of this risk management framework are the clear articulation of roles and responsibilities, appropriate delegation of authority, and proper accountability and documentation. Trust investment policies and investment manager guidelines include provisions designed to ensure prudent diversification, manage risk through appropriate use of physical direct asset holdings and derivative securities, and identify permitted and prohibited investments.

### Fair Value Measurements

The following tables present the fair value of plan assets for pension and other benefits plans by major asset category at December 31, 2014 and 2013.

| | Fair Value Measurements | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| | At December 31, | | | | | | | |
| | 2014 | | | | 2013 | | | |
| **(in millions)** | **Level 1** | **Level 2** | **Level 3** | **Total** | **Level 1** | **Level 2** | **Level 3** | **Total** |
| **Pension Plan:** | | | | | | | | |
| Short-term investments | $ 352 | $ 311 | $ - | **$ 663** | $ 70 | $ - | $ - | **$ 70** |
| Global equity | 918 | 2,311 | - | **3,229** | 1,123 | 2,363 | - | **3,486** |
| Absolute return | - | - | 577 | **577** | - | - | 554 | **554** |
| Real assets | 620 | - | 675 | **1,295** | 562 | - | 544 | **1,106** |
| Fixed-income | 2,068 | 5,718 | 638 | **8,424** | 1,448 | 5,104 | 625 | **7,177** |
| **Total** | **$ 3,958** | **$ 8,340** | **$ 1,890** | **$14,188** | **$ 3,203** | **$ 7,467** | **$ 1,723** | **$12,393** |
| **PBOP Plans:** | | | | | | | | |
| Short-term investments | $ 28 | $ - | $ - | **$ 28** | $ 31 | $ - | $ - | **$ 31** |
| Global equity | 124 | 549 | - | **673** | 127 | 504 | - | **631** |
| Absolute return | - | - | 55 | **55** | - | - | 53 | **53** |
| Real assets | 72 | - | 49 | **121** | 67 | - | 38 | **105** |
| Fixed-income | 163 | 1,055 | 1 | **1,219** | 137 | 936 | 2 | **1,075** |
| **Total** | **$ 387** | **$ 1,604** | **$ 105** | **$ 2,096** | **$ 362** | **$ 1,440** | **$ 93** | **$ 1,895** |
| **Total plan assets at fair value** | | | | **$16,284** | | | | **$14,288** |

In addition to the total plan assets disclosed at fair value in the table above, the trusts had other net assets of $24 million and $131 million at December 31, 2014 and 2013, respectively. These net assets and net liabilities were comprised primarily of cash, accounts receivable, accounts payable, and deferred taxes.

### Valuation Techniques

The following describes the valuation techniques used to measure the fair value of the assets and liabilities shown in the table above. All investments that are valued using a net asset value per share can be redeemed quarterly with a notice not to exceed 90 days.

***Short-Term Investments***

Historically, short-term investments consisted primarily of commingled funds of U.S. government short-term securities that were considered Level 1 assets and valued at the net asset value of $1 per unit.

In 2014, PG&E began diversifying these short-term investments across government, credit, and asset-backed sectors. These securities are categorized as Level 1 and Level 2 assets.

***Global Equity***

The global equity category includes investments in common stock, equity-index futures, and commingled funds comprised of equity securities spread across multiple industries and regions of the world. Equity investments in common stock are actively traded on public exchanges and are therefore considered Level 1 assets. These equity investments are generally valued based on unadjusted prices in active markets for identical securities. Equity-index futures are valued based on unadjusted prices in active markets and are Level 1 assets. Commingled funds are valued using a net asset value per share and are maintained by investment companies for large institutional investors and are not publicly traded. Commingled funds are comprised primarily of underlying equity securities that are publicly traded on exchanges, and price quotes for the assets held by these funds are readily observable and available. Commingled funds are categorized as Level 1 and Level 2 assets.

***Absolute Return***

The absolute return category includes portfolios of hedge funds that are valued using a net asset value per share based on a variety of proprietary and non-proprietary valuation methods, including unadjusted prices for publicly-traded securities in active markets. Hedge funds are considered Level 3 assets.

***Real Assets***

The real asset category includes portfolios of commodity futures, global REITS, global listed infrastructure equities, and private real estate funds. The commodity futures, global REITS, and global listed infrastructure equities are actively traded on a public exchange and are therefore considered Level 1 assets. Private real estate funds are valued using a net asset value per share derived using appraisals, pricing models, and valuation inputs that are unobservable and are considered Level 3 assets.

***Fixed-Income***

The fixed-income category includes U.S. government securities, corporate securities, and other fixed-income securities.

U.S. government fixed-income primarily consists of U.S. Treasury notes and U.S. government bonds that are valued based on quoted market prices or evaluated pricing data for similar securities adjusted for observable differences. These securities are categorized as Level 1 or Level 2 assets.

Corporate fixed-income primarily includes investment grade bonds of U.S. issuers across multiple industries that are valued based on a compilation of primarily observable information or broker quotes in non-active markets. The fair value of corporate bonds is determined using recently executed transactions, market price quotations (where observable), bond spreads or credit default swap spreads obtained from independent external parties such as vendors and brokers adjusted for any basis difference between cash and derivative instruments. These securities are classified as Level 2 assets. Corporate fixed-income also includes commingled funds that are valued using a net asset value per share and are comprised of corporate debt instruments. Commingled funds are considered Level 2 assets. Corporate fixed-income also includes privately placed debt portfolios which are valued using a net asset value per share using pricing models and valuation inputs that are unobservable and are considered Level 3 assets.

Other fixed-income primarily includes pass-through and asset-backed securities. Pass-through securities are valued based on benchmark yields created using observable market inputs and are Level 2 assets. Asset-backed securities are primarily valued based on broker quotes and are considered Level 2 assets. Other fixed-income also includes municipal bonds and Treasury futures. Municipal bonds are valued based on a compilation of primarily observable information or broker quotes in non-active markets and are considered Level 2 assets. Futures are valued based on unadjusted prices in active markets and are Level 1 assets.

**Transfers Between Levels**

Any transfers between levels in the fair value hierarchy are recognized as of the end of the reporting period. No material transfers between levels occurred in the years ended December 31, 2014 and 2013.

**Level 3 Reconciliation**

The following table is a reconciliation of changes in the fair value of instruments for pension and other benefit plans that have been classified as Level 3 for the years ended December 31, 2014 and 2013:

| (in millions)<br>For the year ended December 31, 2014 | Pension Plan<br>Absolute Return | Fixed-Income | Real Assets | Total |
|---|---|---|---|---|
| Balance at beginning of year | $ 554 | $ 625 | $ 544 | $ **1,723** |
| Actual return on plan assets: | | | | |
| Relating to assets still held at the reporting date | 23 | 24 | 54 | **101** |
| Relating to assets sold during the period | - | 4 | - | **4** |
| Purchases, issuances, sales, and settlements: | | | | |
| Purchases | - | 1 | 78 | **79** |
| Settlements | - | (16) | (1) | **(17)** |
| **Balance at end of year** | **$ 577** | **$ 638** | **$ 675** | **$ 1,890** |

| (in millions)<br>For the year ended December 31, 2013 | Pension Plan<br>Absolute Return | Fixed-Income | Real Assets | Total |
|---|---|---|---|---|
| Balance at beginning of year | $ 513 | $ 611 | $ 285 | **$ 1,409** |
| Actual return on plan assets: | | | | |
| Relating to assets still held at the reporting date | 37 | 1 | 49 | **87** |
| Relating to assets sold during the period | 4 | - | (3) | **1** |
